President William D. Adams holds up the University's fifth Presidents' Cup in the past eight years. See story on page 10.

Admissions attracts diverse first-year class

By Chris Ellis

The admissions office made a push to attract a strong, diverse Class of 2002. Despite giving 300 fewer offers of admission than last year, the University ended up with one of its largest, most academically successful classes ever.

Nine hundred and fifty-three students enrolled for the University's class of 2002, an increase of 61 students over last year's incoming class.

The average student had an SAT score between 1170 and 1340, and over 80 percent of the class placed in the top fifth of their high school class.

"We did not anticipate the overwhelming response that we received," Mark Davies, director of admissions said. "The response says a lot about Bucknell and the faculty, staff and students that believe in what we're doing here."

Even more important than the large size of the class is its racial and geographic diversity. Davies and the admissions office have made a recent push to make the University more appealing to minority students

and students from outside the East Coast, and that push began to pay dividends in earnest in the Class of 2002.

Twelve percent of students in the Class of 2002 are minority students, an increase from 9.5 percent from last year. 69 percent of students are from "West Coast" states, a number that exceeds last year and nearly doubles the West Coast total from the year before. In total, 37 states and the District of Columbia are represented in this semester's first-year class.

The admissions office credits a three-pronged approach to the recent success in attracting strong, diverse classes. First, the University has taken a proactive stance in attracting minority students, holding two special "Open House" events, sending special targeted mailings and relying heavily on input and guidance from current minority students in persuading prospective minority students to choose the University.

Bid Day undergoes changes

By E.J. Crawford

President Adams agreed late Tuesday night to a proposal that will alter the face of Bid Day for years to come. The proposal, which effectively moves Bid Day from Saturday to Friday night, was made by IFC and Panhel in an attempt to follow National InterFraternity Council and Panhellenic Conference guidelines pertaining to Rush and Bid Day.

The guidelines, referred to as the National Panhellenic Conference Unanimous Agreement, were passed by the National Panhellenic Conference in the summer of 1997 and prohibit alcohol and contact with members of the opposite sex for 24 hours after Bid Day ends. The National IFC passed a similar agreement this past summer.

"Bid Day is a formal Rush process so there should be no alcohol or members of the opposite sex until 24 hours after Bid Day ends ... so this latest proposal (since passed) would follow all guidelines and still celebrate being Greek," Panhel president Charlene Vai '99 said.

The changes were prompted by the arrival of five national sorority consultants. Only Alpha Chi Omega and Delta Gamma were not represented on a national level (Kappa Chi Delta is a local sorority and thus has agreed to all Panhel rules and regulations).

A national consultant from Kappa Alpha Theta noted that the rules have been in existence for some time and that the consultants' job was only to enforce the existing rules.

"On the national level, we're trying to make sure all the rules and regulations are followed and, on a sisterhood front, that we are taking care of our women ... and the celebration of being part of a certain organization," said the consultant, who wished to remain anonymous. She added that "we're not trying to ruin people's fun, we're just trying to be safe."

Bid Day had formerly taken place on Saturday. Bids were handed out on Saturday morning and fraternities and sororities were permit-

ted to host parties with alcohol from 1-4 p.m. and 8-12 p.m. Under the new guidelines, bids will be handed out from 5-7 p.m. on Friday. Fraternities and sororities are permitted to host their new pledges from 7-10 p.m. that night. No alcohol is permitted. On Saturday, Dean Baker will be hosting a mandatory new member education program at 1 p.m. for sororities and 2 p.m. for fraternities. Fraternities will then be permitted to host registered parties with alcohol from 10 p.m.-2 a.m. Saturday night, 24 hours after Bid Day has officially ended.

"The changes are definitely a good move. It cuts down on alcohol in a big way but still allows us to celebrate," said Bowman Hallagan '99, citing the reduction in registered events involving alcohol. See BID DAY, page 3.

Beetna Kim—The Bucknellian

The Bid Day guidelines, which were passed in 1997, prohibit contact with members of the opposite sex and consumption of alcohol until 24 hours after Bid Day ends.

Tau Kappa Epsilon closes chapter

By Tracy Thiffault

It was the culmination of over a year-long series of events that led the national alumni of the Tau Kappa Epsilon Fraternity (TKE) to shut down its chapter at the University this past June. In addition to numerous other violations, the chapter was charged with financial mismanagement and severe physical damage to its house and surrounding property.

The University first suspected problems with TKE when it failed its Council on Greek Life (COGL) annual review in April of 1997, specifically for facility mismanagement and other violations, according to Roy Baker, assistant dean of Greek Life.

At that time the fraternity was put on probation and was given outlined sanctions including a weekly meeting with COGL, a written report, repairs made to the house and membership review.

The fraternity was also not permitted to have social events without permission from the University and COGL during this time. "During the year the guys did a pretty good job of getting their act together," Baker said. The fraternity put about \$15,000 into the house to make necessary repairs and property maintenance.

However, additional sanctions came from the national office after their membership review. National called for the installment of a risk management program and disciplinary action for some individual brothers.

"To my knowledge, the chapter probably only completed one or two sanctions even though they were reminded of them on a number of occasions," Baker said.

The trouble within the house led the former President, Jason Tiede '99 to resign at the end of the semester. "I found it unfortunate to have received the Most Improved Chapter Award and then to be closed a month later," Tiede said.

No other brothers that were contacted would agree to comment.

TKE passed its second COGL review this

past April. However, they were still kept on probation "until they got things up to speed," Baker said. "We thought things were progressing very well."

"After that, we're just not sure what happened," Baker said. During exam week the TKE house was destroyed, including a new shed the alumni had just bought them. "There was food everywhere and maggots crawling around. The hallways were just filled with debris. It smelled so badly you couldn't go in there," said Dean Baker.

When the alumni association heard and witnessed the destruction, it immediately decided to close the house and not let the chapter live there for the 1998-99 academic year. They also filed a number of charges against the fraternity that included financial mismanagement, physical mismanagement of the house and sent them to the

national office. "There was approximately \$6-7,000 in unpaid bills," Baker said. The bills will now have to be taken care of by the alumni association.

"There were several incidents in which we were thinking the best, but now we know what really happened and are trying to straighten them out," Baker said. "There was a minor fire in the basement and several other incidents throughout the year that raised red flags that something was not right."

See CHAPTER, page 2.

Paige Cull—The Bucknellian

The TKE house was closed for the 1998-1999 academic year because of extensive damage.

Plans considered for TKE house

By Tracy Thiffault

The closing of the Tau Kappa Epsilon (TKE) Fraternity and necessary relocation of the 25 brothers scheduled to live in the house this year placed an especially large burden on University housing due to the unexpectedly large number of first-year students enrolled at the University.

The majority of eligible brothers chose to live off-campus when notified that their house was being shut down. Others had to take leftover rooms in the dormitories, according to Roy Baker, assistant dean of Greek Life.

"It would have been very difficult to house every one of those guys if we had to house them [as a result of the large number of first-year students.] If they were eligible to live off-campus, they were allowed to."

Announcements

Politis named director of Small Business Development Center

John L. Politis has been named the director of the Small Business Development Center (SBDC) at the University.

Politis, a cum laude graduate of Penn State University, brings more than 20 years of management and planning experience to the SBDC.

Politis has served as head of the voice systems section at the U.S. Naval Research Lab and as program manager of the Defense Communications Agency in Washington, D.C. He also founded Telecommunications Marketing Associates, a professional services company.

The mission of the University SBDC is to assist the small business community in Union and neighboring counties in business plan preparation.

Mathias and Sampson appointed to Board of Trustees

John H. Mathias '69 of Lewisburg and Myles Sampson '67 of Murrysville, Pa., have been named to the Board of Trustees at the University.

Mathias, the current president of JPM Company, graduated from Bucknell with a bachelor of science degree in mathematics. JPM was founded in 1949 by Mathias's father and is a leading manufacturer of cable assemblies and wire harnesses for the banking and telecommunications industries.

Sampson, who graduated from the University with a degree in business administration, serves as manager and president of Rimco Industries Inc. of Pittsburgh since its founding in 1970. He has served the University as a member of the Pittsburgh regional campaign committee, the Alumni association board of directors, the 30th reunion gift committee and the Bertrand society.

Sigma Alpha Mu loses house

Paige Cull—The Bucknellian

The SAM house is now known as 22 University Avenue House.

By Sarah Palmer

The final decision to shut down the Sigma Alpha Mu (SAM) Fraternity last semester resulted when a national representative of the organization visited the University to talk to the brotherhood about the disheartening situation they were facing.

For a few years, the Interfraternity Council (IFC) had warned SAM that failure to meet its nationally regulated quota of 80 percent occupancy in their house would result in forcing the house to be turned over to the Office of Housing and Residential Life. Last semester, the fraternity did not meet its quota; therefore, it no longer has a home.

It is quite probable that SAM could return starting the fall of '00 or '01. As was the case with Sigma Phi Epsilon, which has returned to campus as a once-active organization this semester, the national chapter of SAM will wait approximately two or three years before allowing a fraternity or sorority back.

"This allows time for the students already involved to graduate so that the respective Greek organization can make a 'fresh start,'" said Roy Baker, assistant dean of students and director of Greek affairs.

Last semester, SAM was required

to submit a list of names to the University, indicating how many brothers would be living in the house during the following semester. "There were many ups and downs," Baker reported.

"The numbers fluctuated on a daily basis. Sometimes they were above the quota, sometimes they were below."

When the moment to turn in the list finally arrived, the numbers had fallen significantly below the quota, exhibiting just 15 members after graduation in late May.

Although an incident involving "risk management violations," as Baker called them, ensued at the SAM house last spring and led the chapter to endure heavy fines, Baker

could not comment on any specific incidents of hazing, although he confirmed there is an investigation pending. "The alumni chapter did charge TKE for hazing," Baker said.

When nationals heard of the charges, they notified the brothers and scheduled a hearing for June 28th to which only three brothers came, according to Baker. At this time, TKE Alumni made the deci-

tion to close the chapter, with the intent of possibly reconstituting after three years.

The closing of the TKE fraternity is similar to that of the Sigma Phi Epsilon fraternity (Sig Ep) which is now undergoing a successful reorganization effort.

"I am not sure it has any impact on Rush," Baker said. "We lost a chapter, but we gained a chapter, Sig Ep."

Public Safety Log

August 25, 1998

ASSIST POLICE — A public safety officer responded to Sigma Phi Epsilon Fraternity to assist Lewisburg Police Department to identify a University student who was cited for littering, underage consumption, and an open container violation.

MISSING PROPERTY — A University student reported to PSO that a water cooler was missing from the Sigma Chi Fraternity. East Buffalo Township Police were notified and the incident is under investigation.

MISSING PROPERTY — A University student reported to PSO that a water cooler was missing from the Sigma Chi Fraternity. East Buffalo Township Police were notified and the incident is under investigation.

August 26, 1998

NON-EMERGENCY MEDICAL TRANSPORT — A public safety officer dispatched a Student Health Services driver to Smith Hall to transport an ill University student to Evangelical Hospital Emergency Room. The student was treated and returned to campus.

INDECENT EXPOSURE — A University student reported to a public safety officer that an unknown male had exposed himself on the off-campus jogging path near St. George and S. Front Streets by the river. Lewisburg Police and BUPPS searched the area and found no one. A Public Safety Alert was issued and the incident is under investigation.

AMBULANCE TRANSPORT — A public safety officer responded to Vedder Hall for the report of an ill student. The victim was transported by ambulance to Evangelical Community Hospital Emergency Room for treatment and later released.

MEDICAL ASSIST — A public safety officer responded to Davis Gym for the report of a visitor with diabetic complications. The victim refused medical treatment and signed a release.

MEDICAL ASSIST — A public safety officer responded to the Fieldhouse for the report of a University student with a possible broken ankle. William Cameron Engine Company ambulance responded and transported the victim to Evangelical Community Hospital Emergency Room.

INFORMATION/POSSIBLE ACT 64 VIOLATION — A public safety officer responded to Swartz Hall for the odor of marijuana which was determined to be unfounded.

INFORMATION — A vendor reported to a public safety officer that two University students were observed removing merchandise from a parked delivery truck on S. Third Street. Lewisburg Police Department will cite the individuals.

August 27, 1998

UNDERAGE CONSUMPTION — A public safety officer responded to Vedder Hall for the report of a University student who was being cited by Lewisburg Police for underage consumption. A university citation is pending.

INFORMATION — While on routine patrol on Brown St., a public safety officer was notified of an intoxicated University student who was being transported by ambulance to Evangelical Community Hospital Emergency Room for treatment. Lewisburg Police cited the student for public drunkenness.

UNDERAGE CONSUMPTION — Lewisburg Police informed a public safety officer that three males were cited for underage consumption and open container violations at the rear of Galloway House.

MEDICAL TRANSPORT — A public safety officer responded to Tustin Gym and transported a University student to Student Health Services for treatment of a recurring knee injury.

MEDICAL ASSIST — A public safety officer responded to the corner of S. 7th St. and Moore Ave for the report of a University student who had fallen. The victim was transported by ambulance to Evangelical Community Hospital Emergency Room for treatment of an ankle injury and later released.

DISORDERLY CONDUCT — A public safety officer responded to Kress Hall for the report of a student struck by a water balloon thrown from a moving vehicle near the Rookery Chemistry Building. The victim refused medical treatment. The vehicle was not located in a search of the campus. The incident is under investigation. East Buffalo Township Police were notified.

INFORMATION — A University student came to Public Safety with a minor injury after SHS had closed. The victim refused transportation to a medical facility.

August 28, 1998

INFORMATION/MISSING PROPERTY — A public safety officer responded to St. George St. for the report of missing construction markers, including two cones, a barricade and a light. The incident is under investigation. Lewisburg Police notified.

MEDICAL ASSIST — A public safety officer responded to Vaughan Literature Building for the report of an ill student. The victim was transported to Student Health Services for treatment.

ASSIST LOCAL POLICE — A public safety officer and East Buffalo Township Police responded to Swartz Hall for the report of a University student who admitted to purchasing beer with false identification. Citations for underage consumption and false identification were issued.

MISSING PROPERTY — A visitor at the Langone Center reported to a public safety officer that a camera was missing. The incident is under investigation.

August 29, 1998

LOST PROPERTY — A University student reported to a public safety officer having lost an identification holder containing a number of cards and a University room key which was later located.

UNDERAGE CONSUMPTION (2 COUNTS) — While on routine bicycle patrol, a public safety officer observed two males carrying open containers of alcohol at the rear of Vedder Hall. Citations were issued by Lewisburg Police and the University.

August 30, 1998

PROPERTY DAMAGE — A University student reported to a public safety officer that a window in Swartz Hall was broken. The incident is under investigation. East Buffalo Township Police were notified.

MISSING PROPERTY — A University student reported to a public safety officer that a parking decal was removed from a vehicle. The incident is under investigation.

THEFT BY UNLAWFUL TAKING — A University student reported to a public safety officer that a ski rack was taken from the trunk of a car parked in the 102 University Ave. House lot. The incident is under investigation. Lewisburg Police were notified.

August 31, 1998

DISORDERLY CONDUCT — A public safety officer responded to Kress Hall for the report of a student struck by a water balloon thrown from a moving vehicle near the Rookery Chemistry Building. The victim refused medical treatment. The vehicle was not located in a search of the campus. The incident is under investigation. East Buffalo Township Police were notified.

INFORMATION — A University student reported that a vehicle window was broken while the car was parked in the Gateway Lot. The incident is under investigation. Lewisburg Police were notified.

LARCENY/THEFT BY UNLAWFUL TAKING — A University student reported to PSO that an unlocked bicycle was taken from the exterior of a University West Mod. The incident is under investigation. East Buffalo Township Police were notified.

CRIMINAL MISCHIEF — A University student reported that several windows were damaged in Gateways Riser and Viddinghoff, possibly over the summer break. The incident is under investigation. Lewisburg Police were notified.

ASSIST LOCAL POLICE — A public safety officer and East Buffalo Township Police responded to Swartz Hall for the report of a University student who admitted to purchasing beer with false identification. Citations for underage consumption and false identification were issued.

MISSING PROPERTY — A visitor at the Langone Center reported to a public safety officer that a camera was missing. The incident is under investigation.

IN THE NEWS...

National

Gulf Coast keeping eye on strengthening Earl

MIAMI—Tropical Storm Earl strengthened rapidly Tuesday and was expected to become the season's third hurricane as it moved on a track toward the U.S. Gulf Coast. The storm's clouds nearly filled the Gulf and one computer model projected 'explosive intensification,' the National Hurricane Center said. By late morning Tuesday, the storm's highest sustained winds were blowing at 60 mph, up from 40 mph late Monday. Earl is expected to develop into a hurricane and could come ashore between Texas and the Florida Panhandle. No watches or warnings have been immediately posted.

S. California fires claim dozens of homes

LOS ANGELES—A wildfire raging through the Juniper Flats area of California's Riverside County has burned at least 36 structures, including 26 homes, the Department of Forestry said Tuesday. The blaze has consumed 6,000 acres and already has caused an estimated \$1 million damage, according to local officials. At least five other fires are said to have been triggered by thunderstorms and were also burning in the county. This year, the situation has been made worse because the region saw tremendous plant growth due to the El Niño related wet-weather phase.

Report: No evidence of nerve gas exposure in Gulf War

WASHINGTON—There is no evidence to support the theory that exposure to nerve gas caused the mysterious illnesses of U.S. soldiers who fought in the Persian Gulf War, a Senate committee report has concluded.

But leaders of the Senate Veterans' Affairs Committee said Tuesday they believe that despite the lack of evidence, it's still possible that limited exposure to chemical weapons may be one of the reasons some troops fell ill with a range of undiagnosed ailments. "My judgement is that nerve gas is a contributing factor to Gulf War illness," said Sen. Arlen Specter (R-Pennsylvania), chairman of the committee.

Michigan ban on assisted suicide takes effect

LANSING, Michigan—Michigan's ban on assisted suicide takes effect Tuesday, although voters in Dr. Jack Kevorkian's home state could repeal it when they vote the polls in two months. Gov. John Engler signed the assisted suicide ban into law in July. The law makes assisting in a suicide a felony punishable by up to five years in prison and a \$10,000 fine.

However, a proposal on the November 3 ballot would legalize physician-assisted suicide and automatically repeal the ban.

World

Duma, Yeltsin dig in heels over Chernomyrdin

MOSCOW—Russian President Boris Yeltsin and his foes in Parliament raised to yield on Tuesday over the President's choice of Prime Minister, raising the prospect of prolonged political stalemate amid a serious economic crisis. On Monday, the State Duma, or lower house of Parliament, roundly rejected Yeltsin's choice—former Prime Minister Viktor Chernomyrdin.

The speaker of the State Duma, Gennady Seleznev, on Tuesday said the chamber's ruling council had set the second debate on Chernomyrdin's candidacy for next Monday. But he added that Chernomyrdin was unlikely to win approval.

Death toll rises in Asian floods

ASIA—Death tolls rose on Tuesday in portions of Asia where natural disasters—including typhoons, floods and mudslides—have already killed thousands of people this summer and left millions more homeless. Even where flooding has stopped, starvation and disease remain a threat to large populations.

Conditions have severely worsened in India. Nearly 10 million people in 23,300 villages in Uttar Pradesh—India's most populous state—were displaced or lost their livelihood in the past three weeks, authorities said. The dead included 120 people who died of waterborne diseases. Relief volunteers said the number was expected to go up once the floodwaters started receding.

Japan hunts for North Korean missile

TOKYO—Both Japan and South Korea expressed concern Tuesday about North Korea's missile test-firing over Japanese territory. Of the two, Tokyo took the harder line, announcing it was suspending food aid to North Korea and breaking off normalization talks.

North Korea's Taepo Dong I missile has a longer range—1,200 miles (2,000 kilometers)—than an older model and is capable of reaching all of South Korea and Japan.

For four years, North Korea has been able to target all of South Korea with its shorter-range Rodong I missile, which is capable of carrying nuclear or chemical warheads.

U.N. tribunal to give first verdict on Rwanda genocide

ARUSHA, Tanzania—A U.N. tribunal will issue the world's first international court verdict on genocide Wednesday, in the 1994 slaughter of more than 500,000 minority Tutsis in Rwanda.

Jean-Paul Akayesu, an ethnic Hutu and former mayor of the central village of Taba, has maintained his innocence on 15 counts of genocide, crimes against humanity, torture and rape. His trial began in January 1997. Prosecutors accuse Akayesu of ordering the killings of 2,000 people during the three-month genocide of more than half a million ethnic Tutsis that began in April 1994.

The killings ended when mainly Tutsi rebels fought their way to power. In November 1994, the United Nations set up a tribunal to bring the leading architects of the genocide to justice.

National and World News Briefs compiled by Jeff Scepanski from the CNN Interactive Website

Registration process achieves efficiency

By Anne Monoky

After undergoing several changes, the registration and enrollment process at the University has finally reached a level of efficiency. According to the administration, a large majority of the students were appropriately accommodated during this registration period.

Don Fox, registrar, expressed great content with the progression of the process. "Registration and enrollment went rather smoothly this semester with little or no changes involved. We are always looking to revamp our processes to insure maximizing efficiency for all members of the Bucknell community."

Robert Midkiff, assistant dean of arts and sciences, agreed with Fox. "In my perspective, I think that this year was a lot better than last year with little or few glitches," he said.

However, one of the problems that Midkiff addressed was that of the long lines that students must stand in while waiting to be helped. He felt that these lines were a result of the students making changes in their schedules over the summer and trying to take care of these changes during enrollment.

Another difficulty that Midkiff noted was the lack of availability of the closed and nearing capacity class lists. He felt that this made it troublesome for students to obtain signatures from their professors all within the first few days of classes.

In response to these problems, both Fox and Midkiff stressed that the office of the dean are open listen to complaints and concerns from students. "Dean Murphy and I welcome any concerns about this process. Feel free to forward those to me," said Dean Midkiff.

A final matter that many students found difficult to deal with throughout this process is the problem with credits transferring from other universities and programs. Midkiff explained that often other universities do not send the information concerning transcripts until our university has already commenced classes. Consequently, these students do not know what credits transferred, or what classes they need to enroll in for completion of their requirements.

Midkiff elaborated, "These students' records do not get updated on time, so it looks as though they are behind. Really these other institutions have not yet sent the final transcripts until the enrollment process has begun."

Midkiff said that this often becomes the problem with students who have taken summer classes or studied abroad through other universities. He commented that these problems are the fault of these other institutions, not the students.

Halogen lamps banned

By Mark Popielarski

Halogen tertiary lights, previously found in the majority of dormitories, have been banned in residence halls at the University beginning this semester; the Committee on Complimentary Activities banned the lamps in an effort to follow a national trend toward student safety.

"They represent a serious hazard to the safety of the students," said Safety Manager James McCormick. Stiff new penalties are in store for anyone caught possessing one.

The structure of halogen lamps start fires easily. These are freestanding pole lamps with a halogen bulb on top. Dust and objects get on the bulb and start fires. McCormick showed several lamps that were confiscated last year. They had melted or had burned.

Penalties are high for anyone caught with a halogen lamp. The student gets a letter of censure, confiscation of the lamp, a \$100 fine, loss of lottery number in the next room selection and loss of off-campus living privilege for the next academic year.

BID DAY

From page 1.

cohol from two events to one. "But change does not come easy at Bucknell."

The Hunt Hall celebration—in which the fraternities and sororities meet in front of Hunt Hall to introduce their pledge classes—has been moved from Saturday at 2 p.m. to Saturday at 4 p.m. All Greek members are required to be sober, an additional change from last year. Panel also voted against the continuation of the circuit—in which the sororities travel around to every fraternity on Saturday night—due to its objectification of women.

"We felt it was unnecessary and inappropriate," said Alpha Chi Omega president Vanessa Bovo '99, citing that the circuit was a Bid Day tradition and that Saturday no longer constitutes Bid Day.

For Dean of Greek Affairs Roy Baker, the decision to follow all National Bid Day policies is an exciting step in the right direction. "It is the biggest thing that we could be doing. To be able to say that the Greek System will follow the Unanimous Agreement without alcohol and parties is tremendous... I'm so excited about this. It really sets the right tone for the rest [the pledge's] Greek experience."

The changes this year will also have a positive effect on next year's Bid Day, according to Hallagan, who expects "a lot more changes next year. This is a model to follow but next year there may be fraternity nationals that will enforce an absolute following of all changes... it will never be the Bid Day of old."

HOUSE

From page 1.

The TKE house is not University owned. Nonetheless, according to Baker, the University has negotiated some services with the TKE alumni association including electricity and an alarm system.

"We are currently negotiating the purchasing of the house," Baker said. "We are hoping that we can negotiate a deal in which [the University] can buy the house and make the necessary repairs and bring it up to Bucknell standards suitable for living in three years."

In addition to negotiating with the University, the TKE alumni association is currently attempting to generate enough money from alumni donation for the renovations and repairs instead of selling the house. They have written to each alumni in the area asking for \$300. If enough money is not received, they will be forced to sell the house.

The TKE house was the first house scheduled to undergo the RESNET renovations this summer which created additional complications. According to Baker, "Each brother was made aware that they were not allowed to keep anything in their rooms over the summer. We couldn't even go in the [TKE] house and had to immediately change our plans."

Photo courtesy of Dean Baker

The TKE house was closed because of charges that included physical and financial mismanagement of the house. This shed was destroyed during exam week last spring.

ADMISSIONS

From page 1.

"We wanted to make sure that [the minority students] understood the opportunities that they would have here," Davies said. "As with any special group, success demands individual and personal contact. Extra attention truly does make a difference."

The department is also beginning to reap benefits from the establishment of a admissions branch office in Denver, Colorado. The office, established in August of 1996 and run by admissions employee Shena Molyneux, allows for the admissions department to have information and staff members in closer proximity to the West Coast applicants it works.

Finally, the admissions office has worked in conjunction with faculty members to institute and spark faculty-prospective contact. In recruiting the class of 2002, faculty members called or wrote to 400 targeted prospects, asking questions of students and inviting students to voice any questions or concerns regarding

the University. The program is relatively new at the University, and, according to the admissions office, is another way for the University to spread its message.

"We wanted to show prospective students that our faculty is interested in you not just now, but for the entire four years," Davies said. "The faculty really stepped it up and helped our program out."

The large and academically successful class is just the beginning of the University's drive to improve its reputation and future classes. With the hiring of additional faculty and major campus renovations in the spring, the admissions office is poised to continue down the right road.

"We've been busy all summer interviewing prospective applicants and spreading the good word about Bucknell," Davies said. "We have some very ambitious goals, and we're heading in a good direction."

A Quaker Voice -

In Quaker spirituality... We reach toward God and are returned to this world changed, to embody or incarnate the Divine Spirit for others in our own faltering, fallible, flawed ways.

Paradoxically if we accept the challenge of living out of this Spirit in relationship in the variety of our encounters with the world, we are drawn still closer to God. As with the rest of our spiritual life, growth is rarely linear. It sometimes seems like a series of of looping needlepoint stitches drawing us closer to one another, the world, and God in turn and turn about. At other times it may seem more like a spiral in which we swing again and again past the same point, lesson, or situation.

Excerpt from Patricia Loring, *Listening Spiritually*. BX 7748 .M92 1997

The Lewisburg Friends (Quaker) Meeting gathers at 11 a.m. on Sundays in the Smith Library, Vaughan Literature Building. We would be pleased to have you with us. For information call Geri Cooke at 523-6628

Politis named director of Small Business Development Center

John L. Politis has been named the director of the Small Business Development Center (SBDC) at the University.

Politis, a cum laude graduate of Penn State University, brings more than 20 years of management and planning experience to the SBDC.

Politis has served as head of the voice systems section at the U.S. Naval Research Lab and as program manager of the Defense Communications Agency in Washington, D.C. He also founded Telecommunications Marketing Associates, a professional services company.

The mission of the University SBDC is to assist the small business community in Union and neighboring counties in business plan preparation.

Mathias and Sampson appointed to Board of Trustees

John H. Mathias '69 of Lewisburg and Myles Sampson '67 of Murrysville, Pa., have been named to the Board of Trustees at the University.

Mathias, the current president of JPM Company, graduated from Bucknell with a bachelor of science degree in mathematics. JPM was founded in 1949 by Mathias's father and is a leading manufacturer of cable assemblies and wire harnesses for the banking and telecommunications industries. Sampson, who graduated from the University with a degree in business administration, serves as manager and president of Rimco Industries Inc. of Pittsburgh since its founding in 1970. He has served the University as a member of the Pittsburgh regional campaign committee, the Alumni association board of director, the 30th reunion gift committee and the Bertrand society.

Sigma Alpha Mu loses house

Paige Cull—The Bucknellian

The SAM house is now known as 22 University Avenue House.

By Sarah Palmer

The final decision to shut down the Sigma Alpha Mu (SAM) Fraternity last semester resulted when a national representative of the organization visited the University to talk to the brotherhood about the disheartening situation they were facing.

For a few years, the Interfraternity Council (IFC) had warned SAM that failure to meet its nationally regulated quota of 80 percent occupancy in their house would result in forcing the house to be turned over to the Office of Housing and Residential Life. Last semester, the fraternity did not meet its quota; therefore, it no longer has a home.

It is quite probable that SAM could return starting the fall of '00 or '01. As was the case with Sigma Phi Epsilon, which has returned to campus as a once-again active organization this semester, the national chapter of SAM will wait approximately two or three years before allowing a fraternity or sorority back.

"This allows time for the students already involved to graduate so that the respective Greek organization can make a 'fresh start,'" said Roy Baker, assistant dean of students and director of Greek affairs. Last semester, SAM was required

to submit a list of names to the University, indicating how many brothers would be living in the house during the following semester. "There were many ups and downs," Baker reported.

"The numbers fluctuated on a daily basis. Sometimes they were above the quota, sometimes they were below."

When the moment to turn in the list finally arrived, the numbers had fallen significantly below the quota, exhibiting just 15 members after graduation in late May.

Although an incident involving "risk management violations," as Baker called them, ensued at the SAM house last spring and led the chapter to endure heavy fines, Baker

CHAPTER From page 1.

Baker could not comment on any specific incident of hazing, although he confirmed there is an investigation pending. "The alumni chapter did charge TKE for hazing," Baker said.

When nationals heard of the charges, they notified the brothers and scheduled a hearing for June 28th in which only three brothers came, according to Baker. At this time, TKE National made the decision to close the chapter, with the intent of possibly reconvening after three years.

The closing of the TKE fraternity is similar to that of the Sigma Phi Epsilon fraternity (Sig Ep) which is now undergoing a successful reconvening effort.

"I am not sure it has any impact on Rush," Baker said. "We lost a chapter, but we gained a chapter, Sig Ep."

er insisted that the fraternity was shut down for one reason only—the fact that it fell short of fulfilling its national standards. "What people must understand is that [shutting SAM down] was not a disciplinary action taken by the University. It wasn't a University decision; it was a national one," Baker asserted. "Although some SAM brothers still remain in the old SAM house, it was put into the room selection process for the entire student body last spring." Daniel Bentley, director of the Office of Housing and Residential Life said, "No one was forced to live there. Anyone wishing to live there was able to do so."

Recreation facilities in the 22 University Avenue house are now reported as reservable space for any organization to utilize.

Tom Lewis '99, rush chairman for SAM, feels that the University community may be under the wrong impression regarding the reasons behind the fraternity losing its house. "I feel that we have been given a bad rap by some students," he said.

Lewis feels that students do not understand that the decision to take away the house was not prompted by ill behavior on the brothers' part.

Despite the fact that the brothers of SAM are no longer able to conduct chapter meetings, a sense of brotherhood remains. "We still all stick together," Lewis said.

"We'll always consider the things we do [as brothers] as SAM activities, even though technically, they are not."

Public Safety Log

August 25, 1998

ASSIST POLICE — A public safety officer responded to Sigma Phi Epsilon Fraternity to assist Lewisburg Police Department to identify a University student who was cited for littering, underage consumption, and an open container violation.

MISSING PROPERTY — A University student reported to a public safety officer that a pool table light was missing from the Phi Kappa Psi Fraternity. The incident is under investigation.

MISSING PROPERTY — A University student reported to PSO that a water cooler was missing from the Sigma Chi Fraternity. East Buffalo Township Police were notified and the incident is under investigation.

August 26, 1998

NON-EMERGENCY MEDICAL TRANSPORT — A public safety officer dispatched a Student Health Services driver to Smith Hall to transport an ill University student to Evangelical Hospital Emergency Room. The student was treated and returned to campus.

INDECENT EXPOSURE — A University student reported to a public safety officer that an unknown male had exposed himself on the off-campus jogging path near St. George and S. Front Streets by the river. Lewisburg Police and BUPs searched the area and found no one. A Public Safety Alert was issued and the incident is under investigation.

AMBUANCE TRANSPORT — A public safety officer responded to Vedder Hall for the report of an ill student. The victim was transported by ambulance to Student Health Services for treatment of a recurring knee injury.

MEDICAL ASSIST — A public safety officer responded to Davis Gym for the report of a visitor with diabetic complications. The victim refused medical treatment and signed a release.

MEDICAL ASSIST — A public safety officer responded to the Field House for the report of a University student with a possible broken ankle. William Cameron Engine Company ambulance responded and transported the victim to Evangelical Community Hospital Emergency Room.

INFORMATION/POSSIBLE ACT 64 VIOLATION — A public safety officer responded to Swartz Hall for the odor of marijuana which was determined to be unfounded.

INFORMATION — A vendor reported to a public safety officer that two University students were observed removing merchandise from a parked delivery truck on S. Third Street. Lewisburg Police Department will cite the individuals.

August 27, 1998

UNDERAGE CONSUMPTION — A public safety officer responded to Vedder Hall for the report of a University student who was being cited by Lewisburg Police for underage consumption. A university citation is pending.

INFORMATION — While on routine patrol on Brown St., a public safety officer was notified of an intoxicated University student who was being transported by ambulance to Evangelical Community Hospital Emergency Room for treatment. Lewisburg Police cited the student for public drunkenness.

UNDERAGE CONSUMPTION — Lewisburg Police informed a public safety officer that three males were cited for underage consumption and open container violations at the rear of Galloway House.

MEDICAL TRANSPORT — A public safety officer responded to Tustin Gym and transported a University student to Student Health Services for treatment of a recurring knee injury.

MEDICAL ASSIST — A public safety officer responded to the corner of S. 7th St. and Moore Ave for the report of a University student who had fallen. The victim was transported by ambulance to Evangelical Community Hospital Emergency Room for treatment of an ankle injury and later released.

DISORDERLY CONDUCT — A public safety officer responded to Kress Hall for the report of a student struck by a water balloon thrown from a moving vehicle near the Rooke Chemistry Building. The victim refused medical treatment. The vehicle was not located in a search of the campus. The incident is under investigation. East Buffalo Township Police were notified.

INFORMATION — A University student came to Public Safety with a minor injury after SHS had closed. The victim refused transportation to a medical facility.

August 28, 1998

INFORMATION/MISSING PROPERTY — A public safety officer responded to St. George St. for the report of missing construction markers, including two cones, a barricade and a light. The incident is under investigation. Lewisburg Police notified.

MEDICAL ASSIST — A public safety officer responded to Vaughan Literature Building for the report of an ill student. The victim was transported to Student Health Services for treatment.

ASSIST LOCAL POLICE — A public safety officer and East Buffalo Township Police responded to Swartz Hall for the report of a University student who admitted to purchasing beer with false identification. Citations for underage consumption and false identification were issued.

MISSING PROPERTY — A visitor at the Langone Center reported to a public safety officer that a camera was missing. The incident is under investigation.

der investigation.

August 29, 1998

LOST PROPERTY — A University student reported to a public safety officer having lost an identification holder containing a number of cards and a University room key which was later located.

UNDERAGE CONSUMPTION (2 COUNTS) — While on routine bicycle patrol, a public safety officer observed two males carrying open containers of alcohol at the rear of Vedder Hall. Citations were issued by Lewisburg Police and the University.

August 30, 1998

PROPERTY DAMAGE — A University student reported to a public safety officer that a window in Swartz Hall was broken. The incident is under investigation. East Buffalo Township Police were notified.

MISSING PROPERTY — A University student reported to a public safety officer that a parking decal was removed from a vehicle. The incident is under investigation.

THEFT BY UNLAWFUL TAKING — A University student reported to a public safety officer that a ski rack was taken from the trunk of a car parked in the 102 University Ave. House lot. The incident is under investigation. Lewisburg Police was notified.

August 31, 1998

DISORDERLY CONDUCT — A public safety officer responded to Kress Hall for the report of a student struck by a water balloon thrown from a moving vehicle near the Rooke Chemistry Building. The victim refused medical treatment. The vehicle was not located in a search of the campus. The incident is under investigation. East Buffalo Township Police were notified.

INFORMATION — A University student reported that a vehicle window was broken while the car was parked in the Gateway Lot. The incident is under investigation. Lewisburg Police were notified.

LARCENY/THEFT BY UNLAWFUL TAKING — A University student reported to PSO that an unlocked bicycle was taken from the exterior of a University West Mod. The incident is under investigation. East Buffalo Township Police were notified.

CRIMINAL MISCHIEF — A University student reported that several windows were damaged in Gateways Roser and Viddinghoff, possibly over the summer break. The incident is under investigation. Lewisburg Police were notified.

IN THE NEWS... National

Gulf Coast keeping eye on strengthening Earl

MIAMI—Tropical Storm Earl strengthened rapidly Tuesday and was expected to become the season's third hurricane as it moved on a track toward the U.S. Gulf Coast. The storm's clouds nearly filled the Gulf and one computer model projected "explosive intensification," the National Hurricane Center said. By late morning Tuesday, the storm's highest sustained winds were blowing at 60 mph, up from 40 mph late Monday. Earl is expected to develop into a hurricane and could come ashore Friday with 90-mph winds. The storm is expected to hit land somewhere between Texas and the Florida Panhandle. No watches or warnings have been immediately posted.

S. California fires claim dozens of homes

LOS ANGELES—A wildfire raging through the Juniper Flats area of California's Riverside County has burned at least 36 structures, including 26 homes, the Department of Forestry said Tuesday. The blaze has consumed 6,000 acres and already has caused an estimated \$1 million damage, according to local officials. At least five other fires are said to have been triggered by thunderstorms and were also burning in the county. This year, the situation has been made worse because the region saw tremendous plant growth due to the El Niño related wet-weather phase.

Report: No evidence of nerve gas exposure in Gulf War

WASHINGTON—There is no evidence to support the theory that exposure to nerve gas caused the mysterious illnesses of U.S. soldiers who fought in the Persian Gulf War, a Senate committee report has concluded.

But leaders of the Senate Veterans' Affairs Committee said Tuesday they believe that despite the lack of evidence, it's still possible that limited exposure to chemical weapons may be one of the reasons some troops fell ill with a range of undiagnosed ailments. "My judgement is that nerve gas is a contributing factor to Gulf War illness," said Sen. Arlen Specter (R-Pennsylvania), chairman of the committee.

Michigan ban on assisted suicide takes effect

LANSING, Michigan—Michigan's ban on assisted suicide takes effect Tuesday, angling voters in Dr. Jack Kevorkian's home state could repeal it when they head to the polls in two months. Gov. John Engler signed the assisted suicide ban into law in July. The law makes assisting in a suicide a felony punishable by up to five years in prison and a \$10,000 fine.

However, a proposal on the November 3 ballot would legalize physician-assisted suicide and automatically repeal the ban.

Duma, Yeltsin dig in heels over Chernomyrdin

MOSCOW—Russian President Boris Yeltsin and his foes in Parliament refused to yield on Tuesday over the President's choice of Prime Minister, raising the prospect of prolonged political stalemate amid a serious economic crisis. On Monday, the State Duma, or lower house of Parliament, roundly rejected Yeltsin's choice—former Prime Minister Viktor Chernomyrdin.

The speaker of the State Duma, Gennady Seleznyov, on Tuesday said the chamber's ruling council had set the second debate on Chernomyrdin's candidacy for next Monday. But he added that Chernomyrdin was unlikely to win approval.

Death toll rises in Asian floods

ASIA—Death toll rose on Tuesday in portions of Asia where natural disasters—including typhoons, floods and mudslides—have already killed thousands of people this summer and left millions more homeless. Even where flooding has stopped, starvation and disease remain a threat to large populations.

Conditions have severely worsened in India. Nearly 10 million people in 23,300 villages in Uttar Pradesh—India's most populous state—were displaced or lost their livelihood in the past three weeks, authorities said. The dead included 120 people who died of waterborne diseases. Relief volunteers said the number was expected to go up once the floodwaters started receding.

Japan hunts for North Korean missile

TOKYO—Both Japan and South Korea expressed concern Tuesday about North Korea's missile test-firing over Japanese territory. Of the two, Tokyo took the harder line, announcing it was suspending food aid to North Korea and breaking off normalization talks.

North Korea's Taepo Dong I missile has a longer range—1,200 miles (2,000 kilometers)—than an older model and is capable of reaching all of South Korea and Japan.

For four years, North Korea has been able to target all of South Korea with its shorter-range Rodong I missile, which is capable of carrying nuclear or chemical warheads.

U.N. tribunal to give first verdict on Rwanda genocide

ARUSHA, Tanzania—A U.N. tribunal will issue the world's first international court verdict on genocide Wednesday, in the 1994 slaughter of more than 500,000 minority Tutsis in Rwanda.

Jean-Paul Akayesu, an ethnic Hutu and former mayor of the central village of Taba, has maintained his innocence on 15 counts of genocide, crimes against humanity, torture and rape. His trial began in January 1997. Prosecutors accuse Akayesu of ordering the killings of 2,000 people during the three-month genocide of more than half a million ethnic Tutsis that began in April 1994.

The killings ended when mainly Tutsi rebels fought their way to power. In November 1994, the United Nations set up a tribunal to bring the leading architects of the genocide to justice.

National and World News Briefs compiled by Jeff Scepanski from the CNN Interactive Website

Registration process achieves efficiency

By Anne Monoky

After undergoing several changes, the registration and enrollment process at the University has finally reached a level of efficiency. According to the administration, a large majority of the students were appropriately accommodated during this registration period.

Don Fox, registrar, expressed great content with the progression of the process. "Registration and enrollment went rather smoothly this semester with little or no changes involved. We are always looking to revamp our processes to insure maximizing efficiency for all members of the Bucknell community."

Robert Midkiff, assistant dean of arts and sciences, agreed with Fox. "In my perspective, I think that this year was a lot better than last year with little or few glitches," he said.

However, one of the problems that Midkiff addressed was that of the long lines that students must stand in while waiting to be helped. He felt that these lines were a result of the students making changes in their schedules over the summer and trying to take care of these changes during enrollment. Another difficulty that Midkiff noted was the lack of availability of the closed and nearing capacity class lists. He felt that this made it troublesome for students to obtain signatures from their professors all within the first few days of classes.

In response to these problems, both Fox and Midkiff stressed that the office of the dean are open listen to complaints and concerns from students. "Dean Murphy and I welcome any concerns about this process. Feel free to forward those to me," said Dean Midkiff.

A final matter that many students found difficult to deal with throughout this process is the problem with credits transferring from other universities and programs.

Midkiff explained that often other universities do not send the information concerning transcripts until our university has already commenced classes. Consequently, these students do not know what credits transferred, or what classes they need to enroll in for completion of their requirements.

Midkiff elaborated, "These students' records do not get updated on time, so it looks as though they are behind. Really these other institutions have not yet sent the final transcripts until the enrollment process has begun."

Midkiff said that this often becomes the problem with students who have taken summer classes or studied abroad through other universities. He commented that these problems are the fault of these other institutions, not the students.

Halogen lamps banned

By Mark Popielarski

Halogen tertiary lights, previously found in the majority of dormitories, have been banned in residence halls at the University beginning this semester; the Committee on Complimentary Activities banned the lamps in an effort to follow a national trend toward student safety.

"They represent a serious hazard to the safety of the students," said Safety Manager James McCormick. Staff new penalties are in store for anyone caught possessing one.

The structure of halogen lamps start fires easily. These are freestanding pole lamps with a halogen bulb on top. Dust on the bulb and start fires. McCormick showed several lamps that were confiscated last year. They had melted or had burned.

Penalties are high for anyone caught with a halogen lamp. The student gets a letter of censure, confiscation of the lamp, a \$100 fine, loss of lottery number in the next room selection and loss of off-campus living privilege for the next academic year.

A Quaker Voice -

In Quaker spirituality... We reach toward God and are returned to this world changed, to embody or incarnate the Divine Spirit for others in our own faltering, fallible, flawed ways.

Paradoxically if we accept the challenge of living out of this Spirit in relationship in the variety of our encounters with the world, we are drawn still closer to God. As with the rest of our spiritual life, growth is rarely linear. It sometimes seems like a series of looping needlepoint stitches drawing us closer to one another, the world, and God in turn and turn about. At other times it may seem more like a spiral in which we swing again and again past the same point, lesson, or situation.

Excerpt from Patricia Loring, *Listening Spiritually*. BX 7748 .M92 1997

IN THE NEWS... National

Gulf Coast keeping eye on strengthening Earl

MIAMI—Tropical Storm Earl strengthened rapidly Tuesday and was expected to become the season's third hurricane as it moved on a track toward the U.S. Gulf Coast. The storm's clouds nearly filled the Gulf and one computer model projected "explosive intensification," the National Hurricane Center said. By late morning Tuesday, the storm's highest sustained winds were blowing at 60 mph, up from 40 mph late Monday. Earl is expected to develop into a hurricane and could come ashore Friday with 90-mph winds. The storm is expected to hit land somewhere between Texas and the Florida Panhandle. No watches or warnings have been immediately posted.

S. California fires claim dozens of homes

LOS ANGELES—A wildfire raging through the Juniper Flats area of California's Riverside County has burned at least 36 structures, including 26 homes, the Department of Forestry said Tuesday. The blaze has consumed 6,000 acres and already has caused an estimated \$1 million damage, according to local officials. At least five other fires are said to have been triggered by thunderstorms and were also burning in the county. This year, the situation has been made worse because the region saw tremendous plant growth due to the El Niño related wet-weather phase.

Report: No evidence of nerve gas exposure in Gulf War

WASHINGTON—There is no evidence to support the theory that exposure to nerve gas caused the mysterious illnesses of U.S. soldiers who fought in the Persian Gulf War, a Senate committee report has concluded.

But leaders of the Senate Veterans' Affairs Committee said Tuesday they believe that despite the lack of evidence, it's still possible that limited exposure to chemical weapons may be one of the reasons some troops fell ill with a range of undiagnosed ailments. "My judgement is that nerve gas is a contributing factor to Gulf War illness," said Sen. Arlen Specter (R-Pennsylvania), chairman of the committee.

Michigan ban on assisted suicide takes effect

LANSING, Michigan—Michigan's ban on assisted suicide takes effect Tuesday, although voters in Dr. Jack Keivorkian's home state could repeal it when they head to the polls in two months. Gov. John Engler signed the assisted suicide ban into law in July. The law makes assisting in a suicide a felony punishable by up to five years in prison and a \$10,000 fine.

However, a proposal on the November 3 ballot would legalize physician-assisted suicide and automatically repeal the ban.

Duma, Yeltsin dig in heels over Chernomyrdin

MOSCOW—Russian President Boris Yeltsin and his foes in Parliament refused to yield on Tuesday over the President's choice of Prime Minister, raising the prospect of prolonged political stalemate amid a serious economic crisis. On Monday, the State Duma, or lower house of Parliament, roundly rejected Yeltsin's choice—former Prime Minister Viktor Chernomyrdin.

The speaker of the State Duma, Gennady Seleznyov, on Tuesday said the chairman's ruling council had set the second debate on Chernomyrdin's candidacy for next Monday. But he added that Chernomyrdin was unlikely to win approval.

Death toll rises in Asian floods

ASIA—Death tolls rose on Tuesday in portions of Asia where natural disasters—including typhoons, floods and mudslides—have already killed thousands of people this summer and left millions more homeless. Even where flooding has stopped, starvation and disease remain a threat to large populations.

Conditions have severely worsened in India. Nearly 10 million people in 23,300 villages in Uttar Pradesh—India's most populous state—were displaced or lost their livelihood in the past three weeks, authorities said. The dead included 120 people who died of waterborne diseases. Relief volunteers said the number was expected to go up once the floodwaters started receding.

Japan hunts for North Korean missile

TOKYO—Both Japan and South Korea expressed concern Tuesday about North Korea's missile test-firing over Japanese territory. Of the two, Tokyo took the harder line, announcing it was suspending food aid to North Korea and breaking off normalization talks.

North Korea's Taepo Dong 1 missile has a longer range—1,200 miles (2,000 kilometers)—than an older model and is capable of reaching all of South Korea and Japan.

For four years, North Korea has been able to target all of South Korea with its shorter-range Rodong 1 missile, which is capable of carrying nuclear or chemical warheads.

U.N. tribunal to give first verdict on Rwanda genocide

ARUSHA, Tanzania—A U.N. tribunal will issue the world's first international court verdict on genocide Wednesday, in the 1994 slaughter of more than 500,000 minority Tutsis in Rwanda.

Jean-Paul Akayesu, an ethnic Hutu and former mayor of the central village of Taba, has maintained his innocence on 15 counts of genocide, crimes against humanity, torture and rape. His trial began in January 1997. Prosecutors accuse Akayesu of ordering the killings of 2,000 people during the three-month genocide of more than half a million ethnic Tutsis that began in April 1994.

The killings ended when mainly Tutsi rebels fought their way to power. In November 1994, the United Nations set up a tribunal to bring the leading architects of the genocide to justice.

Registration process achieves efficiency

By Anne Monoky

After undergoing several changes, the registration and enrollment process at the University has finally reached a level of efficiency. According to the administration, a large majority of the students were appropriately accommodated during this registration period.

Don Fox, registrar, expressed great content with the progression of the process. "Registration and enrollment went rather smoothly this semester with little or no changes involved. We are always looking to revamp our processes to insure maximizing efficiency for all members of the Bucknell community."

Robert Midkiff, assistant dean of arts and sciences, agreed with Fox. "In my perspective, I think that this year was a lot better than last year with little or few glitches," he said. However, one of the problems that Midkiff addressed was that the long lines that students must stand in while waiting to be helped. He felt that these lines were a result of the students making changes in their schedules over the summer and trying to take care of these changes during enrollment.

Another difficulty that Midkiff noted was the lack of availability of the closed and nearing capacity class lists. He felt that this made it troublesome for students to obtain signatures from their professors all within the first few days of classes.

In response to these problems, both Fox and Midkiff stressed that the office of the dean are open listen to complaints and concerns from students. "Dean Murphy and I welcome any concerns about this process. Feel free to forward those to me," said Dean Midkiff.

A final matter that many students found difficult to deal with throughout this process is the problem with credits transferring from other universities and programs.

Midkiff explained that often other universities do not send the information concerning transcripts until our university has already commenced classes. Consequently, these students do not know what credits transferred, or what classes they need to enroll in for completion of their requirements.

Midkiff elaborated, "These students' records do not get updated on time, so it looks as though they are behind. Really these other institutions have not yet sent the final transcripts until the enrollment process has begun."

Midkiff said that this often becomes the problem with students who have taken summer classes or studied abroad through other universities. He commented that these problems are the fault of these other institutions, not the students.

Halogen lamps banned

By Mark Popielarski

Halogen tertiary lights, previously found in the majority of dormitories, have been banned in residence halls at the University beginning this semester, the Committee on Pledgery Activities banned the lamps in an effort to follow a national trend toward student safety.

"They represent a serious hazard to the safety of the students," said Safety Manager James McCormick. Stiff new penalties are in store for anyone caught possessing one.

The structure of halogen lamps start fires easily. These are freestanding pole lamps with a halogen bulb on top. Dust and objects get on

the bulb and start fires. McCormick showed several lamps that were confiscated last year. They had melted or had burned.

Penalties are high for anyone caught with a halogen lamp. The student gets a letter of censure, confiscation of the lamp, a \$100 fine, loss of lottery number in the next room selection and loss of off-campus living privilege for the next academic year.

BID DAY

From page 1.

cohol from two events to one. "But change does not come easy at Bucknell."

The Hunt Hall celebration—in which the fraternities and sororities meet in front of Hunt Hall to introduce their pledge classes—has been moved from Saturday at 2 p.m. to Saturday at 4 p.m. All Greek members are required to be sober, an additional change from last year. Panhel also voted against the continuation of the circuit—in which the sororities travel around to every fraternity on Saturday night—due to its objectification of women.

"We felt it was unnecessary and inappropriate," said Alpha Chi Omega president Vanessa Boro '99, citing that the circuit was a Bid Day tradition and that Saturday no longer constitutes Bid Day.

For Dean of Greek Affairs Roy Baker, the decision to follow all National Bid Day policies is an exciting step in the right direction. "It is the biggest thing that we could be doing. To be able to say that the Greek System will follow the Unanimous Agreement without alcohol and parties is tremendous ... I'm so excited about this. It really sets the right tone for the rest [the pledge's] Greek experience."

The changes this year will also have a positive effect on next year's Bid Day, according to Hallagan, who expects "a lot more changes next year. This is a model to follow but next year there may be fraternity nationals that will enforce an absolute following of all changes ... it will never be the Bid Day of old."

HOUSE

From page 1.

The TKE house is not University owned. Nonetheless, according to Baker, the University has negotiated some services with the TKE alumni association including electricity and an alarm system.

"We are currently negotiating the purchasing of the house," Baker said. "We are hoping that we can negotiate a deal in which [the University] can buy the house and make the necessary repairs and bring it up to Bucknell standards suitable for living in three years."

In addition to negotiating with the University, the TKE alumni association is currently attempting to generate enough money from alumni donation for the renovations and repairs instead of selling the house. They have written to each alumni in the area asking for \$300. If enough money is not received, they will be forced to sell the house.

The TKE house was the first house scheduled to undergo the RESNET renovations this summer which created additional complications. According to Baker, "Each brother was made aware that they were not allowed to keep anything in their rooms over the summer. We couldn't even go in the [TKE] house and had to immediately change our plans."

Photo courtesy of Dean Baker

The TKE house was closed because of charges that included physical and financial mismanagement of the house. This shed was destroyed during exam week last spring.

Good or bad, change is the reality for Greeks

There are two common axioms about change: either "change is a good thing" or "if it ain't broke, don't fix it." While it is debatable whether the Bid Day of the past years was "broke" or not, it is bold fact that it is changing. Drastically.

There is little fanfare from fraternity and sorority members about the Bid Day changes, which will move Bid Day officially to Friday night and make the entire event sober and without contact with the opposite sex. In addition, the Greek system has long felt as if it is under fire. Social events have been restricted, House Party will be held in March this upcoming year—yielding to Parent's Weekend in April—and now Bid Day has been restructured.

The harsh truth is that the Greek System is under fire, both nationally and on the University campus. Last year two students died, one at LSU and one at MIT, during Greek events involving alcohol and hazing. On this campus there was a hit-and-run involving two Greek students on Bid Day, and two Greek organizations have been suspended. As unfortunate as the changes to Bid Day may seem, the basic facts are that fraternities and sororities are now being asked to follow national IFC and Panhel guidelines. Greeks may not agree with these guidelines or have a particular affinity for them, but they are here and probably will be for quite some time.

The Bid Day changes also raise a number of questions about the Greek System on campus. While rumors that the Greek System will be eliminated is mere unqualified speculation, it is clear that the Greek System is in a great state of flux. The presence of national sorority consultants this year could lead to national fraternity consultants next year. If this is to be the case, fraternities may have helped themselves by taking the initiative to alter Bid Day this year. On a larger scale, how will the restructuring of traditional events such as Bid Day and House Party affect the number of rushers and initiates for the future? Only time will be answer these questions, but these questions hold significant importance to the Greek System as it currently exists.

In benefit to the Greek System, this year's Bid Day provides the fraternities and sororities with a similar opportunity as last year's House Party. The Greek System has repeatedly claimed that it is about unity, not alcohol. These changes are another chance for Greek organizations to prove this to both the University and national community. If the Greeks can prove that they can celebrate safely and wisely, it will send a positive message to all parties involved.

For most Greeks, the Saturday Bid Day was one of the most anticipated days of the year, a celebration of being Greek and welcoming new members.

But the rules are the rules, and try as the Greek system may, those rules will not be changed this year. Remember, sometimes change is good—it enables new traditions to be formed and, in this case, could be the type of facelift the Greek System needs. It is not the ideal, but it is the reality. A reality that must be faced.

OPINIONS

First-year student examines transition

By Rebecca Rowland

I bought fifty bucks worth of underwear. Since this is basically all I did in the way of preparing for college, every night before I go to bed I pray that my first test will be on the colors available in Victoria's Secret bikini briefs. Actually, I am fairly well prepared for my classes (although a test on underwear would help my grade point average). It is the social aspect that has me confused.

As far as I am concerned, I am the epitome of cool. I have graduated from high school. I go to college and where is the party? What's that you say, the party is at a BAR? Dude, I cannot get in. Oh, I'm not invited. Remind me why not again—oh. I am a freshman. I'm a freshman? No I'm not! I'm a senior, and I have the T-shirt to prove it. I'm really a freshman. Who? Unfortunately, it is the sad truth.

Just three short months ago I was the king of the mountain. Fourteen year-olds quaked at the sight of me. I knew every teacher, what I could get away with and how to pass a class without doing any of the homework. Now, not only do I not know the teachers but they are not even teachers anymore, they are professors. Am I still a student or am I some fancy synonym, too, like a pupil? And what is with this seven books for one class deal? I had a class like that in high school, it was called "Library Aid."

Now, don't get me wrong. I am thrilled to be out of my house and living in a closet (I have a dingle and I'm fairly sure "dingle" means "small," claustrophobia-inducing place where you bump your head a lot" in some other language). No more nagging parents, whiny little siblings or boring nights where you and your friends drive around your hometown saying "I cannot wait to get to college, once I'm there I'll never have a dull moment again."

I didn't cry when I left home. To me, that seems like an innate crying when his parole is approved. I was so excited, I would talk to anyone about Bucknell. During Beach Week, on an Ocean City, Maryland bus, I

talked for a very long time about Bucknell to some girl from Denmark (anyone who's been to Ocean City during Beach Week can understand my behavior. Let's just say that after the poor girl got off the bus I started doing "bus flips").

One part of domestic life that I do miss, though, is my kitchen (or rather my Mom cooking in my kitchen). Who knew that so many deli-

cious dishes could be heated in a microwave. I think the university should send each freshman a copy of "So You Like Your Food Luke-warm: How to Learn to Love Your Microwave." There is, of course, the cafeteria or The Bison. They both have good food, but sometimes I want popcorn or hot chocolate RIGHT NOW!

I guess being a freshman, just

like everything else in life, has its pros and cons. You are out of your house, but you are out of your house. Classes are more interesting, but they are also longer and more difficult. You have all of this responsibility, but if you screw up, it is nobody's fault but your own. I'm ready, are you? Good. Now if you'll pardon me, I have to go memorize my underwear. Hey, it can't hurt!

Over-the-counter steroid adds controversy to home run chase

By Meredith Shreiner

Mark McGwire is the mammoth St. Louis slugger whose skill captivates both baseball fans as well as those of us across the nation who do not follow the intricacies of the game. His heated race with Sammy Sosa to break Roger Maris' 1961 record of 61 home runs in one season is only part of the story. The tension that will ensue over the next several weeks is caused by an issue far more pressing: his admitted use of a quasi-legal drug called Androstenedione.

Androstenedione is an over-the-counter steroid banned in many sports, including both the National Football League and the Olympics. In baseball, however, the drug has not yet been outlawed. No matter how deleterious the effects of the drug may be, Mark McGwire is breaking no baseball rules; nor should he be punished for using that, while they may exist in the future, do not exist at this time.

On Sunday, August 30, McGwire hit home run number 55, leaving him 26 games to score only seven more home runs. Sammy Sosa was trailing by four runs. On Monday, however, Sosa counter-attacked and hit the tie-breaking 55th run. If both of them break Maris' record, who de-

serves the new title? Sosa has not admitted to using androstenedione. While some may argue that this makes his accomplishment even more remarkable, numbers do not lie. If McGwire hits more home runs than Sosa without the use of any illegal steroid, he deserves the credit.

Androstenedione has not

complishments may be "qualified" is unjustifiable because he was never informed that his actions were questionable.

If an 18-year-old bought a pack of cigarettes the day before a law was passed making the legal purchasing age of cigarettes 21, should he be punished? Even if the 18-year-old realizes that smoking is wrong, he has not broken the law.

This parallels Mark McGwire's situation. He cannot legitimately be punished for doing something legal, even if it may be morally questionable. We cannot judge McGwire's moral code. We can only analyze the situation from a legal stance and act accordingly.

There is no law prohibiting McGwire from taking the legal steroid androstenedione. If it does become illegal this season, McGwire still has every right to count the home runs that he scored while on the steroid. He may have damaged himself by taking a drug which still has unknown side effects. In addition, he may have had an unfair advantage over Sammy Sosa, who did not have the same edge. Nonetheless, McGwire did nothing and did nothing illegal. Sports records are broken all the time; maybe it is McGwire's turn.

changed McGwire from an underdeveloped, small man into the muscular giant he now is. In his rookie year, 1987, McGwire hit an amazing 49 home runs. He is a natural athlete who deserves the recognition he has earned. This season, he deserves the honor of beating Maris' long held record. McGwire never lied about using the drug. He knew that he was doing nothing wrong and consequently, he knew that he had nothing to fear. The fact that his ac-

A bully in the neighborhood?

The United States' war on terrorism raises questions of respect and ideology

By Chris Beatty

Let's assume for a minute that you live in a small, peaceful neighborhood and you are, by far, the most powerful person in that neighborhood. In times of trouble you helped to write and enforce the laws that govern the citizens. Now it is relatively peaceful, although your enemies are subtly attacking you and your friends. You alone have the power to take care of this problem and rid the neighborhood of these people. But, to get to your enemies, you have to break the laws that you helped to write. Your power will ensure that you can do this without fear of retribution from the community.

Your reputation throughout the neighborhood is that you are honorable and law abiding. You don't break the laws and encourage others to follow your lead. If you are to rid the neighborhood of your enemies, you must become a hypo-

cite. What do you do? Do you ignore ideology to save yourself and friends from trouble, or do you stand by your long held tenets regarding law and order?

The relevance of this little story lies in the recent world event of the American sorties into Afghanistan and Sudan. In his speech explaining the reasons for and the results of the attacks, Bill Clinton implied that the United States will no longer respect the territorial

rights of any country that harbors terrorists. The US military will bomb terrorist facilities regardless of location, with or without the blessing of the countries themselves. The undertones of his speech hinted that this marked the beginning of a new American war on terrorism, without regard for foreign countries' sovereign rights or people. This is a clear violation of the laws of international diplomacy, but Bill Clinton's

speech made it clear that the United States does not care about the laws that it helped write and promote. It cares only for the American ability to deal with its enemies. The United States is the only country in the world whose military hand extends to every square inch of the globe. This world hegemony is a unique situation. The question arises, what should we do with this power? Should we use it to crush our enemies and bring "righteousness" to the world? Should we use it only to protect our citizens? Or all allied citizens? Or all citizens of the world? Because we are strong, we have the ability to bring our ways, the "right ways," to the world. Specifically, nations who support terrorism. We have the military and economic might to accomplish this, but is it right? What is more important, American lives or the American ideology?

Chelsea's situation is not unique

Like others who have dealt with parents' adultery, first daughter needs support

By Emily Novick

It is difficult to imagine oneself in the shoes of Chelsea Clinton. Growing up in the White House, her adolescent years were constantly monitored by the country. Every awkward phase, every fashion miscue and every personal moment was shared with the world. So envision Chelsea right now while the country's political agenda revolves around the inappropriate behavior of the President, her daddy.

Sadly, it is only at this point that many college kids can relate to Chelsea. Thousands of kids have been confronted with situations where they are forced to use terms such as mistress and adultery in connection with their mothers or fathers. They are forced to conquer and overcome the obstacles which may attempt to destroy their core, their family.

This country has finally accepted the notion that the "Leave it to Beaver" lifestyle has been

eradicated and that America's family structure has altered a bit. But even though the country has accepted it, that doesn't mean that we know how to handle it emotionally.

The news is exploding with the reactions of Hillary and how she is dealing with the President's apology. The country follows the Clinton family to their vacations at Martha's Vineyard and through the lens of a camera, people attempt to interpret body language. Every major magazine has published advice to Hillary from other famous people that have encountered similar situations. Every woman in America feels for Hillary's current situation. They both step back in awe and admire her determined attitude and strong self-worth, or they shake their heads in disappointment praying that she will leave him any day now.

Chelsea is practically being removed from the situation as possibly an act of protection, done on purpose to prevent her from experiencing more pain.

However, Chelsea should not be placed aside, but instead she should be made a priority. She is a regular college kid whose father was unfaithful to her mother. Kids go through hours and hours of extensive therapy to deal with this harsh fact. In those situations, the problems experienced stay within the family.

Instead, Chelsea's family troubles are proclaimed to the world. Imagine hearing stories everywhere about your father's promiscuous sex life. Chelsea cannot watch the news, which is exploding with story after story on the "scandal." She cannot watch late night television because Jay Leno's monologue has consisted of nothing but Clinton jokes since February. She also cannot read a newspaper. These gestures of the media make it that much more difficult to begin a long and difficult healing process.

Chelsea needs to be advised. She needs help coping with this overwhelming situation. From an outsider's view, it does not seem

as if anything is being done to help Chelsea. Hopefully, from behind closed doors the view is different.

SURVEY

DO YOU THINK THAT THE MONICA LEWINSKY INCIDENT HAS AFFECTED PRESIDENT CLINTON'S ABILITY TO LEAD THE COUNTRY?

"Since it has decreased people's trust in him, it has adversely affected his ability to lead the country."
Andrew Butula '01

"Definitely. I think that he is a weaker figure now. I no longer believe him nor respect him, and I do not think that he has the ability to lead the country."
Sonan Tashi '02

"In some ways, I'd say yes. It is a distraction of sorts and time away from more important issues."
John Lange '01

"Based on the crisis that is going on internationally, he doesn't seem to be directly affected in his role as a leader by Lewinsky. However, he is taking certain actions, such as bombing terrorist sites, to alert everybody that he is the leader. Obviously, he is trying to prove something."

Clinic incident raises new abortion issue

By Maren Johnson

Out of all the controversy surrounding abortion, there is one point of contention that does not seem to have been given much thought. If a woman refuses to have an abortion, due to a traumatic experience, does she have the right to sue the abortion clinic for "wrongful birth"?

This is the question now facing the Preterm abortion clinic in Brookline, Massachusetts. Apparently, Deborah Gaines, a 31-year-old woman, frantically left the clinic four years ago when a man opened fire in the lobby. She claims that the experience left her far too terrified to return to any abortion clinic and subsequently gave birth to baby Vivian. Gaines decided to keep Vivian, but feels that Preterm owes her a great deal of financial support in raising her child.

The question here is whether or not Gaines has sufficient grounds to request this financial support. It is not necessarily a matter of whether her decision to go through with an abortion is right or wrong, as no one but herself can understand her emotional status following the traumatic incident. But whether she is being fair in asking for child support from the abortion clinic remains a question.

The controversy seems to be that the Brookline Clinic is not truly at fault in this situation. The shooting that occurred there in 1994 is no more their responsibility than if the clinic had been struck by lightning. It is pure coincidence that Gaines happened to have an appointment on the day of the shooting, but she is now claiming that the clinic owes her support. What about the people that died in the shooting? Should Preterm have to pay their families' funeral bills? What about the other women who were there that day? Should Preterm have to refund them for abortions they may have gotten elsewhere? Why didn't Gaines consider giving Vivian up for adoption so that she could be raised by a family with the resources to support her? Questions such as these make one wonder about the validity of Gaines' suit.

Although one cannot deny that this woman may need financial assistance, it does not appear that Preterm bears enough responsibility for Gaines' "wrongful birth" to have to give her any sort of financial support.

Good or bad, change is the reality for Greeks

There are two common axioms about change: either "change is a good thing" or "if it ain't broke, don't fix it." While it is debatable whether the Bid Day of the past years was "broke" or not, it is bold fact that it is changing. Drastically. There is little fanfare from fraternity and sorority members about the Bid Day changes, which will move Bid Day officially to Friday night and make the entire event sober and without contact with the opposite sex. In addition, the Greek system has long felt as if it is under fire. Social events have been restricted. House Party will be held in March this upcoming year—yielding to Parent's Weekend in April—and now Bid Day has been restructured.

The harsh truth is that the Greek System is under fire, both nationally and on the University campus. Last year two students died, one at LSU and one at MIT, during Greek events involving alcohol and hazing. On this campus there was a hit-and-run involving two Greek students on Bid Day, and two Greek organizations have been suspended. As unfortunate as the changes to Bid Day may seem, the basic facts are that fraternities and sororities are now being asked to follow national IFG and Panhel guidelines. Greeks may not agree with these guidelines or have a particular affinity for them, but they are here and probably will be for quite some time.

The Bid Day changes also raise a number of questions about the Greek System on campus. While rumors that the Greek System will be eliminated is mere unqualified speculation, it is clear that the Greek System is in a great state of flux. The presence of national sorority consultants this year could lead to national fraternity consultants next year. If this is to be the case, fraternities may have helped themselves by taking the initiative to alter Bid Day this year. On a larger scale, how will the restructuring of traditional events such as Bid Day and House Party affect the number of rushers and initiates for the future? Only time will be answer these questions, but these questions hold significant importance to the Greek System as it currently exists.

In benefit to the Greek System, this year's Bid Day provides the fraternities and sororities with a similar opportunity as last year's House Party. The Greek System has repeatedly claimed that it is about unity, not alcohol. These changes are another chance for Greek organizations to prove this to both the University and national community. If the Greeks can prove that they can celebrate safely and wisely, it will send a positive message to all parties involved.

For most Greeks, the Saturday Bid Day was one of the most anticipated days of the year, a celebration of being Greek and welcoming new members.

But the rules are the rules, and try as the Greek system may, those rules will not be changed this year. Remember, sometimes change is good—it enables new traditions to be formed and, in this case, could be the type of facelift the Greek System needs. It is not the ideal, but it is the reality. A reality that must be faced.

OPINIONS

First-year student examines transition

By Rebecca Rowland

I bought fifty bucks worth of underwear. Since this is basically all I did in the way of preparing for college, every night before I go to bed I pray that my first test will be on the colors available in Victoria's Secret bikini briefs. Actually, I am fairly well prepared for my classes (although a test on underwear would help my grade point average). It is the social aspect that has me confused.

As far as I am concerned, I am the epitome of cool. I have graduated from high school, I go to college and where is the party? What's that you say, the party is at a BAR? Dude, I cannot get in. Oh, I'm not invited. Remind me why not again-oh, I am a freshman. I'm a freshman? No I'm not! I'm a senior, and I have the T-shirt to prove it. I'm really a freshman, huh? Unfortunately, it is the sad truth.

Just three short months ago I was the king of the mountain. Fourteen year-olds quaked at the sight of me. I knew every teacher, what I could get away with and how to pass a class without doing any of the homework. Now, not only do I not know the teachers but they are professors. Am I still a student or am I some fancy synonym, too, like a pupil? And what is with this seven books for one class deal? I had a class like that in high school, it was called "Library Aid."

Now, don't get me wrong, I am thrilled to be out of my house and living in a closet (I have a dingle and I'm fairly sure "dingle" means "small, claustrophobia-inducing place where you bump your head a lot" in some other language). No more nagging parents, whiny little siblings or boring nights where you and your friends drive around your hometown saying "I cannot wait to get to college, once I'm there I'll never have a dull moment again."

I didn't cry when I left home. To me, that seems like an inmate crying when his parole is approved. I was so excited, I would talk to anyone about Bucknell. During Beach Week, on an Ocean City, Maryland bus, I

talked for a very long time about Bucknell to some girl from Denmark (anyone who's been to Ocean City during Beach Week can understand my behavior. Let's just say that after the poor girl got off the bus I started doing "bus flips").

One part of domestic life that I do miss, though, is my kitchen (or rather my Mom cooking in my kitchen). Who knew that so many deli-

cious dishes could be heated in a microwave. I think the university should send each freshman a copy of "So You Like Your Food Luke-warm? How to Learn to Love Your Microwave." There is, of course, the cafeteria or The Bison. They both have good food, but sometimes I want popcorn or hot chocolate RIGHT NOW!

I guess being a freshman, just

like everything else in life, has its pros and cons. You are out of your house, but you are out of your house. Classes are more interesting, but they are also longer and more difficult. You have all of this responsibility, but if you screw up, it is nobody's fault but your own. I'm ready, are you? Good. Now if you'll pardon me, I have to go memorize my underwear. Hey, it can't hurt!

Over-the-counter steroid adds controversy to home run chase

By Meredith Shreiner

Mark McGwire is the mammoth St. Louis slugger whose skill captivates both baseball fans as well as those of us across the nation who do not follow the intricacies of the game. His heated race with Sammy Sosa to break Roger Maris' 1961 record of 61 home runs in one season is only part of the story. The tension that will ensue over the next several weeks is caused by an issue far more pressing, his admitted use of a quasi-legal drug called Androstenedione.

Androstenedione is an over-the-counter steroid banned in many sports, including both the National Football League and the Olympics. In baseball, however, the drug has not yet been outlawed. No matter how deleterious the effects of the drug may be, Mark McGwire is breaking no baseball rules; nor should he be punished for rules that, while they may exist in the future, do not exist at this time.

On Sunday, August 30, McGwire hit home run number 55, leaving him 26 games to score only seven more home runs. Sammy Sosa was trailing by four runs. On Monday, however, Sosa counter-attacked and hit the tie-breaking 55th run. If both of them break Maris' record, who de-

veloped, small man into the muscular giant he now is. In his rookie year, 1987, McGwire hit an amazing 49 home runs. He is a natural athlete who deserves the recognition he rightly earns. This season, he deserves the honor of beating Maris' long held record. McGwire never lied about using the drug. He knew that he was doing nothing wrong and did nothing illegal. Sports records are broken all the time; maybe it is McGwire's turn.

A bully in the neighborhood?

The United States' war on terrorism raises questions of respect and ideology

By Chris Beatty

Let's assume for a minute that you live in a small, peaceful neighborhood and you are, by far, the most powerful person in that neighborhood. In times of trouble you helped to write and enforce the laws that govern the citizens. Now it is relatively peaceful, although your enemies are subtly attacking you and your friends. You alone have the power to take care of this problem and rid the neighborhood of these people. But, to get to your enemies, you have to break the laws that you helped to write. Your power will ensure that you can do this without fear of retribution from the community.

Your reputation throughout the neighborhood is that you are honorable and law abiding. You don't break the laws and encourage others to follow your lead. If you are to rid the neighborhood of your enemies, you must become a hypo-

crit. What do you do? Do you ignore ideology to save yourself and friends from trouble, or do you stand by your long held tenets regarding law and order?

The relevance of this little story lies in the recent world event of the American sororities into Afghanistan and Sudan. In his speech explaining the reasons for and the results of the attacks, Bill Clinton implied that the United States will no longer respect the territorial

rights of any country that harbors terrorists. The US military will bomb terrorist facilities regardless of location, with or without the blessing of the countries themselves. The undertones of his speech hinted that this marked the beginning of a new American war on terrorism, without regard for foreign countries' sovereign rights or people. This is a clear violation of the laws of international diplomacy, but Bill Clinton's

speech made it clear that the United States does not care about the laws that it helped write and promote. It cares only for the American ability to deal with its enemies.

The United States is the only country in the world whose military hand extends to every square inch of the globe. This world hegemony is a unique situation. The question arises, what should we do with this power? Should we use it to crush our enemies and bring "righteousness" to the world? Should we use it only to protect our citizens? Or all allied citizens? Or all citizens of the world? Because we are strong, we have the ability to bring our ways, the "right ways," to the world. Specifically, nations who support terrorism. We have the military and economic might to accomplish this, but is it right? What is more important, American lives or the American ideology?

Chelsea's situation is not unique

Like others who have dealt with parents' adultery, first daughter needs support

By Emily Novick

It is difficult to imagine oneself in the shoes of Chelsea Clinton. Growing up in the White House, her adolescent years were constantly monitored by the country. Every awkward phase, every fashion miscue and every personal moment was shared with the world. So envision Chelsea right now while the country's political agenda revolves around the inappropriate behavior of the President, her daddy.

Sadly, it is only at this point that many college kids can relate to Chelsea. Thousands of kids have been confronted with situations where they are forced to use terms such as mistress and adultery in connection with their mothers or fathers. They are forced to conquer and overcome the obstacles which may attempt to destroy their core, their family.

This country has finally accepted the notion that the "Leave it to Beaver" lifestyle has been

eradicated and that America's family structure has altered a bit. But even though the country has accepted it, that doesn't mean that we know how to handle it emotionally.

The news is exploding with the reactions of Hillary and how she is dealing with the President's apology. The country follows the Clinton family to their vacations at Martha's Vineyard and through the lens of a camera, people attempt to interpret body language. Every major magazine has published advice to Hillary from other famous people that have encountered similar situations. Every woman in America feels for Hillary's current situation. They both step back in awe and admire her determined attitude and strong self-worth, or they shake their heads in disappointment praying that she will leave him any day now.

Chelsea is practically being removed from the situation as possibly an act of protection, done on purpose to prevent her from experiencing more pain.

However, Chelsea should not be placed aside, but instead she should be made a priority. She is a regular college kid whose father was unfaithful to her mother. Kids go through hours and hours of extensive therapy to deal with this harsh fact. In those situations, the problems experienced stay within the family.

Instead, Chelsea's family troubles are proclaimed to the world. Imagine hearing stories everywhere about your father's promiscuous sex life. Chelsea cannot watch the news, which is exploding with story after story on the "scandal." She cannot watch late night television because Jay Leno's monologue has consisted of nothing but Clinton jokes since February. She also cannot read a newspaper. These gestures of the media make it that much more difficult to begin a long and difficult healing process.

Chelsea needs to be advised. She needs help coping with this overwhelming situation. From an outsider's view, it does not seem

as if anything is being done to help Chelsea. Hopefully, from behind closed doors the view is different.

Clinic incident raises new abortion issue

By Maren Johnson

Out of all the controversy surrounding abortion, there is one point of contention that does not seem to have been given much thought. If a woman refuses to have an abortion, due to a traumatic experience, does she have the right to sue the abortion clinic for "wrongful birth"?

This is the question now facing the Preterm abortion clinic in Brookline, Massachusetts. Apparently, Deborah Gaines, a 31-year-old woman, frantically left the clinic four years ago when a man opened fire in the lobby. She claims that the experience left her far too terrified to return to any abortion clinic and subsequently gave birth to baby Vivian. Gaines decided to keep Vivian, but feels that Preterm owes her a great deal of financial support in raising her child.

The question here is whether or not Gaines has sufficient grounds to request this financial support. It is not necessarily a matter of whether her decision to go through with an abortion is right or wrong, as no one but herself can understand her emotional status following the traumatic incident. But whether she is being fair in asking for child support from the abortion clinic remains a question.

The controversy seems to be that the Brookline Clinic is not truly at fault in this situation. The shooting that occurred there in 1994 is no more their responsibility than if the clinic had been struck by lightning. It is pure coincidence that Gaines happened to have an appointment on the day of the shooting, but she is now claiming that the clinic owes her support. What about the people that died in the shooting? Should Preterm have to pay their families' funeral bills? What about the other women who were there that day? Should Preterm have to refund them for abortions they may have gotten elsewhere? Why didn't Gaines consider giving Vivian up for adoption so that she could be raised by a family with the resources to support her? Questions such as these make one wonder about the validity of Gaines' suit.

Although one cannot deny that this woman may need financial assistance, it does not appear that Preterm bears enough responsibility for Gaines' "wrongful birth" to have to give her any sort of financial support.

SURVEY

DO YOU THINK THAT THE MONICA LEWINSKY INCIDENT HAS AFFECTED PRESIDENT CLINTON'S ABILITY TO LEAD THE COUNTRY?

"Since it has decreased people's trust in him, it has adversely affected his ability to lead the country."
Andrew Butula '01

"Definitely. I think that he is a weaker figure now. I no longer believe him nor respect him, and I do not think that he has the ability to lead the country."
Sonan Tashi '02

"In some ways, I'd say yes. It is a distraction of sorts and time away from more important issues."
John Lange '01

"Based on the crisis that is going on internationally, he doesn't seem to be directly affected in his role as a leader by Lewinsky. However, he is taking certain actions, such as bombing terrorist sites, to alert everybody that he is the leader. Obviously, he is trying to prove something."
June Kim '00

"I don't that it has changed his ability; what ability he had before, he still has. However, it reflects badly on his office."
Matt Griffin '02

"No I don't think it does because it is a personal issue and he can still run the country the same as before."
Ben Payne '99

"Yes, I do, because it takes his attention away from other issues and problems that are facing the country."
Kara Koppenhaver '01

BAC plans fun for all

By Christina Jenckes

Here's the deal: it is a Saturday night and you can't find anything to do. The fraternities are not having any dance parties and the exciting night life of Lewisburg has you bored already. Your friends are probably going to stay in and watch movies again because you don't have cable. You are anxious to go out. So who do you turn to so you can have some fun? You turn to the Bucknell Activities Council, otherwise known as BAC.

BAC plans exciting events every weekend in case you find yourself with nothing to do. Julie Fitzgerald, assistant director of campus activities and programs said, "There is a wide range of events, something for everyone."

This fall, BAC takes control of activities at the University by organizing such programs as Casino Night, the coffeehouse every Wednesday night, and a tribute to Garth Brooks including hay rides and country music. BAC also plans a spectacular lineup of concerts including the popular bands Rusted Root, Brownie Mary and a Beatles look-alike band.

Coming this fall, BAC will sponsor many blockbuster movies beginning with *Titanic* playing this Wednesday. Other movies will include *Saving Private Ryan*, *The Truman Show* and *The Man in the Iron Mask*. The cost is one dollar and the movies play every Wednesday and Saturday nights at 10:30 p.m. in the L.C. Forum.

If you are anxious to leave campus for a while, BAC will be having several trips this fall. Trips to New York City and Baltimore for an Orioles game are planned.

The upcoming Fall Parents' Weekend, BAC even has some events for you and your parents to enjoy. They sponsor that long-standing tradition of Christy's, a night of music from the University's a cappella groups Two Past Midnight, The Silhouettes, and The Bison Chips in the Rooke Chapel.

Other events to look forward to this semester include the Harlem Wizards basketball game versus the University faculty and students, a swing band that teaches swing dance lessons, and Steve Banachek, a famous hypnotist.

With all the exciting events that BAC has going on this fall, you'll never be left wondering what to do. It's your decision. You know what to do and you know where it is.

The rock band Brownie Mary will play this Saturday, sponsored by the Bucknell Activities Council. This Pittsburgh-based band began by playing college parties and now have a record deal with Blackbird/Sire Records. The latest album *Naked* follows the two independent releases *That's Me* (1994) and *Who's Your Daddy?* (1995). Listen and dance to Brownie Mary's music this Saturday at 8 p.m. in Smith quad.

Music Reviews

Garbage & Rammstein

By Andy Burge

Garbage: *Version 2.0*
© 1998 Alamo Sounds

I know this album has been sitting on the shelves for a while, but it was released after my last review of the school year. For this reason, I decided to make sure that it was the first album to be reviewed this year. After three years of working in the studio and touring, Garbage came out with *Version 2.0*, a follow-up to their self-titled album. Without a doubt, this was one of the best albums, if not the best one, to come out this summer or possibly this year.

Garbage has created a style that is all their own. They proved themselves on their debut album, but it seemed to be lacking something, such as depth to their sound. Whatever the problem, they found it. This is a remarkable album by all standards. Garbage masterfully combines electronica sounds with those of the pop world. With a producer like Butch Vig and the voice of Shirley, how could success not be seen in their future?

Even though *Version 2.0* only peaked at 13 and is currently in the seventies on the charts, I consider that to be a blessing for the band. I want people to buy music because they love it, not because everybody else is listening to it and therefore have to have it.

Version 2.0 opens with "Temptation Awaits," a song that sets the pace for the rest of the album. This song introduces most, but not all, of the facets of their style. To date, Garbage has only released two singles: "I Think I'm Paranoid" and "Push It." A third will come out at the end of the month. "Push It" is probably the most recognized song on the album since it was used as the CD promoter.

Not only does Garbage produce great songs with their musical master Vig, they also produce outstanding videos as well. If you have not seen either video, they appear on their homepage in their entirety. Garbage has creatively and successfully combined the genres of rock and electronica to produce a sound that is all their own and a standard for future music.

Rammstein: *Schmeißt*
© 1997 Motor Music

I was introduced to this group a couple of years ago with release of the "Lost Highway Soundtrack." Rammstein was formed in the beginning of 1994 with six musicians from the Berlin area. Within a year, they were picked up by Motor Music, a sub of Polygram. They wasted no time in producing their debut album, *Herzeleid* (Heartbreak). After a brief hiatus, Rammstein is back with their sophomore set, *Schmeißt* (Hunger).

If you are unfamiliar with the sounds of Rammstein, they are an industrial band that forms a great mix with hard-hitting guitar. The majority of the album is at a medium pace that is not too hard, so it does not scare away people who are afraid that their style might be too hard-hitting for their tastes. Even though their style is nothing new, they do possess a lead singer with a most unique voice.

The most notable song on the album is "Du Hast" (You Hate). The released single was accompanied by an outstanding video as well. On "Klavier" (Piano), Till Lindemann shows us his softer side with a love ballad. At the end of the album, there are two bonus tracks, one being "Du Hast," for those who don't feel like translating into English.

Rammstein is a good choice for someone who is looking for something different. It is a pleasant change of pace. I do have to remind you that their style is not for everybody. One certainty is that Rammstein puts on a great live performance that leaves you wanting more. From fire to shoes that shoot fireworks, Rammstein has it all.

Bucknell Activities Council Fall 1998 Schedule

Friday, September 4
*Game Show Night: "Singed Out!"
9 p.m. in the Bison

Saturday, September 5
*Rickett's Glen Day Trip
Depart downhill Langone Center at 10 a.m.
*Wal-Mart Shuttle
Depart downhill Langone Center every 30 minutes
from noon until 3:30 p.m.
*Live Band: Brownie Mary
8 p.m. in Smith Quad

Friday, September 11
*Casino Night with Psychic Jim Karol
10 p.m. in the Terrace Room

Saturday, September 12
*Baltimore Trip with Orioles Tickets
Depart downhill LC at noon
*Bucknell Squares Game with entertainment
by Slightly Ripe, 7 p.m. in Vedder

Tuesday, September 15
*Musical Comedy: Romanovsky & Phillips
Sponsored by FLAG&B and LGB
9 p.m. in Larison

Saturday, September 19
*Dean Simmons: A Tribute to Garth Brooks
9 p.m. in Larison

Parents' Weekend: September 25 & 26
*Christy's: Bison Chips, Silhouettes and Two Past Midnight
8 p.m. in Rooke Chapel

Friday, October 2
*Rusted Root and Special Guest
8 p.m. in the Fieldhouse

Saturday, October 3
*New York City Trip
Depart downhill Langone Center at 7 a.m.
*Bloomsburg Fair Shuttle
Depart downhill Langone Center at 2 p.m.
*Lisa Cerbone, acoustic guitarist and vocalist
9 p.m. in the Bison

Saturday, October 7
*Trivia Game Show: Think Fast
9 p.m. in the Bison

Friday, October 23
*Imagine: The Beatles Tribute
Cosponsored with Office of Alumni and Parent Relations

Saturday, October 31
*Murder Mystery Dinner
7 p.m. in the Terrace Room

Friday, November 6
*Five O'Clock Shadow, six man a cappella
9 p.m. in the Bison

Friday, November 13
*Comedian Eric O'Shea
9 p.m. in the Forum

Saturday, November 14
*Wizards versus Bucknell
7:30 p.m. in the Davis Gym

Saturday, November 21
*Mentalist, Hypnotist Steve Banachek
9 p.m. in the Bison

Friday, December 4
*BAC Bingo
10 p.m. in the Terrace Room

Saturday, December 5
*New York City Trip
Depart downhill Langone center at 7 a.m.

Every Wednesday Night
*Coffeehouse featuring performances
The Bison

Every Wednesday and Saturday Night
*BAC Films
10:30 p.m. in the Forum

Every Friday and Saturday
*Susquehanna Valley Mall Shuttle Service
Friday: Departs downhill LC at 6 & 8:45 p.m.
Saturday: Departs downhill LC at 3, 6 & 8:45 p.m.

BAC plans fun for all

By Christina Jenckes

Here's the deal: it is a Saturday night and you can't find anything to do. The fraternities are not having any dance parties and the exciting night life of Lewisburg has you bored already. Your friends are probably going to stay in and watch movies again because you don't have cable. You are anxious to go out. So who do you turn to so you can have some fun? You turn to the Bucknell Activities Council, otherwise known as BAC.

BAC plans exciting events every weekend in case you find yourself with nothing to do. Julie Fitzgerald, assistant director of campus activities and programs said, "There is a wide range of events, something for everyone."

This fall, BAC takes control of activities at the University by organizing such programs as Casino Night, the coffeehouse every Wednesday night, and a tribute to Garth Brooks including hay rides and country music. BAC also plans a spectacular line-up of concerts including the popular bands Rustied Root, Brownie Mary and a Beatles look-alike band.

Coming this fall, BAC will sponsor many blockbuster movies beginning with *Titanic* playing this Wednesday. Other movies will include *Saving Private Ryan*, *The Truman Show* and *The Man in the Iron Mask*. The cost is one dollar and the movies play every Wednesday and Saturday nights at 10:30 p.m. in the L.C. Forum.

If you are anxious to leave campus for a while, BAC will be having several trips this fall. Trips to New York City and Baltimore for an Orioles game are planned.

The upcoming Fall Parents' Weekend, BAC even has some events for you and your parents to enjoy. They sponsor that long-standing tradition of Christy's, a night of music from the University's a cappella groups Two Past Midnight, The Silhouettes, and The Bison Chips in the Rooke Chapel.

Other events to look forward to this semester include the Harlem Wizards basketball game versus the University faculty and students, a swing band that teaches swing dance lessons, and Steve Banachek, a famous hypnotist.

With all the exciting events that BAC has going on this fall, you'll never be left wondering what to do. It's your decision. You know what to do and you know where it is.

photo courtesy of Larry Busacca and the Blackbird Recording Company

The rock band Brownie Mary will play this Saturday, sponsored by the Bucknell Activities Council. This Pittsburgh-based band began by playing college parties and now have a record deal with Blackbird/Sire Records. The latest album *Naked* follows the two independent releases *That's Me* (1994) and *Who's Your Daddy?* (1995). Listen and dance to Brownie Mary's music this Saturday at 8 p.m. in Smith quad.

Music Reviews

Garbage & Rammstein

By Andy Burge

Garbage: *Version 2.0*
© 1998 Alamo Sounds

I know this album has been sitting on the shelves for a while, but it was released after my last review of the school year. For this reason, I decided to make sure that it was the first album to be reviewed this year. After three years of working in the studio and touring, Garbage came out with *Version 2.0*, a follow-up to their self-titled album. Without a doubt, this was one of the best albums, if not the best one, to come out this summer or possibly this year.

Garbage has created a style that is all their own. They proved themselves on their debut album, but it seemed to be lacking something, such as depth to their sound. Whatever the problem, they found it. This is a remarkable album by all standards. Garbage masterfully combines electronica sounds with those of the pop world. With a producer like Butch Vig and the voice of Shirley, how could success not be seen in their future?

Even though *Version 2.0* only peaked at 13 and is currently in the seventies on the charts, I consider that to be a blessing for the band. I want people to buy music because they love it, not because everybody else is listening to it and therefore have to have it.

Version 2.0 opens with "Temptation Awaits," a song that sets the pace for the rest of the album. This song introduces most, but not all, of the facets of their style. To date, Garbage has only released two singles: "I Think I'm Paranoid" and "Push It." A third will come out at the end of the month. "Push It" is probably the most recognized song on the album since it was used as the CD promoter.

Not only does Garbage produce great songs with their musical master Vig, they also produce outstanding videos as well. If you have not seen either video, they appear on their homepage in their entirety. Garbage has creatively and successfully combined the genres of rock and electronica to produce a sound that is all their own and a standard for future music.

Rammstein: *Sehnsucht*
© 1997 Motor Music

I was introduced to this group a couple of years ago with release of the "Lost Highway Soundtrack." Rammstein was formed in the beginning of 1994 with six musicians from the Berlin area. Within a year, they were picked up by Motor Music, a sub of Polygram. They wasted no time in producing their debut album, *Herzeleid* (Heartbreak). After a brief hiatus, Rammstein is back with their sophomore set, *Sehnsucht* (Hunger).

If you are unfamiliar with the sounds of Rammstein, they are an industrial band that forms a great mix with hard-hitting guitar. The majority of the album is at a medium pace that is not too hard, so it does not scare away people who are afraid that their style might be too hard-hitting for their tastes. Even though their style is nothing new, they do possess a lead singer with a most unique voice.

The most notable song on the album is "Du Hast" (You Hate). The released single was accompanied by an outstanding video as well. On "Klavier" (Piano), Till Lindemann shows us his softer side with a love ballad. At the end of the album, there are two bonus tracks, one being "Du Hast," for those who don't feel like translating into English.

Rammstein is a good choice for someone who is looking for something different. It is a pleasant change of pace. I do have to remind you that their style is not for everybody. One certainty is that Rammstein puts on a great live performance that leaves you wanting more. From fire to shoes that shoot fireworks, Rammstein has it all.

Bucknell Activities Council Fall 1998 Schedule

Friday, September 4
*Game Show Night: "Singled Out"
9 p.m. in the Bison

Saturday, September 5
*Rickett's Glen Day Trip
Depart downhill Langone Center at 10 a.m.

FEATURES

Father Moran welcomes students with a smile 11-year priest replaces the departed Father Jack Kelly

By Beth Slaby

As last semester came to a close, members of the Catholic community were left in suspense as to who would replace the departing Catholic minister, Jack Kelly. On Monday morning, I ventured over to Newman House to interview and get to know Father Marty Moran, the new priest on campus.

When I opened the door, I was confronted by a warm, congenial atmosphere. I immediately began to look at the posters and pictures that lined the wall and staircase, when I was greeted by Fr. Moran's smiling face. He joked about just being the caretaker then warmly invited me into the spacious living room to chat. Fr. Moran first spoke about his background. He is originally from Harrisburg. He did his undergraduate work in Kentucky at Thomas More College and his graduate studies at LaSalle University in Philadelphia. He attended St. Charles Borromeo Seminary and has been a priest for 11 years.

Fr. Moran is very excited about his move to campus. He also commented that there is such a vibrancy and sense of life in the community. Even though he believes there is deep tradition implanted here, everyone is very warm and welcoming to new faces. Fr. Moran also sees a difference in the students here, where he believes the level of maturity is high and there is a great involvement in various faith communities as well as the Lewisburg community.

Newman House, which is home to Fr. Moran, is also a "home away from home" for many students, and he would like to continue this sense of belonging for all those in Catholic Campus Ministry (CCM).

The house, which is located at 610 St. George St., has just been revamped as far as study areas. They have added 2 additional TV rooms and added landscaping in front of the house.

Fr. Moran was very eager to give me a tour of the house. There are many spacious study areas both upstairs and down. There is a chapel where daily masses are held for special groups. There are quiet areas for students who need a place to study, but there are also lounge

Jonah Hall—The Bucknellian
Father Moran sits at his desk, always waiting to hear from students, and busy organizing events and discussions.

areas equipped with TVs and CD players where students can relax and spend time with other students.

As we prepare for the new millennium, Fr. Moran conveyed what changes were in order for the upcoming year. He believes it is important for students to know that they are the future for the Catholic Church. He also wants to emphasize the fact that Newman House is always there and will continue to be a home away from home for students.

Many might be apprehensive at first about coming to visit, but he encourages this.

The house is always unlocked and he even gives students free reign over the kitchen. The response of the first-year students has already been overwhelming and 80 of them have already visited with their parents the day they arrived on campus. Fr. Moran is now planning an e-mail to parents on a monthly basis to

keep them informed of what's happening in the Catholic community.

Fr. Moran and the Steering Committee which is headed by Kristen Martinelli '99 and Mike Bolduc '00 are planning activities for the upcoming year. Sunday, Sept. 6 is the welcome back BBQ for all CCM members and first-year students at Newman House after the 4 p.m. mass. They also plan weekly gatherings where the students make dinner and discuss a topic of interest. The first gathering is planned for Thurs. Sept. 10th.

There are confessions 1/2 an hour before each mass, and the mass schedule is as follows: Sat. 5 p.m. at the Meditation Chapel, Sun. 4 p.m. in Rooke Chapel and Sun. 10 p.m. in Larison Dining Hall.

Fr. Moran has such enthusiasm for the new programs planned and the students he plans to meet. He wants to emphasize the fact that Newman House is always there and will always be welcoming to any new face that should walk through the door.

Even for those that have been involved with Catholic activities on campus, Father Moran's desire to interact with students and staff was a pleasant surprise. His depiction of the "home away from home" atmosphere was delightful, and welcoming.

The Newman House houses the Catholic Campus Ministry and is always open to university students/staff. The Newman House is located at 610 St. George Street behind the Larison Dormitory.

Jonah Hall—The Bucknellian
Father Marty Moran, the new priest on campus, has received rave reviews from pleased University students.

An opportunity of a lifetime

By Jacob Frechette

In 1984 the June Seminar for Younger Poets was created. Every summer since then, a small group of poets from American colleges has gathered here in Lewisburg. The idea behind the June Seminar was to create a sanctuary for students which enables them to be devoted to their writing for a month.

Applicants nationwide compete for one of eight fellowships, while two other spots are filled by applicants from the University. All of the fellows receive housing and a meal plan. This past June, I was fortunate enough to be a part of the June Seminar.

There were eleven fellows this year, three from the University, myself and recent graduates James Bush and Kerry Parke. The other fellows were from universities such as Georgetown, The University of Pennsylvania and Texas A&M. Without a doubt, geographical diversity added to the overall environment of the seminar.

This summer Cynthia Hogue, director of the Stadler Center for Poetry, led the staff. Nicole Cooley served as co-director. Steven Styers and Deirdre O'Connor were the other staff members from the University. Michael Alsa Weaver, a professor currently at Simmons college, Denise Duhamel, and Nick Carbo, a professor at Rutgers also were part of the staff.

There were two workshops a week led by a staff member. These workshops were designed so that the fellows could critically assess the work of their peers, and also have their own work critiqued. The opportunity to work with poets and students from all over the country was fantastic. Working with people who bring different perspectives to discussions is crucial to growing as a writer.

Aside from the bi-weekly workshops, there was also a trip to Appleton Alley Press here in Lewisburg, a workshop devoted to the revision process, a discussion on graduate school options, and many readings. There were readings by the fellows, which gave us a chance to refine our style of reading and become more comfortable with sharing our work directly with an audience. There were

also readings by staff members which gave us a chance to see and be inspired by professional poets we were working closely with.

One reader that stands out in my mind is Ethelbert Miller. Miller gave a great reading and discussed with us the responsibilities that accompany being a professional writer. His advice, along with the advice of staff members, and the structure of the June Seminar provided us with a better glimpse of what life as a poet is really like.

That kind of knowledge may be gained more easily from an internship in other professions, but for an aspiring writer the experience that the June Seminar provides is invaluable.

While the June Seminar provides a structure to assist the fellows writing, the most important thing it provides is the chance to concentrate on nothing else but writing.

For most students, this is a chance they never get. Most fellows spent several hours a day reading, in addition to the time they spent writing. There were many discussions centered around literature. In conclusion, being surrounded by people who are passionate about the same thing that you are is in itself inspiring and challenging.

The June Seminar for Younger Poets is a rare opportunity for young writers to be taken seriously, and to take themselves seriously.

Information about applying for the 1999 Seminar can be acquired at The Stadler Center for Poetry in Bucknell Hall. Bucknell Hall is located downhill across the street from the Music and Art Building. Stop by, even if it is just to take a quick look at all of the available programs out there.

Cynthia Hogue, director of the Stadler Center for Poetry, led the staff at the June Seminar for Young Poets.

The Orientation Staff of the Class of 2002 Looking Back on the Week's Events

By Tracey Hickey

The 1998 orientation program for the first year students consisted of 110 orientation assistants, 10 orientation leaders, and two orientation coordinators hired for the summer.

The entire staff worked together to ensure that the incoming class of 2002 would receive a warm "Bucknell welcome." This year's staff consisted of sophomores, juniors, as well as seniors. OAs arrived back at Bucknell three days prior to first-year student arrival to begin preparing for orientation events.

The training program was completely revised this year to include an entire day of team building and leadership training in addition to event's training. August 21st marked the official opening of orientation week as the first students arrived. OAs began their busy day by assisting first-year students with moving in to their residence halls. Playfair, as many University students recall, wrapped up the first day of orientation. Throughout the week all of the old favorites were back to entertain, including Dave Binder and Maura Cullen.

Over 100 orientation leaders and assistants came to school early to welcome first-year students and teach them about life on campus.

Dave calmed the freshman jitters with his fun and creative musical lyrics, while Maura inspired us all to break down the cultural barriers we all may have. Bobby Petroselli was a new addition to the orientation program this year. His powerful speech, "Ten Seconds Can Change Your Life", inspired and motivated the class of 2002 to make careful and wise decisions.

The annual candlelighting ceremony followed by "A Little Night Music" concluded the week's events on August 25th. The staff was full of enthusiasm and creativity. Thanks to

the hard work of everyone involved, New Student Orientation was a success.

Anyone interested in participating in orientation next year is encouraged to fill out an application later in the semester. Everyone will be made aware of the position openings.

Positions for orientation leaders are available for anyone that was an orientation assistant this year. Also the position for assistant orientation coordinator is up for grabs. This position is a paid summer internship. Please inquire at the Dean of Students Office if interested.

SCIENCE & TECHNOLOGY

Susquehanna: Why a river of dreams?

By Adam Parris

Among the many pastimes at the Bubble, students often try to find an escape at the Susquehanna River which runs conveniently close to the campus. A small and narrow trail winds down a short portion of the bank, and it makes for a quiet walk, bike ride or jog. If anything, it offers a picturesque view just outside those within the boundaries of our small community.

However, as award winning journalist Susan Stranahan said, it can also "offer the perfect framework for a storyteller." Stranahan, who has worked for the Philadelphia Inquirer for over a decade, came to campus to speak about the subject of her book *Susquehanna: River of Dreams*.

In her speech to University students this past Monday, Stranahan's intention was not to shamelessly plug her book, now being used as reading material in some of the University's environmental classes. Instead, she intended to instill interest in the Susquehanna River in the minds of those inhabitants who seem to have the most potential in aiding its recovery.

Recovery from what? Stranahan explained that, for centuries, the Susquehanna River has been plagued by "resource exploitation," an outcome which never should have reached its banks.

Beginning her story in the middle 1800s, Stranahan told the true story of the logging industry and its mindless disregard for its own future, the well being of its employees and the river which eventually caused the industry's demise. She added statistics such as the fact that Williamsport, at the pinnacle of the logging industry in the late 1800's, had more millionaires than any other city in the United States.

She explained how the extensive logging efforts caused the greatest flood ever to run its course through the Susquehanna. The lack of hemlock and pine trees caused the incapability of the river banks to hold the water which reached 33 foot crests in the year of 1889, putting an end to the illustrious industry on the banks of the river.

Another industry of which Stranahan spoke was the anthracite coal industry. Of particular interest to Lewisburg residents, the coal industry centered itself in the northeastern portion of Pennsylvania, less than an hour's drive from the University. In this portion of the state, almost 30

Susan Stranahan of the Philadelphia Inquirer spoke about the importance of the Susquehanna River in her Environmental College Lecture on Monday, Aug. 31.

million tons of coal were mined from underneath the ground, but the most devastating fact that Stranahan delivered was that the mine owners faced no legislation

from dumping remnants of the mines and discarded coal into the river. As a result, life in some places on the Susquehanna, to this day, does not exist at all.

Stranahan said that this "acid mine drainage" resulted not only from poor legislation, adding that "greed also played a major role."

Stranahan also spoke of the more recent effects of poor farming and "sprawl", a term which she used to describe overdevelopment. Stranahan described these effects as "subtle, but equally damaging," as those of the past.

She told the audience about the impact that overdevelopment, caused by paving parking lots and malls, as well as toxic waste from hog farming made life in the Chesapeake Bay, downstream from the Susquehanna, close to impossible as well.

However, being a good storyteller, Stranahan encompassed subtle promise in her story. The importance of this type of encouragement was that, with any luck, she reached the minds of the students in the audience because, inevitably, the student body must come to realize that hope for the Susquehanna rests, to a large degree, in their hands.

Stranahan described the present outlook of the Susquehanna residents as one

of a "fierce loyalty." University students "have access to the library, experts...and enthusiasm." The only quality which ultimately remains for students is "pride."

In the three year span spent writing her book on the Susquehanna and in her 45 minute span at the University, Susan Stranahan shared part of what she referred to as a "writer's wellspring." In a quiet walk, jog or bike ride along the trail near campus, her words linger in the pulse of a river which should scream to students who, in her mind, have the greatest potential to fix it.

In any case, Stranahan's appearance on campus was greatly appreciated by all who attended. Even a local farm woman stopped to thank Stranahan, despite the fact that her farm has been devastated by the death of 140 cattle, which were drowned by unnecessary flooding. Her requests for help have been unanswered by congressmen and mayors from Pennsylvania, but apparently not by Stranahan.

Speaking of students...

By Adam Parris

Student involvement with the Susquehanna River is now increasing in the form of a new University foundation seminar, taught by James Lee, adviser to *The Bucknellian*.

Lee saw his first opportunity to teach a foundation seminar as an opportunity for "utilizing a local resource."

"I wanted to do something that would get students off-campus and into the community," Lee said.

Ryan McCarty '02 took advantage of the opportunity. McCarty said, "I am an outdoors type of person, and do a lot of fly-fishing and thought it sounded interesting." Lee hopes to provide McCarty and his other first-year students with an appreciation and understanding of the Susquehanna, and make students see "the river as part of the ecology of the area."

It certainly will be an effective tool for implementing the changes of which Susan Stranahan spoke in her speech, and as McCarty said, "open people's eyes."

Lee concluded, saying, "So often we separate literature, history, and science as discreet things, and I want them to look at the river as something comprehensive."

the Week of the fall season.

Freshman phenom ruled eligible by NCAA

Top womens' soccer recruit, Lindsay Slomer, granted waiver by clearinghouse

By Brian Watson

Lindsay Slomer has the full package. The valedictorian of her senior class at Springdale High School outside of Pittsburgh, Slomer earned a 4.3 grade point average and racked up a 1,330 on her Scholastic Aptitude Test. Considered by Bucknell coach Chrissy Findlay to be the best of a nationally-ranked recruiting class, Slomer was expected to make an immediate impact on the women's soccer team, until the NCAA stepped in.

The National Collegiate Athletic Association's academic clearinghouse, the governing body that reviews all student-athlete's transcripts, rejected her application. While reviewing Slomer's remarkable records, the NCAA found that she had only taken three years of English, one short of the eligibility requirement.

In reality, Slomer took ninth-grade English during eighth-grade, although the record was absent from the transcript received by the NCAA. She attended private English lessons during her senior year, where she analyzed Shakespearean plays and Zora Neale Hurston's *Their Eyes Were Watching God*.

Because these records did not appear before the

clearinghouse, the NCAA was forced to rule Slomer ineligible to play this season.

An appeal was filed soon after, and Slomer was forced to wait. She was granted a waiver in early August that allowed her to begin practice with the team.

"We never had any doubt. You couldn't argue her situation," Findlay said. "It was ridiculous. The clearinghouse is supposed to work for you, not against you."

"If they looked at the schedules and grades, they'd know it wouldn't be a problem," Slomer said. "It was definitely frustrating."

Although the situation was extremely tedious and distracting, Slomer appears to be adapting well.

"I was worried that this would affect her adjustment into college, but it certainly did not," Findlay said. "If anything, I think it made her stronger, both as a student and an athlete."

The women's soccer team opens their season this Saturday at Niagara. Their first home game will take place on Wednesday, September 9 at 4 p.m.

Beetna Kim—The Bucknellian
Lindsay Slomer '02 joined the Bison in August just in time for the start of practice

And You Thought Hazing Was Only In Fraternities:

The whole idea behind professional sports is, well...being professional. Usually, the mood of intimidation one faces in the college locker room is replaced with a business-like atmosphere. However, occasionally the public learns of exceptions to this pattern. Such is the case of the New Orleans Saints. In a surprising revelation, 6-foot-5, 282-pound defensive lineman Jeff Danish described the treatment he received as a first year player for the black and gold. While wearing a pillowcase over his head, Danish had to run through a gauntlet of 20 teammates, enduring a series of kicks, punches, elbows, and blows to the head and back with a bag of coins. As a result, Danish ended up with bruises all over his body and face, and thirteen stitches in his left arm. To make matters worse, the wound in his arm reopened five days later, and before it could heal he was released. It seems that Danish may spend the remainder of the season watching games from his living room, instead of the sidelines. His reasoning was simple. "It would be pretty hard for another team to give me a shot or pick me up after this. I still have 13 stitches in my arm."

Though Danish is the only victim making headlines, it has been revealed that others also went through the Saints' initiation ceremony. Tight end Cam Cleeland finally returned to practice this week, after missing the previous five days with an eye injury sustained during the hazing. The NFL is investigating.

The 11.5 Million Dollar Mascot: Not long ago, college-receiving phenom Keyshawn Johnson wrote a book in which he stated that fellow Jets receiver Wayne Chrebet would serve a better role as a mascot. The following year Chrebet shined in his starting role, and in effect, put the rookie in his place. Yesterday, the humble 25-year-old receiver was rewarded for his play, and signed an \$11.5 million four-year deal with the Jets. In typical Chrebetian fashion, the receiver explained, "I am happy I am going to be around here for the foreseeable future. This is where I intended to stay, where my friends and family are, and where the fans have treated me super."

Edwards Ego: After boldly declaring, I don't think any defensive back in the country can go one on one with me, Louisiana Tech wide receiver Troy Edwards let his actions do the talking. In one of his first games of the 1998 college football season, Edwards, a 1997 Biletni-koff award finalist, torched a lackluster Nebraska secondary for a NCAA all-divisions record of 405 yards. In Tech's 56-27 loss to the fourth ranked Huskers, Edwards caught 21 passes, including second-half touchdown receptions of 94, 80, and 52 yards, while fellow teammate Tim Rattay completed 46 of 68 pass attempts for a total of 590 yards, all dubious records for the Nebraska defense. In their defense, Nebraska safety Joe Walker stated, "He backed up his point, but he also said they were going to come out and win, and obviously they did not get that part down."

Mac Attack put on Hold: Why would 47,000 fans ever pack St. Louis' Busch Stadium to watch their mediocre Cardinals play the Atlanta Braves? Two words: Big Mac. The robust redbird is on pace to break one of baseball's most coveted records. Through Tuesday Mark McGwire had 57 home runs, a mere four short of Maris' mark. He brings excitement to every ballpark he visits, and as a result fans have been scrambling to get a piece of the action. Even celebrities are trying to meet McGwire. Prior to Saturday's game against the Braves, legendary Indiana University basketball coach Bobby Knight got his wish when he sat down with the colossal Cards' slugger. Perhaps the meeting with fiery Indiana coach inspired his behavior later that night. In McGwire's first at bat, he was called out on strikes. Unknowingly, McGwire made the long trot to first base as if he had been walked. When he learned the true nature of the call, Big Mac let umpire, Sam Holbrook, know exactly how he felt. Long story short, he was ejected. In the argument that ensued, Cards' skipper Tony Larussa was also ejected, as McGwire stormed off into the dugout. In protest, fans littered the field with trash and debris, apparently denoting their loyalty to McGwire. It was the first time McGwire had been tossed since he was traded to the Cardinals over a year ago. The Braves won the game 4 to 3.

Serious Scoreless Streak: If there were any doubters that Roger Clemens was back in top form after his 21 win performance a year ago, they cannot help being convinced of his dominance when learning of his latest accomplishments. The Blue Jay pitched a two-hit shutout in earning his 17th victory of the season. Amazingly, this is only the latest achievement in his string of dominating performances. He has not lost since May 29, and has won 12 of his last 17 starts. In doing so, he has lowered his era from 3.22 to a measly league-leading earned run average of 2.64. Through Sunday, Clemens has a scoreless streak of 29 consecutive innings, the halfway mark to Orel Hershiser's major league record of 58.

Tufts honored for athletic service

Veteran Associate Athletic Director recognized nationally

Steve Stasson—The Bucknellian
Associate AD and womens' golf coach Brad Tufts.

By Michael Brophy

For forty years, Brad Tufts has devoted his time and energy to Bucknell athletics. Spending many of

his years as the Sports Information Director, he is presently working as the Associate Director of Athletics for Bucknell. This past year Tufts was selected to be a recipient of the Lester Jordan Award that honors those who have served the Academic All-American Program.

The Academic All-American Program was established to recognize starting varsity athletes who, during their season, have a cumulative grade point average above a 3.20.

Tufts became involved in this program during his ten years as Sports Information Director. During this time he served as the Vice-Chairman of the College Sports Information Directors Academic All-American Committee (CosIDA).

"If we didn't have as many student athletes here, I wouldn't have gotten as involved in the Program," Tufts proclaimed. In 1990, CosIDA recognized Tufts as an Honorary Academic All-American.

Currently, Bucknell ranks second to the University of Nebraska in the number of student-athletes named to Academic All-American teams. Tufts attributes most credit to all the student athletes whom he nominated to the Academic All-American program, and the many whom were recognized.

Cross Country readies for another run at League title

By Rose Sedo

There is no sport quite like cross-country. This is a sport that can bring runners to tears of joy or pain, cause coaches to grimace in disappointment or shout in excitement, and onlookers to wonder exactly why anyone would be so crazy as to run three miles uphill in 90 degree weather.

Without a doubt, it is a sport for those with speed, stamina, and commitment. It is one of the toughest sports around, both mentally and physically, but it is also one of the most rewarding.

Everyone is equally important, for everyone must be successful in order for the team to win.

However, a winning team usually means talented runners and a dedicated coach. Bucknell has both.

The University's men and women cross country teams are not strangers to the thrill of victory. Last year at the Patriot League Championships at Colgate University, the men dethroned Army to win the crown. Army had won four straight league titles, dating back to Bucknell's last win in 1992. The women placed second after Army, missing first place by only 10 points.

In the men's meet, Bucknell junior Matt Kodak finished third in 25:14.6. He led a pack of four Bison runners who ran among the top six overall.

Bucknell's women, meanwhile, finished a solid second to Army in the team standings, and Bison junior Julie Sweitzer won the individual championship, running Colgate's 5000-meter course in 19:04.3.

Sweitzer breezed to a 15-second win in the women's meet, becoming

Bucknellian file photo
The Womens' team is once again anchored by Julie Sweitzer '99.

Bucknell's first-ever Patriot League women's individual champion.

As for this upcoming season, head coach Art Gulden is extremely confident, and he should be, especially if history repeats itself.

Gulden's men's cross country teams won 18 straight conference titles between 1975-92, and have won three ICAA championships. He maintains that both teams will continue to ride the wave of success, and keep up the tradition of being "the best two teams in the history of Bucknell."

As far as goals go for both teams, Coach Gulden likes to keep it simple and direct. "Beating Army is the most important thing," he said.

"This year our biggest home meet is Patriot Leagues on October 31, and we want as much support as possible on the course," Gulden said.

After Patriot League Championships, Gulden thinks that there is the possibility of both teams going to Nationals. "There has been an increase

Men's water polo shoots to capture East region

Newcomers Greditzer '01, Mueller '02 give boost to successful squad

By Brian Watson

Anchored by a solid core of seniors, numerous experienced underclassmen and several talented newcomers, the mens water polo team looks to improve on last season's 19-17 finish.

Head Coach Mike Wooster, who begins his fourth year at the helm, feels the team's depth is the key.

"This is the strongest, deepest team I've had in my four years," Wooster commented. "We go nine players deep, which I consider a luxury."

The Bison will look to their co-captains, Brian Baker '99 and Kevin Permisohn '01, to handle most of the scoring load left by the graduation of All-American Alex Lundberg. Baker scored 48 goals and racked up 15 assists in his junior campaign, while Permisohn tallied 36 goals and 40 assists, the fourth highest freshman total in Bucknell history. The captains, both drivers, will look for scoring help from James Mante '01 (15 goals, 20 assists), Josh Watts '00 (30 goals, 8 assists) and Justin McCarthy '01 (16 goals, 15 assists). Freshman

Ryan Mueller, who participated at the Pan-American Games as a member of the Junior National Team this summer, should make an immediate impact at the driver spot.

In goal, Wooster will count on senior standout Zach Blixt, a four-year starter who recorded a .500 save percentage last year. Other defensive help will come from Permisohn, the returning steals leader, as well as Mante, Watts and transfer Tate Greditzer '01.

Greditzer, who comes to Bucknell after a season at the University of California at Santa Barbara, is expected to step into a prominent role for the Bison.

Wooster is optimistic about the team's potential. "We could win the East this year. We're a faster team, and we should be able to score a lot of counter-attack goals," Wooster continued. "We're in the top of our division, and if everyone steps up, we will be very successful."

The Bison begin their season on Saturday, September 5, at the Navy Invitational.

Overtime goal propels men's soccer to victory in home opener

Cummings '99 and Pace '01 lead Bison to sudden death win over St. Peter's

By Brett Tomlinson

Bucknell Men's Soccer caught fire late in the game to capture the victory in Tuesday night's season opener against St. Peter's. Angelo Pace '01 finished a cross from Bill Epley '01 to bury the Peacocks after six minutes of sudden death overtime.

For the Bison, who have not reached the Patriot League tournament since 1994, the win was a promising start which included standout performances from veterans and newcomers.

St. Peter's scored first, but the Bison remained aggressive. Senior co-captain Ryan Cummings ripped a 35-yard shot into the upper portion of the net late in the first half to even the score at 1-1. The Bison fullback proceeded to remove his shirt and wave it for the home crowd.

"It was probably the best shot I'll hit in my career at Bucknell and that's why the celebration was so outrageous," Cummings said.

After intermission, the Peacocks ruffled the referees' feathers, leading to two yellow cards and an ejection. But they still managed to score with a man down and proceeded to retreat into a defensive shell for the final 16 minutes.

Bucknell chipped away at the defense, and with just 1:20 remaining, Ian McVeigh '02 streaked into the box for a header to tie the contest. The momentum swing helped the Bison in overtime, with Pace's goal finishing the job for the persistent Bucknell attack.

The victory was a confidence booster, but the outlook for the young Bison squad still hinges on their ability to come together as a team as the

season progresses.

Seniors and juniors fill only five slots on the team, while there are nine first-year Bison players. Coach Craig Reynolds used five different freshmen in the opening victory.

Cummings views the team's youthful makeup as a challenge and a blessing. "It makes my role as a leader more important... but it's very exciting, too, because the freshmen are so talented," Cummings said.

The offensive performance was a solid effort for the Bison, who averaged just over a goal per game en route to a 6-11 record last year.

Using a formation of three backs, five midfielders, and two strikers, the Bison are looking to increase offensive output. "This year, we're trying to work with the talent that the freshman class has brought in. Many of them are offensive players," Cummings said.

Bucknell features a fresh-faced attack to complement the experienced defense of Cummings, Epley and co-captain Carmine Guirland '99. Nathan Fitzgerald '00 and Paul Maier '01 will split time in goal.

According to Cummings, the team's goals include improving with each successive game and reaching the Patriot League Tournament.

"By the end of the year, when we have four league games in the last two weeks of the season, we should be prepared to put those teams to a test," Cummings said.

Bucknell travels to the Virginia Military Institute this weekend for a two day tournament. The Bison will be back in action for the home crowd on Wednesday night against Monmouth.

Athlete of the Week

Check out next week's issue for the Bucknellian's first Athlete of the Week of the fall season.

Freshman phenom ruled eligible by NCAA

Top womens' soccer recruit, Lindsay Slomer, granted waiver by clearinghouse

By Brian Watson

Lindsay Slomer has the full package. The valedictorian of her senior class at Springdale High School outside of Pittsburgh, Slomer earned a 4.3 grade point average and racked up a 1,330 on her Scholastic Aptitude Test. Considered by Bucknell coach Chrissy Findlay to be the best of a nationally-ranked recruiting class, Slomer was expected to make an immediate impact on the women's soccer team, until the NCAA stepped in.

The National Collegiate Athletic Association's academic clearinghouse, the governing body that reviews all student-athlete's transcripts, rejected her application. While reviewing Slomer's remarkable records, the NCAA found that she had only taken three years of English, one short of the eligibility requirement.

In reality, Slomer took ninth-grade English during eighth-grade, although the record was absent from the transcript received by the NCAA. She attended private English lessons during her senior year, where she analyzed Shakespearean plays and Zora Neale Hurston's *Their Eyes Were Watching God*.

Because these records did not appear before the

clearinghouse, the NCAA was forced to rule Slomer ineligible to play this season.

An appeal was filed soon after, and Slomer was forced to wait. She was granted a waiver in early August that allowed her to begin practice with the team.

"We never had any doubt. You couldn't argue her situation," Findlay said. "It was ridiculous. The clearinghouse is supposed to work for you, not against you."

"If they looked at the schedules and grades, they'd know it wouldn't be a problem," Slomer said. "It was definitely frustrating."

Although the situation was extremely tedious and distracting, Slomer appears to be adapting well.

"I was worried that this would affect her adjustment into college, but it certainly did not," Findlay said. "If anything, I think it made her stronger, both as a student and an athlete."

The women's soccer team opens their season this Saturday at Niagara. Their first home game will take place on Wednesday, September 9 at 4 p.m.

Bretna Kim—The Bucknellian
Lindsay Slomer '02 joined the Bison in August just in time for the start of practice

And You Thought Hazing Was Only In Fraternities:

The whole idea behind professional sports is, well...being professional. Usually, the mood of intimidation one faces in the college locker room is replaced with a business-like atmosphere. However, occasionally the public learns of exceptions to this pattern. Such is the case of the New Orleans Saints. In a surprising revelation, 6-foot-5, 282-pound defensive lineman Jeff Danish described the treatment he received as a first year player for the black and gold. While wearing a pillowcase over his head, Danish had to run through a gauntlet of 20 teammates, enduring a series of kicks, punches, elbows, and blows to the head and back with a bag of coins. As a result, Danish ended up with bruises all over his body and face, and thirteen stitches in his left arm. To make matters worse, the wound in his arm reopened five days later, and before it could heal he was released. It seems that Danish may spend the remainder of the season watching games from his living room, instead of the sidelines. His reasoning was simple: "It would be pretty hard for another team to give me a shot or pick me up after this. I still have 13 stitches in my arm." Though Danish is the only victim making headlines, it has been revealed that others also went through the Saints' initiation ceremony. Tight end Cam Cleeland finally returned to practice this week, after missing the previous five days with an eye injury sustained during the hazing. The NFL is investigating.

The 11.5 Million Dollar Mascot:

Not long ago, college-receiving phenom Keyshawn Johnson wrote a book in which he stated that fellow Jets receiver Wayne Chrebet would serve a better role as a mascot. The following year Chrebet shined in his starting role, and in effect, put the rookie in his place. Yesterday, the humble 25-year-old receiver was rewarded for his play, and signed an \$11.5 million four-year deal with the Jets. In typical Chrebetian fashion, the receiver explained, "I am happy I am going to be around here for the foreseeable future. This is where I intended to stay, where my friends and family are, and where the fans have treated me super."

Edwards Ego: After boldly declaring, I don't think any defensive back in the country can go one on one with me, Louisiana Tech wide receiver Troy Edwards let his actions do the talking. In one of the first games of the 1998 college football season, Edwards, a 1997 Biletni-koff award finalist, torched a lackluster Nebraska secondary for a NCAA all-divisions record of 405 yards. In Tech's 56-27 loss to the Cornhuskers, Edwards caught 21 passes, including second-half touchdown receptions of 94, 80, and 52 yards, while fellow teammate Tim Rattay completed 46 of 68 pass attempts for a total of 590 yards, all dubious records for the Nebraska defense. In their defense, Nebraska safety Joe Walker stated, "He backed up his point, but he also said they were going to come out and win, and obviously they did not get that part down."

Mac Attack put on Hold: Why would 47,000 fans ever pack St. Louis' Busch Stadium to watch their mediocre Cardinals play the Atlanta Braves? Two words: Big Mac. The robust redbird is on pace to break one of baseball's most coveted records. Through Tuesday Mark McGwire had 57 home runs, a mere four short of Maris' mark. He brings excitement to every ballpark he visits, and as a result fans have been scrambling to get a piece of the action. Even celebrities are trying to meet McGwire. Prior to Saturday's game against the Braves, legendary Indiana University basketball coach Bobby Knight got his wish when he sat down with the colossal Cards' slugger. Perhaps the meeting with fiery Indiana coach inspired his behavior later that night. In McGwire's first at bat, he was called out on strikes. Unknowingly, McGwire made the long trot to first base as if he had been walked. When he learned the true nature of the call, Big Mac let umpire Sam Holbrook know exactly how he felt. Long story short, he was ejected. In the argument that ensued, Cards' skipper Tony La Russa was also ejected, as McGwire stormed off into the dugout. In protest, fans littered the field with trash and debris, apparently denoting their loyalty to McGwire. It was the first time McGwire had been tossed since he was traded to the Cardinals over a year ago. The Braves won the game 4 to 3.

Serious Scoreless Streak: If there were any doubters that Roger Clemens was back in top form after his 21 win performance a year ago, they cannot help being convinced of his dominance when learning of his latest accomplishments. The Blue Jay pitched a two-hit shutout in earning his 17th victory of the season. Amazingly, this is only his latest achievement in his string of dominating performances. He has not lost since May 29, and has won 12 of his last 17 starts. In doing so, he has lowered his era from 3.22 to a measly league-leading earned run average of 2.64. Through Sunday, Clemens has a scoreless streak of 29 consecutive innings, the hallway mark to Orel Hershiser's major league record of 58.

Bucknell takes Presidents' Cup

By Tim Scheu

When Bucknell athletes first took to the fields for competition in the fall of 1997, they were embarking upon a rigorous quest. It was a quest that nearly every varsity athlete on campus played a role in. After the buzzer sounded, the whistle was blown, and the Bison stormed to victory, the successes of all the individuals and all the teams were totaled and compared to those of other schools in the Patriot League.

These statistics were used to determine the winner of the prestigious Presidents' Cup Trophy, an award annually given to the best athletic program in the Patriot League. After everything was tabulated, the cup was awarded last May to Bucknell University. The '98 cup marks Bucknell's fifth in the last eight years.

While the award was a product of the entire Bucknell athletic program, certain teams played a larger role than others did. The football team ran up a record setting 10-1 mark while under the direction of head coach, Tom Gallo. Coach Art Gulden's men's cross country and women's indoor track and field teams both captured league championships. In addition, the Bison baseball team placed a strong second place in the Patriot League.

Overall, the Bison secured the cup with a balanced athletic program that finished third or higher in 16 of the 22 sports sponsored by the league.

"It's a tremendous accomplishment by our student-athletes and coaches," Athletic Director Rick Hartzell said. "It's something the entire campus can be proud of, from the Admissions Office to the faculty and the student body who cheers the teams on."

In winning, the Bison ripped the cup from the grasp of Army, despite the fact that they won four league titles and effectively dominated the spring sports season.

The scoring is tabulated by adding up the points given to various representatives of a certain university. Points are awarded based upon tournament finishes of each institution, or if there is not post-season tournament, points are awarded based upon the final regular season standings.

Tufts honored for athletic service

Veteran Associate Athletic Director recognized nationally

Steve Stasson—The Bucknellian
Associate AD and women's golf coach Brad Tufts.

By Michael Brophy

For forty years, Brad Tufts has devoted his time and energy to Bucknell athletics. Spending many of

his years as the Sports Information Director, he is presently working as the Associate Director of Athletics for Bucknell. This past year Tufts was selected to be a recipient of the Lester Jordan Award that honors those who have served the Academic All-American Program.

The Academic All-American Program was established to recognize starting varsity athletes who, during their season, have a cumulative grade point average above a 3.20.

Tufts became involved in this program during his ten years as Sports Information Director. During this time he served as the Vice-Chairman of the College Sports Information Directors Academic All-American Committee (CoSIDA).

"If we didn't have as many student athletes here, I wouldn't have gotten as involved in the Program," Tufts proclaimed. In 1990, CoSIDA recognized Tufts as an Honorary Academic All-American.

Currently, Bucknell ranks second to the University of Nebraska in the number of student-athletes named to Academic All-American teams. Tufts attributes most credit to all the student athletes whom he nominated to the Academic All-American program, and the many whom were recognized.

Cross Country readies for another run at League title

By Rose Sedo

There is no sport quite like cross-country. This is a sport that can bring runners to tears of joy or pain, cause coaches to grimace in disappointment or shout in excitement, and onlookers to wonder exactly why anyone would be so crazy as to run three miles uphill in 90 degree weather.

Without a doubt, it is a sport for those with speed, stamina, and commitment. It is one of the toughest sports around, both mentally and physically, but it is also one of the most rewarding.

Everyone is equally important, for everyone must be successful in order for the team to win.

However, a winning team usually means talented runners and a dedicated coach. Bucknell has both.

The University's men and women cross country teams are not strangers to the thrill of victory. Last year at the Patriot League Championships at Colgate University, the men dethroned Army to win the crown. Army had won four straight league titles, dating back to Bucknell's last win in 1992. The women placed second after Army, missing first place by only 10 points.

In the men's meet, Bucknell junior Matt Kodak finished third in 25:14.6. He led a pack of four Bison runners who ran among the top six overall.

Bucknell's women, meanwhile, finished a solid second to Army in the team standings, and Bison junior Julie Sweitzer won the individual championship, running Colgate's 5000-meter course in 19:04.3.

Sweitzer breezed to a 15-second win in the women's meet, becoming

The Women's team is once again anchored by Julie Sweitzer '99.

Bucknell's first-ever Patriot League women's individual champion.

As for this upcoming season, head coach Art Gulden is extremely confident, and he should be, especially if history repeats itself.

Gulden's men's cross country teams won 18 straight conference titles between 1975-92, and have won three ICAA championships. He maintains that both teams will continue to ride the wave of success, and keep up the tradition of being "the best two teams in the history of Bucknell."

As far as goals go for both teams, Coach Gulden likes to keep it simple and direct. "Beating Army is the most important thing," he said.

"This year our biggest home meet is Patriot Leagues on October 31, and we want as much support as possible on the course," Gulden said.

After Patriot League Championships, Gulden thinks that there is the possibility of both teams going to Nationals. "There has been an increase

of the number of teams that can attend, and that can only be an advantage for us," he said.

Not surprisingly, the women's captains, Annie Hamlin and Julie Sweitzer, and the men's captains, Jonathan Dietrich and Matt Kodak, exhibit the same confidence as their coach. "Everybody is really excited for the season to start. We've been an up and coming team for a while now, and this is our year. We have a talented freshman class, and all the girls on the team have worked hard all summer. We know we're ready to go up to Army and beat them," Hamlin said.

"There's more focus and intensity this year. We hope to be better than last year, and take things one day at a time. We're all very enthusiastic about what the future holds," Dietrich said.

The first meet this year is at home against Rutgers, Manhattan St. Francis, Lehigh, and Syracuse, and will take place on the Golf Course on Saturday, September 12, at 10 a.m.

Andrewhat?... Who cares?

"Making something of nothing," Mark McGwire told ESPN Monday, responding to questions about his use of Androstenedione, an adrenal hormone that is converted to testosterone in the liver and increases muscle production. "It supplements my workouts. It has nothing to do with baseball."

Speaking of baseball, the Major League has experienced something of a revival during the 1998 season. Ninety-nine percent of the thanks belong to St. Louis slugger Mark "Big Mac" McGwire. Plagued by years of low attendance and unpopularity, America's pastime is back and stronger than ever. Remarkably, this season may be the most historic, record-breaking year ever.

But no one is chasing history like Big Mac. The soft-spoken, mammoth basher is currently on pace to smash Maris' mark set over 35 years ago.

Following Big Mac is Chicago Cub outfielder Sammy Sosa, who has trailed McGwire closely throughout most of the season, and Seattle outfielder Ken Griffey Jr., who has recently fallen off the pace.

Baseball enthusiasts across the country are watching wide-eyed at McGwire's every swing, rooting him on in the final stretch of the quest for 62. Unfortunately, someone has to drag the skeletons out of the closet.

Recent reports have focused on Big Mac's use of Androstenedione. The supplement, commonly known as "Andro," is available over-the-counter despite being banned by the National Football League the NCAA and International Olympic committee.

Major League Commissioner Bud Selig has announced that the league and the players' union are planning to research and evaluate the hormone in the coming months.

Critics are claiming that this supplement is the reason for McGwire's smashing success and insist that an asterisk be placed next to his name in the record books.

They obviously are not thinking hard enough. His six-foot-five-inch, 250-pound frame is built rock solid, with arms and legs like a bodybuilder. He has the ability to demolish pitches, sending them on a 400 to 500-foot joyride, usually landing them in the next county, whether or not he is using strength-building supplements.

Big Mac has openly admitted that he has consistently used the product—but only for one year. That would not explain McGwire's astounding ability to hit a four-bagger once every 7.6 at-bats throughout his 14-year career.

Because no long-term studies have been conducted, endless concerns have been voiced about Andro and its effects on adolescents. McGwire's popularity, which has skyrocketed to Jordanesque proportions (his ejection from Saturday's game led fans to pelt the field with baseballs, golf balls, and bottles), will undoubtedly influence many youngsters to experiment with the product. Fortunately, McGwire is not endorsing the product or pushing it on kids, and a recent survey of the Little League World Series champions from Toms River, New Jersey, shows that young players are not looking to boost their performance by using such supplements.

Still, Big Mac has no reservations about his supplement. "Everything I've done is natural. Everybody that I know in the game of baseball uses the same stuff I use," McGwire told the Associated Press last week.

Many experts believe that Andro is only effective if injected into a vein or muscle. McGwire takes the pill form, which experts like Dr. Charles Yesalis believe to be less effective. "We don't know if this drug does increase testosterone levels," Yesalis, author of *The Steroids Game*, told CNN. "The current state of the art on this drug is that we don't even know if it works as a performance enhancer."

But the voices of criticism continue to scream out against Andro, though they seem to ignore a product called Creatine. Numerous sluggers, as well as professional athletes from all sports, swear by this nutritional supplement that improves athletic performance while building lean muscle mass. Like Andro, no long-term studies have been confirmed about Creatine, which has only been available synthetically since 1991.

So, McGwire is being condemned for using a relatively unknown substance, while multitudes of other athletes are hailed for their bolstered abilities. Does this make sense to anyone?

Let's face it: Big Mac is no Dennis Rodman; he is well respected for his sportsmanship and charitable donations. Underneath the rough exterior lies a heart of gold, a man who ignores the hype and focuses on what matters. He has said that the most special part of the home run race is having his son there as a batboy. "To have him around," McGwire told ESPN, "that's more important than the game itself."

Bottom line: McGwire should not be the target of controversy-starved reporters.

Thousands of loyal fans are watching in anticipation as the greatest home run hitter of our time pursues the most prominent record in all of sports. Hopefully the skeptics will not ruin the chase or discredit Big Mac's achievement because of a petty formality.

After all, there are plenty of other controversies going on in our country right now, aren't there?

Bison football looks to reload after record-breaking 10-1 season

By Tim Scheu

A year ago, the Bucknell football team had the most prolific year in school history. The Bison went 10-1, and led the Patriot League in total defense for the third consecutive year. They finished ninth in the country with a turnover margin of +12 for the year. The defense was perfectly complemented by the offense, which scored 282 points on the season, the third highest total in school history.

The team was marked by big name players, including both Hunter Adams and Chris Peer. Adams, a three time all-league selection, was one of the premier defensive ends in Bison history, and made waves at the New York Giants training camp. Peer contributed a great deal to the offense by rushing for over 1,100 yards, scoring 11 touchdowns and earning All-Patriot league honors. Unfortunately, many of the players that aided in Bucknell's rise to glory departed after their senior season. So, what about this year's team?

Despite what many people may be thinking, the 1998 season is not a rebuilding year. Coach Tom Gadd returns with a solid nucleus of players, including quarterback Don McDowell '00, and the seasoned receiving duo of Ron Rockett '99 and Ardie Kissenger '99.

Gadd is optimistic, stating, "I think this team has its own character and personality. Obviously, it is hard to predict that you are going to win 10 football games in a season, but this team has a chance to be as good or better as a year ago," Gadd said. "It is all about the commitment that each individual makes to work hard and get better in practice."

Overall, the offense looks just as good, if not better than a year ago. True, the offensive line lost three starters, but for the most part, all the position players are back. The backfield may be even stronger than last

year, despite the loss of Peer. Juniors Jim Weidle and Dan Palko, and sophomore Lamario Bradwell will all contend for playing time, though Palko emerged as the frontrunner due his dominating performance in the spring game.

Gadd summed up the outlook from the running game, "I think we have tremendous depth at tailback. We have three or four kids that we feel really good about. Our offensive line is maturing and we have two tight ends that are really good football players. So again, I think our running game will be just as good if not better than last year."

The strength of the backfield will only be complemented by the passing game of returning quarterback McDowell. A year ago McDowell passed for eight touchdowns and ran for an additional seven. Now that he has a little more experience under his belt, and his favorite receivers back in Rockett and Kissinger, he can expect to have a breakthrough year. However, don't be surprised if you see #17 Lucas Phillips '01 getting some significant action as well. Phillips maybe the quarterback of the future and he has the strongest arm on the team.

The only thing plaguing the Bison defense is inexperience. There are only six starters returning from last year's squad, and half of those are in the secondary. This means that in order for Gadd's team to lead the league in total defense, the defensive line and linebacking corps have to prove themselves in the early season. Coach Gadd summed it up best when he said, "After playing with players like Hunter Adams, you rely on them to play a certain role. Obviously, Adams is gone, so everyone else just needs real game experience. How they are going to react in a game situation is still a bit of a question mark."

The defense is led by the secondary, which returns three of their four

Beetna Kim—The Bucknellian

After starting that last half of the '97 season at quarterback, Don McDowell '00 returns to lead the '98 squad to a Patriot League title.

starters. Nate Musselman '00 returns at cornerback after leading the league in interceptions a year ago with seven. Justin Lustig '00, the other cornerback, finished fifth on the team last year with 62 tackles, while also finishing second in pass break-ups.

In terms of special teams, the Bison have their returning all-league kicker in Ross Coleman '99. Last year he made 30 of 32 point-after-attempts and 10 of 16 field goal tries, including a 47 yarder in Bucknell's 25-24 win over Yale. Punter Brian Kramer '00 also returns after averaging 36.3 yards a punt a year ago.

Overall, the 1998 Bucknell football team has a world of potential. They have all the tools to challenge for a Patriot League title. They open up the season September 5th when they travel to Duquesne for their first real test.

Coach Gadd expects the biggest hurdle to be first game jitters, not their opponent. "The first game is always difficult. There is an awful lot of excitement, and a lot of adrenaline flowing. What I would like to see us do is play with poise, and not hurt ourselves by doing silly things like getting penalties. If we do all that, I expect us to do OK."

Women's soccer looks to improve with youth

Beetna Kim—The Bucknellian

The freshmen make up a recruiting class was ranked in the top 25 in the country.

By Matt Fraser

As the Bucknell women's soccer team prepares for the 1998 season, many questions remain to be answered. The one certainty, however, is that this will be quite a different team than last year's squad.

There are an astounding 14 freshmen

men on the roster, with just nine upperclassmen returning. Led by senior midfielder Lindsay Founds and junior Katie McElligott, who earned second-team All Patriot League honors in 1997, the Bison will be looking to improve upon last year's 7-12 record.

Despite the tremendous number of new faces, the team does possess quite a bit of talent. In fact, the Bucknell women were ranked among the top 25 recruiting classes in the nation by Soccer Buzz, an on-line soccer magazine.

Probably most impressive is the fact that Bucknell is the only school on that list which does not award athletic scholarships.

Second-year head coach Chrissy Findlay remains quite optimistic in regards to her team's ability to compete.

In assessing the upcoming season, which features a particularly tough schedule, Coach Findlay realizes that "we need to compete on a daily basis. Our youth and inexperience means that we will need to work very hard for every win."

The squad's rapid progress became evident in Saturday's 2-1 pre-season loss to 13th-ranked Lock Haven. Determination and a relentless defense highlighted a surprisingly strong performance against a very talented team.

Much is being expected from this year's women's soccer team. However, nowhere are expectations running higher than among the players themselves.

They understand that success will not come easily, but they remain determined to alert the rest of the Patriot League that this will be a team to watch out for both this season and in the next several years.

Sports Trivia Quiz

1. Who was the last U.S. team to win the Little League World Series?
2. What man holds the record for most U.S. Tennis Open championships?
3. Who is the only nonactive, non-Hall of Famer to hit 400 home runs?
4. Who was the only NFL running back to rush for 200 yards in two different games?

ANSWERS: 1. Long Beach, CA in 1993; 2. Jimmy Connors (5); 3. Dave Kingman; 4. Corey Dillon of the Cincinnati Bengals.

Todd Gleason '99 is the recipient of the Udall Fellowship.

Gleason awarded Udall Fellowship

By Chris Ellis

It is the most dignified award in environmental studies. And, finally, it has come to the University.

Todd Gleason '99, a biology and political science major, won the University's first ever Udall Fellowship, a national award given annually to students who demonstrate aptitude of and appreciation for environmental policy and law.

"[The Udall Fellowship] is probably the most prestigious fellowship in environmental studies and law," said John Gillroy, associate professor of environmental studies and the University faculty representative for the Udall Fellowship. "This should give a big boost to our program."

The fellowship is named after United States Congressman Morris K. Udall, an outspoken advocate of environmental regulation before being stricken with Parkinson's disease. It was established by the United States Congress in 1992 to honor Udall's 30 years of service with the U.S. House of Representatives. Udall received the Presidential Medal of Freedom—the government's highest civilian award—for his public service contributions.

Bid Day changes yield positive results

By E.J. Crawford

The changes were not popular. They were not ideal. They certainly were not traditional.

But they were effective.

The change of Bid Day from Saturday to Friday yielded great successes for the Greek System. The 1997 Bid Day resulted in numerous alcohol-related incidents, a hit-and-run that shocked the campus and in excess of 30 Public Safety incident reports. The 1998 Bid Day emerged unblemished. There were two incident reports Saturday night involving fraternities.

The Bid Day changes, prompted by the arrival of five sorority consultants, were made in an effort to comply with the Panhellenic Unanimous Agreement. The Agreement stated that there could be no alcohol and no contact with members of the opposite sex for 24 hours after Bid Day. The National Interfraternity Conference also agreed to follow the Unanimous Agreement.

"I am very pleased," said Dean of Greek Affairs Roy Baker, who visited every fraternity between 10:11:30 p.m. on Friday night. "We actually said there would be no alcohol between 7-10 p.m. and, to my knowledge, there wasn't."

"On our formal Bid Day a lot of fraternities [and sororities] did a lot of good things ... We did what we said we were going to do," he continued, alluding to the adherence to all established Bid Day guidelines.

Director of Public Safety Vincent DeCerio was also pleased with the event. "Bid Day went very well," DeCerio said in an e-mail message. "The events achieved its goals successfully without alcohol abuse and without incident ... The Saturday evening events were as equally well-planned and well-supervised ... I hope that the fraternities continue to set such wise and practical examples throughout the year."

For IFC president Bowman Hall-

Lewisburg Police crack down on students

By Tracy Thiffault

Due to the increase in the number of alcohol, drug, and disorderly conduct violations on college campuses nationwide, the Lewisburg Police have announced a "Zero Tolerance" policy for students and residents of the borough.

Police officers are now instructed to issue citations instead of warnings for first-time violators with fines up to \$300 plus the cost of lawyer fees. Off-campus residents are also subject to arrest for any disorderly act that originates from their residence.

Thirty-six citations have been issued since students arrived on campus, according to Ronald Kerstetter, Lewisburg Chief of Police.

"We found that no one was respecting us and we needed to approach [the violations] in a stricter manner," Kerstetter said.

"It definitely affects us. We have to be smarter when we have parties now," said Keith Seabury '99, of South Seventh Street. "I got a citation [for a noise violation], but it's not going to stop me from having parties in the future."

"I know three or four other people who got violations," Greg Brash '99 said. "They don't let us have parties uphill and now not downhill. What do they want us to do?"

In cases where unsafe or unsanitary conditions exist in a residence, the office of code enforcement and, in some cases, the landlord will be notified.

Enforcement operations will also be conducted at random times during the year.

Minors convicted of consumption of alcohol will have their driver's license suspended for a period of 90 days and their parents will be notified. A driving while under the influence charge will be filed for any minor operating a vehicle with a blood alcohol level of .02 percent or greater.

"In my discussions with the local authorities, it is my understanding that they do not expect any more or any less of students than they expect from any other law-abiding members of the community," said Vince DeCerio, director of Public Safety.

The Lewisburg Police and Kerstetter are working with the University in implementing the harsher policy. "I think it's appropriate," Ger-

ald Commerford, associate dean of students, said. "It's customary to follow the procedure they're following."

Neither Commerford nor Kerstetter have received any complaints of the policy thus far. However, "From the amount of violations, nobody seems to be hearing us," Kerstetter said. "We need more strict enforcement for the students' and community's sake."

Jonah Hall—The Bucknellian

Lewisburg Police, shown here in last March's student "riot", have implemented a "Zero Tolerance" policy due to the increase of alcohol, drug and disorderly conduct violations. Thirty-six citations have already been issued to University students. Stiff fines and citations now await off-campus offenders.

C.A.L.V.I.N. and H.O.B.B.E.S. members move to Hulley House

By Greg Venbrux

This year is a time of change for substance-free C.A.L.V.I.N. and H.O.B.B.E.S. as they slowly adjust to living in their new location at Hulley House. The move was prompted last year when Sigma Phi Epsilon (Sig Ep) decided to recolonize its old house that was being used by C. & H. in Sig Ep's absence.

Apparently, members of C. & H. had been wanting their own house for quite some time and expressed interest in Sig Ep's house when it became vacant. C. & H. moved into Sig Ep's house in 1995 after their chapter was closed due to financial difficulties and substance abuse.

With the assistance of Gerald Commerford, associate dean of students, C. & H.'s dream of having a house became a reality. The University spent nine months and \$278,000 renovating their new facility shortly thereafter.

C. & H. grew to include over 215 members after colonizing the old Sig Ep house. The house itself held over forty members. However, as C. & H. grew, interest in Sig Ep was also growing as students recruited one another to join the recolonized fraternity. This new interest in Sig Ep threatened to take over the house recently acquired by C. & H.

According to Commerford, "The University agreement with Sigma Phi Epsilon, which had originally owned that facility, gave them the opportunity to colonize one more time after a three year hiatus. Their recruitment was done last year with the understanding that, beginning with the Fall of 1998, if they had a Chapter they would move back to that facility. Consequently, then, we'd have to find another place to accommodate C.A.L.V.I.N. and H.O.B.B.E.S."

Commerford went on to explain why the University relocated C. & H. to Hulley House.

"Originally [C.A.L.V.I.N. and H.O.B.B.E.S.] had a significant number that wanted to live together, and we figured that [their] needs would best be met by accommodations in Hulley House."

Since moving out of their old house, members of C. & H. have dispersed throughout campus. Currently, only six or seven members live together in Hulley House. As Commerford explains, "Regrettably, nine or ten of the students [in C. & H.] decided to live elsewhere rather than

living in Hulley House."

Because the members are a minority, in Hulley House, C. & H. is not allowed to claim the house as their own.

When asked how they felt about their relocation to Hulley House, C. & H. vice-president Cheryl Morse replied, "The house is a lot smaller. For our group that's kind of important because we have a lot of activities, we like to have parties... [but] we're not complaining because we got to live in a house. If we had to live in a hall or a dorm, it would have been a lot worse."

President Tom Egan said, "Everyone that was here last year feels that it's not as big. The house last year was really really nice."

Despite the shortcomings of the house, one positive aspect is its location. Since Hulley House is located near most of the dorms, C. & H. hopes to attract more first-year students. "We're closer to most of the first-year students. It's easier for them to stop over at the house," Morse said.

This year, both Egan and Morse appear to be optimistic about the future of C. & H. They hope that the organization will grow next year and possibly find a new, permanent residence that they can call their own. The strength and determination of C. & H. appears to be keeping their organization afloat, even in times of depression. "We're still here. Even though we don't have the space we used to, we're still going to hold on to our guns," Morse said.

Jen Ciotta—The Bucknellian

Members of C. & H. now reside in Hulley House.

University buildings undergo renovations

Vaughan Literature, Harris Hall and the Mods received improvements this summer

Paige Call—The Bucknellian

Renovations to Vaughan Lit included electrical and lighting upgrades as well as cosmetic improvements.

By Sarah Palmer

This summer's triad of renovations, including makeovers in Harris Hall, the Mods and the Vaughan Literature Building, can be credited to the University physical plant. Although each set of buildings experienced alterations to different degrees, the overall outcome at summer's end left each of them upgraded and updated.

Plans for renovations in the Vaughan Literature Building commenced during the fall of 1997. "All drawings were done by the physical plant, although utilities experts and outside contractors were certainly consulted," Angelo Viecei, project manager for the physical plant, said.

"We had budgeted forty-eight dollars per square foot for this project when we started making plans," he said. We were able to stay within that budget—the renovations (for Vaugh-

an) costing approximately \$300,000.

Renovations in the literature building included an electrical and lighting upgrade and complete wiring to the network. Viecei referred to the changes as programmatic as well as cosmetic and stated that there were no structural changes within the building. Because they were part of the general work area, six classrooms and three offices were renovated.

The building's walls were given a fresh coat of paint as well. "As you walk through the building, you will see a color palette scheme that distinguishes Vaughan from other academic buildings," Viecei said. "We have made it a point to make each building a bit different from the others."

New instructors' desks which include audio-visual equipment and networking options, as well as overhead data projectors have also been

provided for the classrooms. The Information Services and Resources office on campus offered advice to the physical plant in arranging these facilities.

Harris Hall, which was constructed in 1905 and last renovated in 1965, endured the most change, surpassing the others at a cost of \$1.6 million. In addition to electrical and networking upgrades, the building underwent what Viecei calls "a complete cosmetic makeover."

"Harris was in need of much more extensive alterations," Viecei said. In addition to heating, and electrical upgrades, the building was extended new floor coverings to replace the old asbestos-infested ones that had been there previously. Also added were new bathrooms and shower rooms, each designed to be handicap accessible, as well as a new ventilating system.

"I think that we will probably be

facing a lot fewer requests and complaints from Harris residents this year than in previous years [now that the renovations have been completed]," Viecei asserted.

However, Daniel Remley, director of the Office of Housing and Residential Life, stressed that all students should be aware that if complaints indeed arise, "they can alert our office regarding the concerns relative to their living conditions."

"By this I mean reporting of problems, suggestions for improvement to existing structures, providing suggestions as to design of future renovations or construction. Our office values student input and welcomes their suggestions."

Project manager for the Mods, Bob Martin, conceded that renovating Bucknell West was quite a task. "We had a real logistics problem," Martin said, referring to the short notice the physical plant was given by the University to prepare for the eight-week process.

Although the Mods first set foot on campus as temporary housing, they have become increasingly popular among the University community during the past several years.

Approximately \$700,000 was invested in the 16 Mods that were refurbished with new facilities ranging from new carpet and paint to much larger accommodations such as new baths, kitchens, decks, and heating.

Another valuable asset provided for both Harris Hall and the Mods was complete access to the University network.

Hunt Hall is next on the physical plant's agenda of renovations, scheduled to be "renewed" in the summer of 2000.

As for the new dormitory scheduled for building on Swartz Field as early as next summer, Viecei could only disclose that the physical plant is in the process of composing the plans and will be responsible for the building's construction.

In addition, the Instructional Facilities Committee, which manages the upkeep of all academic buildings, intends to implement projects similar to last summer's Vaughan project in the near future. However, no final decisions have been made regarding which buildings will ultimately be chosen.

Public Safety Log

September 1, 1998

VANDALISM—A Public Safety Officer responded to Kappa Sigma Fraternity for the report of damage to the sign and light. The incident is under investigation. Lewisburg Police Department was notified.

THEFT (2 Counts)—Two University students reported to a Public Safety Officer that bicycles were taken from the Martin House and Carey House bike racks where they were secured. Lewisburg Police Department was notified and the incident is under investigation.

September 4, 1998

INFORMATION—While on routine patrol, a Public Safety Officer observed a fire burning at the rear of a Bucknell West Mod. A Public Safety Officer assisted the resident in extinguishing the flames of a citronella candle.

THEFT (2 Counts)—A University employee reported to a Public Safety Officer that the PAC numbers from two students were being used without their authorization. A student admitted to the unauthorized use and university charges were filed.

September 5, 1998

INFORMATION—A University student reported to a Public Safety Officer that water balloons were being thrown from the windows of the Delta Upsilon Fraternity. The incident is under investigation.

UNDERAGE DRINKING—While doing a routine fraternity party check, a Public Safety Officer observed an underage University student carrying alcohol. A university citation was issued.

INFORMATION/POSSIBLE ACT 64 VIOLATION—A Public Safety Officer responded to University Avenue House for the report of the odor of marijuana. An investigation determined that the report was unfounded.

September 6, 1998

UNDERAGE DRINKING—While doing a routine fraternity party check, a Public Safety Officer observed an underage University student carrying alcohol. A university citation was issued.

citation was issued.

DISORDERLY CONDUCT/INTOXICATION—A Public Safety Officer responded to Chi Phi Fraternity for the report of an intoxicated University student throwing a barricade. A university citation for disorderly conduct was issued.

INFORMATION—A University student reported to a Public Safety Officer that a motorcycle was vandalized while parked in the Swartz Lot. The incident is under investigation.

LARCENY/THEFT BY UNLAWFUL TAKING—A Public Safety Officer responded to Bucknell West for the report of vandalism to a University student's vehicle. East Buffalo Township Police Department was notified and the incident is under investigation.

STUDENT HEALTH TRANSPORT—A Public Safety Officer responded to Swartz Hall for the report of a broken window. East Buffalo Township Police Department was notified and the incident is under investigation.

VANDALISM—A Public Safety Officer responded to Swartz Hall for the report of a broken window. East Buffalo Township Police Department was notified and the incident is under investigation.

INFORMATION/POSSIBLE ACT 64 VIOLATION—A Public Safety Officer responded to Gateway Kalm Posner for the report of an odor of marijuana. Upon investigation, that report was determined to be unfounded.

September 7, 1998

STUDENT HEALTH TRANSPORT—A Public Safety Officer responded to Kress Hall for the report of a University student with an eye injury. An SHS driver transported the student to Evangelical Hospital Emergency Room for treatment. The student later returned to campus.

September 8, 1998

LARCENY/THEFT BY UNLAWFUL TAKING—A University student reported to a Public Safety Officer that someone removed a parking decal from her vehicle. The incident is under investigation.

Million Youth Movement March ends on upbeat note

ATLANTA—The Million Youth Movement March ended Monday with civil rights leaders urging young black people to resist violence and hate.

"Nonviolence is a powerful tool because it's about mind control," said the Rev. Jesse Jackson in a speech. "It's about spiritual control, it's about self-development and lifting up."

Jackson, NAACP President Kwesi Mfume and others spoke to about 4,000 people who had traveled to Atlanta during Labor Day weekend to attend workshops and participate in a march to call attention to the plight of black youth.

McGwire's 61st shot in the arm for America's pastime

ST. LOUIS—Mark McGwire's 61st home run of the season was the blast that put baseball back on the map. Fans and players across the country cheered McGwire, whose shot tied Roger Maris' single-season record, who slugged 61 home runs in 1961 for the New York Yankees.

McGwire, who has 20 games to set the record with the Cubs' Sammy Sosa, who has hit 58 home runs. Sosa did not hit a home run in the Chicago Cubs' 3-2 loss to the St. Louis Cardinals, but he remains in the hunt to break Maris' record.

McGwire's and Sosa's quests to break Maris' record have riveted the nation and helped to revive interest in the national pastime after the bitter strike a few years ago that resulted in the cancellation of the 1994 World Series.

Man killed in freak roller coaster accident

SANTA CLARA, California—A 25-year-old man died Monday after being struck in the head by a woman whizzing by in a roller coaster at Paramount's Great America Theme Park.

The man jumped over a fence into a restricted area to retrieve a hat he had lost while riding "Top Gun," park officials told KSTS-TV.

A woman accidentally kicked the man when her car passed him. The cars in the "Top Gun" roller coaster ride are suspended from an overhead track and the passengers are seated with their legs dangling from the bottom of the cars.

One suspect in custody, other dead in Colorado shootings

AURORA, Colorado—One of the teen-age suspects in a Colorado shooting spree was taken into custody Tuesday after the other suspect was found dead in a field. The two boys allegedly shot four other teens and a woman to death in a rampage at two homes in the Denver suburb of Aurora.

Witnesses who saw the attack at one home Monday told police "two kids wearing bandannas barged into the house carrying shotguns and opened fire, police spokesman Bob Stef said.

Police tracked down the second suspect, a 17-year-old boy, at a home in the suburb, and he was taken to the police station accompanied by his father, Stef said.

World

Bad weather delays Swissair search

HALIFAX, Nova Scotia—Due to bad weather, divers won't resume their search for Swissair Flight 111's second "black box"—the cockpit voice recorder—until Wednesday at the earliest. Meantime, the flight-data recorder, recovered Sunday, contains no information from the crucial final minutes before the plane crashed, investigators said.

At the crash site, in the Atlantic five miles off shore, divers equipped with hand-held sonar searched at a depth of 190 feet on Monday for the plane's cockpit voice recorder. Signals from the device have been detected, but high seas forced suspension of the diving.

Launch gives North Korea morale boost

PYONGYANG, North Korea—National Pride is an obsession here, where millions of citizens have been mobilized to celebrate the secretive country's 50th anniversary and the official naming of Kim Jong Il as supreme leader. But a display of technical skill is what worries North Korea's neighbors and Washington.

North Korea may have been telling the truth when it said a rocket it launched on August 31 carried a satellite, but the launch's primary purpose was to test a new, long-range ballistic missile, U.S. officials said. U.S. intelligence and defense sources said that, while North Korea may have tried to launch a satellite in conjunction with its first test of a two-stage Taepo Dong I missile, there is no evidence of a North Korean satellite orbiting the Earth.

Rebel leaders quit Congo peace talks

VICTORIA FALLS, Zimbabwe—A two-day summit of southern African leaders ended Tuesday without the hoped-for cease-fire agreement in the Democratic Republic of the Congo.

A delegation of rebel leaders quit the talks and left Zimbabwe, saying they could not agree to a truce without being allowed to talk directly with the government of Congo President Laurent Kabila.

"There will be no cease-fire before Kabila negotiates with us directly," said Arthur ZiaAhidi Ngoma, the deputy president of the rebel political movement, the Congolese Democratic Coalition. "We are going back home now to do one thing only, to intensify our campaign against Kabila," he added.

Yeltsin consults aides in crisis over prime minister

MOSCOW—President Boris Yeltsin met his top advisers in a secluded residence outside Moscow on Tuesday to consider his next move in a battle with parliament over who should be Russia's next prime minister.

Yeltsin has a week to name a new candidate for prime minister or renominate Viktor Chernomyrdin for a third, decisive vote after the State Duma rejected his veteran ally for the second time on Monday.

A third rejection would trigger the automatic dissolution of the Duma and an early parliamentary election.

Wiltgen assumes position of Program Coordinator for Residential Colleges

By Anne Monoky

After working in the Office of Housing and Residential Life for the past two years, Jim Wiltgen took on the position as Program Coordinator for the Residential Colleges. In this new position, he will be responsible for a large spectrum of events involving the Colleges.

First, Wiltgen serves as the supervisor of the Junior and Senior Fellows who assume the task of a support system for students in the Colleges. For instance, these Junior Fellows (JF) set up trips to New York City or Washington D.C. and Wiltgen makes sure that everything runs smoothly.

"I make sure that they are, for example, spending their money wisely. But, at the same time I want them to become the leaders and assume the major responsibilities."

Another main responsibility that Wiltgen's new position entails is the recruitment of students into the Residential Colleges. His primary argument deals with the benefits that students reap from working so closely with the University's administration.

"These students are able to develop a sense of community while

better understanding the overall academic mission."

Wiltgen also focuses on the idea that students are able to live with the same students that are in their classes. He explained that many schools around the nation have similar programs just with different names, such as "Living, Learning Programs."

As for Wiltgen's plans for the upcoming year, his calendar will be quite packed. Wiltgen commented that there are two aspects of his planning: small and big events. He spoke of the smaller events as an Ultimate Frisbee contest and the sponsoring of lectures around campus. As for the bigger events, "We just took 50 kids last weekend to the 'Hide and Seek' exhibit at Cowan this past Saturday. We are also planning to be a part of the AIDS March on October 4th."

Wiltgen's position opened up when Sue Ellen Henry became a visiting professor of Education. He voiced interest in the programmatic position after deciding that he needed a change of pace from his 15 years of experience in the Residential Life area. "I really liked the fact that I could work more directly with the students and faculty."

Shallonda Trim—The Bucknellian

Jim Wiltgen, Program Coordinator for Residential Colleges

BID DAY

From page 1.

again '99, the successes of Bid Day were particularly sweet considering the short amount of time—four days—IFC and Panel had to put together an alternate plan and subsequently get that plan passed by the administration. "I'm glad the Greek system did take on the challenge in such a short period of time and still have such a successful event. It's nice to see a plan come together."

Panhellenic Council president Charlene Vai '99, echoed Hallagan, saying that "the general consensus at Panel was that everybody got to know their new members better than they had on any other Bid Day in the past because there wasn't that pressure to drink... Everyone thought it was awesome."

GLEASON

From page 1.

Applicants for the scholarship are required to write an essay, primarily reflective in nature, on an aspect of Udall's work that inspired the candidate.

Gleason, who receives a \$5,000 stipend and the title of Udall Fellow for one year as a result of the award, spent part of August at the Morris K. Udall Foundation Headquarters in Tucson, Arizona. There he joined other inductees in a series of environmental seminars and an induction ceremony.

The foundation is an Executive Branch Agency of the United States government, with its Board of Trustees approved by the President of the United States, with advice and consent from the Senate.

Gleason's fellowship was made possible through the efforts of Gilroy, who came to the University in the fall of 1996 as an associate professor. Gilroy served as the first-ever faculty representative for the fellowship and acted as an adviser to Udall applicants. Two Bucknellians applied for the 1998 fellowship and Gleason was informed of his award in May.

"[Gilroy] is the one that pulled it all together," Gleason said.

Gleason's essay, on the 1980 low-level radioactive waste initiative that Udall championed, was chosen as one of approximately 55 winners from a pool of over 500 applicants. The initiative that served as the subject of Gleason's essay was a controversial plan that required states to create storage units for low-level radioactive waste.

"Before, there used to be no way to deal with radioactive waste. There used to be no disposal and no storage," Gleason said. "The initiative wasn't popular, but he helped to push it through."

Gilroy credits Gleason's diverse background in social and physical sciences in helping him to win the award. Udall applicants are concerned chiefly with environmental studies, but an understanding of the political and physical ramifications of environmental law is necessary.

"Because of his backgrounds in political science and biology, he probably can cover all sides of an issue better than most candidates," Gilroy said. "He's a hard worker with talents in diverse fields."

This year, Gleason will serve with Gilroy as a mentor to prospective Udall Fellowship applicants.

An Eating & Drinking Place For Good Sports

YOU'LL DO LOTS OF HARD THINGS WHILE YOU'RE HERE...

...FINDING SHOES WON'T BE ONE OF THEM

Because if you're smart, you'll learn right away that we have more sneakers and cleats than anywhere around here. And our prices are generally better than the chain stores (plus we have the ever-popular *Closeout Shoes* for you bargain hunters.) And, golly geez, we're only 4 blocks away.

So you should be really clear on where to go for sneakers, right?

NOW, HOW ABOUT ALL THE OTHER STUFF?

We have stuff like you won't believe, from the obvious to the obscure. From ping pong to place kicking tees. Sportrights to soccer hair scrunchies. Oakley brand eyewear to eye black for those bright sunny days on the field. Dance shoes and dancewear to dandy looking watchbands. Rollerblade brand in-line skates, racquets, soccer sandals (most commonly used as shower sandals), wiffleball bats & balls (hey, you guys buy them) and a generally thorough selection of athletic apparel.

If McDonalds hadn't stolen my slogan and put a fat trademark on it, I'd say

THIS IS THE PLACE

But they did. So I won't

Romanovsky & Phillips mix comedy with music

By Beth Slaby

On this Tuesday, FLAG & B is sponsoring Romanovsky and Phillips, a comical singing duo. Ron Romanovsky and Paul Phillips began performing in San Francisco.

Romanovsky and Phillips pose for their act that mixes music with comedy.

They will perform for your entertainment Tuesday, September 15 in Larison Dining Hall. Their music celebrates life with a perfect balance of wit, sensitivity and political passion. They have also been described as "delightful and entertaining Ambassadors of Homosexuality" by the *Sydney Daily Mirror*.

One member of the group, Romanovsky, was born and raised in a suburb of Pittsburgh. At 16, he began piano lessons, but instead of "practicing Chopin waltzes and Beethoven sonatas, he wrote satirical songs about his high school foes with catchy titles like 'Ignorant People,' 'Average Boys,' and his coming out song, 'Masquerade.'"

After coming out by singing "Masquerade" to the entire city of Pittsburgh, Romanovsky moved to San Francisco with only \$100 in his pocket. He began performing at coffee houses like the Mustard Seed and The Owl and the Monkey Cafe. Inspired by the women's music movement, Ron decided "the time was ripe for 'Meh'n's Music.'" Romanovsky met Paul Phillips by chance in Golden Gate Park.

Phillips was born in New Jersey and began singing four-part harmonies with his family in nursing homes and hospitals when he was just 6 years old. He came out at the end of his freshman year at Wheaton College. The Wheaton College Men's Glee Club was not amused and uninvited him to go on their European Tour. Phillips moved to Manhattan, and then to San Francisco where he met Romanovsky.

Six months later, they began performing together as Romanovsky & Phillips, which according to Phillips, has been "the perfect marriage of my three greatest passions: music, politics, and fashion!" Phillips continues to devote time to local gay/lesbian organizations, the Wheaton College Gay and Lesbian Alumni Association, and encouraging up-and-coming gay and lesbian performers.

Pioneers of the now-popular gay and lesbian comedy movement, Romanovsky and Phillips began their career at San Francisco's Valencia Rose cafe in 1982 when they were the opening act for Lea Delaria and Marga Gomez. Soon, they were praised by Bay Area critics who touted them as the "Gay Simon and Garfunkel." The band hoped that soon other duos would be compared to them as the "straight Romanovsky and Phillips."

Inspired by their newfound success, they began their first national tour in the fall of 1983. Over the next three years, they proceeded to record three record albums, *I Thought You'd Be Taller*, *Trouble in Paradise*, and *Emotional Roller Coaster*, on their own label, Fresh Fruit Records. The duo won the 1987 San Francisco Cable Car Award for "Best Recording Artist." R&P's music has been performed by lesbian/gay choruses throughout the United States. Their anthem "Living with AIDS" was sung by the Festival Chorus at the Vancouver Gay Games in 1990. In 1991, R&P released *Be Political, Not Polite*, for which they were once again shown to be on the cutting edge of gay and lesbian music.

Let's Flaunt It!, released in 1995, is perhaps their strongest album to date, with over 70,000 copies sold. In July 1996, R&P performed at the opening ceremony of the GALA Chorus Festival V, the largest convention ever held in Tampa, Florida. There they shared the stage with Ann Hampton Callaway, BETTY, and keynote speaker Maya Angelou. Currently, R&P are finishing 14 songs for an upcoming Off-Broadway-bound musical called JAYSON, working on their new act, and touring throughout the U.S. and Canada.

Come see this act Tuesday, September 15 at 8 PM in the Larison Dining Hall.

Cooking with Doug

By Doug Didyouyoung

Grilled Jamaican Chicken:

This recipe requires a twenty-four hour period to marinate; therefore, it's optimal to plan ahead, and I recommend that you save this recipe for long weekends, like Labor Day (that is, if you're not in class). So, give this one a mum.

You will need:

- 3/4 chicken breast, trimmed.
- 1 cup soy sauce
- 1/2 cup honey
- 1/4 cup orange juice concentrate
- 1/4 cup of rum
- sprinkle of dry hot pepper flakes

Add all ingredients into a large mixing bowl and whisk together. Place the chicken breast into a zip lock bag with the marinade. Let this sit in the refrigerator for 24 hours. Then simply grill. This chicken tastes even better with grilled asparagus, yellow peppers and scallions. If you want, use any extra marinade for the vegetables in another baggy, and grill alongside the chicken. Bon appetit.

Elizabeth's

FEATURES

An abroad perspective: Brussels

By Alexandria Trivisani

Although I always heard about the incredible experiences that people had while "abroad," I did not understand the extent to which traveling internationally contributed to one's overall collegiate experience. However, I spent last semester in the wonderful world of Brussels and this (almost) out-of-body experience proved to be just as salient for me. Well, I spent some of the time there, and a whole lot of time everywhere else in Europe. I can go on and on about how much I loved being abroad, but I think that it would be much more interesting if I just gave you one of the many e-mails I sent home, describing the adventures I had.

So I get off the train (from an amazing three day weekend in Paris at the Brussels train station at 8 AM... I hop on the tram back to my house and run upstairs to take a nice long shower... I don't even have enough time to unpack my backpack. I just grab my student ID and tram pass and run back out the door. I meet my girlfriend at the tram stop and we are off to the train station to buy tickets to Binche, which, at this point, is nothing more to me than a name. We don't even know which direction this town is in, let alone what time the festivities commence or where to go once we arrive. But going to foreign places with no prior planning was not new to us, after only having been in Europe for one month. From the moment we stepped off the train and onto the landing we needed to do nothing more than follow the crowd and the multi-colored confetti that carpeted the ground.

We followed the people down this cute little back street (it could have been the main street for all I know, but it seemed pretty small to me)... confetti still all over the ground... people at stands on the side of the road selling string spray, hair color or spray, huge bags of confetti, colored wigs... and other interesting products. Once we got onto the main street there were swarms of people all along the road. Many were gathered around these grates that were lined up, forming two lines down the whole road, obviously between what this alleged parade was going to pass through. So I looked around to soak in all the open bars with music, the enticing aromas coming from the food stands, and all the people. Then I happened to look up to the houses that lined the street... how interesting: every window of every story of every building was covered with wired screening that had wooden frames, making a wedge, pointing outward. What the heck is up with this, I'm thinking? Now I already have been forewarned that oranges are thrown around...but this road is pretty wide... I can't see how someone tossing an orange from the middle of the road out into the crowd can hit a window four stories up! I guess I will find out when

it starts. People were walking up and down this street for the whole three hours that we were there, up until the procession began. But it wasn't as simple as walking up and down...if you walked in here (which we did) you were making yourself subject to all sorts of "fun" stuff... those who were standing up along the gates watching the people walk in the middle, had all sorts of goodies that they were going to dump on the passers-by. We were sprayed with bright green stringy spray, and handfuls of confetti by random people.

Somehow we managed to avoid the craze of people with shaving cream cans and colored hair sprays. But some folk didn't dodge these decorations as well as we did. I saw this older man utterly "jumped" by five 20 year olds. They doused this man with shaving cream, but when the guys were through there were no hard feelings whatsoever. The man took off his glasses to wipe them off and the crowd laughed at the way he looked like a snowman with clean eyes. Kids had the greatest time throwing things on strangers. However, with all of the excitement, my eyes were zooming around looking at all of the children climbing on their parents' shoulders. At this point,

it is said that they are passed down from father to son. What I wondered is how do they wash them? Do the dry cleaners clean such costumes? A little ways up the road, I heard a lot of screaming, so I stood on my tiptoes trying to see what was going on. On both sides of the road, people were waving their arms like maniacs and clapping and yelling to whoever is passing down the middle of the road and then I notice that some people were jumping up and down trying to catch something that is being thrown at them— oranges. The crowd was going wild, jumping over each other, screaming, laughing and waving about— all for oranges. Is this fruit not grown in Belgium? I was watching these oranges making rainbows in the air and that the only way I could tell if they are approaching because I could not see who was throwing these oranges.

Finally, I could see—about 15 little boys all wearing the same costume, and they each had a basket of oranges in their hands. People all around me started to get really loud, and raise up their arms and sing some song. It was very bizarre, I was in too much shock and everything was so new I could not really enjoy the moment. So I just watched everything, and all the while tried to keep my eyes in the general direction of the incoming oranges. However, with all of the excitement, my eyes were zooming around looking at all of the children climbing on their parents' shoulders. At this point,

every one of might that they possess. You could hear the bang of the orange smashing up against a wall, the shiver of the wire shutters. I looked down to see tons of smashed oranges, dripping juice, confetti and beer cans swimming in the oranges' juice. A man climbed up the lamp pole five meters from me and wiggled up to the top of it. He was waving an arm at the next group of young men who were sporting the hats, and this guy knew what was coming.

Suddenly every one of the guys turned to this man and hits him with a myriad of oranges. Now there were constant oranges being thrown hard at this guy on the pole, they all slam against the house behind him, people around him were running for cover, and others are laughing and smiling. The guy on the pole must have been hit a number of times, but he was too drunk to feel it (but I'm sure he will be soaking those welts the next day). Anyhow, it continued like this... a few more groups of costumed hat bearers pass... they get older as they came.

It was a truly exciting experience... this small town of Binche really knows how to have a uniquely good time. Well, what do you think? Just remember that was only one day of my four month, adventure-filled "study" abroad experience. All I have to say is: go abroad!

than the first bunch of boys, and they all looked like princesses. They were wearing yellow, pink and blue dresses and matching tall cone hats. They, too, had baskets of oranges. When they passed by, I looked up the street again for more, and sure enough I noticed that the oranges in the air are going a little farther and are a lot harder! Now I realized that there are people on their balconies behind the protective screens that were standing up and shouting out at the people with the oranges. So now I saw that the oranges were being thrust all the way up at these people who seemed to be teasing the orange-throwers. The orange throwers used even more gusto to get the oranges through the wire or over top, to fall into the balcony. Now my eyes were a little wider as I noticed that the oranges rebound off the window protectors and fall back into the crowd. Yikes! The adrenaline in me was starting to pump a little and I started to smile—I could not believe what was going on, it was totally awesome. Behind me in a bar, YMCA was playing and all the locals were belowing out the words with their French accents. I saw the bartender come out to put a grate over the door, and then people again started jumping up and down and yelling around me... I spun back around to take guard against the teenage boys who were having it out with their oranges. Now these kids were truly putting their strength to the limits, throwing these oranges with every ounce of might that they possess. You could hear the bang of the orange smashing up against a wall, the shiver of the wire shutters. I looked down to see tons of smashed oranges, dripping juice, confetti and beer cans swimming in the oranges' juice. A man climbed up the lamp pole five meters from me and wiggled up to the top of it. He was waving an arm at the next group of young men who were sporting the hats, and this guy knew what was coming.

Suddenly every one of the guys turned to this man and hits him with a myriad of oranges. Growing pains need to be addressed carefully

As the 953 students of the class of 2002 settle into their routines as University students, the growing pains of an increasingly large incoming class can be seen around campus. Parking in the downhill area is at a premium with sophomores in Vedder competing for spots. Some first-year students in Smith are in "quadruples" (triples housing four students) while others are sharing the more traditional "dingles" (singles converted to doubles) uphill at Swartz Hall. In the midst of this overcrowding, the Mods, which were constructed as temporary housing over a quarter of a century ago, have been refurbished and are looking increasingly permanent.

The new residential hall slated for the Swartz Field area cannot come soon enough and the other new buildings planned through the Bucknell Campaign will undoubtedly upgrade the campus. For the time being, however, the housing crunch is causing the University to send mixed messages to the students and the Lewisburg community. The brothers of Tau Kappa Epsilon were evicted from their house in June, but with on-campus rooms already stretched to capacity, the University permitted eligible brothers to live off campus. The University has tried to monitor off-campus living to promote a responsible image to the people of Lewisburg. In the wake of the housing crunch, however, students who allegedly neglected their own fraternity house were sent out to live side-by-side with Lewisburg residents. The decision was practical from a numbers perspective but questionable when it comes to principle.

The solution to the housing crunch cannot come from downtown apartments, especially given the fragile relations caused by last year's "riot" and the recent zero-tolerance policy of the Lewisburg Police. In addition to the construction of the new residence hall, the University should start solving the housing problem by purchasing the Tau Kappa Epsilon house. The feasibility of this purchase is uncertain, but the living space could be used to alleviate overcrowded rooms as early as next semester. In the future, it could be used as a regular residential hall or it could house a new fraternity. Expanded housing on the west side of Route 15, either in the form of apartment-style units or a new residence hall, is also an option in the long term.

Smaller incoming classes in the next few years (until the new residence hall is completed) would also help, but as *The Bucknellian* reported last week, the admissions game is not an exact science. Despite offering admission to 300 less prospective students last year, 61 more students accepted offers. While it may be risky to continue reducing the number of offers, it should be considered for several reasons.

First, the size of the student body is an important part of the social and academic character of this campus. There is a small, intertwined community at the University, but it is far from microscopic. Students know a significant portion of their peers, but even seniors are still meeting new people. Academically, the University's unique blend of a small liberal arts college and a nationally renowned engineering school attracts many current students. Expanding the University could lead to confining academic specialization.

The aesthetics of the campus should also be considered during expansion. The spacious, uncluttered campus is a breathtaking selling point for prospective students and a daily stress reliever for current ones. To break up the University's wide open spaces would significantly reduce the natural beauty of the campus.

Given the current housing situation, something has to be done about living space and class size. Admitting a large class of incoming students and then subjecting them to undesirable living conditions is a great disservice to our first-year students. When new living space is available, however, it should be used to alleviate space problems, not to jam in even more students. Changes on this campus are necessary, but in this process, it is important to preserve the positive characteristics of the campus and the student body.

Family ties provide stability and support

Often taken for granted, relatives are lost in the confusion of daily routines

By Beth Martin

Like many of us, I'm often so absorbed with my life here at Bucknell that I forget about my family. Well, maybe not forget exactly, but it is not exactly at the forefront of my mind. Instead, while I'm at school, my grandparents, parents and sisters take a backseat to my schoolwork, sorority, activities and friends. Although my family is seldom on my mind, my mother tells me that I am constantly on her mind. I think this is an exaggeration, but I do know my mother thinks and worry about me much more than I do them.

Unfortunately, my paternal grandfather passed away last week, and suddenly my family became my number one priority. His death was no great tragedy (he was 82 and had been very sick for the last few years), but though I too was sad, I was truly more concerned with my father, aunt and grandmother. Likewise, when my roommate coincidentally lost her

maternal grandmother a couple of weeks ago, she was extremely focused on how her mother, aunts and uncles were fairing. However, at the time it was not easy for me to give up prefs, Bid Day and one of the biggest party nights of the year to go back to New Jersey for the viewing and funeral.

I realize how self-centered it was to even consider what I would miss, but I think most college kids are selfish. And why shouldn't we be? We have few real responsibilities, and have our whole lives in front of us. There are always people to hang out with and parties to attend.

But this won't always be the case. Before we know it, our lives will change dramatically. Many of us will have our own kids, whom we will think and worry about constantly. Our families will be more important to us than our peers will be or any fraternity party ever was.

This past weekend made me think about just how important my

family really is to me. One of the main reasons why I sometimes lose track of them at school is because they have given me so little to worry about, supporting me emotionally and financially. More importantly, I know that my family is a permanent part of my life. Sadly, almost everything and everybody else is not. Roommates, friends and even spouses come and go, but family is here for life. The truth is, nobody will ever love or give up so much for us as our parents have.

But even though our families are probably not going anywhere, it is important now to give back to them some of the attention and support that they have given us—even though our lives are busy revolving around ourselves, as they should be.

Do I think that we should spend our college years constantly thinking and being concerned about how and what our families are doing? No. However, I do think that we should recognize and be open to grateful for their support and

love. And I do think we should give them the time of day when they need us, as was the case with my family last weekend. Giving up one party weekend at college in order to comfort and support my family was well worth it; I know that they have given up so much more for me over the years.

Many of us complain that our parents call us too often or at the worst times and, disturbingly, I've heard quite a few people say that they do not want to go home for Fall Break this year because they will have to "deal" with their parents. Are their parents wicked or abusive? I doubt it. Rather, they probably ask too many questions and nag them too much.

It is important, however, to keep strong ties with our families, even when we think that we don't need them, because they do need our love and attention. More importantly perhaps, we probably need them a lot more than we realize even here at the Bucknell "Bubble."

Is dieting really worth the effort?

By Rebecca Rowland

Since it is so frigid here in Pennsylvania, I had to put on an extra layer of fat to protect me from the elements. At least, that is what I am going to tell my friends when I see them over October break. Actually, I have yet to gain the "Freshman Fifteen." In fact, I fully expect to lose weight while I'm at college. Intrigued? Allow me to elaborate.

Here at Bucknell, (motto: "Educating the obsessive gym-rats of tomorrow, today") the peer pressure to stay thin is high. I mean, get real, J. Crew does not make XL. I've come to the conclusion that most people here would sell their right leg to be the perfect size zero (or at least to decrease their thigh measurement. "Nine inches, all right!"). Have you seen with what ferocity people here consume Diet Coke? Diet Coke ranks just above clam juice on the "Undrinkable

Beverage" list yet people have it coming out of their noses they drink so much. If there is ever a Diet Coke shortage, I am sure it is because it is being stockpiled in the basement of the Langone Center.

To the students at Bucknell, not exercising every day is almost as bad as driving a station wagon. The people who live in the Gateways are revered as gods because they GET to walk up that massive cliff/staircase everyday. And why do you think so many people wear heels to class? It's a good calf workout, of course! Here's an experiment: walk up to any student you see around campus. If you manage to stop him or her (I'll say him, girls get picked on enough about this) from running, ask him what he would rather be, thin or smart? I'm sure the answer to this question would be very enlightening but unfortunately, he wouldn't be able to give you one because he would suddenly have to find a tissue to stop the uncontrollable flow of his nose.

It is for these reasons that I firmly believe I will not gain fifteen pounds. I will gain twenty because I will be so upset about driving a station wagon that I will stuff myself happy. The rest of my peers, however, will be A-OK. Sadly though, this cycle of weight loss will perpetuate with increasing ferocity until the freshman class of 2030 has to hold their convocation ceremony indoors lest they all blow away in the breeze.

Here's a little anecdote I found amusing: I went on a tour of Gettysburg College the summer before my senior year. My tour guide was, how to say this politely, fluff. As we walked by the lovely buildings, we passed the dining hall. "The food here is really good," she said, "I gained forty pounds by Thanksgiving of my freshman year." AAAAAARRRRGGGGHHHHH!! To make a long story short, I came to Bucknell.

Wouldn't it be ironic if scientists found out that fat was good for you and being thin was a hazard to your health? The Diet Coke stash would be dumped into the Susquehanna thereby resulting in extremely thin fish while all over campus students rejoiced and stockpiled Eddy's Pralines and Cream instead.

Of course, someone would have to call J. Crew.

POLITICAL CARTOONISTS ARE IN DEMAND...

Especially on this campus. If you have the artistic touch and you have something to say, call x1520. We'll make room for your talents.

FDA-approved pill reshapes birth control

By Emily Novick

What will happen the morning after? On a cool, September morning at the end of the month, the people of our society will rise as they do every morning and dress for the rat race. The children will go off to school with bagged lunches and life will continue as it always does. But something different will be going on down at all the local drug stores, because this day will be the day America takes a radical leap in the liberal direction. After years of study, the approval finally came and the "morning-after pill" will be released as a kit obtainable through a doctor's prescription.

The new American version of the pill was recently approved by the Food and Drug Administration. Obtainable by prescription, the morning-after pill will be marketed in a

kit known as Preven. The kit has the ability to prevent pregnancy up to 72 hours after unprotected sex. It is suggested that the pill prevents ovulation, therefore, preventing the implanting of an egg on the uterine wall. The morning-after pill will not destroy an egg that has already attached itself to the uterine wall, however.

The morning-after pill is not to be confused with the French emergency contraceptive called RU-486. Having been used in Europe for many years, RU-486 is drastically different from the new American version. RU-486 also comes in the pill form, but it has the ability to destroy a fertilized egg, which has already been implanted on the uterine wall. There is much controversy surrounding the use of RU-486; supporters of the Pro-Life movement strongly oppose the pill equating it to sur-

gical abortion procedures. RU-486 does indeed complete the parallel procedure, destroying a fertilized egg.

The government has approved the distribution, marketing and advertisement of Preven, but how do the people feel about it? It can be assumed that Preven will only add to the enormous amount of tension that complicates the issue of abortion. But little does the American public know that this form of emergency contraception has been used for as long as the birth control pill has been around. Doctors who understand the workings of the birth control pill have been advising women who engage in unprotected sex to intake specific doses of their usual birth control pills for the days following intercourse. However, this system is not completely effective. Now, medicine has just created an

effective system through the same means.

The Preven kit will now become a wondrous aid for those who have experienced failed contraceptives or for those who have been the victim of sexual assault. But now the American government has the responsibility of monitoring the use of the morning-after pill, making sure that it is not taken advantage of.

Preven should be quite easily available as an emergency form of contraceptive, but at no time should it be used as a typical form of birth control. The American market is overflowing with various birth control methods; Preven should not become one of them. The morning-after pill is a crisp, September morning as long as the government prevents Preven from becoming just another stock on the drug store shelves.

Consider candidates' goals when voting

By Maren Johnson

You've seen them around, "Don't be an ass..." "Cute Puss Out..." "Hey Stud..." These are all catch phrases that have been plastered about campus by first-year hopefuls battling for class officer positions. The competition is hot, with at least 8 advertised candidates running for the coveted position of President. Each one is vying for the honor of presiding over the largest class. Bucknell has ever seen.

However, it is a shame that with such little time to get to know our classmates and no major issues to focus on, this could turn out to be just another high school popularity contest. Granted, on the eve of the election, we will have the chance to hear what exactly it is that the candidates stand for. But it is almost too little, too late.

Most of the smart candidates have already proceeded in telling every friend they have made at Bucknell to throw a vote their way. The sexual tones of the candidates' slogans have caught most people's attention, as well as the rampant campaigning at all hours of the night and day.

I'm not trying to put down the "political structure" here at Bucknell or the learning experience involved in the situation. I think that there are some very positive aspects to the process. It simply seems that there is just too little time and organization to choose a candidate based on much more than whether or not they've been your friend so far. It is important that we listen to what it is that the candidates stand for. What are they going to do for us? Is the

candidate a competent public speaker? Public speaking is always a valuable asset whether or not that person has to speak in front of a large group. Being able to articulate one's thoughts and desires well is what gets results.

Is the candidate serious about

the position, or do they just want the privilege of the title? Is what they promise to produce important? How will it benefit us? These are just some of the questions to consider when you listen to the candidates and when you go to fill out the ballot.

I am not condemning voting for

a friend, but make sure that your friend is also a positive candidate for the job. It is important that, in this microcosm at Bucknell, we have a competent leader to guide us through our first year.

Best of luck to all the candidates and remember who it is that you are representing.

Latest changes in choices anger one 'Caf' veteran

By Allyson Demerath

You have had a long day, and you are ready for a little relaxation before your nocturnal activities. After arguing with all of your friends on where to go to dinner, you realize none of you have any money. You grab your ID, not that kind and head for the Bostwick Cafeteria, better known as "the caf."

As you enter the cafeteria, you notice something is drastically different from last year. Is it the horrible lighting? No, that is still pretty bad. What about those lovely olive green chairs? No, they are still there. Then it hits you: there are lines longer than those found at Disney World. A little discouraged, you head for the nearest group of students to get a lovely light blue tray. Given that you will die before making through the lines for the main courses, you head for the salad bar before tackling the rest. However, the salad bar no longer exists. All you can see is a group of clueless students risking

cutting off the tops of their heads to reach the cucumbers in the second row. Instead of having four nice lines going down both sides of the two salad bars, there are only two herds of people pushing and shoving each other on the outskirts of the "U" shaped obstacle course. Once you have survived the challenge of getting a salad, you realize there are only three different salad dressings to choose from. Where did the rest of them go?

It is time to head into the main battle lines to get something edible. The food remains the same from last year. We all still love the chicken tenders, but the overcooked vegetable department could use some work. So, you make your way to the beverage area to find something to quench your thirst from such a workout. I personally think our caf does a pretty good job of providing a variety of drinks, but it is a good thing there are free refills! Bigger glasses that are not a hundred degrees when you pick them up would

be nice. So you have finished your meal, and it was not too bad. You enjoyed chatting with all of your friends and watching the first years look for some place to sit. It is okay; we've all been there! Now you are ready for some dessert. What happened to the "fro yo!" The area I used to frequent has now turned into some huge mass of confusion and people keep walking away with glasses and bowls of semi-liquid substances. How can the frozen yogurt in the Bison be so good, while the frozen yogurt in the caf looks like soup? I do not understand! It is a college cafeteria however, and I think the dining service deserves credit for taking a risk and trying something new. We understand that it is not going to be the same as mom's special lasagna. All of the staff in the caf are as friendly as those in your favorite restaurant back home. Overall, the caf remains a mediocre experience, which could use a few more "improvements!"

SATs are integral to college application

By Meredith Shreiner

When I was an applying to colleges last year I noticed a growing trend in the number of schools no longer requiring SAT scores.

My brother was an entering freshman at Dickinson College six years ago. At that point, he needed his SAT scores submitted in order to gain acceptance. However, I was surprised when several of my friends applying there, now six years later, had specifically chosen Dickinson and schools like it because they no longer require SAT scores. This is a dangerous trend for a school that I hope isn't administered by Bucknell in the future. I was an above average student in advanced high school courses. I didn't have a 4.0 or a 3.9 or a 3.8. What I did have, however, were very good SAT scores and a National Merit title. If the colleges I wanted to go to did not weigh SAT scores close to grades, I would have been out of luck. I was lucky that I was accepted to Bucknell early decision.

So far here, I have found it much easier to work up to my potential. Not only do I see more of a point to working hard in my classes, but also they are difficult enough to merit attention. Had Bucknell not taken into consideration my SAT scores, I would have been a borderline candidate who may not have been accepted. My SAT scores reflected something about my learning capacity and intelligence that grades did not.

My friends who applied to Dickinson and other colleges which do not require SATs did so because their scores were embarrassingly low when compared to their levels of academic achievement. So, colleges see a 3.9 GPA and say, "Wow, we need this kid."

However, not all cases of low SATs reflect a student who does not test well. Sometimes, the student just applies himself to high school classes that are not very difficult. Then, when they get to competitive colleges, they are lost in the confusion of work, classes and their new-found freedom. In these cases, SATs would have been a good indicator of their academic potential.

Another problem with not requiring SAT scores is the variety of high schools from which kids are coming from. My high school was very competitive. A 4.0 from my school reflects a student who is not only motivated, but blessed with enormous talent. Other school districts in my area, however, give out A's just for showing up to classes on a somewhat regular basis. Colleges do not know which school is more difficult than the next. This is the reason that many colleges' academic expectations are gradually lowering while Bucknell is steadily rising.

I am not blind to the advantages of not requiring SATs. A good friend of mine applied to a school that did not require her SAT scores. She had scores of about a thousand, but her high school GPA was a 3.8. Her freshman year she earned the recognition of becoming the "outstanding freshman." She found the perfect balance between academics, volunteerism and social life. It is for students like her that the system was designed.

Bucknell, however, will hopefully not follow the increasing trend towards not requiring SATs. I have heard rumors that the University is seeking an Ivy League label and, if that is the case, Bucknell could only hurt itself by not requiring SATs. The traditional system of judging college applications has worked in the past and now is not the time to change.

Letters Policy

The Bucknellian accepts letters to the editor from students, staff, faculty, and the community at large. Letters should be less than 750 words and Macintosh format is preferred. *The Bucknellian* editorial staff reserves the right to withhold letters with inappropriate content. Letters can be sent to campus box C-3952 or e-mailed to bucknellian@bucknell.edu.

SURVEY

DO YOU THINK THAT LEWISBURG'S NEW "ZERO TOLERANCE" POLICY WILL BE SUCCESSFUL IN "REDUCING THE RISK OF INJURY OR HARM TO PERSONS WHO ABUSE ALCOHOL OR DRUGS" AS INTENDED BY THE LEWISBURG POLICE DEPARTMENT?

"I don't think it will help. It won't affect people's judgment to drink."
Jennifer Eakin '01

"Honestly, I don't think it will do anything. Just like Prohibition in the 1920s, a few people given citations won't help."
Eric Sendrow '00

"I don't think it is necessary at the University if people aren't disrupting anyone."
Julie Mason '02

"Probably not, because I don't see injury as being a problem and injury usually occurs inside and I don't think that police are chilling in there."
Andrew McCartor '02

"Yes, I think it will help keep students away from the town and disturbing the citizens if they are drinking."
Amy DiValerio '02

"I think it will, because people will be more careful about keeping themselves inside while they are drinking. In the fraternities and houses it will have more of an impact on where people drink, but not necessarily how much."

THE BUCKNELLIAN

Founded in 1896 as *The Blue and Orange*

Volume 122, Number 2

C-3952 BUCKNELL UNIVERSITY

LEWISBURG, PENNSYLVANIA 17837

(717) 524-1520

bucknellian@bucknell.edu

<http://www.bucknell.edu/publications/bucknellian>

EDITORIAL POLICY

The editorials of *The Bucknellian* reflect the consensus of the Editorial Board as to the topics and general position. If a consensus could not be reached, the opinions expressed are those of the Editor in Chief.

All other opinion material represents the views of the author and not necessarily those of *The Bucknellian*.

PUBLISHING POLICY

The Bucknellian is written, edited, and published each Thursday during the academic year entirely by Bucknell University students. The *Bucknellian's* fiscal affairs are overseen by an Advisory Board comprised of faculty, staff, and administrators. All published material is chosen by the paper's Editorial Board without any prior review by its advisors, the University, or the Bucknell Student Government.

The editorial content of *The Bucknellian* does not necessarily reflect the opinions and attitudes of Bucknell University's administration, faculty, or trustees.

SUBSCRIPTIONS POLICY

Subscriptions are available at \$45 per year, \$30 per semester. To subscribe, send payment and address to *The Bucknellian* Subscriptions, Box C-3952, Lewisburg, PA 17837. Subscriptions are mailed first-class on the Friday following publication. Please send change-of-address information to the above location as well.

ADVERTISING POLICY

The Editorial Board of *The Bucknellian* reserves the right to deny advertisements if offensive, illegal, or in bad taste. For advertising rates, please contact the advertising manager at (717) 524-1085.

Merck Presentations: Brian Bowser, Tom Rice, Laura Blumhof, William Evans, Carly Graylock

Summer research keeps students busy

By Katherine Nowak

The Undergraduate Research Symposium, held on Tuesday, September 8, was an impressive array of 35 presentations ranging from issues concerning capital punishment and socio-economic class to the effects of secrets and lies on the behavior of children and adolescents to Biblical revisions illustrated through poetry. The University's research endowments funded the explorations of 30 of the 35 students. The remaining research, presented under the title, "Merck Presentations," was funded through the Chemistry Department by Merck Corporations.

The methods of investigation included statistical analyses, behavioral observations, surveys, as well as comparisons to previously collected data by other experimenters. To illustrate the depth of technique used by the students, I will briefly discuss four of these demonstrations.

Jason Aines '98: Temperature Patterns on the Gray Squirrel
Aines has been observing energy conservation in the gray squirrel here on campus for many months. Body weight measurements as well as seasonal averages in body temperatures have been graphed and recorded by him and results have shown a drop in core body temperature during winter months of January through March compared with September

Nathan Grossman '99: School Characteristics and Parental Involvement: What Factors Predict the Level of Parental Participation in School?

Using the 1988 National Education Longitudinal Study (NELS), 24,599 eighth graders as well as their parents, teachers, and administrators, were surveyed in an investigation about factors influencing parental involvement in their child's education. Some of the variables under study included percentage of minority in the school, family size, economic status, and urban versus rural location.

Amy Fincke '99: Conflict Intervention in Hamadryas Baboons
Included in Fincke's research with the Hamadryas Baboons living in the psychology lab on campus was an in-depth look at the similarities and differences of Savannah

Eric Charles '00: Do Primitive Primates Reconcile?
Charles' question was "Do lemurs show friendly action after a conflict?" Unlike the lemurs under his study, all other primates have shown reconciliation tactics following a fight. Charles found no such tactic in the ring-tailed lemurs in the psychology lab. In fact, following a conflict, the chance of another aggressive episode increased, especially in social contexts involving food. Charles also observed displacement activities (nervous behaviors), such as scratching and fidgeting, occurring most often after a conflict had taken place.

Undergraduate fellowships are available to all students interested in conducting research at the University. For more information on the Undergraduate Research Program check out the University Web Site: <http://www.bucknell.edu/departments/libr/undergrads/>

Sports

Quick start leaves Ultimate feeling optimistic

This year could be one of the best in recent memory for the Bucknell Mudsharks

By Tim Scheu

A year ago, the Bucknell Ultimate Frisbee team had one of its best seasons in years. Behind the leadership of captains Dan Heckman '99, Sanatan Golden '99 and Gregg Lithgow '99, the Mudsharks rebounded from a shaky fall season to place second in its spring section and advance to Regionals.

Last Saturday, the Mudsharks looked to carry the momentum from last season into their first tournament at Lehigh University. However, the skill of the teams at the contest would make that task difficult. Such teams included the likes of UPenn, Swarthmore, Penn State and Lehigh, the very team that defeated Bucknell in the Sectional finals during the spring '98 season. Judging from Bucknell's past meetings with these schools, it appeared that the Sharks were in for a long weekend.

However, from the moment the first game began, Bucknell made it clear that they were not the same team that these schools remembered playing. They were a team marked by poise and confidence. The Sharks rolled in their first game against a talented Penn State team by the score of 13-8.

Bucknell's next challenge came at the hands of the Lehigh Steel. Lehigh had consistently been one of the top programs in Pennsylvania. After defeating the Sharks at place third in the region, falling just a few points short of a trip to Nationals.

When the game began, Bucknell demonstrated the intensity that had aided them in their first game and kept the score close. The second half lead was exchanged back and forth, and it was unclear which team would walk away with the victory. But, (then the) Mud-

sharks stepped it up a notch, and sealed the game with a well-placed overhead throw from Sanatan Golden to Tim Scheu '01.

As the players rejoiced on the sidelines, many came to the realization that something was different. In contrast to years past, their team was greatly improved. When the seniors were freshmen, the Mudsharks were the laughing stock of almost every tournament they attended. However, the more the group played together, the better they became. And in an incredible turn of events, the goofy freshmen that were regularly embarrassed were now doing the embarrassing.

The next two games were not close. The Sharks dominated teams from Carnegie Mellon and Swarthmore, holding them both to single digits. After the first day, the Sharks were undefeated, a perfect 4-0.

The Sharks awoke the next morning to the revelation that their first game would be against their archrival and long time rival, the UPenn Void. Following a spirited warm-up, the Mudsharks took to the field and awaited the Void's kickoff. Unfortunately, it appeared that after a few points, the Bucknell team on the field was not the same one that had dominated play the previous day. After falling behind by the score of 5-1, it seemed that the team was missing intensity, for they lacked the first step and the defensive awareness that they had demonstrated on Saturday.

Someone had to do or say something to prevent the game from getting out of hand. That person came in the form of ultimate superstar and James Brown enthusiast Lithgow. As the team gathered to try and make sense of what had gone wrong, Lithgow broke out in song, quoting the Godfather of soul's "Get Up Offa That Thing." The

pressure seemed to melt away as all the players danced and took the field. The Sharks roared back to take the lead 11-8.

This was not the first time the Mudsharks have used a bit of light-heartedness to escape pressure. "Our team has always been about having fun. We play better when we don't think about our throws and catches. We just like to lighten it up a bit," Golden said.

However, there was a quick shift in momentum, and the Void scored two quick points to cut the lead to one. This sort of situation was typical a year ago. The Sharks would take a big lead, only to choke and lose in heartbreaking fashion. But rather than folding to the UPenn onslaught, the Sharks scored two straight points and won the game on a beautiful throw from Mike O'Brien '99 to Heckman.

In an anticlimactic ending to the tournament, the Mudsharks followed their emotional victory over UPenn by thoroughly dominating a young George Washington team by the score of 13-7. More importantly, the Sharks pushed their record to a perfect 6-0 for the tournament. They made a statement, finishing undefeated in a tournament for the first time in more than five years.

"We knew we would be good coming into this year. We had a lot of returning seniors, and a lot of talent. We just hope we can continue to play this well throughout the season," said Golden.

This is the year of the Bucknell ultimate team. Last year's regional birth was just a preview of things to come. This is the deepest and most talented team they have had in years. They have the ability to challenge any team on the East coast and beat them. As the "Godfather of Soul" would say, they just have to "get on up."

Members of water polo program participate in Pan-American Games

By Brian Watson

During this past summer, men's water polo head coach Mike Wooster served as an assistant coach for the United States Junior National Team at the Pan-American Games in Cuba. He had his first experience coaching Ryan Mueller '02, who was selected for the team after a competitive try-out session in California.

The team competed in a round-robin tournament against several international squads, including Argentina, Brazil, Canada, Cuba, and Puerto Rico. After racking up seven victories, the U.S. team entered the gold-medal game against Canada, who they tied earlier in the tournament. Mueller scored the first goal of the game and led the team to a 6-5 victory.

"Everyone on the team had talent," Mueller said. "Everyone did their job and I feel I filled my position well."

Mueller, who has already become a key player for the Bison this season, was used in counter-

attacks and on defense. An All-American in high school, Mueller ranked as one of the leading scorers of the tournament, netting eight goals during the week.

"Ryan is a very good shooter," Wooster said. "He brings the whole package to the pool."

Mueller was excited about the experience, but noticed many differences, both in the matches and the surroundings. "Any international tournament is exciting because everyone has different styles of play," Mueller commented. "Many of our competitors put on a five-minute production after each goal. For us, it didn't seem like a big deal."

Wooster was overwhelmed by the tournament. "The team was remarkable," he said. "When we needed a goal, we got one, and that doesn't happen often."

"The experience of coaching internationally is unbelievable," Wooster noted. "They played the national anthem and raised our flag while our team was given the gold medals. It was incomparable."

Men's water polo captures fourth at Navy Invitational

Newcomers, Watts '00, Blixt '99 step up; team finishes tournament at 2-2

By Brian Watson

The men's water polo team cruised past MIT, 17-2, in their 1998 season opener at the Navy Invitational last Saturday. Led by senior co-captain Brian Baker (four goals, three assists), the Bison rolled through the first half, leading 10-0. Bill Ruth '02 scored four goals in his first match as a Bison and Chris Kempton '01 added three in an impressive showing.

Later that day, the Bison downed St. Francis (NY), 11-10 behind the scoring of Ryan Mueller '02, Tate Greditzer '01, and Ruth, who scored two goals apiece. Senior goalie Zach Blixt allowed 10 goals but stopped eight for the win.

"St. Francis was ranked 14th in the country at the time," said head coach Mike Wooster. "We came out strong, but unfortunately, we let them back in the game. We need to develop a killer instinct that is lacking right now."

In their third match on Saturday, the Bison were defeated by the University of Massachusetts,

14-10. A strong charge at the end of the first half gave them a 7-6 lead, but the Minutemen countered in the second half, outscoring the Bison 8-3. The Bison were led once again by Mueller and Josh Watts '00, who chipped in three goals

each. Co-captain Kevin Permisohn '01 contributed three assists and two steals.

The Bison met Navy in their final match of the Invitational. An outstanding performance by Watts (six goals in eight attempts) was not

enough for the Bison, though, as they fell 14-11. Greditzer added two goals and Matt Lutz '99, Mueller, and Ruth contributed one apiece. Blixt finished the tournament with an impressive performance, stopping 10 Midshipmen attempts.

"We stuck in some really tough games," Permisohn said. "At the rate this team is improving, later in the season, those games will be great."

"It went well for the start of the season," Watts commented. "The whole team is looking strong, and we know what we need to work on."

"UMass and Navy are two of the best teams on the East coast," Wooster noted. "To know that we're in that caliber of competition is great."

Next up for the Bison will be the Princeton Invitational on Saturday, Sept. 12.

Beetna Kim - The Bucknellian

Coach Mike Wooster's team fared well against several of the East coast's best teams last weekend at the Navy Invitational. They will head to Princeton this weekend.

The Bucknellian Sports Department congratulates Mark McGwire on breaking Roger Maris' single-season home run record.

Sports

Seven reasons why baseball is the best sport in America

Wrigley Field: Not only is this stadium home to the most likeable team in sports, the Cubbies; it epitomizes what a baseball park should be. The stadium is constructed out of brick, with ivy on the outfield walls, and even real grass as a playing surface. The majority of the games are played under the sun, in contrast to the night games that have plagued so many of the other profit-seeking stadiums. If an opposing player hits a home run, the fans throw the ball back onto the field. If a player hits the ball far enough, he will hit it out of the stadium and onto the street, where eager fans scramble for the souvenir. It has been the site of legendary players, coaches and personalities. The late Harry Caray made his home at Wrigley field and became as much a part of the atmosphere as the singing of "Take Me Out to the Ballgame" during the seventh inning stretch. It is just a pleasant place to play and watch baseball.

Tony Gwynn: He is possibly the best hitter of all time. At 38 one would expect that he would be slowing down, not hitting for the same average, and striking out more. Apparently, those stereotypes do not apply to Gwynn. In 1997, he won his eighth batting title, tying Honus Wagner for the major league record, and had career highs in home runs, runs-batted-in, doubles and total bases. This year he is batting .326 with almost as many homers (12) as strikeouts (16). But perhaps the most refreshing thing about Gwynn is not the fact that he can consistently produce at the plate, but his humility and loyalty. He is arguably the nicest guy in baseball, and has shunned offers to make big bucks in other cities, despite the fact that he has spent the majority of his career with a team that has never won a title.

Greg Maddux: In the days of the juiced ball, he has been the keystone of the best rotation in baseball history. When reading his bio Maddux seems rather average. He is about six feet tall, 175 pounds, right-handed, and wears glasses. However, the job he does on the mound is anything but average. He is unquestionably the most dominating pitcher in baseball history. Between the years of 1992 and 1995, he won four consecutive Cy Young awards before being ousted by fellow teammate John Smoltz. Defensively, he has won eight consecutive Golden Glove awards and is one of the best right-handed pitchers at picking runners off. When it comes to control, he is the best there is. In 1997, he surrendered only 14 unintentional walks. Furthermore, his career is far from over: this year may be one of the best, being that he has an E.R.A. of 2.07, 179 strikeouts and 17 victories.

The New York Yankees: The Bronx bombers have already won 100 games and we are barely into the second week in September. Despite losing three games in a row, they are nearly 20 games ahead of the second best team in the American League. They have everything a baseball team needs: money, talent, a good farm system and popularity. The names of Cone, Jeter, O'Neill, Wells and Williams will now be enshrined along with the likes of DiMaggio, Gehrig, Mantle and Ruth. Not surprisingly, they are also the most popular team in baseball. Yankees paraphernalia is everywhere, and I don't know how many different colors of those Yankees hats I've seen. George Steinbrenner, the infamous Yankees owner, has even become a regular part of *Seinfeld*, the most watched comedy in all the land. With all of this going for them, the Yankees of the '90s may become a dynasty the likes of which New York has never seen.

Big Mac: How can you not like this guy? He is a father, a hard worker and a regular gentle giant. He has a career home run average of one every 7.6 at bats, and biceps bigger than my head. He is the most prolific slugger of our time and has brought excitement back into baseball. Never before has the focus been so much on one player as opposed to his team. Headlines around the country read, *McGwire goes hitless*, and underneath it reads *St. Louis loses 4-2*. He has just broke the most celebrated record in all of sports with his 62nd home run of the season. He is a modern-day hero who is making baseball historians rewrite the book. Move over Ruth and Maris, the new home run king is an Irishman by the name of McGwire, Mark McGwire.

The Streak: Cal Ripken has done something that no one will ever do again. In this day and age it is impressive to play a whole season, let alone 2,478 straight games. "The Streak" is the greatest and most unbreakable record in all of sports, and it is being extended right in front of our eyes. Most people don't even play that many games in a career. He surpassed the "Iron Horse," Lou Gehrig, and will probably play every game until he retires. He is a throwback to the days when baseball ruled all.

The pennant race: There is not a more exciting time than late September. As the 162-game season nears its end, baseball truly shows why it is America's best sport. There is a "do or die" feeling in the air as fans around the country root for their teams to either make a dramatic run or maintain their lead. In contrast to the NBA or the NHL, baseball is a sport where mediocre teams don't make the playoffs. And now, since wildcards are being awarded, the chase has gotten even more exciting. Teams can be so close to a playoff berth and not get it. Losing the pennant is the equivalent of leading a marathon, only to lose the lead in a sprint to the finish. After an exhausting race, they just have to accept the loss and wait until next year. This season the wildcard race is gearing up to be one of the best ever. Enjoy the show.

Bison impressive in season opener

Palko's 120 yard rushing performance highlights 38-10 victory

By Chris Ellis

The personnel has changed, but the system has stayed the same. And so, it seems, will the results.

Graduation hit the Bucknell football team hard, but the returning players picked up right where they left off at the end of last year's brilliant 10-1 campaign. The faces were different, but the results were similar: another 100-yard rusher, another standout defensive effort and another convincing win.

"The system hasn't changed since (my) first year," said head coach Tom Gadd after his team spanked Duquesne, 38-10, in its season opener on Saturday. "The kids are just getting better at it."

Bucknell struggled to beat Duquesne in its season opener last year, but the Bison would make no mistake in beating the undermanned Dukes this season. Bucknell's defense held Duquesne to just eight yards rushing while amassing 278 ground yards of its own in coasting to the win. The Bison scored three touchdowns in the game's final 13 minutes to break the contest open.

Like star tailbacks Rich Lemon '97 and Chris Peer '98 before him, Bucknell back Dan Palko '00 was visible early and often. Palko, who did not start last season and played solely on defense and special teams in late season appearances, won the starting tailback job during camp and rushed for 120 yards and three touchdowns in his first game in the offensive backfield. Palko's six-yard score with 14 seconds remaining in the first quarter put the Bison up for good, and the junior back added two short TD runs in

Jonah Hall—The Bucknellian

With the help of Ron Rockett '99, he Bison offense gained 278 yards on the ground and nearly 150 yards in the air.

Bucknell's 21-point fourth quarter. Palko led a group of four backs that rushed for over 40 yards in the win.

While Bucknell was busy establishing its ground game, Duquesne was struggling to find one. The Dukes amassed negative rushing yards in the first half and tallied just eight yards in the game. Duquesne's longest run from scrimmage was just eight yards.

The ground game (or lack thereof) made life miserable for Duquesne quarterback Tony Zimmerman. Zimmerman, a junior transfer from the Division I-A University of Pittsburgh, completed just eight of 22 passes for 149 yards in his Duquesne debut.

"It was a big game for [Zimmerman] and the pressure was really on him," Gadd said. "We're a good

defensive football team and it would be tough to ask him to do anymore than he did."

The solid rushing effort from Palko, the dominance of the Bison offensive line and the swarming rush defense combined for staggering statistical dominance. Some examples: Total Net Yards: Bucknell 420, Duquesne 157. Total offensive Plays: Bucknell 83, Duquesne 44. Time of Possession: Bucknell 41:51, Duquesne 18:09.

After a Bucknell fumble and a one-play, 20-yard touchdown drive gave Duquesne a 7-0 lead less than three minutes into the game, Bucknell rolled. Ross Coleman '99 kicked a 46-yard field goal midway through the first quarter to put the Bison on the board, and a seven-play, 41-yard drive for a touchdown followed as the Bison closed

the first quarter up 10-7.

A Duquesne field goal and a touchdown run by Bucknell's Lamario Bradwell '01 made the score 17-10 Bucknell with 7:33 remaining in the third quarter. But Bucknell put together its most impressive drive of the early season shortly thereafter to seal the win.

The Bison marched 87 yards in 18 plays for a touchdown, chewing up nearly 10 minutes off of the clock and opening a 24-10 lead. The drive featured five third-down conversions and 47 rushing yards by Palko. Palko carried the ball on the final nine plays of the drive, capping his effort with a two-yard touchdown dive that sealed the game. Late touchdown runs by Palko and fullback Jeremy Myers '99 made the final margin of victory 28 points.

Former hoopsters sign pro contracts

By Brian Watson

J.R. Holden '98 and Dave Steigerwald '96, former basketball stars for the Bison, recently signed professional contracts in Europe.

Holden, Bucknell's ninth all-time leading scorer and only player to score 1,000 points and dish out 300 assists, signed with the Broceni Basketball Club in Riga, Latvia.

Holden, last spring's recipient of the Christy Mathewson Award given to the Bucknell's most outstanding student-athlete, is currently in preseason conditioning drills with the club.

Steigerwald, the second-best three-point shooter in Patriot League history, inked a deal with Hyvinkaa-Ponteva of Finland. He played for the Dungannon Basketball Club in Ireland during the past two winters.

Steigerwald has also served as team captain of the New Jersey Generals, the team that travels with the Harlem Globetrotters.

Steigerwald is one of two Bucknell players ever to shoot 40 percent from three-point range and net 100 from downtown.

Head men's basketball coach Pat Flannery, who coached both players during their careers at Bucknell, is ecstatic about the opportunities.

"This is an excellent opportunity for Dave," Flannery said. "He

has such a competitive drive, and it will show in his play."

Holden was hurt by the recent National Basketball Association lockout. "J.R. had some great opportunities to show his stuff with the best of them," Flannery commented. "But he's with a good club in Latvia, and he should have a successful game."

"The spotlight on the international game is growing bigger and bigger each year," Flannery noted. "Dave and J.R. have excellent opportunities to really get their names out there."

Jonah Hall—The Bucknellian

J.R. Holden '98 was The Bucknellian's Athlete of the Year in 1997.

Sports Trivia Quiz

1. How many Home Runs did Mark McGwire hit in his rookie season?
2. Who was the only quarterback to throw for 400 yards last week?
3. Going into the season, who was the Patriots active rushing leader?
4. How many feet was McGwire's record setting home run?

1. 49, a rookie record 2. The Jet's Glen Foley 3. Drew Bledsoe. (Punter Tom Tupa was second) 4. 341 feet, his shortest of the season.

Smithson Prizes awarded

Steve Sasson—The Bucknellian
Dawn Lonsinger '98 received an Honorable Mention.

By Greg Venbrux

Every spring, the English department recognizes the literary work of two undergraduates by awarding them the Julia Fonville Smithson Memorial Prize. The prize, nearing its twentieth anniversary this spring, has become an annual tradition to honor students dedicated to the sharing and making of literature.

This year, the prize was awarded to Anne Ravert '99 for her poem "Crown of Curses, Blessings," and to Joshua Williamson '98 for his short story, "A Passing." Honorable mentions were awarded to Stacy Waite '99, Minal Singh '99, Christopher Evans '99 and Dawn Lonsinger '98.

Maines also won the award in 1997 for his short story, "Conversations with the Ambassador's Daughter." Two prizes are given every spring: one prize for poetry and the other for prose. All recipients of the Smithson Prize, including honorable mentions, have their works published in a booklet distributed by the English department.

The Smithson Prize was founded in 1979 in honor of Julia Fonville Smithson, a University graduate and English major. Karl Patten, professor of English

said, "Julia was a vivacious, attractive young woman who was a very good student. [She] was a very fine English major."

On May 13, 1977, Smithson died at the age of twenty-three due to injuries sustained in an automobile accident. Eventually, a fund was established in her memory. This fund enabled the English department to establish the Julia Fonville Smithson Memorial Prizes, which would be awarded annually to two undergraduates. On May 13, 1979, the anniversary of Smithson's death, the English department announced the first recipients of the two prizes of 50 dollars each.

The English department and the Stadler Center for Poetry still maintain a very high standard for the prize. Nicole Cooley, assistant professor of English, said, "Competition is very stiff...we have a lot of very good writers at Bucknell." This high quality standard is evident in that two prizes are awarded only if the work is truly exceptional. In 1996, for example, no prose prize was awarded despite numerous

Rape shocks campus; safety urged

By E.J. Crawford and Chris Ellis

The District Attorney's office and school officials are urging student safety in the wake of Friday morning's rape of a 63-year-old University employee. The incident is being described as "a crime of strong arm robbery, rape and aggravated assault," according to the Lewisburg Police Department. The suspect, described as a young, white male with a dark complexion, had not been apprehended as *The Bucknellian* went to press.

The incident took place, according to Public Safety, at approximately 4:15 a.m. Friday morning as the victim was walking to work. The rape occurred at the corner of South Seventh and Saint George Streets at the entrance of the Lewisburg cemetery. According to District Attorney Pete Johnson, the woman was grabbed off of Seventh Street, choked and taken to the entrance of the cemetery, where she was "violently sexually assaulted" under the streetlight adjacent to the cemetery.

"The resolve with which this crime was committed by this perpetrator bespeaks of a very dangerous person. The crime was committed by a person who was willing to take a person walking in the middle of the street and attack and choke her so that she could not speak or call for help," Johnson said, adding that "we're applying as many resources as possible to attempt to find this person."

The victim was taken to the Evangelical Community Hospital in Lewisburg for treatment.

In the wake of the incident, Johnson and other school officials are urging students to be extremely careful, walking with a group and avoiding back alleyways and other unlit

areas. "People on this campus, daytime or not, should not be alone no matter how inconvenient it is," Johnson said.

"I am appalled and shocked that such a heinous and despicable crime would occur so close to the campus," said Dean of Students Richard Chapman. "One of the things this should say to each of us in the Bucknell community is that everyone should be extremely vigilant in regards to any untoward acts and report those incidents to the University."

Though the incident is regarded as a criminal matter being handled by the Lewis-

burg Police Department, the effects are being felt by the University Office of Public Safety. Chief of Public Safety Vincent DeCerio has stressed caution and safety for students in the wake of the assault.

"We are doing everything possible to prevent such an incident from occurring again in our community and we are receptive to suggestions from the community for making our campus safer," DeCerio said. "We can only continue to perform our public safety duties aggressively and continue to educate people on how not to become vic-

University to create new logo Graphic identity to be completed by January

By Jared Silliker

The University will soon have a new look. On paper, that is.

As the 21st century approaches, the design and artwork that one associates with the University will soon be replaced by a new graphic identity. The Bucknell woodmark will change and a new University logo will be adopted, according to Sharon Poff, director of public relations/publications and member of the graphic identity committee.

Poff cited several reasons for the change. "We knew we were ready to re-design our admissions materials." The University on average makes significant revisions to student recruitment publications every six years to keep up with changes and to gear them to current high school students.

"We also wanted to come up with a new graphic identity as part of the Campus Master Plan which will include signage for new buildings and facilities," Poff said.

Also a factor is the change of area code, from 717 to 570, and all the exchanges becoming 577. In this, all new stationary will have to be printed.

"We're giving Bucknell a new look," Poff said.

The committee is currently interviewing three design firms to launch the project. The process by which the chosen design firm will come up with a new identity is, however, by no means simple.

The firm will visit campus and meet with several groups of faculty,

administration and students to get a better understanding of the University.

"We would like to involve the entire community in the project," Poff said. "This is obviously difficult because everyone has their own viewpoint [on the University]."

Still, the designers will talk with many organizations and departments including athletics the president's staff and area alumni.

Poff hopes that a decision on the new design will be made by early January, and that new materials can go to press soon thereafter. New admissions publications will then be designed for the first mailing of Spring 2000.

Student-athlete alleges assault by football coach

By Brian Watson

On the night of Monday, Sept. 7, a member of the athletic department allegedly assaulted a University student-athlete.

Matt Lutz '99 claims that assistant football coach Norries Wilson grabbed and choked him in the fieldhouse without reason.

The altercation developed after Lutz asked Wilson if he had any spare change. Wilson reportedly asked Lutz who he was and why he should give Lutz his money.

Lutz walked away, but returned later on his way to water polo coach Mike Wooster's office. Lutz and Wilson supposedly exchanged words, and Lutz claims he was grabbed from behind, pushed up against a wall and choked.

Eyewitnesses said that Wilson lifted Lutz off the ground by his throat and did not let go until Wooster interceded.

"He had Matt almost a foot off the ground, pinned up against the wall," said John Lodato '99, who

Fundraising efforts prove successful

By Sarah Palmer

University fundraising has come a long way in the past few years, as a result of the Bucknell Campaign, a major six-year effort begun in 1994 and scheduled to terminate on Dec. 31, 2000. The campaign, subtitled "Preparing for the Next Century," aims to reach an ultimate goal of collecting \$150 million.

"The campaign is doing really well," said Richard Johnson, vice-president for University relations and campaign director.

At the close of the University's fiscal year, June 30, cash donations had reached an all-time record high of \$25.9 million. This was a 47 percent increase from last year's \$17.6 million and a 300 percent increase from the \$8 million generated just five years ago.

"We're a year ahead of the timeline. We are not home free because we still have \$30 million to raise, but we're very confident that we'll get there."

Johnson said that donations, or commitments, come in two forms, cash and pledges (promises to pay a specified amount within five years). Commitments not only arrive from friends and parents, but from corporations and especially alumni.

The campaign sustains a double objective: to provide the University with new resources which will enhance its excellence while, at the same time, make the University more affordable for students and their families. Currently, the average institutional grant per student is approximately \$13,000.

"The largest part of the cam-

paign is raising money for financial aid," University President William D. Adams said. "We've virtually reached the goal already. We've raised almost the full \$60 million at this point, so when the end of the campaign arrives, we will far exceed our goal."

The fundraising project is segmented into three parts. \$94 million will be used toward endowments, including \$60 million for financial aid and scholarships and \$34 million for academic strategic initiatives. Another \$30 million will be used to augment facilities, while the remaining \$26 million will go toward the annual fund which provides for customary operating facilities.

Of the nearly 35,000 University alumni in the country and around the world, approximately 40 percent make contributions to the University

each year. "I think it's surprising how much money comes to us from alumni and friends," Adams said. "It's incredible that this many people are willing to give this much money to their alma mater."

Adams finds these acts of generosity quite powerful and feels that they result from the University's ability to inspire a great deal of philanthropy to students while they are here.

"I want students to be able to appreciate how much people care about the University and the people currently attending it," Adams said. "In the future, the strength of the University will rely on the students' willingness, as they become successful adults, to continue this caring."

During the past few years, the University has also maintained the

Polite assumes position as Interim Coordinator

By Anne Monoky

After graduating in 1997 from the University, Eric Polite moved to New York City to become a paralegal. However, he now returns to the University in a different nature: not as a student, but as a faculty member. Polite has taken the position of Interim Coordinator of Multicultural Programming.

Polite's new position entails a wide variety of tasks, including creating academic and social support system for students of color and minority students on campus.

Polite has set up a multitude of different outlets for multicultural

students. The office coordinates mentoring programs, facilitates student organizations, participates in various dinners and hosts lecturers and speakers. Polite also expressed the importance of counseling students on an individual basis with any issues that they might have.

Polite explained the other goals of his position focus on strengthening the individual programs of the multicultural program. Polite also expressed anticipation to work on the University's Homepage while building bridges between the University and other central Pennsylvania universities such as Dickinson, Susquehanna, and Bloomsburg.

Overall, Polite feels that his adjustment has gone well, especially his change from student to faculty member.

He said, "I really have an insight into the bureaucratic way in which the University runs and how intricate it really is."

He commented that his division is one cog in a whole network or machine that makes the University run.

"Basically, I was very active as a student on a general level and I would like to cure some of the student apathy that seems to plague the campus."

I want all students to know that they should have a vested interest in diversity," Polite said.

Polite said, "Public Safety is cooperating with the police in their extensive investigation and assisting them in every way." DeCerio said, "I agree that this act offends all of us in this normally safe community."

In a response to the assault, the Women's Resource Center will be holding a candle lighting at 10 p.m. on Friday at the Rooke Chapel to show support for the victim and other victims of sexual assault.

University General Counsel Richard Zanzitis also declined to comment on the situation.

"There was a complete investigation and it is a confidential personnel matter," Athletic Director Rick Hartzell said. "I cannot comment any further."

Wilson was contacted but refused to give a statement.

Witnessed the entire altercation. "He finally hit him and then got in my face, daring me to hit him or something. He was enraged," Lodato continued.

Public Safety was called in, and they passed word onto the East Buffalo Township Police. The department refused to confirm any details, stating that an investigation is underway.

University General Counsel Richard Zanzitis also declined to comment on the situation.

times by practicing common sense crime prevention habits."

The Office of Public Safety has increased its vehicle and bicycle patrols on campus, with an additional focus on the "downtown" area of campus. Public Safety officers will also be conducting walking tours of campus when possible.

The assault has also heightened the importance of resident awareness of safety procedures, especially in Smith Hall, located just yards from where the assault took place. Resident Assistants (RAs) in the dormitory are also encouraging students to use caution.

"Students seem to be really disgusted by the assault, but they're also frustrated that the safety they've come to know and hear about in Lewisburg isn't the way things really are," said Alex Grieco '99, an RA in Smith Hall. "Our job is to help students realize that we can keep an entire building safe just by following the common sense rules that we already have."

Grieco noted that a chief problem in Smith is propping doors open and allowing late night entry into the building to non-residents. Smith Hall residents have also expressed their outrage and concern at the assault.

"It (the assault) is just a way of showing students that this campus isn't as safe as it sometimes appears to be," Smith resident Keri Reiter '01 said. "We need to realize that we have to take some precautions."

The District Attorney's office and the Lewisburg Police Department are urging students to come forward with any reports of unusual behavior and strange individuals between Thursday at midnight and Friday at dawn. The Office of Public Safety has also encouraged students to come forward with any information pertaining to the assault.

"Public Safety is cooperating with the police in their extensive investigation and assisting them in every way," DeCerio said. "I agree that this act offends all of us in this normally safe community."

In a response to the assault, the Women's Resource Center will be holding a candle lighting at 10 p.m. on Friday at the Rooke Chapel to show support for the victim and other victims of sexual assault.

Public Safety Log

September 7, 1998

A male University student reported to Public Safety that he had been assaulted by a University employee at the Field House. The student was taken to Student Health Services where he was treated and released. East Buffalo Township Police Department responded at the victim's request and the incident is under investigation.

September 9, 1998

INFORMATION — Public Safety responded to the Golf Course to assist East Buffalo Township Police Department with an incident involving a flag taken from the golf course. The incident is under investigation by both departments.

INFORMATION — A University student reported to Public Safety having received harassing phone calls in a Larison Hall room. The incident is under investigation.

HIT & RUN — Public Safety responded to Stadium Road for the report of a vehicle belonging to a University student that was damaged while parked in that location. East Buffalo Township Police Department was notified. The incident is under investigation.

AMBULANCE TRANSPORT — Public Safety responded to the biology building for the report of a University student having an asthma attack. The student was transported by ambulance to Evangelical Community Hospital Emergency room for treatment and later returned to campus.

September 10, 1998

INFORMATION — Public Safety responded to Swartz Hall for the report of a water balloon having been thrown through a University student's window. The incident is under investigation.

HARASSMENT BY COMMUNICATION — A University student reported to Public Safety having received harassing phone calls in a Smith Hall room. The incident is under investigation.

VEHICLE ACCIDENT — Public Safety responded to Smoketown Road for the report of a motor vehicle accident near the entrance to the Mads and involving a University student's vehicle. East Buffalo Township Police Department responded to investigate the accident.

September 11, 1998

INFORMATION/SUSPICIOUS PERSON — Public Safety responded to the railroad tracks near the Gateways for the report of a suspicious male standing by the fence. The individual was not located in a search of the area. The incident is under investigation.

Lewisburg Police Department

INFORMATION — Public Safety responded to the report of a University student having been assaulted at the Sigma Chi Fraternity. Public Safety located one suspect and several witnesses. East Buffalo Township Police Department responded and is assisting with the investigation. Criminal charges are pending.

UNREGISTERED PARTY — While on routine patrol, Public Safety observed loud music coming from the Sigma Chi Fraternity. A large group of people were in the basement drinking beer. A university citation for conducting an unregistered party was issued.

INFORMATION — A University student reported to Public Safety

was notified.

September 12, 1998

DRIVING UNDER THE INFLUENCE/UNDERAGE CONSUMPTION (3 COUNTS) — While on routine patrol, Public Safety observed a vehicle driving on the pathway near Ward House. Lewisburg Police Department responded to the scene and issued citations for driving under the influence of alcohol and underage consumption of alcohol.

INFORMATION — Public Safety responded to a University West Mod for the report of an unauthorized party in progress on the deck. The residents of the Mod were not present when Public Safety arrived. The RA filed a residential life report.

UNDERAGE CONSUMPTION/DISORDERLY CONDUCT/PUBLIC INTOXICATION — Public Safety responded to Vedder Hall for the report of a disturbance. One student received university citations for underage consumption of alcohol, disorderly conduct and public intoxication. The cause of the altercation is under investigation.

INFORMATION — Public Safety responded to Sigma Chi Fraternity for the report of University students on the roof. A citation for violation of university policy is pending.

CRIMINAL MISCHIEF — Public Safety responded to a University West Mod for the report of an object being thrown through a window. East Buffalo Township Police Department was notified. The incident is under investigation.

INFORMATION — Public Safety responded to the Gateways for the report of juveniles knocking on windows. Six juveniles were located and Lewisburg Police Department responded to the scene. The youths complied with a request to leave the area.

BUCKNELL PROPERTY DAMAGE — Public Safety responded to Kress Hall for the report of a broken window. The incident is under investigation.

September 13, 1998

ASSAULT — Public Safety responded to a University West Mod to meet with a student who alleged having been assaulted at the Sigma Chi Fraternity. Public Safety located one suspect and several witnesses. East Buffalo Township Police Department responded and is assisting with the investigation. Criminal charges are pending.

UNREGISTERED PARTY — While on routine patrol, Public Safety observed loud music coming from the Sigma Chi Fraternity. A large group of people were in the basement drinking beer. A university citation for conducting an unregistered party was issued.

INFORMATION — A University student reported to Public Safety

that 3 individuals were hiding in the bushes by the Stadium. The individuals fled the scene leaving behind a football sign that was taken from the area. East Buffalo Township Police Department was present. The incident is under investigation.

TAMPERING WITH FIRE EQUIPMENT — Public Safety responded to a fire alarm activation at Vedder Hall which was caused by a discharged fire extinguisher. No one was located in a search of the area and the incident is under investigation. Lewisburg Police Department was notified.

BUCKNELL PROPERTY DAMAGE — Public Safety responded to Kress Hall for the report of a broken window. The incident is under investigation.

INFORMATION/SUSPICIOUS PERSON — Public Safety responded to Bertrand Library for the report of a suspicious middle aged male seen at various locations on campus. No one was located in a search of the areas.

MEDICAL TRANSPORT — Public Safety responded to Vedder Hall for the report of an ill University student. The student was transported by Student Health Services driver to Evangelical Community Hospital Emergency room for treatment and later returned to campus.

September 14, 1998

INFORMATION/ILLEGAL SOLICITATION & TRESPASS — Public Safety responded to Vedder Hall for the report of a male attempting to solicit sales from University students. Two individuals were located, advised regarding University solicitation policy and escorted off campus. Lewisburg Police Department assisted with the incident.

HARASSMENT BY COMMUNICATION — A University student reported to Public Safety having received harassing phone calls in a Vedder Hall room. The incident is under investigation. Lewisburg Police Department was notified.

September 15, 1998

AIDED — A University student contacted Public Safety for medical treatment for facial pain. A Student Health Services driver transported the student to Evangelical Community Hospital Emergency room where she was treated. The student was later discharged.

MEDICAL — Public Safety responded to Olin Science building for the report of a University student having been stung by a bee. The student was transported to SHS for treatment. Later this date, the victim contacted Public Safety with additional symptoms. A Student Health Services driver transported the student to and from Evangelical Community Hospital Emergency room for further treatment.

INFORMATION — A University student reported to Public Safety

National

Battle erupts over Clintons videotaped testimony

WASHINGTON—A battle is brewing in the House Judiciary Committee as Republican and Democratic members are at odds over releasing the videotaped version of President Bill Clinton's grand jury testimony. This latest bad news for the White House comes on the heels of tough criticism from two top Democratic leaders over the president's defense strategy.

Most Democrats oppose release of the tape because, as one said, "We don't want CNN and others to put it into the endless loop." Despite the intense Democratic opposition, the videotaped testimony could be made public by the end of the week as Republican majority is expected to prevail in the dispute.

JonBenet grand jury convenes

BOULDER, Colorado—A grand jury convened Tuesday to hear evidence in the JonBenet Ramsey murder case, the Boulder County District Attorney's office said. The jurors, eight women and four men—were to receive an overview from the district attorney's office Tuesday with the presentation of evidence and witnesses scheduled to continue on Wednesday, sources familiar with the investigation said.

The grand jury deliberations are expected to be a major advance in the 21-month-old investigation because the jury is empowered to subpoena anyone it wants, with few exceptions, to testify.

Six-year-old JonBenet Ramsey was found dead on December 26, 1996.

Primaries held Tuesday in nine states, D.C.

WASHINGTON—In the last big primary day of the fall, nine states and the nation's capital held primaries Tuesday to determine their Senate, House and gubernatorial candidates. Voters headed to the polls in Connecticut, Maryland, Massachusetts, Minnesota, New York, Rhode Island, Washington and the District of Columbia. Oklahoma will hold a Senate runoff, where the ballot includes one dead candidate.

Democrats and Republicans alike will carefully observe the primary results to see if any of President Bill Clinton's troubles are having an effect on Election '98.

Wallace to get full state funeral Wednesday

MONTGOMERY, Alabama—George Wallace, four times the governor of Alabama, a presidential candidate and the man accused of 'nationalizing racism,' received a full state funeral Wednesday. Wallace died at a Montgomery hospital Sunday night after being stricken with a blood infection.

In one of his best remembered acts, Wallace declared at his 1963 gubernatorial inauguration: "I draw the line in the dust and toss the gauntlet before the feet of tyranny, and I say, segregation now, segregation tomorrow, segregation forever." That remark, as well as the image of Wallace standing in the door of the University of Alabama in 1963 to stop blacks from entering under a federal desegregation order, made him one of America's best known and least admired people.

World

Albanian protesters gather despite ban

TIRANA, Albania—A rally by Albania's opposition Democratic Party took place peacefully in the capital Tuesday, despite a government ban on the gathering.

There was a heavy police presence in Tirana's Skanderbeg Square as Sali Berisha led a march by several thousand supporters, but the police did not intervene. The marchers then returned to nearby Democratic headquarters.

Berisha, who is Albania's former president, urged his supporters to march peacefully and refrain from shouting slogans. Berisha and his supporters blame the prime minister for the weekend assassination of a popular Berisha ally and two others.

N. Korea frustrated by delays in oil, reactor construction

PYONGYANG, North Korea—Amid rising tensions, North Korea is reportedly growing increasingly frustrated that the United States, Japan and South Korea are not keeping their end of a landmark 1994 deal. Under the agreement, North Korea promised to freeze its nuclear program in return for U.S. pledges to provide it with fuel oil, help in building two light-water reactors and, eventually, an end to economic sanctions.

Four years later, shipments of fuel oil to North Korean ports are behind schedule, and construction on the new reactors has ground to a halt one year after a ceremonial groundbreaking. In the United States, Congress has been reluctant to fund the agreement with North Korea, and there has been little easing of U.S. sanctions.

Taliban threatens retaliation if Iran strikes

TEHRAN, Iran—The war of words between Iran and Afghanistan's militant Taliban escalated into more serious threats Tuesday, as the Taliban warned its military would retaliate if Iran attacked Afghanistan.

"We do not want war with Iran, but if Iran attacks we will take all possible necessary measures," Taliban spokesman Wakil Ahmed told the independent Afghan Islamic Press. Ayatollah Ali Khamenei, the leader of Iran, told senior commanders of the Revolutionary Guards "The situation of Afghanistan is a highly crucial issue."

The Taliban warning comes after Iran's leading religious leader Tuesday put the country's military on alert in a further escalation of the crisis with Afghanistan.

Report: Millions face famine in Indonesia

JAKARTA, Indonesia—Millions of Indonesians face an impending famine due to dire food shortages, one of the nation's leading newspapers reports.

Many families can only afford a single daily meal, and things could get worse before the rice harvest in January, Food Minister A.M. Saefudin was quoted as saying in The Jakarta Post on Monday. He said as many as 17 million families could be affected.

The price of rice, which is a food staple in this sprawling Southeast Asian nation of 202 million people, has tripled for most consumers in recent months after a prolonged drought.

National and World News Briefs compiled by Jeff Scepanski from the CNN Interactive Website

AWARDS

From page 1.

entries. Apparently, none of the prose pieces were impressive enough to warrant the prize. Perhaps another reason why the Smithsonian Prize has remained intact for nearly twenty years is the commitment the students have for literature. Cynthia Hogue, associate professor of English, said, "It seems to me that the students covet the award, it means a lot to them to win."

John Rickard, associate professor of English, said, "It's a nice feather in the cap for the students." "I think the Smithsonian is a really good thing for the kind of writing community at Bucknell. It's important for young writers to have something to strive for. It made me work harder at my own writing," Maines said.

The future of the Smithsonian Prize is looking brighter than ever. "I think any really good person in English who is writing would want to compete for (the award). The competition is stiff every year," Patton said. Cooley said, "Bucknell is very competitive...I encourage more people to submit." Notwithstanding, the Smithsonian Prize lives on, a fitting memorial to one of the University's most loved students and ambitious English majors, Julia Fonnville Smithson.

After they received their independence from the British Empire, relations between the Burmese and highland groups deteriorated. A civil war broke out, which has ruined their economy and left the people unable to support themselves.

Finally Silverstein discussed the current political problems. The military government in charge is currently waging a war against the democratically elected government under Aung San Suu Kyi. He concluded his speech with these ominous words, "They have nothing but the guns they have trained on the people."

University celebrates Burma relationship

By Mark Popielarski

The University is celebrating its 140-year association with Burma through a series of special events this semester. Numerous lectures and artistic events will be held to educate students on the Burmese crisis and to help them understand why the University is affiliated with this particular country.

The Bucknell-Burma Alumni Reunion, one of the highlights of the semester, will take place this weekend. It is designed to resemble the gatherings of Burmese alumni of the past and will include a Burmese classical dance performance.

The University became affiliated with Burma in the 19th century. Eugenio Kincaid, one of the University's founders, was a Baptist missionary to Burma. Also, a member of Bucknell's Female Institute founded the country's first girls school and the University's first international student, Dr. Maung Shaw Loo, came from Burma.

Josef Silverstein, professor emeritus of political science at Rutgers University, gave a lecture on the past century of Burmese history last Wednesday. He talked about the relations between the majority Burmese and the minority highland people.

Josef Silverstein spoke about the last century of Burmese in a lecture last Wednesday.

Polite assumes position as Interim Coordinator

By Anne Monoky

After graduating in 1997 from the University, Eric Polite moved to New York City to become a paralegal. However, he now returns to the University in a different nature: not as a student, but as a faculty member. Polite has taken the position of Interim Coordinator of Multicultural Programming.

Polite's new position entails a wide variety of tasks, including creating academic and social support system for students of color and minority students on campus.

Polite has set up a multitude of different outlets for multicultural

students. The office coordinates mentoring programs, facilitates student organizations, participates in various dinners and hosts lecturers and speakers. Polite also expressed the importance of counseling students on an individual basis with any issues that they might have.

Polite explained the other goals of his position focus on strengthening the individual programs of the multicultural program. Polite also expressed anticipation to work on the University's Homepage while building bridges between the University and other central Pennsylvania universities such as Dickinson, Susquehanna and Bloomsburg.

Overall, Polite feels that his adjustment has gone well, especially his change from student to faculty member. He said, "I really have an insight into the bureaucratic way in which the University runs and how intricate it really is."

He commented that his division is one cog in a whole network or machine that makes the University run.

"Basically, I was very active as a student on a general level and I would like to cure some of the student apathy that seems to plague the campus. I want all students to know that they should have a vested interest in diversity," Polite said.

Mia Abe—The Bucknellian

Eric Polite '97 has assumed the position of Interim Coordinator of Multicultural Programming. Polite will conduct academic and social support systems for students of color and minority students on campus.

ASSAULT

From page 1.

witnessed the entire altercation. "He finally hit him and then got in my face, daring me to hit him or something. He was enraged," Lodato continued.

Public Safety was called in, and they passed word onto the East Buffalo Township Police. The department refused to confirm any details, stating that an investigation is underway.

University General Counsel Richard Zanits also declined to comment on the situation.

"There was a complete investigation and it is a confidential personnel matter," Athletic Director Rick Hartzell said. "I cannot comment any further."

Wilson was contacted but refused to give a statement.

A Quaker Voice -

In Quaker spirituality... We reach toward God and are returned to this world changed, to embody or incarnate the Divine Spirit for others in our own faltering, fallible, flawed ways.

Paradoxically if we accept the challenge of living out of this Spirit in relationship in the variety of our encounters with the world, we are drawn still closer to God. As with the rest of our spiritual life, growth is rarely linear. It sometimes seems like a series of of looping needlepoint stitches drawing us closer to one another, the world, and God in turn and turn about. At other times it may seem more like a spiral in which we swing again and again past the same point, lesson, or situation.

Excerpt from Patricia Loring, *Listening Spiritually*. BX 7748 .M92 1997

The Lewisburg Friends (Quaker) Meeting gathers at 11 A.M. on Sundays in the Smith Library, Vaughan Literature Building. We would be pleased to have you with us. For information call Geri Cooke at 523-6628

Our regional website is "Upper Susquehanna Quakers," at <http://www.epix.net/~wadow>.

RAPE

From page 1.

times by practicing common sense crime prevention habits."

The Office of Public Safety has increased its vehicle and bicycle patrols on campus, with an additional focus on the 'downtown' area of campus. Public Safety Officers will also be conducting walking tours of campus when possible.

The assault has also heightened the importance of resident awareness of safety procedures, especially in Smith Hall, located just yards from where the assault took place. Resident Assistants (RAs) in the dormitory are also encouraging students to use caution.

"Students seem to be really disgusted by the assault, but they're also frustrated that the common sense rules that we already have."

Grieco noted that a chief problem in Smith is propping doors open and allowing late night entry into the building to non-residents. Smith Hall residents have also expressed their outrage and concern at the assault.

"It (the assault) is just a way of showing students that this campus isn't as safe as it sometimes appears to be," Smith resident Keri Reiter '01 said. "We need to realize that we have to take some precautions."

The District Attorney's office and the Lewisburg Police Department are urging students to come forward with any reports of unusual behavior and strange individuals between Thursday at midnight and Friday at dawn. The Office of Public Safety has also encouraged students to come forward with any information pertaining to the assault.

"Public Safety is cooperating with the police in their extensive investigation and assisting them in every way," DeCerio said. "I agree that this act offends all of us in this normally safe community."

In a response to the assault, the Women's Resource Center will be holding a candle lighting at 10 p.m. on Friday at the Rooke Chapel to show support for the victim and other victims of sexual assault.

Public Safety Log

September 7, 1998

A male University student reported to Public Safety that he had been assaulted by a University employee at the Field House. The student was taken to Student Health Services where he was treated and released. East Buffalo Township Police Department responded at the victim's request and the incident is under investigation.

September 9, 1998

INFORMATION — Public Safety responded to the Golf Course to assist East Buffalo Township Police Department with an incident involving a flag taken from the golf course. The incident is under investigation by both departments.

INFORMATION — A University student reported to Public Safety having received harassing phone calls in a Larison Hall room. The incident is under investigation.

HIT & RUN — Public Safety responded to Stadium Road for the report of a vehicle belonging to a University student that was damaged while parked in that location. East Buffalo Township Police Department was notified. The incident is under investigation.

AMBULANCE TRANSPORT — Public Safety responded to the biology building for the report of a University student having an asthma attack. The student was transported by ambulance to Evangelical Community Hospital Emergency room for treatment and later returned to campus.

September 10, 1998

INFORMATION — Public Safety responded to Swartz Hall for the report of a water balloon having been thrown through a University student's window. The incident is under investigation.

HARASSMENT BY COMMUNICATION — A University student reported to Public Safety having received harassing phone calls in a Smith Hall room. The incident is under investigation.

September 11, 1998

INFORMATION/SUSPICIOUS PERSON — Public Safety responded to the railroad tracks near the Gateways for the report of a suspicious male standing by the fence. The individual was not located in a search of the area. The incident is under investigation.

INFORMATION — A University student reported to Public Safety

was notified.

September 12, 1998

DRIVING UNDER THE INFLUENCE/UNDERAGE CONSUMPTION (3 COUNTS) — While on routine patrol, Public Safety observed a vehicle driving on the pathway near Ward House. Lewisburg Police Department responded to the scene and issued citations for driving under the influence of alcohol and underage consumption of alcohol.

INFORMATION — Public Safety responded to a University West Mod for the report of an unauthorized party in progress on the deck. The residents of the Mod were not present when Public Safety arrived. The RA filed a residential life report.

UNDERAGE CONSUMPTION/DISORDERLY CONDUCT/PUBLIC INTOXICATION — Public Safety responded to Vedder Hall for the report of a disturbance. One student received university citations for underage consumption of alcohol, disorderly conduct and public intoxication. The cause of the altercation is under investigation.

INFORMATION — Public Safety responded to Sigma Chi Fraternity for the report of University students on the roof. A citation for violation of university policy is pending.

CRIMINAL MISCHIEF — Public Safety responded to a University West Mod for the report of an object being thrown through a window. East Buffalo Township Police Department was notified. The incident is under investigation.

INFORMATION — Public Safety responded to the Gateways for the report of juveniles knocking on windows. Six juveniles were located and Lewisburg Police Department responded to the scene. The youths complied with a request to leave the area.

BUCKNELL PROPERTY DAMAGE — Public Safety responded to Vedder Hall for the report of a broken window. The incident is under investigation.

September 13, 1998

ASSAULT — Public Safety responded to a University West Mod to meet with a student who alleged having been assaulted at the Sigma Chi Fraternity. Public Safety located one suspect and several witnesses. East Buffalo Township Police Department responded and is assisting with the investigation. Criminal charges are pending.

UNREGISTERED PARTY — While on routine patrol, Public Safety observed loud music coming from Sigma Chi Fraternity. A large group of people were in the basement drinking beer. A university citation for conducting an unregistered party was issued.

INFORMATION — A University student reported to Public Safety

that 3 individuals were hiding in the bushes by the Stadium. The individuals fled the scene leaving behind a football sign that was taken from the area. East Buffalo Township Police Department was present. The incident is under investigation.

TAMPERING WITH FIRE EQUIPMENT — Public Safety responded to a fire alarm activation at Vedder Hall which was caused by a discharged fire extinguisher. No one was located in a search of the area and the incident is under investigation. Lewisburg Police Department was notified.

BUCKNELL PROPERTY DAMAGE — Public Safety responded to Kress Hall for the report of a broken window. The incident is under investigation.

INFORMATION/SUSPICIOUS PERSON — Public Safety responded to Bertrand Library for the report of a suspicious middle aged male seen at various locations on campus. No one was located in a search of the areas.

MEDICAL TRANSPORT — Public Safety responded to Vedder Hall for the report of an ill University student. The student was transported by Student Health Service driver to Evangelical Community Hospital Emergency room for treatment and later returned to campus.

September 14, 1998

INFORMATION/ILLEGAL SOLICITATION & TRESPASS — Public Safety responded to Vedder Hall for the report of a male attempting to solicit sales from University students. Two

individuals were located, advised regarding University solicitation policy and escorted off campus. Lewisburg Police Department assisted with the incident.

HARASSMENT BY COMMUNICATION — A University student reported to Public Safety having received harassing phone calls in a Vedder Hall room. The incident is under investigation. Lewisburg Police Department was notified.

September 15, 1998

AIDED — A University student contacted Public Safety for medical treatment for facial pain. A Student Health Services driver transported the student to Evangelical Community Hospital Emergency room where she was treated. The student was later discharged.

MEDICAL — Public Safety responded to Olin Science building for the report of a University student having been stung by a bee. The student was transported to SHS for treatment. Later this date, the victim contacted Public Safety with additional symptoms. A Student Health Services driver transported the student to and from Evangelical Community Hospital Emergency room for further treatment.

IN THE NEWS...

Battle erupts over Clintons videotaped testimony

WASHINGTON—A battle is brewing in the House Judiciary Committee as Republican and Democratic members are at odds over releasing the videotaped version of President Bill Clinton's grand jury testimony. This latest bad news for the White House comes on the heels of tough criticism from two top Democratic leaders over the president's defense strategy.

Most Democrats oppose release of the tape because, as one said, "We don't want CNN and others to put it into the endless loop." Despite the intense Democratic opposition, the videotaped testimony could be made public by the end of the week as Republican majority is expected to prevail in the dispute.

JonBenet grand jury convenes

BOULDER, Colorado—A grand jury convened Tuesday to hear evidence in the JonBenet Ramsey murder case, the Boulder County District Attorney's office said. The jurors, eight women and four men—were to receive an overview from the district attorney's office Tuesday with the presentation of evidence and witnesses scheduled to continue on Wednesday, sources familiar with the investigation said.

The grand jury deliberations are expected to be a major advance in the 21-month-old investigation because the jury is empowered to subpoena anyone it wants, with few exceptions, to testify.

Six-year-old JonBenet Ramsey was found dead on December 26, 1996.

Primaries held Tuesday in nine states, D.C.

WASHINGTON—In the last big primary day of the fall, nine states and the nation's capital held primaries Tuesday to determine their Senate, House and gubernatorial candidates. Voters headed to the polls in Connecticut, Maryland, Massachusetts, Minnesota, New York, Rhode Island, Washington and the District of Columbia. Oklahoma will hold a Senate runoff, where the ballot includes one dead candidate.

Democrats and Republicans alike will carefully observe the primary results to see if any of President Bill Clinton's troubles are having an effect on Election '98.

Wallace to get full state funeral Wednesday

MONTGOMERY, Alabama—George Wallace, four times the governor of Alabama, a presidential candidate and the man accused of "normalizing racism," received a full state funeral Wednesday. Wallace died at a Montgomery hospital Sunday night after being stricken with a blood infection.

In one of his best remembered acts, Wallace declared at his 1963 gubernatorial inauguration: "I draw the line in the dust and toss the gauntlet before the feet of tyranny, and I say, segregation now, segregation tomorrow, segregation forever." That remark, as well as the image of Wallace standing in the door of the University of Alabama in 1963 to stop blacks from entering under a federal desegregation order, made him one of America's best known and least admired people.

World

Albanian protesters gather despite ban

TIRANA, Albania—A rally by Albania's opposition Democratic Party took place peacefully in the capital Tuesday, despite a government ban on the gathering.

There was a heavy police presence in Tirana's Skanderbeg Square as Sali Berisha led a march by several thousand supporters, but the police did not intervene. The marchers then returned to nearby Democratic headquarters.

Berisha, who is Albania's former premier, urged his supporters to march peacefully and refrain from shouting slogans. Berisha and his supporters blame the prime minister for the weekend assassination of a popular Berisha ally and two others.

N. Korea frustrated by delays in oil, reactor construction

PYONGYANG, North Korea—Amid rising tensions, North Korea is reportedly growing increasingly frustrated that the United States, Japan and South Korea are not keeping their end of a landmark 1994 deal. Under the agreement, North Korea promised to freeze its nuclear program in return for U.S. pledges to provide it with fuel oil, help in building two light-water reactors and, eventually, an end to economic sanctions.

Four years later, shipments of fuel oil to North Korean ports are behind schedule, and construction on the new reactors has ground to a halt one year after a ceremonial groundbreaking. In the United States, Congress has been reluctant to fund the agreement with North Korea, and there has been little easing of U.S. sanctions.

Taliban threatens retaliation if Iran strikes

TEHRAN, Iran—The war of words between Iran and Afghanistan's militant Taliban escalated into more serious threats Tuesday, as the Taliban warned its military would retaliate if Iran attacked Afghanistan.

"We do not want war with Iran, but if Iran attacks we will take all possible necessary measures," Taliban spokesman Wakil Ahmed told the independent Afghan Islamic Press. Ayatollah Ali Khamenei, the leader of Iran, told senior commanders of the Revolutionary Guards "The situation of Afghanistan is a highly crucial issue."

The Taliban warning comes after Iran's leading religious leader Tuesday put the country's military on alert in a further escalation of the crisis with Afghanistan.

Report: Millions face famine in Indonesia

JAKARTA, Indonesia—Millions of Indonesians face an impending famine due to dire food shortages, one of the nation's leading newspapers reports.

Many families can only afford a single daily meal, and things could get worse before the rice harvest in January, Food Minister A.M. Saefudin was quoted as saying in The Jakarta Post on Monday. He said as many as 17 million families could be affected.

The price of rice, which is a food staple in this sprawling Southeast Asian nation of 202 million people, has tripled for most consumers in recent months after a prolonged drought.

National and World News Briefs compiled by Jeff Scepanski from the CNN Interactive Website

AWARDS

From page 1.

entries. Apparently, none of the prose pieces were impressive enough to warrant the prize.

Perhaps another reason why the Smithsonian Prize has remained intact for nearly twenty years is the commitment the students have for literature. Cynthia Hogue, associate professor of English, said, "It seems to me that the students covet the award, it means a lot to them to win."

John Rickard, associate professor of English, said, "It's a nice feather in the cap for the students." "I think the Smithsonian is a really good thing for the kind of writing community at Bucknell. It's important for young writers to have something to strive for. It made me work harder at my own writing," Maines said.

The future of the Smithsonian Prize is looking brighter than ever. "I think any really good person in English who is writing would want to compete for [the award]. The competition is stiff every year," Patton said. Cooley said, "Bucknell is very competitive. I encourage more people to submit." Notwithstanding, the Smithsonian Prize lives on, a fitting memorial to one of the University's most loved students and ambitious English majors, Julia Fonnville Smithson.

EFFORTS

From page 1.

ability to keep tuition costs from escalating. Last year, tuition increased by a mere 3.6 percent, the lowest elevation in 30 years.

All donations to the annual fund are exhausted in operating activities each year. In 1996, earnings from annual giving supported five percent of University operating activities. Now, two years later, that percentage has grown to 10 percent. A decade from now, Adams would like to see that percentage reach 20-25 percent.

The rest of the money, given to endowment and the facilities fund, is invested rather than consumed each year. "Bucknell's endowment investment performance ranks among the top institutions in the country," Johnson said. "This inspires confidence because it is evidence of good management. The appreciation in Bucknell's endowment portfolio has been very high in recent years."

"Over time, this campaign will [indirectly] make the University more competitive," Adams said. "The stronger you are financially, the more choices you have."

In time, Adams would like to see the University rank equal in academic caliber with the country's Ivy League institutions, but he reasoned that "you don't get there by being imitative, and it takes a long time."

Plans for the Bucknell Campaign: "Preparing for the Next Century" commenced after University officials reviewed data indicating that the University missed poorly against its competitors with regard to alumni giving, endowment and financial aid programs.

"Historically, the value of our endowment has been quite low compared to many of our peer institutions," Johnson said. "But, we have clearly identified the need to increase the endowment as a primary objective of this campaign and the donors are responding generously."

Jason Aines—The Bucknellian

Joseph Silverstein spoke about the last century of Burmese in a lecture last Wednesday.

After they received their independence from the British Empire, relations between the Burmese and highland groups deteriorated. A civil war broke out, which has ruined their economy and left the people unable to support themselves.

Finally Silverstein discussed the current political problems. The military government in charge is currently waging a war against the democratically elected government under Aung San Suu Kyi. He concluded his speech with these ominous words. "They have nothing but the guns they have trained on the people."

Jennifer Cotta—The Bucknellian

Rape shatters false sense of security on campus

Friday morning's rape of a 63-year-old University employee has shattered the idealistic views of many students and faculty alike at the University. For the first time in years, the University is faced with a horrible, brutal act of a very sick individual. Living in the small town of Lewisburg, it is very easy to get lulled into a false sense of security, a sense of near invincibility and immortality often attributed to young adults. Also, for college students, and people in general, it is always difficult to imagine the severity of a situation until you are forced to face it head on. Even more shocking was the manner and location of the assault. It was not just a simple assault (not that all assaults are not to be taken seriously). It did not happen behind closed doors or in a barren basement. This was an act of pure brutality. The victim was choked, beaten, raped and robbed. Even worse, the assault took place than 300 yards from the Langone Center, the center of the University's campus. It happened within 100 feet of Smith Hall and across from many off-campus houses. The assault was the act of, in the words of District Attorney Pete Johnson, "a very sick and disturbed individual." Be careful. There is no knowledge of whether this is an isolated incident, nor has the suspect been yet arrested. What happened is disturbing and, to be succinct, scary. It is not the goal of this editorial to scare anyone into not leaving their rooms, but to urge extreme care in moving in and around the campus. First and foremost, do not walk alone. This applies to both males and females. There is much truth to the adage that there is safety in numbers. A small town such as Lewisburg is often viewed as safe, but these actions are very real and very disturbing. Lock your doors. This means both your dorm room doors, the doors to your off-campus houses, your mods and your cars. Do not assume that this individual would not enter into a lit area. Anyone who would commit so heinous a crime clearly is disturbed and very dangerous. Safe Rides. If you are ever in doubt, do not hesitate to call Safe Rides or even Public Safety. Any risks are not worth it. In addition, the University offers self-defense classes and, under the guise of Ann DiStefano and Sue Ellen Henry, classes and support groups for victims of or people concerned with sexual assault. There are also private counseling sessions offered by Psychological Services. There are outlets and no one on this campus should hesitate to use them. The *Bucknellian* offers its condolences and best wishes to the victim, her family and friends and hopes for a speedy recovery, as well as the apprehension of the suspect. What happened was a disgusting and violent act. If there is something to be learned, it is that these acts do not happen only in big cities or unsafe areas. Unfortunately, tragedy can strike anywhere, even Bucknell. And one tragedy is already way too many, so please, be smart and be careful and protect yourself and your friends.

OPINIONS

Clinton, like Wallace, is difficult to believe Anti-integration governor was forgiven after politically motivated change of heart

By Meredith Schreiner

The act of forgiveness is part of human nature. Most of our politicians play on this basic human instinct to keep their careers alive. Bill Clinton's future depends on the willingness of the American people to put aside their anger and to accept his apology.

The recent death of Alabama Governor George Wallace also reminds us of the capacity people have to change their beliefs. The ability of the people to accept Wallace's change of heart bodes well for the future of President Clinton's term of office.

Whether or not we, the American people, were correct to welcome Wallace back into the political arena, our trust and respect of him was never again pure and unadulterated. If Clinton does stay in office, all of

his future decisions will be questioned harshly by the general public in a way he has never experienced before.

In elementary school, children are shown videos of George Wallace sternly forbidding black children to enter the white schools of Alabama. We are told that he, alone, virtually prevented integration in the South. But, on May 15, 1972, during his presidential campaign, Wallace was shot five times by Arthur Bremer, a self-admitted assassin. Wallace was left partially paralyzed, unable to walk and in constant pain. His recovery, however, was miraculous. Until his death, Wallace campaigned tirelessly as a "reformed" racist.

Wallace blamed his racist views on his prejudiced family. He alleged that the only reason he fought vigorously against black rights was to be elected into office in a predominant-

ly racist state. Wallace was correct about that. Had he campaigned for the rights of African-Americans, Wallace would have never become Governor. That still does not explain why, if he was genuinely a good person, he hurt and, rather directly, killed many people during his term in office. He never showed any sympathy to the black society and should not be pitied.

Maybe Wallace did genuinely change after the shooting. But, quite possibly, he realized that times had changed and values were no longer the same. In order to remain in the political arena, Wallace saw that he must appeal to the general public. America no longer wanted segregation. Therefore, being a slick politician, neither did he.

Wallace did, however, do many good things for minorities. He was

recognized by many African-American societies as a friend of the black cause. I cannot believe, however, that he was a changed man. Once a racist, always a racist. Once a politician, always a politician.

This is why I do not believe that Clinton's apologies came from his heart. He may be sorry he was caught having an affair, but he is not sorry that he misled and disappointed his nation.

Clinton still has the ability to do wonderful things because of his power, just as Wallace did. Whether the actions came from, or will come from, Wallace's and Clinton's hearts, may not matter. Wallace, who died last week, accomplished miracles for the black people, even if they were under false pretenses. We should let President Clinton do the same. Let him play under our rules.

Without parents cold-fighting is a challenge

By Rebecca Rowland

I have a large ball of phlegm firmly lodged in my throat. I swear, somehow enough mucus to fill the big plastic nose on that Mark Summers' show "Double Dare" made its new home in my trachea. I have a cold; I've sneezed, blown my nose and coughed so many times that I threw my back out. Yes, I have a cold and no parents to cure me!

Remember that feeling you get when you first woke up and realized that you had a cold? For me it was a happy feeling; I could stand a little stiffness in exchange for more sleep, no school, watching "The Rosie O'Donnell Show" and having my mom make me soup.

Nevertheless, when I woke up from a night of hacking on Tuesday morning with a fever, I had no one to tell but my hallmates, who were too wrapped up in their own petty lives and activities, such as going to class, to stay home and comfort me.

Congested and ignored, I headed off to class. I would like to take this opportunity to apologize to everyone in Professor Lucas' 8 a.m. "Intro to Politics" class. I'm pretty sure that the class had a spirited debate about the Clinton sex scandal; however, I coughed fairly loudly at regular intervals throughout the class and could not hear a thing. At one point, I raised my hand to say something earth-shattering brilliant but the only sound that came out of my mouth was "COUGH COUGH HACK HACK CHOKE CHOKE COUGH COUGH COUGH." I closed my mouth, defeated and not a little out of breath.

After class ended (at least I think class ended, as I didn't actually hear Professor Lucas dismiss us) I went back to my room and rummaged

through all the medicine my roommate and I have. I found something that looked perfect: DayQuil, the "non-drowsy, congested-stuffy head, sore throat, coughing, aching, fever" you can face your day" medicine. Yet, when I turned over the package to check the warning it said not to take without a doctor's permission if you have—get ready for this—a chronic or persistent cough! I thought this was the "coughing" medicine, duh! I didn't know what to do. I didn't know if the warning

meant chronic or persistent cough like emphysema or like what I had, the break-your-back, pee-in-your-pants cough (and yes, those are the medical terms for them). I called my mom; she wasn't home. I called my dad; he was in a meeting. I was stymied! What to do, what to do! It was my first adult decision, to pop or not to pop! In the end I decided that if I died, my roommate, who gave me the medicine in the first place, would have a lot of explaining to do and then I would feel bad because she is

an engineer and has lots of bridges to build and cars to test. So I just took a nap.

When I woke up I felt a little better. My mom called and I was actually able to tell her that I was sick without breaking into that "mommy my tummy doesn't feel good" voice. She told me to take something and I just laughed. I highly recommend napping as a form of cold-control; I haven't coughed once since.

COUGH! Damn.

Awkward moments are unavoidable

By Erin Corbo

Awkward, defined by Webster as: "hard to deal with, difficult, embarrassing or inconvenient," is a word that frequents many conversations. Although this word is so commonly used, awkward moments are something that we never seem to stop having. Why is this? Is it because humans never fully mature and know the best way to handle these situations, or rather that some incidents are and always will be just plain uneasy?

Upon pondering or actually dreading these moments, I cannot help but think of a few of these times that always seem to recur. Despite the fact that I often think of a better way to handle the feminine product commercial with someone of the opposite sex, the sex scene with my parents, the infamous walk of shame on Saturday morning wearing the notorious black pants from the night before, or a flatulent odor permeating the air in a room with only a few people, I never fail to react in the same bumbling manner of discomfort.

After such a long day I cannot wait to get home and sink into the comfort of our family room "couch" and watch a bit of TV. Flipping through with the "clicker box," I see that *Disclosure* is on HBO. Never having seen it, I thought it was my best option. After about the first ten minutes my Mom and Dad decide to come and watch. Well how convenient that Demi Moore decides to brutally unzip Michael Douglas's pants at this moment. Of course unable to remain silent I feel the need to say, "Oh gosh, I think Demi is a little nutty." My parents didn't really respond, but their non-verbals indicated that I might be the nutty one.

I still can distinctly remember the first day of my Spanish class. The teacher was discussing our syllabus and all of a sudden a rank odor spread through the room. Someone definitely had a bit of a gas problem, but the culprit "was silent and deadly." The teacher insisted to carry on with the lesson while our class of eleven sat trying to pay attention. Of course I wanted to laugh, but being uncertain of my peers I restrained myself. Although we all have been

flagellating for our entire lives, the smell and sound of a fart still cause us to react with humor and discomfort.

My freshman year I wasn't very into going out at night. Instead, I woke up early and ran on Saturday mornings. It took me a while to figure out why all these girls that looked disheveled were coming out of the local fraternity houses with such nice clothes. I would pass by them and most of the time they would look down. Looking back I was also engaging in some strange behavior, yet they definitely felt ashamed and awkward.

I am sure that every person has experienced their own unique awkward moments. Whether everyone analyzes them is another question, but in my opinion these are character building times in our lives that challenge us to make humor of the bizarre ways of human nature. So next time that you pass the girl wearing morning "B.P.'s," smell the fart in class, or watch a sex scene with your parents you will know that at you are not alone in feeling awkward.

Houses are not ideal for sororities

By Beth Martin

Almost all of us have wondered at one time or another why Bucknell has fraternity houses and not sorority houses. Obviously, the old state law forbidding these "brothels" no longer exists, since other Pennsylvania schools, such as Lafayette, Penn State and Susquehanna, have them. Like every other sorority member at Bucknell that I've talked to about this, I do not know why Bucknell does not have sorority houses; however, unlike most of these same women, I would not want them here.

I too have previously thought that I would like to live in a sorority house, especially last year when I lived in Hunt Hall, a dormitory that leaves much to be desired. Nevertheless, when I have carefully considered what it would really be like, I am glad that Bucknell does not have them.

The responsibility that a house would entail is much more than most members realize. Although at almost any given time several fraternities are on probation, most Bucknell sororities have never been on it. Not only is probation a social inconvenience, but it is also usually accompanied by hefty fines. This is one headache, I'm more than happy to let the guys have to themselves.

Likewise, sorority dues would greatly increase to cover the insurance costs of houses. And even if the University owned these houses, members would have to cover the cost of furnishing and decorating them, at least during the first couple of years. However, unlike Bucknell fraternities, most of which have large alumni funds to cover such purposes, sorority chapters at Bucknell do not currently have the same cash stores, because they have never needed such funds.

But financial and risk management considerations aside, the main reason why I am glad that we do not have sorority houses is because my sorority is not my life, and most of my best friends here are not in my sorority. This is not to say that I do not enjoy being in a sorority and engaging in its activities, nor would I deny that the sorority has enabled me to form some close friendships with women I would probably otherwise not even know.

Yet, I think it would be overwhelming to live in a house, where most of my day would revolve around the sorority and my fellow members. As is the case with most fraternity members, I would rarely go to other chapter houses even to visit friends, and I would no longer eat in the caf and run into people I otherwise would not see until graduation.

I'd have to make a concerted effort to hang out with friends outside the sorority, and frankly I'm not sure if I would expend the energy that often. Most fraternity members don't.

One of the unique and great things about Bucknell compared to most other schools with a high percentage of sorority participation is that the women here do not seem to base friendships on Greek letters. Just consider the roommates of sorority women at Bucknell. Those of us who live downtown, for example, would make a fine advertisement for Greek unity, since most of us choose to live with members of different sororities or women that belong to no sorority. Obviously, this would not be the case if we all lived in sorority houses.

When I look back on my three wonderful years here, I realize that they have been so enjoyable because I have engaged in various activities and have a diverse set of friends. My sorority and the friends I have made through it are very special to me, and I have never regretted my involvement with it. Yet, if I were to live in a sorority house I would most likely not participate in some other activities nor have great friends outside it, involvements which I also have never regretted.

Luck of the draw comes up short

By Alyson Demerath

I looked up the word "dingle" in The American Heritage Dictionary. I actually found a very interesting definition: "a small, wooded valley; dell." I think they got the small part right. My dingle in Swartz may not be wooded, but it is definitely small. I simply cannot understand how Housing and Residential Life can get away with this! Although I have grown to like my little dingle, I am still a bit bothered by the whole process.

Even though the lottery does seem like an impartial way of deciding who receives what room or mod, I do not think it is fair. In fact, when I think of the University's lottery system the short story, "The Lottery," by Shirley Jackson, comes to mind. Perhaps, I am being a little melodramatic. Granted, I would probably love the entire system if my number had been anything under 200. I got 754 and I am still very bitter.

The main problem with the lottery system is the variety of outcomes. Friends of mine are living it up in split doubles in Roberts. Others are holding Wednesday night fiestas in their newly refurbished mods. Some even choose to live in their spacious old rooms in Vedder. A select few were lucky enough to find a Gateway. My room is the size of the kitchen in a Gateway, but that is life.

The University needs to be better prepared for the complications with housing that will inevitably arise. For example, over one hundred more first-year students than expected decided to attend the University. We are all just giddy that the University has developed such a wonderful reputation, but where did they put all of these freshmen? They put them in the rooms upperclassmen should have had. Will someone please ex-

plain the logic of giving a freshman, someone who has most likely never experienced dorm life, a double, while giving upperclassmen dingles?

The University has no problem giving the first-year students the nicest rooms. I know, I had a triple in Larison the size of the entire Swartz dorm. Once they are sure you and your parents' money are coming back from your sophomore year, they throw you and your roommate into a room smaller than the cells at the Lewisburg Penitentiary! They call

this a "college experience!" I am not saying first-year students should get stuck in the dingles either. I think the dingles should be used for their original purpose: singles!

Housing and Residential Life obviously has their work cut out for them. I will allow them a small amount of credit for building a new dorm, but I will be gone by that time. So I ask you, my fellow Bucknellians, does it seem fair for our parents spend their life savings to us to live in a room the size of a coat closet?

Think twice about safety Friday's attack is a wake up call for all students

By Laran Brindle

Every year hundreds of students arrive in Lewisburg, in hopes of having four fulfilled years of college in the rural setting of central Pennsylvania. The peculiar smell on campus and the three hours it takes to reach the nearest large city are mostly the topics of jokes or smirks, and when you tell friends where you go to school and they say, now where is that? Update New York! No, Lewisburg, you know where the Federal Penitentiary is. It's a great place to put one because it's out in the middle of a corn field, just like the University.

These were some of the thoughts going through my head when on Friday night a group of girls were hoarded around the bulletin board on the 4th floor of Hunt Hall. Of course, I had to see what the commotion was about. Eyebrows were raised and foreheads crinkled in pensive surprise. Attempted robbery, a woman in her sixties raped and in the hospital, location: on the corner of 7th St. and St. George, across from the cemetery.

A shudder went through my body and I heard the word "rape" and "in Lewisburg" repeated over again in my thoughts. Downtown, how many times have I walked by myself late at night from precisely that street? Stupid was the next thought.

Perhaps, one of the reasons they come here is because their parents don't have to worry about their kids wandering the streets of New York by themselves.

I take for granted the fact that Lewisburg is in the middle of nowhere, but does this mean the evils of the world cannot penetrate into "nowhere," into our idealized "Bucknell Bubble?" How many times have you left your room or your house without a key? Oh, I! I just leave it unlocked. Who really wants any of my stuff anyway? Think again. Think twice about walking home by yourself, locking your door and taking advantage of the fact that you are not in a city, because the University is not immune to crisis. Just like, that poor woman home by herself, going downstairs to check out an unusual noise in Lewisburg.

Long distance love: An exercise in futility?

By Emily Novick

College: it's definitely an experience. It's a big step up from the past and a scary step toward the future. It is adjustments and introductions: to new people, to cheaper beer (the cheapest) and to the ubiquitous presence of STD's. College is said to be a time of discovery, especially for love or lust. In fact, many will find their first love, which may stand to be their one and only. Here at Bucknell, there are crazy rumors flying around about the percentage of Bucknellians who actually end up marrying other Bucknellians; people say as high as an outrageous 70 percent.

But if this time and place is labeled as "the" time to find your soul mate, then why do so many students make an attempt to keep a long distance relationship afloat? And if they do make that decision, it is possible for it to survive?

Why make the attempt? Love is a crazy thing. There is a person out there who is a perfect match for each and every person on the planet. Some people are luckier than others are; they find their soul mate early in life. Once they find that person, they are content, satisfied, overwhelmed and overjoyed. At this point, those fortunate people begin a roller coaster of a ride. Others are just destined to roam the planet until they find that one in six billion who was created for them. Sadly, some people search all their lives for that person and never find them, while others search, find, but are kept apart by circumstances out of their control.

For those who did have the luck of finding their soul mate before they started their college career, they know. They know that they don't control love, but love controls them and because of this, people embark on a long distance relationship.

Is it possible to survive a long distance relationship? The two words jealously and trust go hand in hand with a relationship separated by distance. The typical day of a college student can cause feelings of raging jealousy for a person in a distance relationship.

The array is endless: frat parties, drinking, drugs, sex, sexual assault and unfamiliar names and faces. All of these things can cause feelings of insecurity in a relationship. Here's when the trust issue arises. It may sound trite but trust is the only thing connecting the two involved in the long distance relationship. A guy in a relationship must trust the girl, trust her actions, trust her behaviors and trust her thoughts. All of these changes that are occurring at this step from the old and toward the future put stress on a long distance relationship. This is why so many fail. In some situations, failure is good. Then the people can begin their roaming process to find their soul mate. But if a person has truly found their soul mate, then their relationship will survive with work, because it was meant to be that way.

President Clinton consults Sosa and McGwire on dealing with the press...

SURVEY

DO YOU THINK THAT PRESIDENT CLINTON SHOULD BE IMPEACHED?

"I believe he should be impeached, but not immediately. He should be impeached after the trials in order to set an example for future Presidents."

Brett Shaver '02

"No, because I don't think his personal life is relevant to the nation."

Julia Bennett '01

"Because it is his personal matter he should not be impeached. It comes down to a matter of definition and unless it can be proven that he lied he should still be President."

Amanda Libengood '01

"I think as soon as he lied under oath that he should have been impeached because any other person would have been punished for lying under oath. He shouldn't be exempt or above the law."

Support the AIDS epidemic and be a part of the annual walk-a-thon

By Amy DeAngelis

It is that time of year again. The time to get your feet moving and participate in this year's AIDS walk in Washington, DC on October 4.

Anyone can participate and it is free of charge. About 88 slots (two buses) are open, but if more people are interested, then arrangements can be made. Buses will be departing on October 12 around 8 a.m. in front of the Smith Arches. At 12:30 p.m., a ceremony will honor all of the participants and at 2:00 p.m. the march begins.

After the march, the walkers enjoy dinner where they will be able to mingle with spectators and friends. It is a great way for people to get together and march for an important cause.

The walk also brings people together because everyone is there for the same reason.

Sue Ellen Henry, faculty coordinator of the walk, stated, "I want students to have the opportunity to gain some level of activism and get the chance to have their lives expressed through their beliefs."

The trip is free for students because the President's office was kind enough to donate \$1,500 along with money from the Residential Colleges, Chaplain's Office, and the Office of Housing and Residential Life, to help promote student participation.

Donations can be made, but they are not essential to participate in the walk. Last year, the largest student donation was

\$175 due to hard work on a student's behalf. The walk is sponsored by the Whitman-Walker Clinic. The clinic provides HIV/AIDS services in the Washington, DC metropolitan area, Northern Virginia, and throughout parts of Maryland.

The funds are used to provide HIV and AIDS patients with critically-needed services. If you are interested in making a donation, a form can be sent to you from the clinic after you register, and then students can decide whether they want to donate or not. Students have the option of donating their own money or petitioning around campus.

The money provided by donors will give medical and dental treatment to 1,700 people, distribute 1,100 free bags of groceries each month, offer housing to people with AIDS who would otherwise be homeless.

In addition, the money helps operate AIDS information lines and educational services, offer mental health and addiction treatment, and provide free legal assistance concerning issues of discrimination, insurance, etc.

By donating, it is possible to change the life of someone with AIDS or HIV.

Last year, students raised \$1,427 and the total gross income from the walk was \$2,492,000. Henry was pleased with last year's turnout of 52 people and the amount of money raised, although other schools raised even more. This year she hopes more people will just go for the experience, and this year free T-shirts will be given out as an extra incentive.

The AIDS walk is also an opportunity for established groups such as the Greek system to get involved in this project. Henry is also looking for a "home" for this project and if one of the established groups are interested, she encourages them to let her know. She feels the walk needs a group leader.

Last year, we were the school that traveled the farthest, but the students. The trip also gives students the opportunity to join with family and friends as well as explore Washington, DC for the day.

Walking for the AIDS cause is very important because AIDS is a crucial topic to be aware of, especially for college students. AIDS affects the younger population of ages 25-44 the most, which means college students are at great risk.

An estimated 29.4 million people are infected with HIV, and about 6.4 million people have died from AIDS worldwide. About 362,004 Americans alone have died from AIDS and 581,429 have been diagnosed with AIDS. For more information about AIDS, you can contact the Center for Disease Control or the Prevention Hotline at (800) 342-AIDS.

The Student Health Center will be providing free HIV tests on campus. The tests are given once a month and conducted by the State Health Department. Students can call anonymously and their identity will be kept confidential. It is important for stu-

The National Society of Black Engineers begins a new year

By Christiane Schuman

A dozen engineering students turned out Thursday evening for the first meeting of the National Society of Black Engineers, referred to by its members as the acronym, "NSBE." The meeting, held at the Seventh Street House, entailed introductions of the seven NSBE officers to the interested engineering students.

The board of officers is comprised of President Milton Baxter '00, Vice President Kenneth Emsen '01, Treasurer Lydell Simmons '99, Secretary Shannel Richardson '01, Finance Chair Adam Webb '00, PCI (Pre-college Initiative) Carole Harrison, and Academic Excellence Chair Eric Slaughter '01.

Baxter took the lead, explaining that the NSBE is a student-run, national organization. The nation is divided into four re-

gions, each of which meet at a conference once a semester on the regional level, and once a year nationally.

According to Baxter, "this fall, we will be sending our engineers to Virginia, where they will get the opportunity to meet the heads of various engineering businesses, attain internships and scholarships, and be schooled on the complicated resume process."

The requirements for joining NSBE are \$15 in annual dues and a completed application, available to all interested. Even area high schools lend recruits for Junior Chapters of NSBE. Requirements for membership, however, ask for much more active participation and enthusiasm.

NSBE does not revolve entirely around academics and engineering. In fact, they are planning their first fundraiser of the year, a bake sale, for

Parents Weekend.

Also on the agenda are entertainment and social events. NSBE recently worked in conjunction with BASE to bring to campus the play, "Our Young Black Men Are Dying and Nobody Seems to Care".

When speaking of goals for the coming year, Baxter stressed one key focus: diversity. "We really want to work this year on helping to diversify the campus," Baxter said. He feels that "people hesitate to show interest in NSBE because they are intimidated, thinking that NSBE is exclusive to black engineers, but in reality, it is open to all."

Another goal set for the coming year is to recruit a historian—a liaison of sorts—to inform the campus not only of NSBE's past accomplishments, but of their plans for a prosperous and diverse future as well.

dents to be extra cautious and avoid unprotected sex and intravenous drug use, since they are the two main ways to contract HIV.

Students interested in participating in the walk on Oct. 4 should contact either Sue Ellen Henry or student coordinators Cy Rubel '01, Carol Hairston '01, and Jackie Nichols '01. In addition, there will also be a sign-up

in the Langone Center Mall on September 22-24. Students will be contacted by e-mail in the upcoming weeks with additional information.

Students interested in participating in the walk on Oct. 4 should contact either Sue Ellen Henry or student coordinators Cy Rubel '01, Carol Hairston '01, and Jackie Nichols '01. In addition, there will also be a sign-up

An Abroad Perspective: Seville

By Katie Hopper

Even after studying Spanish for seven years prior to my study abroad experience, nothing prepared me for what was in store when I studied in Spain for five months last spring. The Spanish culture is different from any other that I've encountered in my travels, and becoming acclimated to my surroundings was challenging, to say the least.

My first day in Spain was the perfect example of culture shock. Completely jet-lagged and in

need of a shower, I stepped into the airport lobby in Seville to meet my hostess who would serve as my Spanish "mom" for the next few months.

During my first encounter of this woman who knew hardly any English, she kissed both cheeks while mumbling something in Spanish. She then proceeded to pick up one of my suitcases as she led my roommate and me to the car. It was scary, to say the least, but we managed to carry on some conversation during the

ride home, where we enjoyed a delicious Spanish meal and collapsed into bed for a few hours.

After my first day, I adapted pretty quickly. When forced to use the language constantly it becomes a lot easier to both think and speak in Spanish. Certain things surprised me throughout my stay in Seville. I found out quickly that trying to go anywhere to run errands in the middle of the day ("siesta" time) was virtually impossible. Everything closes from 2-5 p.m. so I eventually got into the habit of enjoying a mid-afternoon nap before my afternoon classes.

Studying in Spain was a good choice for me especially since Seville has a different kind of beauty than a lot of other cities in Europe. It struck me right away that many of the buildings were white or light-colored, which adds to Seville's charm. The tower next to the cathedral can be seen for miles.

The beautiful "Plaza de Espana" was my favorite place in the city: a huge semicircle of government buildings that looked like something out of a movie set. Everything is covered in Spanish tiles and beautiful mosaics, with a moat around it and towers on either side. I stumbled across that plaza on my third or fourth day, and it truly took my breath away.

Although it was cold when we arrived in January, by mid-February we were going to the beach (although only the sun-hungry Americans thought it was warm enough for that!). With the exception of a rainy April, the weather was beautiful. Good thing, since we had to walk virtually everywhere in the city! I

also found out that the American idea of a night life just does not compare. The Spaniards party harder than any people I've ever seen. Their bars don't even open until 11 p.m. or 12 p.m., and discos are still raging at 7:00 in the morning. During the week of "Feria de Abril," the April Fair, the entire city of Seville takes part in a traditional festival which consists of a fairground full of tents, mostly private, but some public, each with its own bar, kitchen, and dance floor. Women wear the traditional "traje de gitana," or flamenco-style dress, and men wear their best suits. Everywhere you turn couples are dancing "sevillana," Seville's traditional dance. My Spanish mom was nice enough to teach this dance to my roommate and me for free, but a lot of American students took sevillana lessons. One of the best aspects of studying in Seville is the people that live in the city. Everyone is very helpful and friendly, and

sometimes (in the case of the men) overly friendly. The people of Seville are very proud of their city and happy to tell you about it if you have the time to listen.

Studying abroad was one of the best experiences of my life. I was able to travel all over Europe and, more importantly, experience the culture of Spain, one of the most beautiful countries in the world. By the time I left it felt like a second home to me, and it always will.

Lewisburg Listening Post lends an open ear

Bethany Medeiros '00, right, looks over the schedule to see which students she will see during the next class period.

By Dana Rofey

In the midst of harsh break-ups and family problems, a youngster who does not feel comfortable disclosing personal information surely will not go and freely talk with an adult. Luckily, in 1978 concerned teachers, parents, and community members recognized this dilemma at the Lewisburg Middle School, and rather than turning their heads, they made a monumental step in providing resources for their students: The Lewisburg Listening Post.

The Lewisburg Listening Post was started 20 years ago and, as the present Chairman of the Board Mark Beng said, "It is the only program of its kind to survive for 20 years. It has achieved in making approximately 35,000 contacts during that time."

The program allows children in grades six through eight to come to a room designated to University students who deal with the children's problems, concerns, or (simply social) desires. This program is also now at Linntown Intermediate School for students in grades four and five.

Five days a week, six University students are stationed in the Listening Post, eagerly awaiting the stu-

dents' visits. While this time primarily focuses on problematic issues that may be deterring the students' academic concentration, it is also a time when children can touch base with peers of their own age, along with young adults. In addition, these students do not simply come to talk about their problems, but are also encouraged to stop by to converse on any topic at hand. At times, this unstructured period serves as a personal outlet to be listened to without being judged and to help with mediating conflicts.

Cathy Stechschulte, advisor of the Listening Post, is frequently found at the middle school, making sure not only that the program is running smoothly, but also instructing the University students in pro-

per counseling techniques. In addition to Ms. Stechschulte's counseling endeavors, near-peer counselors are also encouraged by the middle school guidance counselors (Ms. Judy Wagner and Mr. Tom Mecouch) and Principal, Floyd Walters, in implementing available resources to Lewisburg students.

Wagner states, "The Listening Post has been an invaluable part of our Middle School for many years. Kids really like to go and talk to the students. We have been incredibly lucky over the years to have the opportunity to work with such talented University men and women."

Ryan Keely '00, Theresa Frezzo '99, Bethany Medeiros '00, Jen Slonaker '00, Dana Rofey '00, and Tovah LeWinter '01 are the six University students who act as near-peer counselors. While it is extremely helpful to the guidance counselors, school educators, and parental figures, it is also an immensely enjoyable learning experience for the University students. As Tovah LeWinter '01 commented, "Being a psychology major, working at The Listening Post is an amazing opportunity that gives me firsthand experience that is sure to benefit my future. At the same time, I get a break from the stresses of college life and get to do what I love, which is working with kids."

This contact presents yet another instance of the University students' involvement with the community. While this is a fabulous resource provided by the Lewisburg School District and the United Way and other community contributors such as Kelly Township supervisors, the Lewisburg Council of Churches, and local businesses and community members to benefit local youngsters, it also presents salient experiences made available to the University's men and women.

Perhaps this is the future that holds possibilities for relationships built on trust and assistance made possible by people who look out for the next generation. As the Lewisburg Middle School states, "It's good for kids, we'll do it." This is the motto for tomorrow's success.

A new movement in martial arts

By Jennifer Wharton

"Empty yourself of everything. Let the mind rest at peace.

All things rise and fall while the self watches their return.

They grow and flourish, and then return to the source.

Returning to the source is stillness, which is the way of nature."

-Tao Te Ching, Book 16

T'ai Chi Chuan, formally known as "Grand Ultimate Fist" is a form of martial arts using movements based on meditation. T'ai Chi differs from other martial arts, in combining "soft," "slow," and "graceful" movements. It's practiced and performed in a completely relaxed manner. T'ai Chi is a way to become more connected with our environment and ourselves. It is very beneficial in developing Preventive Health and Person-

al Development as well as self-defense.

According to Jim Burt, an instructor for T'ai Chi, "By operating at the mind/body interface, students can use the form as a vehicle for personal growth."

As exercise, T'ai Chi improves the circulation of the blood, increases the immune system, and balances regulatory functions. It improves flexibility, coordination, and expands lung capacity so more oxygen can be absorbed by the body. As therapy, it promotes calmness, mind/body integration, balance, and self-discipline. Balance helps us to find our "center" on many levels while self-discipline allows us to focus and succeed in our achievements.

T'ai Chi is also considered an art. Many dance schools include T'ai Chi for what it has to offer in understanding body movement. Chinese dancing has long incorporated its martial arts knowledge into its ballet and folk dancing. "Classes are relaxed, informal, and non-competitive. Students learn at their own pace and the emphasis is placed on nurturing a 'playful' attitude," Burt said. He has been studying T'ai Chi

since 1986 and has been teaching it since 1991. Burt is a fifth-generation T'ai Chi teacher in the lineage of Yang Lu-Shan. He recounts the inspirational story of Lu Shan: "One day, while Lu Shan was working in a local grain store, a rude man came into the T'ai He Pharmacy next to where Lu Shan was working. The next thing Lu Shan saw was the pharmacy owner throwing the man into the street without any effort at all. Lu Shan felt it was quite odd for a person to be able to accomplish such a feat without the use of force. This incident inspired him to begin T'ai Chi classes, and later, he became the founder of Yang style T'ai Chi."

Beginning level classes are available on campus and meet on Tuesdays from 4 - 5:30 P.M. starting September 15 in the Meditation Chapel. For more information, you can contact Jeanne at Psychological Services (x1604); however, spaces are limited. It is offered both this semester and next on a first-come-first-served basis. It's a great way to relieve the stress of classes and have fun at the same time!

Stuart Dempster in concert: Sonic Breathing and Circular Meditations

Stuart Dempster, a performing new and experimental musician, will be coming to the Weis Center on Tuesday, September 22 at 8 p.m. Dempster is a founding member of the American avant garde.

His work is exemplified by Sound Massage Parlor, and the environment/site specific work of the State of Washington As a Musical Instrument has earned him a highly regarded reputation as a composer and performer whose music is deep, meditative, and amusing.

Dempster's performance at the University will feature Didjeridervish, a work in which he uses the American indigenous model didjeridu—plastic sewer pipe—while spinning around in a circle. He will also perform excerpts from the Sound Massage Parlor, which included the use of a garden hose as an acupressure instrument.

Dempster's concert will surely introduce all students to a diversified and entertaining piece of music. Admission is free and the concert is open to all who are interested.

Courtesy The Music Department

Stuart Dempster in the summer of 1938 in Hermosa Beach, CA developed an early passion for music.

Readings from a musical novel

Stephanie Metz—The Bucknellian
Professor Robert Taylor will read some excerpts from his novel about a fiddler and a singer this Sunday in Bucknell Hall.

By Heather Rossi

At any given time, in any of the academic buildings, one can find countless fliers decorating the walls that announce a variety of forums in which to hear professors share their thoughts and talents outside of the classroom. The eagerness of professors to present lectures and share their interests with the students is remarkable. This Sunday, Robert Love Taylor, professor of English, will share his gift of writing with the University through a reading of his fiction.

Taylor's reading will be composed of excerpts from his current novel in progress. It is a story about a fiddler and a singer who come together through their music. Both are extremely committed to and passionate about music. The story tells just what their commitment means and where their passion will take them. The story is an extension of the characters in one of Taylor's previous novels, *Lost Sisters*.

These two works, as well as Taylor's two other novels, are historical pieces that take place from the post-Civil War era to the 1950s. His interest in this time frame stems from his family and from a curiosity about their past. Taylor grew up in the Appalachian Mountains where there was an old, traditional culture. The stories of his family always intrigued

him, and they later became the inspiration for his writing.

The other inspiration for Taylor's writing is music. A spectator, as well as a talented performer, Taylor loves the old time music of his mountain home. He described this music as "a predecessor to Bluegrass," a very lively dancing music that was a main form of entertainment in his home. When he performs, Dr. Taylor plays the Appalachian fiddle, an instrument once made by his grandfather. Taylor's grandfather serves as an interesting connection between his two interests of family history and of music, and both are brought together in his novels.

Taylor was not always a novelist, however. He began writing poetry at a young age because he felt that he had thoughts that could best be communicated through writing. He said, "I want to write because I feel something that I cannot say in any other way." He was influenced by writers such as E.E. Cummings, who could express emotions so well through words. Sometime later, he moved onto short stories, but eventually his thoughts were expanding even beyond their boundaries. So, he began his first novel. Now, after several novels, Taylor is still feeling inspired to put his thoughts into writing.

Taylor's reading will take place at 8 p.m. this Sunday in Bucknell Hall.

The Bread and Puppet Theater breaks the bubble

By Betsy Heckman

In the quest to bring innovative, intriguing performances to this rural campus, the University will welcome the talent of the Bread and Puppet Theater this weekend. This spectacular show of color and sound, sponsored by the department of theatre and dance and the Residential Arts College, will bring a taste of the world beyond the bubble.

Notably, members of the Bread and Puppet Theater University and students of the University will converge to bring "The New York Community Passion Play" to campus. This protest play is a political satire against Major Giuliani's community policies in New York City. The Sacred Harp choir and brass band will lead the audience from one scene to the next.

This week, there was a "fiddle lecture" given by Peter Schumann, the founder of

the Bread and Puppet Theater. Schumann, originally a German sculptor, founded the Bread and Puppet Theater in 1962 on a dairy farm in Vermont. He incorporates European peasant drama as well as folk drama to create a unique, visual performance style.

The theater employs large puppets, masked and unmasked characters, color, music, marching bands and singing to creatively address contemporary political issues. The hundreds of puppets parade in carrying colorful banners and holding large animal masks. These puppets have been used in vigils and street shows to protest such issues as rent strikes, voter registration and the war in Vietnam.

Schumann also brings his plays directly to people on streets and small towns in the United States, Africa, Europe and Australia. There is a 20-acre outdoor stage located in Glover, Vermont where festivals are held annually. This rural setting has helped to forge the themes confronted in the plays.

The Domestic Resurrection Circus is one particular festival held at Glover annually in August. Thousands of people come together to eat homemade bread, wander through the museum, see sideshows in the pine forests and gather in the amphitheater.

The Bread and Puppet Theater is one of the most highly regarded companies in the world. They have won numerous awards. As well as traveling throughout the world, they have represented the UN at various festivals. They utilize amazing visual imagery and sounds to send out their politically-charged message in a way, exciting way to their audience.

The University will be welcoming the Bread and Puppet Theater to the campus at 5 p.m. this Saturday on Rooke Lawn. Admission is free. In case of rain, the pageant will be held in the Fieldhouse.

Courtesy of the Theater and Dance Department
Unusual puppets, outdoor stages, and political satires make the Bread and Puppet theater a unique form of entertainment, which everyone can see this Saturday on Rooke lawn.

Courtesy of the Theater and Dance Department
The Bread and Puppet Theater entertains audiences with political satire plays.

Movie and video reviews

A look at *Armageddon*, *The Avengers* and more

By Aaron Spak

The blockbuster movie of the summer, *Armageddon*, provided all of the explosions and rushing adventure you could want, with Ben Affleck thrown in for the ladies. Michael Bay directs and Jerry Bruckheimer/Don Simpson produce to again delight audiences with their special flair for action: fast paced and loud.

If you liked *Armageddon*, you may want to look at *Bad Boys* with Will Smith and Martin Lawrence, one of Bay/Bruckheimer/Simpson's first collaborations. It is a solidly entertaining movie about Miami cops with a unique case of mistaken identity. Tea Leoni and a Porsche 911 Turbo complete the list of headlines.

Steve Buscemi, whose comic influence in *Armageddon* made it just that much more enjoyable, has written, directed and starred in another quality movie that I discovered in the video store. *Tree's Lounge* is officially classified as an "art" movie, a category that I generally equate with "bad," but this is definitely worth the money. Don't expect Buscemi's fast-paced sarcastic tirades in *Tree's Lounge*, for it provides a look at his considerable dramatic talent. It is a story of a hard luck case and how his life is affected by the personalities in and around his favorite haunt.

LA Confidential received some Academy Awards this year, but I didn't get a chance to see it until this summer. It is a return to old Hollywood and to the glory of the silver screen. A convoluted story steeped in nostalgia, give it a try if you're in the mood for something a little different. This movie is unique because it is made in the manner of early Hollywood films.

Moving on, I now have to admit that I'm a *Conan* fan. Everything from *Goldfinger* and *Dr. No* to *The Rock*, he is one of the most entertaining actors I know. When I saw that he was going to appear in *The Avengers*, I was duly anxious to see it. I have to say that this was, unequivocally, one of the worst movies I have ever seen. Connery stars as August DeWinter, along with Uma Thurman as Dr. Emma Peel and Ralph Fiennes (I can never figure out who you're supposed to pronounce his name) as Agent John Steed, in this remake of the classic television show. Despite the entertaining title sequence, the un-

developed plot left me walking out of the theater saying "What the hell was that all about?" DeWinter gains control of a technology (it's not explained how or what this technology is) that can control the world's weather. Whenever there's a bad guy in a movie there is one thing that is absolutely necessary: *motivation*. August is apparently angry at the world for no reason, and he intends to sell the world its weather. Nobody knows how, but everyone just accepts it. There is no indication of the public's reaction to this revelation; all the scenes of London are aerial with deserted streets. In the end, I was left with a feeling that the film editor cut just a little too much out of the story. These examples are only the tip of the iceberg when it comes to all of the film's shortcomings.

Finally, I have to offer high praise of Robert Duvall in *The Apostle*. I was taken by surprise when I watched this; I knew that it had gotten some Academy Award nominations, but had no idea of the story. Duvall portrays Euliss "Sonny" Dewey, a hellfire and damnation Pentecostal preacher, who is caught between his heavenly aspirations and his human struggles. Sonny is having marital problems with his wife Jesse (Farrah Fawcett) who not only wants to end the marriage, but take his church as well.

Sonny is an intense man, deeply committed to his preaching, but also capable of violence. Because he was in anger up so tight, he is consumed with jealousy and argued that he cannot control despite his connection to God. He loses control and commits a brutal crime of passion, then is forced to leave his beloved Texas. His journey is filled with monologues with God in which he affirms his beliefs and commits himself to Jesus' service "wherever thou leadest, I will follow." He finds himself in the small Louisiana town of Bayou Route where he re-baptizes himself as the Apostle, and it is here that he searches for redemption. He builds a church and a congregation while continuing his preaching.

Although the subject matter is very religious, it is not a "preachy" movie. This is a very tragic and moving exploration of the human spirit and one man's desperate search for salvation. It is a character-driven film that Duvall brings to life. His energetic and moving performance makes this an extremely enjoyable film. I don't think that this is a movie that everyone will enjoy, but it is a strikingly original and poignant film.

By Ted Burnes

The new season is here, and you know you want to watch. TV lounges from Larison to Swartz will be packed, and the Ramen Noodles and microwave popcorn will be flowing. This fall's TV line-up is better than ever. With 36 new shows and lots of new faces on your favorite shows from last season, put down that video rental and pick up that remote control. So, what's all the hype about, you ask? Here is the scoop on all the shows you'll want to watch this season (and the shows you might want to skip).

Sunday nights go back in time this fall as *That '70s Show* hits the FOX network. "It's teenage life told in the most honest way imaginable," says Fox Entertainment president Peter Roth. "We want to do for the '70s what *Happy Days* did for the '50s." The critics, however, have a different outlook. In their opinion, you should put away those lava lamps because this show will be pulled by Halloween.

On a brighter note, *The Simpsons* explodes with cameo guest voices such as Alec Baldwin, Kim Basinger, Cyndi Lauper and George Carlin. Plus, expect the Super Bowl episode to be one of the best ever. And what would Sunday night be without the *X-Files*? The season-six premiere will connect in many ways with this summer's movie, including the kiss between Mulder (David Duchovny) and Scully (Gillian Anderson). "There's definitely a new awareness about how they feel about each other," says executive producer Frank Spotnitz. "No one is pretending it didn't happen."

Monday nights are also fast and furious this fall. NBC's *Suddenly Susan* will finally bring Susan (Brooke Shields) and Jack (Judd Nelson) together, and romance is also in the air for Vicki (Kathy Griffin) and the rabbi she was dating last season. However, don't expect either relationship to be without some trouble. FOX's *Melrose Place* gets a huge face-lift this season as Jennifer (Alyssa Milano), Coop (Linden Ashby), Samantha (Brooke Langton) and Taylor (Lisa Rinna) move out, and Jane (Josie Bisset) comes back to Melrose to reunite with Michael. Wait, didn't he try to kill her a couple of seasons ago? Expect trouble at this apartment complex.

NBC's *Caroline in the City* finds cartoonist Caroline (Lea Thompson) leaving home to work in an office with Del (Eric Lutes), while Richard (Malcolm Gets) and Charlie (Andy Lauer) finally kindle those flames.

Last season's surprise hit, FOX's *Ally McBeal*, is back with even more shocks and surprises this season. "You never know what's gonna come out of

David's pen," said co-executive producer Jeffrey Kramer about *Ally* creator/writer David E. Kelley. Tracey Ullman's theme song lovin' shrink will be back this season, and there will be a new beautiful attorney (*Scream 2*'s Portia de Rossi) at *Ally*'s (Calista Flockheart) law office. Also, expect even more fun as *Ally* and Renee (Lisa Nicole Carson) move into a duplex. Meanwhile, rumor has it that the dancing baby from last season is no longer. It's time to move on, I guess.

Tuesdays are starting out with a bang this fall with *Encore! Encore!*, a new comedy on NBC starring Nathan Lane (*The Birdcage*). Lane plays a has-been opera singer who returns to his hometown to start over. So, what's the buzz on Lane's jump to the small screen? Throw tomatoes at this opera singer, not roses.

Also, NBC says that this might be *Mad About You*'s last season. Expect some cliffhangers for Paul and Jaime.

The most talked about new show of the season is the WB's *Felicity*. This show focuses on a small town girl, Keri Russell, who goes to college in New York. "The heroine's at the a point in her life where she could do anything," says producer J.J. Abrams, "She

could be a doctor, she could be an astronaut, she could be a lawyer. She's incredibly optimistic, and New York City is the perfect obstacle course [for her]." Don't miss this show, guys. The buzz is that this is the most sensitively-written new young-adult drama: the *My So-Called Life* of the millennium.

Whoa, Wednesday night is hot! It starts with the WB's *Dawson's Creek*, the hit show that every adolescent is talking about. Even though best friends Dawson (James Van Der Beek) and Joey (Katie Holmes) locked lips at the end of last season's finale, don't expect a relationship just yet. The arrival of newcomer Jack McPhee (Kerr Smith), the tortured artist who has his eye on Joey, will shoot Dawson and Joey's relationship to the backburner. So, how does the cast of *Dawson's Creek* feel about being in fierce competition with *90210* (both shows are in the 8-9 p.m. time slot)? *Creek*'s Jen (played by Michelle Williams) said, "It's sink-or-swim time. And I like the pressure. Bring it on!"

Murphy Brown may be in syndication heaven, but *Murphy*'s Faith Ford is back with her own show, *Maggie Winters*, debuting on CBS. This show about a former

success who returns home to live with mom promises to be good.

FOX still has a powerhouse Wednesday night with the return of *Beverly Hills 90210*. This season, expect Brandon (Jason Priestley) and Valerie (Tiffany Amber-Thiesen) to pack their bags. Be prepared, however, for the arrival of supervixen Laura Leighton (*Melrose Place*) to fill Thiesen's void. And yes ladies, the rumors are true: Dylan McKay (Luke Perry) is coming back to his favorite zip code; perhaps to reunite with a heartbroken Kelly (Jennie Garth)? Only a couple of episodes will tell.

FOX's *Party of Five* also plans for a great season. Claudia (Lacey Chabert) heads to boarding school and Bailey (Scott Wolf) leads the life of a big-shot restaurant owner with his true love Sarah (Jennifer Love Hewitt). However, not all is well for the Salinger clan. Problems arise for Julia (Neve Campbell) and her roommate when a Stanford undergrad makes an uncanny threesome. Finally, parents-to-be Charlie (Matthew Fox) and Daphne (Jennifer Aspen) doubt that they are ready for the baby they're going to have (the baby will be born later this season on *Party*'s 100th episode). Also, look for a

more grown-up Owen this season; that baby's not a baby anymore.

Will Thursday nights be the same without *Seinfeld*? You can bet NBC will try its hardest to keep it's golden "Must See TV" two-hour time slot. *Friends* is back, picking up where last season's cliffhanger left off. Since Ross (David Schwimmer) accidentally blurted out the name of ex-girlfriend Rachel (Jennifer Aniston) during his wedding to Emily (Helen Baxendale), the only thing that lies ahead is a bumpy road. There's also new romance blossoming between Monica (Courteney Cox) and Chandler (Matthew Perry). America's favorite airhead, Phoebe (Lisa Kudrow), will give birth to her brother's triplets on *Friends*' 100th episode.

The newcomer to NBC's Thursday night is *Jesse*, starring Christina Applegate (from *Married...with Children*). Applegate will shed her airhead, slutty former ego and play a single, level-headed mom while raising her son, studying to be a nurse and working as a barmaid. This show will definitely get the ratings with its Thursday night time slot, but will people really want to watch it?

Frasier takes *Seinfeld*'s time slot at 9 p.m., where we find Frasier (Kelsey Grammer) unemployed and looking for a new job with no success. Niles (David Hyde Pierce) gets divorced, and expect two new faces to join the cast: a waitress at Cafe Nervosa and Niles' disreputable divorce lawyer.

Finally, *ER* also has a new face. Kelly Martin (*Life Goes On*) joins the cast as medical student Lucy Knight, who will most likely be mentored by Dr. John Carter (Noah Wyle). Martin, who just graduated from Yale with a degree in art history, says "the minute I walked on the set I was starstruck, but then I went 'Okay, these are your coworkers—you can't ask for autographs.'" Also, heart throb Dr. Doug Ross (George Clooney) will leave at the end of this season so expect a huge season finale.

The weekend, unfortunately, looks pretty tame. Everybody's favorite little girls, the Olson twins (Mary Kate and Ashley, formerly of ABC's *Full House*), are all grown up and in a new sitcom. The 12-year-old twins will star in Friday night's *Two of a Kind*. ABC is putting Saturday evenings afire as it brings back the popular *Fantasy Island*. However, if you're expecting happy endings and a ukulele-filled soundtrack, forget it. This *Island* is less campy and a lot more '90s with beautiful vixens, adventurous plots and studly crewmen.

So, that's it. Plan your time wisely because this season will hit you with a bang. From old shows with new stars to new shows with star power, this season promises to be one you won't want to miss. However, don't forget the reason why you're here in the first place. Bring your textbook with you to the TV lounge. After all, that's why commercials were invented!

Fall TV Schedule

Monday	
<i>Suddenly Susan</i> (NBC, 8-8:30 p.m. - season premiere Sept. 21)

Saturday	
<i>Fantasy Island</i> (ABC, 9-10 p.m. - series premiere Sept. 26)	
<i>The Pretender</i> (NBC, 9-10 p.m. - season premiere Oct. 17)	

SCIENCE & TECHNOLOGY

Astronomy Club: Opening eyes to the sky

By Adam Parris

As the fall approaches and the evenings start earlier and earlier, the Astronomy Club is beginning a new year with promising hopes. Treasurer Bob Loychik '99 said, "Our goal is primarily to teach and learn science from an astronomical perspective." President Bob Dyson '99 adds that this goal is particularly important because a lot of people don't know "how precious this planet is."

The Astronomy Club began its history approximately two years ago under the direction of David Lien, former professor of astronomy, and Dyson, along with Loychik and secretary Aaron Abrams '00, maintained small foundations in the Observatory with the aid of Edwin Ladd, assistant professor of physics.

However, as they indicated, astronomy has been present on the campus as early as the 1800s. Among their duties in the club, the officers take great pride in

The local University/community Astronomy Club holds weekly Friday night meetings at the University Observatory.

maintenance of the Historical Museum which contains log books from the early observatory at the University dating back to the late 1800s. Around this time, the Clark Telescope was introduced to University astronomers as one of the premier telescopic inventions of its time.

The telescope still provides a great view of the planets and a great sense of history. Dyson said that close to 200 people tour the observatory on Parents' Weekend to see the telescope and the other fascinating aspects of the Museum. Among the other treasures in the Museum, there is a scale model of the earth, moon and sun, a spectrometer which can display the wavelengths of color in the color spectrum for different elements and an old rocket engine used to launch satellites.

The club will run its meetings on Friday nights in conjunction with the Susquehanna Valley Amateur Astronomers Club,

with whom they work closely to provide students with other opportunities such as astrophotography and increased exposure to new and advanced telescopes.

Other opportunities include trips to "dark sky" locations and trips to observatories within a weekend drive. Students even potentially get a chance to engage in astronomical research.

Dyson worked closely with Lien to capture pictures and data of comet Hale-Bopp. Overall, Dyson said that they want to "provide a point of contact" for University students interested in the stars and planets.

"People are limited in their view. They don't know that we're part of something bigger," said Dyson. Dyson, Loychik and Abrams stressed the fact that their reason for running the club is their love for the sky and the very planet from which they observe the sky.

If you're interested in joining them, their first meeting is Friday, September 18, at 8 p.m. in the Observatory.

CCS initiates changes on campus

By Kathy Chevalier

Returning to the University after summer break, many students may not have noticed some new changes on campus, including those initiated by Computer and Communication Services (CCS). Many of these changes involve things in which we interact daily on campus, such as the 350 new computers being installed on campus.

Another change involved many labs being completely redone, including Taylor 203. Other labs are being upgraded including Dana 134 and the CAED lab in Dana Engineering which is a Sun work station lab. According to Eugene Spencer, the associate director for Computing and Information Services, these labs have been "upgraded to 100 mbs, which makes computers ten times faster."

Another project for CCS is finishing the implementation of Banner, which has been an ongoing three year project. Spencer explains the Banner system as "running the administrative processing such as housing, financing, personnel, admissions, etc." Spencer also adds that thanks to the Banner system, "enrollment went well even though there were rocky parts and sometimes it was problematic."

Eugene Spencer, associate director for Computing and Information Services, explains the goals of the CCS for this year.

One change that upperclassmen have probably noticed is that the University home page has quite a different appearance than last year. This modification is due to CCS upgrading the network architecture in the library. Spencer explains, "ISR combines CCS and LIB by integrating that CCS home page and the library home page into the ISR page. They sort of work separately but are growing together in many ways." Spencer also comments that because of this change with the home page, "there is major reorganization with increased speed and reliability."

Another alteration by CCS is the process of migrating off Coral. This requires that all students must delete files from Coral or migrate Coral files to Eudora.

No matter what program is used, students and faculty must either use Resnet or dial in order to achieve Internet access or to check e-mail. Resnet has changed from last year because, as Spencer indicates, "student organizations can participate in Resnet and not just students like last year. This year there are 1500 versus 781 students connected last year to Resnet."

For those who dial in, things are going to change on or off campus in two major ways. The first change is that there is going to be a different type of password used than in previous years. This change in passwords is for the purpose of security upgrades. According to Spencer, "There were rash attempts at hacking into the system after students left for the summer."

The second reason is that there is a change in telephone numbers. The University will have a new area code of 570 instead of 717, thus changing the number for people dialing in. This change in area codes is an opportune time for the University to change the lack of numbers on campus due to the limited number of exchanges available. The previous 524-1XXX, 524-2XXX, 523-4XXX, and 523-5XXX will be changed to the exchange 577 plus the last four digits of the current 524 or 523 number. The new phone number changes go into effect on December 5.

Science & Technology Calendar

Friday, September 18

Biology Seminar at 4 p.m. in Room 116 of the Rooke Chemistry Building:
Dr. Charles Fisher, associate professor of biology, Pennsylvania State University, will present a lecture entitled, "The physiological ecology of giant tubeworms from deep sea hydrothermal vents and cold seeps".

Susquehanna Valley Amateur Astronomers Meeting at 8 p.m. in the University Observatory:
All interested are welcome to attend local college/community astronomy club.

Bison roll past St. Mary's

By Tim Scheu

After starting the season off by routing Duquesne, the Bison rolled to their second straight victory as they defeated visiting Saint Mary's 30-14. The victory was highlighted by the performances of backup quarterback Lucas Phillips '01 and starting running back Dan Palko '00.

Replacing an injured Don McDowell '00 midway through the first quarter, Phillips completed 20 of 30 pass attempts and threw for nearly 270 yards. The game was the first significant action the strong-armed sophomore had gotten in his two-year career at Bucknell. Phillips credited his performance to the veteran offensive line. "I was pretty nervous when I first went in, but after the first or second drive I started to settle down," Phillips said. "It was nice, because the linemen were protecting me really well and I did not face much pressure."

While head coach Tom Gadd was pleased with the performance of Phillips, he was quick to admit that it was the kind of game he was expecting. "That (his performance) is a luxury that comes with being in a program for a fourth year. You get to a point where you have recruited enough solid football players, that you have a little bit of depth, and people who can throw the football."

Phillips made an impact as soon as he entered the game, completing 11 of 17 pass attempts and leading the Bison to two key scoring drives in the first half. The Bison had a 14-point advantage late into the second quarter, until they fumbled deep in their own territory. The turnover led to the Gaels' first touchdown, a two yard run by running back Brandon Young.

The Gaels made it as close as 20-14 with a 80 yard drive early in the second half, but Bison responded by scoring a touchdown of their own. Phillips completed three of four passes for 29 yards, and Palko finished it with a 44-yard touchdown run. The scoring scamper was part of a 100 yard two-touchdown day for the junior tailback. Perhaps the most remarkable thing was that he accomplished this feat on only 15 rushes, an average of 6.7 yards per carry. In addition to his rushing performance, Palko caught

Dan Palko '00 the Bison look to continue their success when they face Fordham this coming Saturday.

two passes for 38 yards and returned six punts and a kickoff for a combined total 103 yards. "He is doing a lot of things for us, and it is obviously important that you have people like that in the program," Gadd said. All the other scoring was a result of the foot of kicker Ross Coleman '99, as he made second half field goals of 21, 23, and 35 yards.

On the defensive side of the ball, the Bison made sure that Gaels'

quarterback Chad Thomas did not enjoy the visit. He was pressured all day and sacked eight times, including three by noseguard Eric Green '00. In contrast to their performance a week ago, the defense gave up well over 200 yards, and allowed Young to rush for 135 yards and a touchdown on 19 carries.

Coach Gadd voiced his concern, "From a team standpoint, I don't know if we were as ready to play Saint

Mary's as we were Duquesne. That is one of our concerns. We have to find some level of consistency on defense. It is hard to play 11 games at the top emotionally and physically, but we need to find a level that is a lot closer to that of Duquesne than Saint Mary's."

The Bison will take their undefeated record into their first of their six Patriot League games when they host Fordham on Saturday afternoon.

For Jamieson and the Iroquois Nation, the victory comes with competition

Lacrosse coach Sid Jamieson was one of the founders of the Iroquois National program, which competed in the 1998 World Games. By E.J. Crawford

Lacrosse coach Sid Jamieson was one of the founders of the Iroquois National program, which competed in the 1998 World Games. By E.J. Crawford

Working as an intern in the sports department of an Annapolis newspaper this summer, I attended and covered the 1998 International Federation World Lacrosse Championships at Johns Hopkins' Homewood Field. I followed Team USA as it scrapped to a fifth consecutive title, defeating Canada, 15-14, in the final overtime. I also covered the lopsided semifinal game between Team USA and the Iroquois Nation. Team USA rolled to a 12-0 first quarter lead and eventually to a 24-1 victory. Bucknell lacrosse coach Sid Jamieson was also a citizen of the Iroquois Nation and a member of its Board of Directors, did not watch the game in disgust. He was not disappointed or saddened. He was content.

According to assistant lacrosse coach Frank Fedorjaka, "I think that, with him being one of the founders of the team, and being his nationality ... to perform as well as (the members of Iroquois team) did, and to perform like they have in the last decade must be truly exhilarating."

"I sat in the stands and felt proud," conceded Jamieson. "It's an exhilarating tournament for me because, just knowing how much effort and energy goes into putting [the Iroquois Nation] on the field, it's an incredible feeling and

experience. Whether the Iroquois Nation wins or not is secondary to just being there. But to accomplish what this team accomplished is a credit to everyone."

What the Iroquois Nation accomplished was a huge upset victory over England and a subsequent victory over upstart Germany while advancing to its first World Games semifinal. The Iroquois Nation has made just two previous World Games, a competition held every four years.

The idea for a national team was conceived by Jamieson and former colleague All-Americans Oren Lyons (Syracuse) and Wes Patterson (UMass). "We had the ability to [put the team together], but you need funding to run an operation like this," Jamieson said. "The impetus was an opportunity to compete in world lacrosse, not just USA lacrosse."

The Iroquois Nation found that monetary support in the Brine Company, who gave the Iroquois Nation the financial legitimacy to apply to the International Lacrosse Federation (ILF) for official recognition. The Iroquois Nation subsequently applied for admission, but was originally rejected. The Nation made strides towards membership by competing in the 1984 cultural activities, a precursor to the Summer Olympics in Los Angeles. In the games, the Iroquois Nation eked out a one-goal win over England. "That victory," said Jamieson, "was our first international victory for the Iroquois in over 100 years."

The Iroquois Nation eventually was accepted by the ILF in 1988 after failing well in several other tournaments, and competed in the 1990 World Games in Perth, Australia.

As I sat in Jamieson's office Tuesday for our interview, his love for lacrosse and the Iroquois Nation were both obvious and immense. Signs, posters and memorabilia from his years in lacrosse are decorated throughout the office. Moreover, during a previous interview with the 1996 NCAA Coach of the Year, Jamieson had shown me around the lacrosse field, pointing out trees given to the school by the Iroquois Nation, as well as explaining the meaning behind the Iroquois National flag, his face beaming during the entire explanation.

He sat in the office now with that same smile on his face, looking back on all the hard work it took to create the Iroquois Nation program. "It's a good reflection of the energy and hard work that's gone into this program since its inception ... the purpose of the Iroquois National Program was to establish a model that would provide a positive experience for the youth on the reservations. Further, [the purpose is] to educate people beyond the reservations [by] exposing those people to images of Native Americans that, in most cases, would be distinctly different than what they've seen in the movies or in books."

In a movie or book or on a lacrosse field, Jamieson's accomplishments as a forefather of the Iroquois National Program warrant attention. Said Fedorjaka, "when you think of Sid Jamieson you think of Iroquois lacrosse, and vice-versa."

Whether in an office, on the field or sitting in the stands, Jamieson's feeling of pride and his smile shine brighter than any win or loss ever could.

Upset Special: Last Saturday in college football was one of the most surprising days in recent history. One week after Notre Dame defeated the defending national champion, they were spanked by the "other Michigan school." After starting 0-2 with losses to Colorado State and Oregon, Michigan State rebounded by defeating the Fighting Irish. The Spartans built up a 42-3 halftime lead, and cruised to a 45-23 victory. In an another surprising game, N.C. State defeated perennial power and national championship contender Florida State 24-7. The Seminoles lost in ACC play for just the second time in its school history, and fell out of the top 10 for the first time since 1994 when they lost to University of Miami, 34-20. In other action, Ohio State continued its dominance with a 49-0 victory over Toledo, and Joe Paterno got his 300th career victory as the Nittany Lions defeated Bowling Green 48-3. After the emotional win, Paterno candidly stated, "After 48 years at Penn State, I salute all the efforts of every team I've been a part of, and that includes all you fans and all you alumni. I love every one of you."

The battle down under: In an all-Australian final at the men's U.S. Open, Patrick Rafter defeated fellow countryman Mark Philippoussis 6-3, 3-6, 6-2, 6-0. In winning his second consecutive U.S. Open, Rafter proved that last year's title had little to do with luck. "Now I feel that last year wasn't such a fluke. Now I can look at people and say that I've done it again."

The match was close in the beginning, but after Philippoussis' usually overpowering serve began to fail him, the victory was in Rafter's hands. The ordinarily dependable serve of Philippoussis was plagued by double faults. In fact, he had nearly three times as many of double faults (13) as aces (five). As a result, Rafter won each of the last 10 games to close out the match. With the victory Rafter is now ranked second in the world behind Pete Sampras, who Rafter beat in the semifinals.

In the women's final, American Lindsay Davenport beat rival Martina Hingis in straight sets 6-3, 7-5. The title was the first grand slam for Davenport, and she became the first American born woman to win the U.S. Open since Chris Evert won the last of her seven titles in 1982. Davenport won 13 of the last 15 points and broke Hingis' serve in the final game.

Davenport is having one of her best years on tour in '98, partly because she had lost 30 pounds since the '97 season. This apparent increase in her mobility and the power behind her shots account for the fact that she did not lose one set in the seven matches she played.

Blue Jays taking flight: News Flash: The hottest team in baseball might not make the playoffs. Sure, the Yankees are good, but they have been slumping as of late, losing their last three and seven of their last 10. The best team in baseball right now is the Toronto Blue Jays. Once out of the playoff race completely, they traded away many of their best players, including Juan Guzman and Randy Myers. But despite this, the Jays are on a roll. They won 11 in a row, and now have won 14 of their last 16 games and are just three games behind the Red Sox for the wild card berth. Their recent winning streak has been a result of both solid pitching and hitting, namely Roger Clemens and Jose Canseco. That's right, Mark McGwire isn't the only "Bash Brother" making news. As of now, Canseco has hit 42 homers, and has more than 100 runs batted in, proving that he still has the stuff that led the A's to glory during the late '80s. On the flip side of the coin is Roger Clemens. He is one of the leaders in the race for the American League Cy Young Award with a 18-6 record, 234 strikeouts, and an earned run average of 2.69. If the Jays make the playoffs, it may be lights out for the Yanks.

Changing of the guard: After not making the playoffs last year, it appears that the Cowboys are now even further from their championship teams of the mid-nineties. Their game Sunday against the Broncos seemed to emphasize this point. Dallas could not stop the Broncos offense during the first half and Denver scored touchdowns on all of their first five possessions, building up a 35-17 halftime lead. To make matters worse, Cowboy quarterback Troy Aikman fractured his collarbone on a six yard running play. Based upon the latest prognosis, it appears that the 'Boys will be without their starting quarterback for at least six weeks. The Cowboys closed to within 12, but the Broncos responded by scoring another touchdown with less than seven minutes to go in the fourth quarter. The game statistics for the Broncos' offense are incredible: 515 yards of total offense, 268 yard passing for Elway and 191 rushing yards for Terrell Davis. It appears that America's team is no longer America's best.

Pressing for a team: Media mogul Rupert Murdoch will supposedly pay \$1 billion for the Manchester United, a British soccer club and member of the Premier League. That figure is roughly double the price billionaire Alfred Lerner paid to buy the Cleveland Browns, the costliest team transaction in U.S. sports. This controversial move tests the very limits of fair-trading, being that Murdoch owns the company that will broadcast the Premier League's games. "Murdoch wants to sit on one side of the table offering a price for televised games, then move round and sit on the other side for Manchester United, accepting or rejecting it," said Joe Ashton, chairman of the all-party parliamentary group on soccer. To make matters worse, Murdoch has the ability to convince people of the deal's legitimacy. He owns The Sun and The Times of London, two of the main British newspapers that had headlines like "IT'S A DEAL!" and have swayed public opinion in favor of Murdoch. The matter is being investigated by The Office of Fair Trading. If Murdoch's plan is accepted, the purchase will be his second of the year. In March, Fox Sports, a division of Murdoch's news group, purchased the Los Angeles Dodgers for \$350 million, a record for a baseball team.

Compiled by Tim Scheu

Quote of the Week:

"I got mail from people everywhere wanting me to heal the country. So we pitched to him."

—Reds Manager, Jack McKeon, on his pitcher giving up McGwire's 60th home run.

Sports

Women's soccer enters league action

Youthful squad looks to leave early season jitters behind

By Matt Fraser

After opening the season with a pair of tough road games, the Bucknell women's soccer team returned home to face a struggling St. Francis (PA) squad. It was the team's first opportunity to showcase its new talent to a home crowd, and they delivered in a big way. Katie McElligott '00 led the team with two early goals as the Bison cruised to an impressive 6-0 rout over the Red Flash.

McElligott got the game going by netting her second and third goals of the season, with Colleen Butler '00 assisting on both shots. The upperclassmen then handed the game over to the freshmen, who certainly made the most of the opportunity. Anna Hall, Katie Baker, and Lindsay Slomer all connected in the first half to put the game out of reach. For Hall and Baker, it was their first goals as Bison. Slomer, who was named Patriot League Player of the Week last week, moved herself into a tie with McElligott for the most goals this season. As the first half came to a close, Butler added one more insurance goal. She finished the day with a goal and two assists.

When all was said and done, Bucknell totaled 25 shots to St. Francis' two. Head Coach Chrissy Findlay commented that, "Overall I think we played very well. Wins like this are a great way to build confidence." The win also put the women over the .500 mark for the first time this year at 2-1-0.

Katie Senderowicz '00 looks to advance the ball down the field.

Riding this wave of confidence, the team traveled to Marshall University for a weekend tournament. Unfortunately, things did not go according to plan. Bucknell surrendered three second-half goals to Duquesne in a 3-0 loss on Saturday. The next day, they gave up the game-winning goal to Marshall with three minutes remaining in regulation. The 2-1 loss wasted an otherwise gutsy performance by the Bison, who have outshot their opponents in all five games this season. The lone highlight of the game came on freshman Sarah Klang-Glienna's first goal of the year.

In analyzing the weekend, Coach Findlay pointed out that "we have to be mentally and physically tougher if we want to compete. We didn't shoot the ball nearly enough, and as a team we just gave up. There have been plenty of opportu-

nities for us. We just need to make a better effort."

McElligott expressed similar concerns for the team. "We're a young team and we're expecting good things, but it just hasn't come together for us yet. The team has been playing very well in the first half, but we always seem to fall apart in the second half," she said.

Despite the disappointing weekend, the women are not panicking yet. They will travel to Cornell to face the Red Raiders this week, and then return home to face Lehigh on Saturday. It will be the first Patriot League game of the season for the Bison, who are determined to improve upon last year's 2-4 league record.

Men's Polo falls shorts at Princeton Invitational

By Brian Watson

The men's water polo, following an impressive showing at the Navy Invitational, finished 1-3 at the Princeton Invitational last weekend. The team lost several close matches against three of the East's best teams.

In the first match, the Bison knocked off Slippery Rock, 15-7. Tate Gredtzer '01 scored three goals, including one two-pointer, on three attempts. Freshman Bill Ruth also scored three goals, and co-captain Kevin Permisohn '01 contributed one goal, three assists and three steals.

Next up was George Washington, who downed the Bison 8-6 in overtime. Josh Watts '00 continued his solid play with three goals while

The Bison are gearing up for the Bucknell Invitational this weekend.

Permisohn added three assists and two steals. The fourth quarter ended in a 4-4 tie, but the Bison were held to two goals in overtime while GW scored four.

In a rematch from the previous tournament, the Bison took on the

Midshipmen of Navy. The Bison were shutout in the first quarter while they watched Navy put six points on the board. They rebounded in the next two quarters, narrowing the gap to 7-6. The Midshipmen pulled away in the fourth, putting the Bison away, 13-7. Watts led the scoring again with four goals, one assist, and a steal.

The Bison took on the Princeton Tigers in their final match. Once again, the team was overpowered 4-1 in the first quarter, but ended the third trailing by a goal. The Tigers were able to score two goals in the fourth and take the match, 10-8. Ruth added two goals and an assist and Watts contributed two more goals, bringing his invitational total to ten.

"We know where we need to go from here," co-captain Brian Baker '99 said. "We have the talent to improve; we just have to get it together."

Permisohn echoed Baker's sentiments. "Even though these were tough losses, now we know how to prepare for upcoming league games," Permisohn said. "We're looking to step it up a notch this weekend."

The Bison will host the Annapolis Water Polo Club, Boston College, Lehman, Richmond, and Salem-Keizer this weekend at the Bucknell Invitational.

Ryan McCarty '02 and the men's water polo team look to rebound from recent losses when they begin league matches on Sat., Sept. 26.

Volleyball off to 4-1 start

By Mike Brophy

After winning the Niagara Invitational two weekends ago, the Bison extended their winning streak to 4-0 by defeating St. Francis last Tuesday. This victory matched the school record for the best start to a volleyball season.

Although the Bison lost a shaky first game 9-15, the team was able to rally quickly to dominate the remainder of the match (15-9, 15-5, 15-8). Coach Cindy Opalski thought, "it was a very good win. They [St. Francis] are a much improved team, but we played very well together as a team." Many people contributed to this victory. Starting Junior Michelle Lesh helped lead the team on offense with 12 kills on 29 attempts. Michelle reiterated the coach's thoughts by saying, "it was defini-

nitely a team match, we all contributed."

Other Bucknell players had strong showings in the victory. Brooke Bader concluded the match with a .273 hitting percentage and recorded 11 digs with two blocks. Senior captain Emily Pomeroy greatly assisted the team on defense with 14 digs.

Unfortunately, the Bison's winning streak had to come to an end when Bucknell faced number one team in the country Penn State on Tuesday night. The Bison dropped three straight games (0-15, 2-15, 0-15) while playing in front of a crowd of 1,273 people in Penn State's Rec Hall. This marked the first time since 1992 that the Bison were held scoreless in a game. Bucknell had solid performance by senior Tristen Voigt who recorded four kills, while teammates Brooke

The volleyball team is off to on of its best starts in school history at 4-1.

Bader, Emily Pomeroy and Molly Brown contributed with each four digs on the night.

The Bison are now 4-1 and will be playing in the Army Invitational this coming weekend.

Dee Kantner to give speech

NBA referee kicks off festivities as Bucknell Celebrates 25 years of women's athletics

By Tim Scheu

In celebration of the 25th anniversary of women's varsity sports at Bucknell, the University is hosting several different functions throughout the year. The goal of these activities is to emphasize the role that women play in sports. The first of these scheduled events is women's sports luncheon on Thursday, September 17. Dee Kantner, one of the first two women to serve as referees in the National Basketball Association, is the guest speaker. In her speech, Kantner will focus on the challenges and highlights she has experienced on and off the court.

Kantner is a native of Reading, Pennsylvania and a graduate of the University of Pittsburgh. While attending Pitt on a field hockey scholarship, she studied mechanical engineering and first became interested in becoming a referee. After a friend convinced her that she was perfect for a refereeing position, she began to officiate church league

games.

Eventually she worked her way up the refereeing ladder and landed position as an official for the Southern Conference, which was made up of Division I schools. After working for several other major conferences, refereeing six final fours and four championship games, Kantner got the call to become an official in the NBA.

Many players complained, stating that they did not think women could officiate a men's game. However, Kantner has surpassed all expectations and left little doubt that she can do the job.

Kantner says she attempts to be "the referee that I always wanted when I was playing, and I hope that the players will forget my gender. My goal is to become invisible, which is what any referee should be."

The luncheon will be held at 11:45 in the Center Room of the Langone Center. Kantner's speech will be given at 7:30 p.m. in the Gallery Room of the L.C. Admission is free and open to the public.

Men's soccer downs LaSalle following loss

By Brian Watson

The men's soccer team rebounded from Sunday's loss to Duquesne with a 1-0 victory over LaSalle Wednesday night. Wilson Pyle '01 headed in the deciding goal after almost 80 minutes of scoreless soccer and the Bison held on for the win.

Bucknell lost a hard fought battle against Duquesne, 3-2, last Sunday afternoon. The Bison rallied from a first-half deficit, but were not able to put the Dukes away in either overtime session.

The Bison, trailing at the half by a goal, scored two quick goals to jump ahead. Steve Deluca '00 fed

sophomore Sam Chamovitz 20 minutes into the second half for the team's first goal. The Bison struck again three minutes later when leading scorer Bill Epley '01 scored on a penalty kick. The Dukes evened the score with only three minutes left in the half, forcing the game into a sudden-death overtime session.

Neither team was able to score in the first 15-minute period, but the Dukes' Derek Garrazone netted a goal two minutes into the second overtime, giving Duquesne its first victory of the season.

Brett Tomlinson contributed to this story.

PRINCIPLES of SOUND RETIREMENT INVESTING

RECENTLY,
MORNINGSTAR CALLED
US CHEAP.
IT'S NOT EVERY DAY
YOU GET A COMPLIMENT
LIKE THAT.

All financial companies charge operating fees and expenses—some more than others. Of course, the lower the expenses you pay, the better. That way, more of your money goes where it should—towards building a comfortable future.

We make low expenses a top priority.

As the largest retirement system in the world—a nonprofit company focused exclusively on the financial needs of the educational and research communities—our expenses are among the lowest in the insurance and mutual fund industries.

In fact, TIAA-CREF's 0.31% average fund expenses are less than half of the expense charges of comparable funds. It's why Morningstar—one of the nation's leading sources of annuity and mutual fund information—says, "At that level [TIAA-CREF] is cheaper than any other

(variable annuity) policy, and is even competitive with the cheapest mutual fund complexes, though it offers far more benefits."

"TIAA-CREF sets the standard in the financial services industry."

Of course, expenses are only one factor to consider when you make an investment decision. Morningstar also noted our commitment to "consumer education, service" and "solid investment performance." Because that can make a difference in the long run, too.

At TIAA-CREF, we believe people would like to spend more in retirement, not on their retirement company. Today, over two million people count on that approach to help them build a comfortable and secure future. So can you. To find out more, call us at 1-800-842-2776. We'd consider it a compliment.

Visit us on the Internet at www.tiaa-cref.org

Sports

Leave the kids alone

Remember Rick Mirer? How about Heath Shuler? If not, you're not alone.

These are just two of many quarterbacks who turned brilliant collegiate careers into disappointing professional campaigns. These QB's are still kicking around the league, trying to regain the glory of their past, but warming the bench for the present.

Mirer emerged from Notre Dame with pro scouts drooling. Picked second overall behind Drew Bledsoe, the two drew unending comparisons and were forced into a competition for supremacy. Clearly, Bledsoe emerged victorious, as he continues to make the New England Patriots a threat throughout the National Football League. Mirer, on the other hand, has fallen short of the great expectations placed on his shoulders.

Not since these two phenoms broke onto the NFL scene has more hype been drawn to two rookies. The 1998 Draft was simply the Peyton Manning Sweepstakes. Whichever team had the privilege of obtaining the first pick also had the luck of grabbing the most highly-touted passer in a decade. And whatever team followed would pick up

Ryan Leaf, regarded as the better prospect for the future.

These two rookie phenoms entered the National Football League with a world of expectations along with the burden of living up to them. It seemed that every sportswriter and football analyst was comparing them to all of the prominent quarterbacks in the league. Pressure like that could break budding superstars, but not Manning or Leaf.

In their professional debuts, both quarterbacks made their presence felt. Manning, last year's top draft pick by the Indianapolis Colts, threw for 302 yards on 21 for 37 passing, while Leaf hit 16 of 31 for 192 yards and a touchdown. Last week, Manning completed 21 of 38, totaling 188 yards in the air. Leaf nailed 13 of 24, resulting in 179 yards for the San Diego Chargers.

Although their numbers are quite similar, Manning and Leaf are two very different quarterbacks. Manning, who stands in at six-foot-five inches and 222 pounds, was touted as the best collegiate player in the country last year. His smoothness in the pocket and pure athleticism make him an intimidating opponent for any defense. Leaf, who outweighs his counterpart by 15 pounds, was considered by many to be the quarterback of the future. His strong, massive frame, which resembles a linebacker more than a quarterback, allows Leaf to take a hit and not see double. He shows no fear or intimidation; he even got in linebacker Junior Seau's face after a rough tackle in a preseason workout. Not afraid to run the ball, he can bust through lines and drag around would-be tacklers with ease. And with a bolstered offensive line, Leaf has had plenty of the time in the pocket to find his man.

But no matter what they do or how good they play, the spotlight will be on them. The cameras will be on them. The pressure will be on them. And they are already feeling the heat.

The Chargers are off to a 2-0 start, defeating the struggling Buffalo Bills and spoiling the Oilers' Tennessee debut. However, next Sunday they travel to Arrowhead Stadium to face the Kansas City Chiefs, the team that embarrassed San Diego 31-3 last year. In what is being considered his first real test, Leaf will face an outstanding defense, which includes perennial Pro Bowler and pass rush specialist Derrick Thomas. The Chargers will look to their defensive corps to slow down the Chiefs' offensive attack, but must count on Leaf to pull some rookie magic.

Manning, on the other hand, has his squad off to a lackluster 0-2 start. In his first two starts, Manning has squared off against the Miami Dolphins, led by legendary quarterback Dan Marino, and the New England Patriots, anchored by one of the league's most prolific passers in Bledsoe. Manning has given the ball up seven times, throwing six interceptions and losing one fumble. However, his yardage and throwing percentage rank among the best in the league for the first two weeks. But on the bright side, he is learning to read pro defenses and is gaining experience with each snap. Colts fans are hoping for that Manning will be the second coming of Johnny Unitas, and not the reappearance of Jeff George. George marched into Indianapolis in 1990 looking to resurrect the ailing Colts. After a 5-7 rookie season, he gave fans hope for a new era. All hope was crushed the following year, when George led the Colts to a league-worst 1-15 record.

But overall, too much is being made of their first efforts. Many are already calling Manning overrated. Others say Leaf doesn't have the stuff. They've only played two games! During the nineties, Kerry Collins, another flop, is the only rookie quarterback to win more than half of his starts in his rookie season.

The pessimists out there who are already labelling Manning and Leaf as failures are going to miss out on a great ride. In a few years, these two phenoms will most likely be competing for Super Bowl rings and All-Pro honors. For now, let them have a few weeks to adjust to the pro game. From then on, watch out.

If you're looking for a comparison, try this one: In his second NFL start, John Elway, leader of the reigning Super Bowl champion Denver Broncos, threw for only 106 yards on nine for 21 passing. All-Pro 49er Steve Young was eight for 17, racking up a measly 53 yards in the air.

So how do Manning and Leaf look now?

News flash: They're only going to get better.

Palko fills void in backfield

By Tim Scheu

The 1998 Bucknell football team is one without many of the faces we have become accustomed to over the years. Gone are all-league selections in Hunter Adams and Chris Peer. Gone is the bulk of a defense that led the Patriot League in yards allowed, giving up a measly 330 yards per game. And gone are All-America Willie Hill and inspirational leader Wally Hurdley, the heart of the line-backing squad. When focusing on the talent that the Bison lost, it is hard to be optimistic about the '98 campaign.

Yet, the new batch of Bison are 2-0 and have dominated their first two games both offensively and defensively. How could this be?

Well, much of their success can be attributed to the emergence of young players ready to fill the giant shoes of their predecessors. One such player is Dan Palko '00.

After playing special teams and cornerback for the majority of his first two years, Palko approached head coach Tom Gadd at the end of his sophomore season. Palko was interested in playing running back, a position that was then vacant due to the departure of Peer. "Coach Gadd responded by telling me that I could get some action at tailback during the spring game," Palko said. "He explained that if I did well during the game I could work out with the running backs."

He won the starting job based upon his consistency throughout the spring and fall. He led all rushers in the spring game with 65 yards on 11 carries. In addition he caught the game-winning pass with 10 seconds

left to lead the Orange to a 20-15 victory over the Blue.

Thus far he has developed into one of the premier backs in the Patriot League, rushing for 100 yards or more in each of his first two games. He leads the Bison in virtually every offensive category, including: rushing yardage, attempts, and average yards per rush; kickoff and punt return yardage; total points scored; touchdowns; and all-purpose yardage. Fittingly, he was awarded the Patriot League offensive player of the week award, after his three-touchdown 120 yard rushing performance against Duquesne. "I have to credit the offensive line and my full-back, senior Jeremy Myers," Palko said. "They have really been opening up the holes for me."

Head Coach Tom Gadd realizes the significance of the role Palko plays for the Bison. "He has the ability to do a lot of things. He is a good receiver, catches the ball really well, and made some big plays for our passing game. He is a good return guy with the punts and kickoffs, and he is a running back. He is a valuable guy to have on your team."

But his value to the team can not be measured merely by his rushing yardage or his number of receptions. He is a leader both on and off the field. "Anytime you look at Danny he is out on the field working his butt off. He goes out there and leads by example," said Don McDowell '99, the Bison starting quarterback.

This point is further supported by his work with the books. He is a Dean's List student and was named to the Patriot League Academic Honor Roll during his sophomore season.

Calder Cruikshank-The Bucknellian

So far this season Dan Palko '00 has averaged 110 yards per game rushing.

Palko is a role model for his fellow teammates. He performs in the classroom and on the field, and does so with a quiet confidence. Palko is the heart of this team and the per-

fect representative to lead the next generation of Bison football players to the Patriot League championship and beyond.

Women's golf places second in first match

By Tim Scheu

Prior to the season opener, women's golf head coach Brad Tufts was optimistic, "We've made some significant progress in our practice and I think everyone is anxious to see how we stack up against other schools. We'll certainly have some growing pains, but our goal is to improve every time out."

On Tuesday afternoon, Tufts awaited the response of his team to the pressure and Bucknell intercollegiate athletic history was made when the women's golf team took to the links in their first match ever. In their debut, the Bison finished a strong second behind Saint Francis and ahead of Mount Saint Mary's with a combined score of 386.

They were paced by Hilary Mainka '02, who lead all participants after shooting a blistering round of 82. Others who contributed were Bridget O'Mara '02, Heather Mann '01 and Chris Boshen '99.

The season opener was exactly what you would expect it to be. Nearly everyone was nervous at the beginning and shot high scores on the front side. The players settled down on the back and improved by an average of six strokes per person.

The Men's team opened up the season by placing eighth at the Colgate-Cornell Invitational with a two day score of 626. At the end of play they found themselves down 28 strokes to tournament champion Ottawa. The Bison were led by Tom Marks '02, who placed ninth overall with a two day score of 153.

This weekend the men host the Bucknell Invitational, while the

Take Back the Night March shows support

Bina Luong—The Bucknellian

Support was shown for the victims of violence as students, administration and faculty participated in the University's annual Take Back the Night march.

On Tuesday, a crowd of University students, faculty, administrators and community members numbering in the hundreds gathered outside the Langone Center to participate in the Take Back the Night March. The event, usually held in April, was staged this week in response to the recent assaults on a University employee and University student.

The crowd included representatives from student organization, fraternity and sorority chapters, and members of University administration. In addition, the large number of Lewisburg residents present emphasized that the issues of rape and assault highlighted by the March are community issues. Organized by the Women's Resource Center, Student Coalition Against Rape and the Peer Educators program, the program consisted of several speakers sharing stories and poems followed by a campus-wide march.

(Compiled by Joel Toluba, Women's Resource Center employee)

Clinton scandal stirs student passions

Lies, scandals and investigations targets of attacks by University members

By Jared Silliker

The President of the United States is currently under investigation, subjecting himself to public scrutiny concerning his personal life and his actions therein. Bill Clinton has obviously committed some morally questionable acts in the privacy of this nation's sacred "home base"—The White House.

The question raised in this article and next week's conclusion is whether this national issue is relevant on a college campus, and if it is, what aspects and values do members of the Bucknell community find important. At the inception of this story idea, it was to be a simple response to Clinton's predicament. The fact that it has snowballed into a two-part series, in itself, shows that it is a pertinent issue on this campus. There has been an outpouring of opinions, especially through an email survey sent to all students, faculty and administration. Bucknell, as with many college campuses, is often said to be insulated from the news of the world.

This attitude is even more evident than one might think—the aforementioned email almost did not exist. It was originally held by the "postmaster" because it supposedly violated the Appropriate Usage Policy of the University, and was not a "Bucknell issue". This writer argued and eventually won out. It seems suffice to say, based on the response, that the Clinton scandal can indeed be deemed a "Bucknell issue" or at least one that interests the University community.

Back to the article's purpose—it would be a disservice to attempt to pile all the opinions and arguments into this space, which is

why most of the material will appear in next week's issue. Here is the preliminary introduction—certainly there are many factors that enter into this public discussion, and many differing interpretations and values involved. What aspects of Clinton's situation and Kenneth Starr's report should we,

as Bucknellians and Americans be most concerned with?

Some respondents centered on the investigation itself, some on Clinton's lies, and still others on his moral character, the effect of impeachment, the legal language and the irrelevancy of the "sex scandal". Here is a smattering of some initial responses. Next week, the article will break this very complex issue into several major arguments and outline the many angles that one take in analyzing Clinton's position. Stay tuned.

"While some may argue that [impeachment] would embarrass the nation, I think that has already been done. If Senator Packwood can get removed from the senate for

kissing a girl on his office desk, then the president should be kicked out for his obviously more serious sexual activity. I think that anything else would support a double standard in our system," Todd Hall '02 said.

"I strongly believe that the demise of honesty and forthrightness that we have all observed in our nation's capitol is the marks of the end of an era of a world power," Nora Daniels '00 said.

"I think it is inappropriate to single out Clinton without also calling attention to the other two principals in this farce, Starr and Lewinsky," John Cooper, professor of Chemistry, said. "Clinton did not act in a vacuum; and his treatment by the political process has been exceptional".

"It troubles me when I hear the words, 'Why doesn't Ken Starr just let [Clinton] alone?' For one thing, Ken Starr just can't let him alone. He is under direct orders from Janet Reno to conduct an investigation. He can't just give up now. He's doing his job, Stephen Graham '02 said.

"I am sure that many other countries think that we are a pretty dishonorable country now that our commander in chief is suspected to have lied under oath," Laura Reed '01 said.

Wasn't everybody tired of dealing with this controversy? Guess not.

First article of a two-part series

Career Development Center welcomes news faces; implements programs

By Greg Venbrux

Students will have several opportunities this year to take advantage of the Career Development Center's (CDC) networking program that made its debut on Sept. 14. The program, aimed at giving students the tools and skills necessary to compete in the job market, is used to introduce students to a wealth of job opportunities by educating them in effective networking.

This first session of the program was conducted by Laura Denbow, Director of CDC, Michelle Robertson, Major Gifts Officer and Kristin Woods, Assistant Director of Alumni & Constituent Relations. The program was created this year in order for the CDC, in conjunction with the Development Office, to play a more active role in connecting students with employers.

"When you look at the world of work, 20 percent of opportunities are things you can read, like in the newspaper [in] the wanted ads...an additional eighty percent are typically not in words, they can be found [through] the hidden job market," Denbow explained. "This program deals with how to tap into the eighty percent of positions which are of significant interest to people but can't be seen readily."

One way in which the CDC is introducing students to the hidden job market is through Alumni & Constituent Relations. "The goal here was to educate students on how to network effectively but at the

Jonah Hall—The Bucknellian

The Employer Expo is one of many career programs for students. same time introduce the students to the Alumni & Constituent Relations Office, so they know how to tap into all of these alums who are more than willing to talk about [jobs]...The Alumni and Constituent Relations Office provides the contacts."

Beetna Kim—The Bucknellian

Director David Carpenter '00 leads the cast of *Pterodactyls* rehearsal for this weekend's production. The performance is part of the University's showcase series.

Pterodactyls on stage

By Kristin Colyer

Pure madness. Overwhelming. Intensely emotional. All are attempts to describe the infinitely indescribable *Pterodactyls*, a play by Nicky Silver. Directed by David Carpenter '00, this full-length production is the first in the Department of Theatre and Dance's newly created showcase series.

Introduced in an effort to foster the development of young directors at the

University, the showcase series will provide students more occasions to put what they've learned to practice. Previously, the two primary opportunities available to student directors were found in the department's elementary directing class and senior honors thesis. The showcase allows for an interim step, a chance to direct a full-length production as a junior or possibly a sophomore.

See INVASION, page 11.

New director Denbow brings innovation, opportunity to CDC

By Brett Tomlinson

With a record turnout of over 70 interested employers at Tuesday's annual Employer Expo, the future looks bright for University seniors planning to enter the workforce. According to new Career Development Center (CDC) director Laura Denbow, however, on-campus recruiting is just the tip of the iceberg.

"Employer Expo is an important event, but it is not the only way to find things," Denbow said.

Students leaving the event realized that dropping a few resumes is just one part of the job search process.

Greg Doerge '99 said, "It's difficult to make any significant connections in that atmosphere. I plan to do a job search on my own using some contacts from my summer internship."

Networking is one of several important job search tips advised by the CDC. Denbow, who came to the University in May after working for seven years in the MBNA

Career Education Center at Georgetown University, said that students at the University have great opportunities through networking with alumni and parents.

"Where we have established relationships, those relationships are very strong," Denbow said. "We have good students, but in addition we have really strong alumni and parents and that network is pretty profound."

The CDC is available to help students connect with job opportunities, and Denbow has taken a forward-thinking approach since her arrival on campus.

Her first goal is to use technology to enable students to search for jobs more efficiently. Job listings from the CDC are now available via the internet on the CDC website.

Improving the structure for matching students with internships is another priority for Denbow. The most important long-term for service of the CDC, however, is education.

Denbow commented that statistics predict graduates

will work anywhere from seven to 11 different jobs in their lifetime.

"I would really encourage students to participate in the programs we're offering because you will not only use them immediately, but you'll use them over a lifetime," Denbow said.

According to the *Wall Street Journal*, the job market for graduates is the strongest in over a decade, but recent stock market instability has some students worried about the future. Denbow, who started working as a career counselor during the downsizing periods of the early 1990s, understands the fluctuating patterns of recruiters.

"The rumblings in the market concern me because if it sustains, that will have an impact on how organizations strategize," Denbow said. "There is a lot of growth strategy in organizations today."

Despite recent stock market fluctuations, firms are

Impeachment decision will shape the future

The Starr Report video tapes have added another sensationalistic dimension to the White House scandal. Additionally, the behind-the-scenes scramble for a deal to avert impeachment continues to build the circus atmosphere in Washington. It is easy to become overwhelmed with rumors, polls and rhetorical sound bites. Despite this latest chapter, however, it is important to realize the importance of the matters at hand. The nation's moral and legal principles are being challenged and the trustworthiness of political leaders has taken another devastating blow. The resolution of this controversy will shape the future of the American Presidency. With that in mind, we make the following observations:

First, and most obvious, the President's behavior has been morally reprehensible. It is completely legitimate to hold the President to a high moral standard and he has disappointed the American people. As college students, we are naturally sympathetic to Chelsea's suffering, but we also understand the painful struggle Hillary Clinton continues to endure. This compassion should not shadow the fact that the President's actions were immoral.

Second, there is a fundamental loss of trust due the President's bold-faced denial of his affair with Monica Lewinsky. Americans cannot help but wonder what else he has lied about. The President's supporters are, in many cases, hurt the most by his lies because they had the courage and faith to stand by his original statements, even in the wake of mounting evidence. Finally, the Clinton affair has affected the perception of both the President and the United States in the international arena. Just as the extramarital affair of Prince Charles was a black eye for the United Kingdom, the Clinton-Lewinsky affair has diminished the United States' reputation in the world view. President Clinton, however, is a powerful leader, not just a figurehead. His dishonesty raises questions of his leadership ability. There is no room for two years of lame-duck politics in the White House. Developing countries are looking to the United States for aid and leadership economically and terrorism is a threat to Americans domestically as well as abroad. The nation needs a reliable leader in the international economics, foreign policy and domestic issues. President Clinton may think he is still capable, but his spurned friends and furious enemies on Capitol Hill do not agree.

Given these points, the question of impeachment still remains a legal issue and the decision of whether to proceed lies in the Congress. Even if there are impeachable offenses, Clinton may emerge untried due to political maneuvering and public fears. Republicans fear that if Clinton leaves office, Al Gore will have the inside track for the 2000 Presidential Elections. Some Americans simply fear that Gore is unfit to lead. Others fear that any change in power will cause turmoil. In contrast, it is frightening to think of the message that a lack of action will send to future generations of leaders and citizens in our democracy.

The United States is in an uncomfortable predicament, but there is a way out. The logical, honorable decision for President Clinton is to step down and allow the country to move forward. If that does not happen, however, the democratic system must proceed and make a decision on impeachment which is based on our laws and ideals, not our fears.

LETTERS TO THE EDITOR

Thanks for showing your support at sexual assault event

TO THE EDITOR:

I wanted to thank everyone who attended last Friday's Show Your Support event at the Rooke Chapel. This is my third year as a sexual assault victim advocate, and I can say with all sincerity that it was the most supportive moments I've had here in that role. As Victim Advocates, Ann DiStefano and I hear about the terrible stories about which we demonstrated on Friday. Friday was a day when I knew that the work Ann, Janice Butler, myself and others do on this campus is supported by the University community at large. You may not know how much your support helps me continue to hear these stories and try to help students who are hurting, but believe me, it is extremely touching. Thank you again so very much.

SUE ELLEN HENRY

Where's Public Safety when it is needed

TO THE EDITOR:

Recently I have been questioning the priorities of Public Safety, especially after the two serious events that have occurred on/near campus. Thursday night around 9:30 p.m. I was pulled over by two public safety cars for failure to stop at the Vedder stop sign. Okay, so I only waited two seconds before moving instead of three. That same hour my friends walked home from St. George St. to the Gateways without seeing an officer. Why do I deserve all of the attention? I do comment Public Safety for their presence on campus, but why did it take two officers to pull me over? My friends could have been attacked and no one would have been

Alum addresses drunk driving

TO THE EDITOR:

I read with interest the July 1998 *Bucknell World* article on drinking among Bucknell University students. Unfortunately, it sounds as though things haven't change much since I graduated from Bucknell in 1993.

As pointed out in the article, part of the explanation is probably the "it can't happen to me" attitude that most young adults seem to share. I know; I've been there.

I was spending the July 4, 1995 long weekend on the Jersey shore with friends from Bucknell. Around 10:00 p.m., we started playing "Quarters," a drinking game from our college days. Sometime after midnight, I told my friends that I was going upstairs to bed. Instead, I got into my car and drove off. On the Garden State Parkway, I hit another vehicle and five people were killed. I am currently serving a 21 year sentence in the Garden State Youth Correctional Facility.

If sharing my experience with other Bucknell students might prevent even a single tragedy, I would be willing to cooperate in anyway I can.

KEVIN R. PRICE '93

YARDVILLE, NJ

within range to respond. Also, officers should be more widely distributed around campus. I have seen many officers concentrated in one area, while they have ignored other places. For example, I have not seen any officers behind Roberts, Trax and Kress, near the library or by the Gateways. Public Safety should focus on what is most important, even if it means breaking "policy" to protect the student body.

MEGAN YARUSSI '99

OPINIONS

A call for no more 8 a.m.'s

By Maren Johnson

The debate over eight has been a point of contention on campus lately. It is rumored that many faculty members are dissatisfied with the emphasis on more 8 a.m. classes this coming semester. Many of the classes intended for the 9:30 slot are being pushed into the 8 a.m. time slot due to its obvious unpopularity. Having more classes moved to this block should prove to be an unpopular move with both students and faculty alike.

The largest and most foreseeable problem with this is the issue of biological alarm clocks not being set for such an early hour. It is almost commonplace to see students asleep or "zombie-eyed" during 8 a.m. classes. Absorbing information and staying attentive becomes that much harder.

I find that I am less apt to participate or take comprehensive notes during these early morning classes. I find that there is less participation from the whole class as well.

Why is it that students are not performing up

to their potential during 8 a.m. classes? Many students keep late hours to complete their studies or add the finishing touches to a paper. Just the other day, I had a professor comment that the time marked on students' e-mail assignments shocked him. The majority of the class had e-mailed the professor at about 1 or 2 a.m. that morning. A few of these reading responses had been done even later.

Although this may sound like whining from students who do not consider themselves "morning people," it is truly an issue that should be considered. Although there are students who have trouble making 8 a.m. classes due to excessive partying the night before, there are also many students that are using their time to study, only to receive inadequate amounts of sleep.

In order to cut down on early morning absences and enable students to be more efficient, this matter should be seriously considered. There may be room for a compromise (possibly more 9 a.m. classes) or small readjustments in order for everyone to benefit as much as possible from his or her education.

Public Safety not responsive

TO THE EDITOR:

I write to you in regard of the unfortunate events that have taken place on campus and the lack of response from Bucknell's Public Safety. On Wed., Sept. 16, at approximately 10:30 p.m., I was sitting with friends on a porch on St. Catherine Street. As we were sitting and talking to each other, two suspicious young males strolled past the house and slowed down as they turned the corner towards Market Street. They decided to turn around and approach the porch, and asked if we were having a party, and if they could come in. As they stood in front of us, I remembered the notice sent to all students regarding two African American males looking for parties and asking to stay with University students around campus. My friends asked who they were and as they responded, we realized that they were not University students. As this exchange continued, I left the conversation and went to call Public Safety.

Thinking quickly, I questioned whether I was doing the right thing. I then remembered the Public Safety notice stating that if anyone seemed suspicious, they should call immediately. I called Public Safety, explained who I was and the situation that was taking place. The officer asked me where I was and I told him the location of Sixth and St. Catherine Street.

At this point, I assumed that the situation was under control and that there would be an immediate response. Unfortunately, I was dead wrong. The officer responded to my request by stating that because I was off campus, they were not responsible for that area and that I should call the Lewisburg Police at 911. I was so taken aback and angry by the officer's response that I didn't respond to him or the situation at all, and I simply hung up the phone.

After the conversation, though, millions of thoughts ran through my head. First, why didn't they at least take the responsibility of assisting me and calling the police themselves? Second, regardless of the location, University students live off-campus, and therefore, Public Safety should be responsible for them as well. To make matters worse, these two men and several others were loitering around St. Catherine Street on Friday night. Unfortunately, this time they started a fight and University students were injured. I can't help but think that if Public Safety had responded to me in the first place, none of this might have happened.

After these incidents, it appears as though Public Safety is not doing their job if they don't protect all students and they simply respond to just those that live on-campus. They certainly don't have a problem-ending parties. This leads me to my third and most important point. It absolutely infuriates me that public safety spends more time assisting in breaking up parties and stopping people for open containers, yet, when there is possibly a dangerous situation happening they don't respond at all, especially after the events that have taken place over the past two weeks. It seems that Public Safety needs to redirect their attention and focus on the unsafe campus Bucknell is turning into. I am not sure what kind of impact that this letter will have, but I hope that it opens more eyes and people take better precautions, especially Public Safety. Students are frightened and something needs to be done.

Public views Clinton tape with disgust, sympathy

WASHINGTON—Congress has its collective ear in the air Tuesday, listening to what America is saying about President Clinton after the airing of his grand jury testimony about his affair with Monica Lewinsky. Opinion polls provide one reading, but it's up to the nation's elected representatives to determine what, if anything, happens next. And they're getting an earful. A sampling of public opinion:

"He's the biggest liar and con man I've ever seen since W.C. Fields."

"If the man is doing a good job, you got to give him a chance to let him finish what he's doing."

"I'm not a person who ever liked the president, but now I feel sorry for him."

Marine aviators waive right to grand jury

CAMP LEJEUNE, North Carolina—Two Marine aviators whose jet clipped an Italian gondola cable, killing 20 people, waived their right to the equivalent of a civilian grand jury hearing on new charges in the case. The additional charges of obstruction of justice and conspiracy to obstruct justice against Capt. Richard J. Ashby and Capt. Joseph P. Schweitzer will be included at their courts-martial on manslaughter and homicide charges, the U.S. Marine Corps said Monday.

Their jet was temporarily assigned to the U.S. base at Aviano, Italy, on Feb. 3, when the plane sliced the cable while on a low-level training flight in the Italian Alps. Defense lawyers say maps issued to the crew did not show the gondola cables.

FloJo dies at age 38; heart condition suspected

MISSION VIEJO, California—Florence Griffith Joyner, the triple gold medalist at the 1988 Olympics who captivated the world with her meteoric speed and flamboyant style, died Monday as the result of an apparent cardiac condition. She was 38.

From the White House to fellow track stars, the sprinter known as "FloJo" was mourned and remembered a decade after she turned the women's sprints at the Seoul Games into her personal showcase.

"We were dazzled by her speed, humbled by her talent, and captivated by her style," President Clinton said. "Though she rose to the pinnacle of the world of sports, she never forgot where she came from, devoting time and resources to helping children; especially those growing up in our most devastated neighborhoods make the most of their own talents."

Bo Gritz recovering from shooting

BOISE, Idaho—James "Bo" Gritz, the former Green Beret colonel and leader of the right-wing Patriot Movement, was recovering after shooting himself in despair over his pending divorce.

Gritz, 59, shot himself in the upper left chest with a .45-caliber handgun, Clearwater County Sheriff Nick Albers said Monday. Albers would not say whether the shooting was an attempted suicide, but he did say it was not accidental. The wound was not life-threatening, Albers said.

In an interview on Thursday, Gritz said he had contemplated suicide because of his marital problems, said Mark Potok, editor of the Southern Poverty Law Center's Intelligence Report.

World

Iranian leader denounces terrorism, calls for Afghan talks

UNITED NATIONS—Moderate Iranian President Mohammed Khatami addressed the 53rd United Nations General Assembly on Monday, calling for reforms in the Security Council, as well as renewed efforts to curb international terrorism and end Afghanistan's bloody civil war.

The Iranian government faces a military standoff with the Taliban, which it blames for the murders of nine Iranian diplomats stationed there. Iran has massed 200,000 troops at the border with Afghanistan amid growing demands for vengeance by mobs of Iranian demonstrators.

Three dead as S. African troops intervene in Lesotho

MASERU, Lesotho—South African troops crossed into Lesotho at dawn Tuesday to quell weeks of anarchy. They secured two army bases and the royal palace after heavy fighting in which three soldiers died, the South African military said.

The action, post-apartheid South Africa's first major military intervention, follows weeks of opposition party demonstrations over allegations of election-rigging and an army rebellion that had effectively paralyzed the government in this tiny mountain country.

U.N. to get results of Iraqi warhead probe this week

UNITED NATIONS—Chemical weapons experts studying Iraqi warheads that are suspected of carrying deadly VX gas are to deliver final results to the United Nations this week, a U.N. spokesman said Monday. The experts, from France and Switzerland, are to arrive Wednesday to turn over the results of the tests on missile fragments. Preliminary results apparently have failed to turn up traces of the deadly nerve agent, according to published reports.

A Maryland lab found traces of VX on fragments of missile warheads that Iraq had filed before the 1991 Gulf War. A few drops of the nerve agent can be fatal.

Iraq admits that it experimented with VX, but maintains that it failed to produce the gas in a form that could be loaded into missile warheads.

Malaysia's ruler: Sacked finance minister charged

KUALA LUMPUR, Malaysia—Prime Minister Mahathir Mohamad on Tuesday justified the detention of sacked Finance Minister Anwar Ibrahim and said that Anwar would get a public trial soon on a variety of charges, including sodomy.

Anwar's adopted brother and a former speech writer pleaded guilty last Saturday to being sodomized by Anwar, who denied the allegation and said it was part of a conspiracy to end his political ambitions.

The government also charged Anwar under the Internal Security Act, a harsh law that provides for indefinite imprisonment without formal charges or trial.

National and World News Briefs compiled by Jeff Scepanski from the CNN Interactive Website

An open message from the University

I wanted to take this opportunity to communicate with the Bucknell community on two issues. I would like to update you on a variety of steps that we have taken in response to the sexual assault of an employee off-campus on Friday, September 11 and the reported physical assault on a student on Tuesday, September 15. I also wanted to dispel the unfortunate rumors of further incidents that have been circulating recently.

First, let me assure you that despite the recent rumors, there have been no assaults on members of the Bucknell community since September 15 reported either to the University or to the Lewisburg Police Department. A student did inform University officials just this week of a physical altercation he had with a group at Seventh St. and Moore Ave. on September 5, but he had not reported this earlier for fear of being cited for underage consumption of alcohol. Since there was no report, there was no Public Safety Alert.

However, the incidents of September 11 and 15 were fully reported in Public Safety Alerts and in *The Bucknellian*. Let me also assure you that whenever the University receives information warranting issuance of a Public Safety Alert, it issues the Alert as soon as possible, with as much relevant information as it has at the time. Providing students, faculty and staff with information they can use to feel safer and more secure on campus and in the community is important to us all.

Further, I urge anyone who has any factual information on any safety or security concern, whether driven by rumor or not, to contact Director of Public Safety DeCerio or Dean Chapman or Dean Comerford immediately. I am sure you understand that factually unsupported rumors or exaggeration of something that may have occurred is corrosive to our sense of community and not in anyone's interests.

Equally important, we have taken the following steps in response to the reported incidents:

— the comprehensive circulation of Public Safety Alert notices immediately

following our being informed of the incidents of September 11 and 15

— increased public safety patrols on foot, on bike and in vehicles in the downtown/lower campus area every night

— enhanced publicity of the Safe—Rides program

— encouragement of everyone to use a "buddy system" when walking, particularly after dark

— changing of the locks on buildings and doors when appropriate.

It is important that everyone remain vigilant during this difficult time, and I encourage anyone who witnesses any suspicious persons or activity to notify Public Safety immediately (Ext. 3333). Avoid walking or jogging alone at night and do not prop open residence hall doors or house doors.

We continue to work very closely with the Lewisburg Police Department in support of their ongoing criminal investigations of these incidents. This includes our providing additional resources whenever the Department believes it helpful.

The response of the University community to these attacks has been laudatory. Particularly notable have been last Friday morning's recognition ceremony and the student-organized "Take Back the Night" march Tuesday night. I join all of you in wishing that the violence that is part of our society today had not taken such a horrible toll on members of the Bucknell and Lewisburg communities. I hope that all of us as individuals, as well as the University, will continue to take every step we can to create as safe an environment as possible.

Margaret F. Plympton
Vice President for Finance and Administration

(Editor's note: At press time, District Attorney Pete Johnson has reported that there is no new information available at this time regarding the rape and assault of a University employee on September 11. The investigation is continuing.)

JUMP START

...your high-tech career search at the Greater Philadelphia TechLink!

Systems & Computer Technology Corp. (SCT) and The Technology Council present

The Greater Philadelphia TechLink
Thursday, October 1, 1998, 6-8 p.m.
At the SCT corporate campus in Malvern, PA (suburban Philadelphia)

It's often "who you know" that can give you the edge in your career search. TechLink is a reception providing rare opportunities to network with CEOs and other key executives of fast-growing technology companies in the Philadelphia area. You'll learn about the vast array of jobs available with these companies - **directly from their executives.**

We'll even distribute a résumé book that includes all attendees' résumés to each of the Technology Council's member organizations. It's your chance to get your skills noticed by powerful professionals!

In today's competitive technology industry, companies must continually seek well-trained, energetic employees to support their ever-changing technology. If you have the skills to compete in this challenging environment, **don't miss this once-in-a-lifetime opportunity!**

Admission is limited, so register today via the Internet at <http://www.sctcorp.com/events/techlink98.htm> or by contacting Kristin Volpe via phone at 800.223.7036 ext. 7780, e-mail at kvolve@sctcorp.com, or fax at 610.578.7788.

The Technology Council is a CEO-driven association that serves leaders of technology-oriented companies by providing contacts, capital, and information using events, publications, and innovative services. SCT, based in metropolitan Philadelphia, is a leading provider of software and information technology services for government, higher education, manufacturing & distribution, and utilities.

Common Learning Agenda receives grant

By Sarah Palmer

The University recently received a \$100,000 grant from the William and Flora Hewlett Foundation which will be instrumental in strengthening the Common Learning Agenda (CLA), the University's program for general studies within the College of Arts and Sciences. The grant will fund summer research and pedagogical curriculum development for faculty for the next two years.

"This grant is exciting both for faculty and students," said Daniel Little, vice-president for academic affairs. Little was responsible for organizing the University's proposal for the grant.

The majority of the grant will be used to support research endeavors for 30 to 40 faculty members by the end of the two-year effort. Those faculty members interested in carrying out the grant's objective will collaborate over the summer months to develop new courses in an effort to provide students with a broad range of choices within the CLA. The Hewlett grant will be used to compensate participating faculty with stipends.

Six to eight new CLA courses will be implemented by the close of the two years. "The courses will be interdisciplinary in nature and will be designed to stimulate students' curiosity, while deepening their knowledge over a broad range of fields," Little said.

The courses will be team-taught, meaning that professors across two or three disciplines will provide their expertise in a respective area which will ultimately be incorporated into a common course issue.

One portion of the CLA, the Human Diversity Initiative, requires courses to incorporate social sciences, history and natural sciences into a common course theme. "When you learn calculus, you are learning about a very specific, specialized body of

knowledge," Little said. "But, for a course in an area like human diversity, it is much more beneficial to have the perspective of professors of geology, history, literature and other disciplines. This provides the student with a broadened perspective on an issue."

Another part of the CLA is the Natural and Fabricated Worlds Initiative. Courses within this portion of the agenda are designed to give all students rigorous exposure to science and technology and their ever-changing influences on world issues and problems. Examples of these courses range from courses on the energy crisis, AIDS and global warming.

The CLA also includes the foundation seminar, which students take during their first year, and the capstone course, which is taken during the senior year and provides closure to the CLA mission.

The CLA aims to make general courses more interdisciplinary. "The aspect of the grant that most excites me is that it is explicitly for team teaching," Margaret Kastner, professor of chemistry and CLA coordinator, said. "Right now, we don't have many examples of team teaching here. I think that one way to increase the interdisciplinary of our general courses is to teach in this manner."

Little added, "In my mind broadening students' perspectives on issues is a very distinctive educational goal and one that is very well-suited for interdisciplinary teaching."

Correction:

There was an error in the quotation attributed to John Lodato '99 in last week's article "Students' athlete alleges assault by football coach." The correct quotation was, "He finally dropped him and then got in my face, daring me to hit him or something. He was enraged."

Public Safety Log

September 15, 1998

ASSAULT—A University student reported to Public Safety that an unknown male pulled her into some bushes on St. George St and struck her once. Lewisburg Police Department responded. The incident is being investigated and a Public Safety Alert was issued.

September 16, 1998

UNIVERSITY PROPERTY DAMAGE—A University employee reported to Public Safety that a window was broken in Davis Gym. The incident is under investigation.

INFORMATION—Public Safety responded to Moore Avenue for the report of a bicycle vs. vehicle accident involving two University students. There were no injuries and minor vehicle damage.

INFORMATION—Public Safety responded to lower campus for the report of individuals passing out advertisements in Hunt, Larison and Harris Halls. The individuals could not be located.

ASSIST East Buffalo Township Police Department—East Buffalo Township Police Department and Public Safety met with a University student who confessed to taking a table and two chairs from the Days Inn Patio. The property was recovered and criminal charges are pending.

September 17, 1998

INFORMATION/MEDICAL ASSIST—Public Safety responded to the Langone Center for the report of a student who had fallen. The student was transported to Student Health Service for treatment.

INFORMATION—Public Safety responded to University Hall for the report of a vacuum cleaner missing from the custodial closet. The incident is under investigation.

der investigation.

THEFT—A University student reported to Public Safety that a book bag was taken from Rooke Chapel. The incident is under investigation.

INFORMATION—Public Safety responded to Davis Gym for the report of a male in the women's locker room. The individual was gone upon the arrival of Public Safety. East Buffalo Township Police Department and Lewisburg Police Department were notified. The incident is under investigation.

September 18, 1998

INFORMATION—While on routine patrol, Public Safety observed a male riding a bicycle near the special interest house. The individual, who admitted to consuming alcohol, could not provide identification. Lewisburg Police Department responded to the scene and escorted the male to his residence.

UNDERAGE DRINKING—While conducting a party check in Chi Phi Fraternity, Public Safety observed a University student who had been drinking while under the legal age. A university citation was issued.

INFORMATION/SUSPICIOUS PERSON—A University student reported to Public Safety having observed an unknown male using keys to enter Hunt Hall. No one could be located in a search of the area. Lewisburg Police Department was notified. The incident is under investigation.

IDENTIFICATION—While responding to Vedder Hall for a fire alarm activation, Public Safety located a trash can containing beer and a Connecticut State ID card. University charges of underage possession and false identification are pending an investigation.

September 19, 1998

INFORMATION/SUSPICIOUS PHONE CALL—A University student reported to Public Safety having received a suspicious phone call in a Smith Hall room. The incident is under investigation.

MEDICAL TRANSPORT—An Student Health Service doctor requested an ambulance to Christy Mathewson Stadium for a football official who had fallen. The individual was transported to Evangelical Community Hospital for treatment.

UNDERAGE DRINKING/UNREGISTERED PARTY—Public Safety responded to Phi Psi Fraternity for the report of two University students who would not leave the house. University citations were issued for underage drinking.

INFORMATION/FIRE—Public Safety responded to Smith Hall for a fire alarm activation and found that a University student had extinguished a small fire on the kitchen stove using a fire extinguisher.

ASSIST Lewisburg Police Department—A University student reported to Public Safety that three suspicious males were seen entering a south Sixth Street residence the previous evening. Lewisburg Police Department was notified and officers from both departments met with the student to take a report.

September 20, 1998

UNDERAGE DRINKING—While on a routine check at the Sigma Alpha Epsilon Fraternity, Public Safety observed a University student who was drinking while under the legal age. A university citation was issued.

INFORMATION/VEHICLE DAMAGE—A University student reported to Public Safety that a vehicle was damaged when driven against a concrete barrier in the Gateway Parking Lot. The incident is under investigation.

MISSING/RECOVERED CHILD—A University student reported to Public Safety having observed an unsupervised child on the University Golf Course. Lewisburg Police Department and East Buffalo Township Police Department were notified and a parent was located to take custody of the child.

HARASSMENT BY COMMUNICATION—A University student reported to Public Safety having received a harassing phone call in a Larison Hall room. The incident is under investigation.

INFORMATION/SUSPICIOUS PERSON(S)—Public Safety responded to the rear of Smith Hall for the report of suspicious persons. Lewisburg Police Department responded and positively identified the visitors who cooperated with a request to leave the property.

THEFT—A University student reported to Public Safety that a bicycle was taken from the bike rack at Berryland Library. East Buffalo Township Police Department was notified. The incident is under investigation.

routine patrol. Public Safety stopped a visitor for an open container violation on Fraternity Road. The individual fled from the officer and was apprehended near Davis Gym. East Buffalo Township Police Department responded and took the individual into custody for outstanding warrants.

INFORMATION—Public Safety responded to Trax Hall to check on the welfare of a University student. The student was found to be studying in the room and had not responded because of wearing headphones.

INFORMATION/VEHICLE DAMAGE—A University student reported to Public Safety that a vehicle was damaged when driven against a concrete barrier in the Gateway Parking Lot. The incident is under investigation.

INFORMATION—A University student reported to Public Safety that visitors caused a disturbance in Trax Hall. The incident is under investigation.

MISSING/RECOVERED CHILD—A University student reported to Public Safety having observed an unsupervised child on the University Golf Course. Lewisburg Police Department and East Buffalo Township Police Department were notified and a parent was located to take custody of the child.

HARASSMENT BY COMMUNICATION—A University student reported to Public Safety having received a harassing phone call in a Larison Hall room. The incident is under investigation.

INFORMATION/SUSPICIOUS PERSON(S)—Public Safety responded to the rear of Smith Hall for the report of suspicious persons. Lewisburg Police Department responded and positively identified the visitors who cooperated with a request to leave the property.

THEFT—A University student reported to Public Safety that a bicycle was taken from the bike rack at Berryland Library. East Buffalo Township Police Department was notified. The incident is under investigation.

THEFT—A University student reported to Public Safety that a bicycle was taken from the bike rack at Berryland Library. East Buffalo Township Police Department was notified. The incident is under investigation.

September 21, 1998

INFORMATION—A University employee reported that a suspicious noise was heard in the bookstore. No property appeared to be missing. The incident is under investigation.

THEFT—Public Safety responded to Malcolm House for the report of a missing telephone and answering machine. East Buffalo Township Police Department was notified. The incident is under investigation.

INFORMATION/MEDICAL ASSIST—Public Safety responded to the Langone Center for the report of a University employee who had fallen. The individual was transported to Student Health Service for treatment.

THEFT—A University student reported to Public Safety that a bicycle was taken from the Swartz Hall bike rack. East Buffalo Township Police Department was notified. The incident is under investigation.

September 22, 1998

MEDICAL ASSIST—Public Safety responded to Smith Hall for the report of an ill student who was transported by ambulance to Evangelical Community Hospital Emergency Room for treatment and was later released.

MEDICAL ASSIST—Public Safety responded to Swartz Hall for the report of an unconscious student. An ambulance from William Cameron Engine Company responded but upon regaining consciousness, the student signed a release refusing medical treatment.

INFORMATION—Public Safety responded to 304 S. 7th St. for the report of alcohol, food, and blankets found in the building. Lewisburg Police Department was notified. The incident is under investigation.

INFORMATION—Public Safety responded to Swartz Hall for the report of a computer damaged by a water balloon. East Buffalo Township Police Department was notified. The incident is under investigation.

Insomnia 101: Good sleep is underrated

By Rebecca Rowland

It is two and I am awake. This in and of itself is really not that interesting, but when you consider that I mean two o'clock in the morning, it becomes a little more extraordinary. Actually, no, I take that back. There is nothing unusual at all about being up until all hours of the night at school.

For some reason, as soon as quiet hours begin, everyone is drawn to the hall like there is some little voice in their heads whispering "What do you want to sleep for? Wimp! Come out to the hall, everyone is doing it!" So like zombies we all pile onto the floor, lean our heads against the cinder block walls and wait for something cool to happen. Nothing ever does, of course and we spend the next morning cursing that voice in our heads and sucking down coffee like there is no tomorrow (unfortunately there is a tomorrow and we will all see it arrive from our posts in the hall at the urging of our head-voice. How weak we all are!).

There must be some reason why nighttime is so alluring to people (I'm not knocking it of course, I love the night life, I like to boogie). I guess it all started when we were little kids. We had to go to bed at eight p.m. on school nights and we were convinced that as soon as our bedroom lights went out, the fun stuff began.

Personally, I was convinced that the second after my parents said good night they went downstairs and ate ice cream and watched *The Goonies* and played with my toys. Little kids hate to be left out so they would think of reasons to go downstairs to try to catch their parents in the act. Does this sound familiar,

"My tummy hurts?" How about, "I'm thirsty?" Sometimes I would get really creative and say stuff like "I have a headache." Sounds normal, doesn't it? Unfortunately, I never realized that, had I really been asleep, I wouldn't know I had a headache. Really, though, who thinks that far in advance? I would have told my parents I had leprosy if I thought I would be able to stay up a little later.

Now that we are all at college we

are acting out this long-forgotten desire to be the last one to go to sleep. Maybe we figure that, as soon as we turn off our lights, the Domino's people will drop by and say "We had extra pizza, you guys want it?" Right after that everyone expects that the TV will magically get cable and the water fountains will start shooting out beer. Yeah right! More limited contact to the outside world. Students on campus, which is most of us, have little if any access to cable. Granted, we may all end up watching HBO, but we are intelligent college students who do have some interest in the news, occasionally. Another link would be newspapers and magazines. I don't know about you, but I have enough problems reading for my classes. So, any form of literature is definitely out.

The rural setting can be restricting at times. Students are less inclined to become involved with issues outside of campus because of

the limited number of options. Although "downtown" may hold endless opportunities for social gatherings, it is lacking in opportunities concerning national events. Students who are looking for cultural experiences may have to resort to a trip to the Lewisburg Penitentiary. The bubble prevents us from exposure to the latest music and trendiest clothes, which cannot be found in quaint Lewisburg.

Even with this realization, I am not sure that I would want to give up the beautiful sunsets and sheltered surroundings for what the outside world has to offer. The same characteristics that limit some of our college experience are the exact ones that make it so unique. While we may still be able to hold onto the small class discussions and personal attention, I don't think they would hold the same passion and dedication without the "bubble" environment.

Instead, the students and faculty should focus on a balance between the bubble and the outside world.

A question of language

By Erin Corbo

Along with the many political issues that the crude, immoral and perverted Bill Clinton has caused me to ponder is the English language itself. The many interpretations of one definition allows lawyers, politicians and artists the incredible ability to manipulate and exploit words. How many times have you heard a word or phrase that bothers you? How many times can you say one word before it becomes foreign? How many times can I say "how many times?" Anyway, I think that the point is well understood, the English language is strange and ambiguous.

Let me begin this with a phrase that is familiar to all of us in the so-called Bucknell Bubble: "hook up." Personally, I despise this phrase because it has so many meanings. My parents ask me to hook up with them for dinner. My friends asked who hooked up last night. What does "did they hook up" actually mean? Does it mean, did they meet up with

one another, did they kiss, or did they have sexual relations?

Following a similar theme is the ever so popular word "gay." I cannot fathom how a word that means either having and showing a lively mood or being a homosexual has become synonymous for stupid. I often will say "that is so gay." It has just recently occurred to me that this slang term is beyond strange.

Another one of my favorites is "chill." This seems to be something that is perceived as positive. If you are a "chill person," you are relaxed, fun and down-to-earth. How does this phrase make any rational sense? I like my fruit chilled, my dad likes his beer mug chilled, but to be the state of chill somehow takes on this elitist quality. I suppose that this term chill is a descendant of the old-school word "cool," but where did that start?

Coincidentally, I have also heard the actual word, "word" used to ask, "how are you?" I am not sure where this originated, but I think it derived

from "what's up" to "word up," and now to just plain "word." How something that means a linguistic unit consisting of one or more spoken sounds or their written representation and functioning as a carrier of meaning has been translated to mean "what is going on" is just plain astonishing.

After discussing this topic with a few of my associates, J.C. and Treacher, they shared many of their own "silly sayings." Three of my favorites were "chit-chat," "melancholy" and "delve." You can always chat, but why can't you just chit? Melancholy, where's the melon, are there seeds in that? Delve, have you ever delved into anything? How was it?

Word to all of the chill people who delved into this article. I hope that you didn't think it was gay. Maybe you are disappointed in the recent chit that our President hooked up with Monica, but at least he didn't touch her melancholy?

SURVEY

IN LIGHT OF RECENT EVENTS, DO YOU THINK THAT THE UNIVERSITY HAS TAKEN ADEQUATE MEASURES BY INCREASING CAMPUS SECURITY PATROLS TO ENSURE STUDENTS' SAFETY?

"Yes, it doesn't seem like these incidents are representative of the whole University or town. It should not be blown out of proportion."
Jake Berner '01

Chelsea's troubles

The nation aside, how's all this going to affect a certain Stanford sophomore

By Chris Beatty

I'm going to take out an ad in next week's *Bucknellian* and print, in large bold letters that your father is an adulterer. Not only that, but I'm going to then write an article that tells exactly what happened during his adulterous relationship. I'll tell all sorts of lurid details about him using a cigar as a sexual object and how there is an article of clothing with his semen on it. With all of these graphic details I'm going to attack your father publicly and loudly. I know you're just another college sophomore trying to fit in, but I'm going to do it anyway.

How much must it hurt Chelsea Clinton to read about her father everyday as the press and the politicians debate the President's sexual conduct and his cover up of an affair with a White House intern? I would bet that when she reads those articles or listens to those people on the news, Chelsea does not see the issue of whether or not to impeach the President. She reads the papers and knows that her Dad lied to the nation, but it's much more personal than that. Her father cheated on her mother.

To Chelsea it is not about the monumental issues involved with the office of the Presidency and whether the President is above the law. It's about trust and about family. You can't just put aside your personal feelings and think about the good of the country when something so personal happens so publicly. Everyday families are torn apart by infidelity, but at least the entire country isn't watching to see what happened and what happens. I personally think that Bill Clinton should be tossed out of office, but this public spectacle is entirely unnecessary. If I could get this article to the whole nation I would say to everyone, particularly the press, "Keep your eye on the ball."

The impeachable offense that Bill Clinton committed was not to have an affair in the White House. His choice in the use of cigars is not on trial. The impeachable offense that Bill Clinton committed was that he lied about his affair and tried to cover it up (Remind you of anyone? Ahem. Richard Nixon). Let's concentrate on perjury, or campaign finance, or Filagate or Whitewater. Let's not tear apart someone's father simply because it sells papers.

Alumni share memories of Bucknell-Burma weekend

By Beth Slaby

Most students do not even know the location of Burma on a map. How, then, could the history and current events in Burma have such an impact on the University community? Last Saturday, five alumni shared stories of how the University's connection with Burma, an island in the Bay of Bengal to the west of Thailand, affected their lives for years after graduation. Jim Hammerlee, former University Chaplain '66 was the mediator for the panel of these graduates, which included: Kyaw Khin '62, Dorothy Bomberger '64, Janet Powers, '61, Chubb Condict '39 and John Zeller '41.

Khin began the panel discussion first by warning the audience that he would be speaking Burmese English (Khin was born in Burma), but to bear with him. He recounted his struggle with mechanical engineering when he arrived on campus in 1958. Khin was very accustomed to the system at his previous schools where students only needed 40 out of 100 points in order to pass the class. He believed that he was doing well with grades of 65, until his professor pointed out that he was indeed receiving D's.

Despite these cultural barriers, Khin was quite happy at the University, although he was one of only 24 international students. He returned to Burma in 1962, but admitted that he was unhappy and truly wanted to come back to the states.

He managed to do so in 1982 for his 20 year reunion. Jim Hammerlee remembers his return: "I was in the Bostwick cafeteria when Khin entered ... there was quite an uproar as he

entered the caf. ... I've never seen students so excited to see someone." Like the other panel members, Khin was honored and excited to return for the weekend this year.

The first experience Powers had with the Burma-Bucknell weekend also occurred when she was a student. Volunteers were needed to act as hosts for Burmese students, and she was assigned a princess: "I'll never forget seeing her come up the steps of Edwards House in a huge fur coat."

Powers believes that experiences such as these "opened students to the world." Powers also recounted a story from her senior year. She was editing for *The Bucknellian* in 1960 when she discovered the CIA was reading it because of a controversial story published relating to Burma. The experience Powers had here with Burma activities eventually pushed her to pursue what she loved—a career in global studies.

Bomberger came to campus in 1960 to pursue a degree in organic chemistry. She had intentions of being a nurse, but she did not want to abandon college. Bomberger hated the labs that went along with her major. To get out of going to lab, she, too, signed up to be a host. She was greatly influenced by Forest Brown, the original coordinator of the weekend.

"By the time I was a senior and the Chairman of the program, I realized how much planning was involved [for the weekend]. The Burma-Bucknell connection was the 'thread that holds the whole University and Burma community together.'"

According to Bomberger, the Burma-Bucknell weekend is one of the factors that contributed to her change

from an organic chemistry major to that of political science. She went on to take the state department test, but when she did not pass, Bomberger joined the Peace Corps. Soon after, she received a scholarship to go to Washington, DC where she attended graduate school, and now resides.

Bomberger now has two daughters in college. She frequently encourages them to take full advantage of their university education. "It's much more than classes and fraternity parties—it is a lifelong experience that has great impact on the rest of life."

Zeller also remembers the richness of his University life. He was too young to have any direct experience with the weekend, but was active in the Christian Association when Forest Brown was the executive secretary.

It was through his stellar leadership and quest to involve students in intercultural, interracial relationships that the Burma-Bucknell weekend was born. "Brown let students take some responsibility."

There have been cascading effects from the leadership that the Burma-Bucknell program experienced. Today, the program of Asian studies would not exist without our previous connection to Burma.

These alumni could not speak enough about the lasting effects Burma has had on their lives. For many, the Bucknell-Burma weekend opened their eyes to a whole different side of the world. Many hope to visit or return to the land that made such a lasting impression on their lives.

Dee Kantner contributes on and off the court

By Nicole Salita

Thursday, Sept. 17 commemorated the 25th year of women's varsity athletics on campus. To celebrate the occasion, the Forum was host to a remarkable and witty speaker, Ms. Dee Kantner. After her second year officiating as one of two women referees in the NBA, Kantner poignantly delivered a powerful message: "Whatever you want to do, go for it!"

A native of Reading, PA, her fascination with basketball was sparked at the age of seven when she began playing for local teams. Following her heart, Kantner attended the University of Pittsburgh where she played field hockey and basketball while majoring in mechanical engineering.

Her "passion for officiating" began as a mere Band-Aid solution for her college financial troubles, but this pastime soon evolved into a long-term addiction. After college, when she gained some financial stability, Kantner accepted a job at Westinghouse. She enjoyed public interaction, but missed the adrenaline rush refereeing supplied. So, enthused and shocked by an offer in 1995 to referee for the NBA, Kantner took the opportunity without a backward glance.

After surviving her first pre-season game in 1996, she went on to officiate her first NBA game that same year. She went on to referee six women's Final Four contests, tend to four championships and officiate the Olympic qualifying tournament.

What drove this petite, small-town woman to achieve such remarkable goals, setting a precedent for future women of America? Supporting her with a "do what you want to do" attitude, Kantner's family and friends were her motivation and foundation. Also, expecting her colleagues to undermine her abilities because of her gender, Kantner was relieved to find her male counterparts reassuring and motivational.

But most of all, Kantner is continually charged and energized by the women in the stands that support her with

screams and cheers before every game. Digesting this support, she fuels herself to referee "from the heart," not thinking about the players and people, but the fairness of the game. Now a very public figure, Kantner uses the same support network to cope with pressing media, biting news articles, and the harassment received in a male-dominated career.

As glamorous as her life sounds, Kantner must deal with a rigid routine and hectic schedule. Before a game, she arrives in the city the night before, reviewing technique tapes while fitting in her own strict physical fitness routine. As if dodging Shaq O'Neal and ignoring obnoxious fans is not enough hard work during a game, Kantner's work continues even after the fans

have left the stadium. She must review each game after its completion and break it down for missed calls, trying to fit in enough sleep afterward to be alert for the following game the next day.

Altogether, Kantner can travel a whopping 28 days out of each month, allowing only a few moments to spend with her dogs and to catch up with family. In the off season, Kantner is allowed more liberty to do what she chooses, often opting to continue officiating at basketball camps for prospective players of all ages.

Dee Kantner's witty personality and zest for basketball can be summed up best in this brief story: beginning her training at an NBA camp, Kantner called her first foul on one of the players. Obviously objecting to the call, the player chose some choice phrases to shout at her, amongst one was "What's a woman doing here anyway?"

But Kantner calmly, almost nonchalantly replied, "Well, I'm here now and you're not," throwing the player out of the game. Strong and independent, Kantner slowly boosts the status of women with each call she makes and game she officiates. Competitive women may not always be applauded, but Kantner certainly deserves a standing "O" for her fine work.

Dee Kantner, one of only two female NBA referees, visits the University.

"Love, lust, and liberation"—Hasani Imarobe speaks for minority students

Jonah Hall—The Bucknellian
Hasani Imarobe encourages minority students to find inner peace.
By Maureen Fick

On Thursday, Sept. 18, nationally recognized public speaker Hasani Imarobe offered an evening of enlightenment and empowerment to those students who gathered in Arches Lounge.

Encouraging minority students to "release the spirit of black," Mr. Imarobe promoted the appreciation and understanding of culture in the attempt to enable each individual to achieve peace through self-knowledge. This peace makes us free and its importance lies in Mr. Imarobe's belief that "peace is the way of the righteous." His lecture focused on the three L's—love, lust, and liberation.

According to Mr. Imarobe, self-gratification has taken priority over emotional connection, causing society to stray from healthy relationships. Love and lust are confused; we are unable to differentiate between that which is emotionally appealing and attraction based on appearance. Yet, the way a person is

initially viewed (in an internal sense) is the way a person is kept. Appearance changes, while elements of character and personality remain steadfast.

Ideally, during the course of a relationship, three phases take place—romance, problems, and, ultimately, commitment. In America today, however, few couples reach the third phase. Overwhelmed by the bliss of romance and then the shock of problems, the couple terminates the relationship and moves on only to repeat the cycle. Even couples married for years never complete the commitment stage. The divorce rate for blacks on the African continent is five percent, while the divorce rate of African-Americans is at a rising 55 percent. The phase most responsible for inhibiting commitment is the way in which humans deal with their problems. Women and men deal with problems in opposite ways, escalating them to the level at which they seem irreparable. Women get emotional when upset and express themselves through words that cut into masculinity and bruise the male ego. Men are more physical, adding the threat of domestic violence. A woman who wins a verbal battle with a man can still lose when her partner decides to wage a physical battle.

To escape these problems and to help each individual in coping with the natural rockiness that accompanies any relationship, Imarobe encourages establishing a strong sense of self-esteem. He tries to rid mi-

norities of labels that stifle self-esteem. He believes that "labels stigmatize you" in the inaccuracy of their descriptions. Blackness is defined by three C's—color, culture, and consciousness. According to Imarobe, society has stripped African-Americans of their culture and consciousness leaving only color, a dividing barrier that leads some to self-hatred because there is no culture or consciousness to back it up.

As society must get past appearance, it must, too, go beyond labels. True liberation, the third of the three L's, will only come after self-esteem is bolstered, problems are handled effectively, and commitment is achieved. Indeed, Mr. Imarobe equates commitment with liberation. To begin the processes that will encourage self-esteem and commitment, Mr. Imarobe suggests that young people across the college campuses of America unite and cast away the apathy that threatens to further destroy our relationships and ourselves. In order for changes to be made, "the youth of today must be the leaders of tomorrow."

Cooking with Doug

Try this cold pasta salad instead of the old spaghetti with red sauce. Sure, it's a little more work; however, since it's served cold, you can snack on the leftovers. You will need:

1/2 pound Orzo pasta—pasta doubles in weight, so 1.5 pounds are plenty for four people.
2 cups calamata olives—pitted and chopped
1 cup feta cheese
1/4 cup of capers
1 tbl. dry turmeric
fresh crushed garlic
1/2 cup extra virgin olive oil
1/4 cup of balsamic vinegar
chopped parsley
salt and pepper to taste

Cook the orzo as you would any pasta. However, if you don't add olive oil to your pasta water normally, do so, since orzo tends to stick to the bottom of the pan and to each other. After cooking, rinse and run under cold water; set aside. Taking the seeds out of olives can be time consuming. What I

usually do, is place several olives in a kitchen cloth, wrapping the cloth over the olives. Then, I pound them with a rolling pin. Repeat the process until all of the lives are done. The seeds can be easily removed this way. Of course, if you are frustrated you may remove the seeds by hand, one at a time, while watching Ben Hur. Chop the olives on a cutting board, and throw them into the bowl.

After the pasta has cooled, place it in a large mixing bowl. Pour the olive oil over the pasta as well as the balsamic vinegar. With your hands, crumble the feta cheese into the bowl, and add the fresh garlic capers. Finally, you want to sprinkle the turmeric over the salad, stirring so it covers the pasta. You may want to try the turmeric on a little of the pasta separately, since turmeric has an interesting flavor. Add salt and pepper to taste. Throw some chopped parsley on the pasta before serving.

Confusion, questions...and candles burn

Bethna Kim—The Bucknellian
The University Chaplain, Ian Oliver, lights a candle in an effort to address the recent tragedy that occurred last week on campus.

By Christiane Schuman

At 10 a.m. on Friday, Sept. 18, a crowd of nearly 100 students and faculty gathered outside Rooke Chapel for a ceremony held in lieu of the traumatic events of the preceding week. Sunny "it's Friday" smiles vanished beneath cloudy looks of concern and compassion. One student described the mood as "sobering. Every-

one seemed to want to band together as a concerned community."

Speakers such as Janice Butler of the Women's Resource Center and University Chaplain Ian Oliver addressed the tragic incident in thoughts and prayers. Oliver invited those in the crowd to do the same. Feeling compelled to speak on behalf of the students, as others did for the staff and the community, BSG President Jessica Jackley stated, "I just wanted to take the time to thank and show respect for the victims and also those who came out to

sponding with questions of 'why?' and shocked mutters of 'I can't believe this happened here' Oliver remarked on how the community-wide concern was evident "not only in how many attended, but in how many spoke up and what they said." In listening to students, faculty, and members of the surrounding community, he witnessed "sharing of many personal experiences and memories, but the sharing of anger and discontent seemed to prevail."

Along with voicing their concern and sharing a few words, each onlooker lit a candle as a symbol of their love and support. By the time the Rooke Chapel bells chimed 11 a.m., students and staff had departed, but over 100 candles flickered in the returning sunlight. A strong breeze was blowing, but not a single candle died out. The flames burned on, as do the questions of "why?" and "how?" in students' minds.

Bethna Kim—The Bucknellian
On Friday, September 18, 100 students met at Rooke Chapel to show support for the 63 year old victim of the tragic rape that occurred on 7th Street.

How do you think Chelsea Clinton is reacting to the revelations that have occurred about her father?

How would you feel, being a college student as well?

"I would feel as though I should be strong for my family, but deep down, I would be extremely ashamed and embarrassed."

- Donna Engle '00

"I would probably leave the country for a few years."

-Stephanie Nieratka '00

"I think I would never want to see a cigar again!"

-Leanne McFadden '00

"I don't think she's reacting any differently than anyone else would in her situation. How would you feel?"

-Jason Aines '00

"Who's Chelsea Clinton?"

-Richard Buckley '02

"I would try to act as if nothing had happened, and ignore it."

-Megan Rancier '01

I would feel angry and embarrassed."

-Bethany Goff '02

"She's dealing with it as well as anyone could. I haven't seen her struggling. It must be a lot of pressure; luckily, she's been kept out of most of it, which is best."

-Christy Smith '99

"It must be hard for her to deal with the facts that have come up about her father. She should be talking to some counselor."

-John Monie '01

"I'd put a book out about it, and make a lot of money."

-Matt Albert '01

"I think she's probably appalled. At least I would be."

-Don Porter '02

Another Deloitte Consulting Difference

THEM:
Get a life

DELOITTE CONSULTING:
Got a life

Work/life balance. The buzz of the moment. Everyone in corporate America is aware of the research showing people's desire to get ahead in their company while getting more out of life away from the job.

Deloitte Consulting has long been committed to helping people achieve this important balance — well before it was "the thing" to do. Here, you'll work hard. And, yes, travel is often involved. But we also have programs in place that ensure your other responsibilities can be met.

We just happen to think that an employee who is relaxed, fulfilled, involved, content — ultimately does a better job. So, is it any wonder that Deloitte & Touche was named in *Fortune's* list of "The 100 Best Companies To Work For In America"? If you're intent upon building your career with a firm that understands your need to balance your personal and professional goals, stop by. What we have to say could change your life.

To apply for a Systems Analyst interview slot on October 28, drop your resume, cover letter and personal data sheet off at the Career Development Center by September 21st.

To speak with us further, visit our booth at the Employer Expo on September 22nd.

Visit our Web site at www.careers.dtcg.com

A very different approach. For very different results.

Deloitte & Touche Consulting Group is an equal opportunity firm. We recruit, employ, train, compensate, and promote without regard to race, religion, creed, color, national origin, age, gender, sexual orientation, marital status, disability or veteran status.

SCIENCE & TECHNOLOGY

Do helicopters help in emergency accidents?

By Adam Parris

Accidents on America's highways occur very often. One of the most crucial ways to mitigate the damaging effects of these tragic outcomes is emergency response from hospitals, who utilize two different methods of transport to arrive at the scene of an accident: helicopters and ambulances.

"We wanted to compare transport times of helicopters and ambulances and see what affect helicopter transport had on patient outcomes," Shannon Escalante '99 said of her research project this past summer.

Funded by the Undergraduate Summer Research Program, Escalante conducted a study called "Efficacy and Efficiency of Emergency Medical Air Transport" at the Penn State Geisinger Medical Center in Danville.

The center "collects data from 25 accident trauma centers throughout Pennsylvania."

Escalante's study was done using the

Shannon Escalante '99 compared the transport times of helicopters and ambulances in emergencies in her summer research project.

two different academic disciplines which she studies at the University, biology and mathematics, and the help of professor of mathematics, Michael Frey.

"We got a database from Pennsylvania Trauma Systems Foundation," Escalante said.

The software that Escalante used was SAS, which conducted analysis and modeling, and SPSS, which produced graphics of her results. Among those results that she found, she said that helicopters take 38 percent longer than ambulances on average.

"Helicopters still do not overcome ambulances," she said. "What we thought we would get was that ambulances were faster. These results were particularly surprising for the rural setting because in a rural setting you have the problem of poor road access and long distances both of which hinder ambulance transport."

Escalante stressed the fact that helicopters are mainly used for their Advanced Life

Support (ALS), which is why she tested the effect of the different transport modes on other factors like patient mortality and length of hospital stay. Using a "case control design" to isolate the mode of transport from other controlling factors, Escalante confirmed her results.

"Mode of transport did not affect patient mortality. Helicopter transport only resulted in marginal increased hospital stay," she said.

She stresses the point that her study only covers "motor vehicle accidents on the road."

Escalante's study pinpoints the purpose of helicopter transport for motor vehicle accidents. Although most people think that helicopter use aids the response to automobile accidents in a timely fashion, Escalante explains helicopter use as a device designed to give ALS.

"In both of our patient outcomes, we found that ALS does affect them."

Ultimately, helicopters are "heavily over-

used." Despite the lack of time that helicopters save, Escalante believes their use is well-warranted.

"Helicopters are useful and beneficial, but from our study we found that they can be more efficient," she said.

Escalante's study supports the need for student research and proves how effective it can be. With the results of this study, hospitals learn a great deal about emergency response and other factors which consequently help motor vehicle outcomes. Escalante explains that hospitals must use their helicopters in order to convince their management offices to keep them. The results to her study prove that helicopter use is more beneficial to patients and pockets when their use is thought out in advance.

"There need to be criteria making them more effective," she said in reference to helicopters.

Escalante will present her research results as a poster presentation at a Trauma Conference in Harrisburg in November.

New athletic training and fitness class offered

By Erin McKenna

In recent years, there has been a growing concern about the nature of fitness and the best way to attain fitness goals. Such diverse establishments as corporate offices, athletic training centers, and universities have begun to offer programs to instruct interested members of their facilities about these issues. Like many of these establishments, the University has taken a proactive role.

In response to a multitude of student requests, the University has made many changes in the Davis

Gym Annex. Because of these improvements, the athletic facility has decided to initiate a class called "Exercise Principles and Concepts" to help facilitate training in a more beneficial and healthy manner.

Instated by Strength and Conditioning Coach Terry Fike, this program intends to educate staff, faculty and students about the fundamental principles of athletic training and the reasons behind the changes in the Annex. In addition, the class intends to teach all who participate how to adapt to these alterations to revise their present training theories. This year is the first year the class is

offered. "This should have been done in the past, but with the new and radical changes in the Annex, we wanted to make sure that everyone was able to meet their needs in terms of exercise and fitness," Fike explained.

The program consists of at least five or six classes so that those interested gain a wide variety of knowledge about fitness training principles. This class is important because it will beneficially support and facilitate the rise in athleticism and exercise at the University.

"In offering this class, I hope to make the space as functional and usable as possible so as to encourage greater use of the facility. The class will prove that the more the school invests in the Annex, the more they will get out of it because it is such a significant place on campus," Fike added.

He hopes to illustrate to both the staff and the student body that, for a healthy adult, the principles involved in fitness are very simple, yet extremely effective in providing good results. Fike is very positive about the creation of this program. He is excited to educate those interested in enhancing fitness performance.

He is qualified as well. Fike is certified by the National Strength and Conditioning Association, which is a professional organization for strength coaches and provides the certification required for University coaches and professional sports teams. In addition, he is a registered nurse with an extensive background in cardiac rehabilitation.

Classes for staff and faculty will begin on September 29 as an introduction of basic concepts and machines versus other forms of resistance. The schedule for students interested in this class has yet to be determined.

Terry Fike, strength and conditioning coach, began a program to educate faculty and students about the principles of athletic training.

SCIENCE & TECHNOLOGY

Environmental careers: possibilities for the future

By Adam Parris

Among the most rapidly growing fields in the job market, environmental positions seem to be opening up everywhere. There are several reasons for this increase in jobs. The first is that jobs concerning the environment encompass a wide variety of tasks. The other reason is increased interest in the state of the world environment.

"I like being a part of the solution instead of part of the problem," professor of environmental and civil engineering at Duke University, said Arnie Vesilind.

Since the number of students who showed interest in the environment increased at the University, the Environmental College held a lecture this past Monday in the Langone Center Forum involving professionals from various environmentally related fields.

Vesilind explained that his interest in the environment resulted from a passion which was sparked by the controversial book *Silent Spring*, by Rachel Carson. Carson's book attacked the use of pesticides in America during the mid 1900s, stirring a great deal of heated debate.

"I thought to myself, if they're saying these kind of things about her there's got to be some truth to what she's saying," Vesilind said.

Like other scientists and professionals from various fields, Vesilind began to try to make an impact on the improvement of the environment, utilizing his skills as an engineer. He explained to students that this effort has made his career much more fulfilling.

"As an environmental engineer, I get the chance to solve the problem," Vesilind said.

A chemical engineer at the nearby Lycoming County Landfill, Mike Hnatin, agreed. He stressed his interest in making an impact at the landfill, saying it was a great way to use his engineering skills as well as his other talents.

"I wear a multiple hat. I learn to deal with a multitude of different people," Hnatin said.

Hnatin and Vesilind were joined by another engineer, Dave Garg, professional engineer with the Department of Environmental Protection (DEP), specializing in solid waste management.

Garg told students of his track towards engineering, which started from a love for the environment. Garg was an avid backpacker and wanted to become a forester.

"I kind of landed in this career," Garg said.

Garg explained to students that he landed in engineering because it provided him with the opportunity

Arnie Vesilind, professor of environmental and civil engineering at Duke University, spoke to the Environmental College about environmental career opportunities.

"As an environmental engineer, I get the chance to solve the problems."

—Arnie Vesilind

to be working in the field which was where he most wanted to be. He also explained that his reason for picking his job was the ability to make a difference, and not his salary. He repeated a frequently asked question that he received from others in his field:

"How come you're still in regulation in a state system; don't you want to make a lot of money? The answer is basically no," Garg stressed.

Dave Long, who recently retired after almost 30 years of service with the DEP, spoke after Garg. Long was a Resource Management major at Penn State University, who left the University to try a variety of jobs, including a job at a waste water treatment plant, before he finally settled as a water quality specialist. Long stressed some of the skills that students needed to acquire in order to succeed, including "a good science background and writing skills."

However, Long introduced another quality to students that he thought was most important, determination.

"If you're determined to do it, you can do it," Long said.

Professor of English Glynnis Carr, presented the humanities to students as another area through which people entered the environmental field.

"Nature writing is very important. It is a real chance for activism," Carr said.

Carr summed up the entire lecture in several ways. She provided even more examples of jobs in the environmental field, such as teaching and writing, and she also accurately repeated the theme of every speaker at the lecture.

"In parting I wanted to reinforce the sense of making a difference," Carr said.

The professional's lecture proves that any academic discipline or any talent suits the field of the environment, but the main factor is desire.

A day in the life of a tubeworm

By Anita Malhotra

Friday's biology seminar presented an unusual topic: "Giant tubeworms from deep sea hydrothermal vents and cold seeps." The topic was actually very interesting.

Dr. Charles Fisher, associate professor of biology from Penn State University, gave an entertaining and informative lecture. He has been working on a number of projects in the Gulf of Mexico for several years. Much of his work consists of deep sea dives using a submarine and various other high tech gadgets.

Hydrothermal vents, where the tubeworms are concentrated, are found on ocean bottoms. This environment is the deep sea, where there is no light available. No light means no photosynthesis, which is what life on earth is based upon. These worms are huge, reaching lengths of four feet. So how do they survive?

The answer is through bacteria. Bacteria live with the tubeworms

in a symbiotic relationship. They use carbon dioxide as a carbon source and get energy from reduced chemicals. All of this provides the necessary nutrition for survival. In fact, about 99 percent of the nutrition is provided by the symbiotic bacteria.

The most important element utilized by the bacteria is sulfur. The sulfur provides an energy source for the worms. Here comes a logistical problem: the worms need sulfur, but they need oxygen as well. Sulfur and oxygen cannot coexist. The tubeworms solve this problem by living in an area of actively mixing water, the hydrothermal vents.

A tubeworm, like most other worms, is simply constructed. Their anatomy consists of a plume (muscular collar which contains the heart and brain) and a trunk filled with fluid, which is essentially a sac of bacteria.

The giant tubeworms are the fastest growing invertebrates on

the planet and represent an amazing amount of biomass. They grow in bushes or aggregates that can be up to eight feet in diameter. Fisher has constructed a landing device that can attach to the worms and measure tube growth. He has determined that they only grow approximately one centimeter per year, which means the huge bushes of worms have been around for centuries.

Fisher and his team at Penn State design and build all of their equipment. They have made landing devices, interstitial water samplers, and something called the Bush Master which can attach to

the aggregates and anchor the submersible. Many of his "toys," as he fondly calls them, are state of the art and he also uses them for his other numerous projects.

While studying the tubeworm, the team discovered a store of methane hydrate and methane ice on a large organism. The discovery of these hydrates was incredible and generated a great deal of publicity because they may be the fuel of the future. There is more carbon in these hydrates than any other fossil fuel reserve. In addition, Fisher also discovered a new species of worm that farms and grazes on the bacteria living on the hydrates.

STUDENT PRIZES AND AWARDS Fall, 1998

THE STEPHEN A. BAROWSKY PRIZE—For a junior demonstrating campus leadership.
Tracey Alan Gray

THE "MOLES" CIVIL ENGINEERING AWARD—For the civil engineering student whose academic achievement and application for the first three years show outstanding promise for a career in construction engineering and management.
David Michael Schwab

THE YARNALL PRIZE IN ENVIRONMENTAL AFFAIRS—To a junior or senior who has a high academic standing and has demonstrated leadership in and a contribution to environmental affairs.
Sonja Katharina Pieck

THE RALPH A. STILL AND ANNE B. STILL PRIZE—For the junior, majoring in English, who has the highest standing in English.
Jessica Lynn Minser

THE SAMUEL LEWIS ZIEGLER PRIZE—For the junior showing the greatest proficiency in English composition and literature.
Ellen Jane McWhorter

THE UNIVERSITY PRIZE FOR MEN—For the junior man showing the greatest proficiency in English composition and literature.
Christopher Elio Evans

THE BUCKNELL PRIZE FOR WOMEN—For the junior woman showing the greatest proficiency in English composition and literature.
Stacey Ann Waite

THE AMERICAN CHEMICAL SOCIETY UNDERGRADUATE AWARD IN ANALYTICAL CHEMISTRY—For the student who has displayed interest in and aptitude for a career in analytical chemistry.
Aimee Leah van Olden

THE BUCKNELL PRIZE FOR WOMEN—For the sophomore woman showing the greatest proficiency in English composition and literature.
Rachael Elizabeth Hicks

THE UNIVERSITY PRIZE FOR MEN—For the sophomore man showing the greatest proficiency in English composition and literature.
Matthew Donald Scheidt

THE SAMUEL LEWIS ZIEGLER PRIZE—For the first-year student whose preliminary examinations in English show the greatest proficiency in the elements of English composition.
Michael Allen Todrin

THE PRESIDENT'S AWARD FOR DISTINGUISHED ACADEMIC ACHIEVEMENT—established to recognize annually all students who have demonstrated, according to established criteria, high level of academic excellence.

Arts & Entertainment

CD Reviews *Rusted Root & Fuel*

By Matt Albert

Rusted Root: *Cruel Sun*
c 1992 Rusted Root Music

Rusted Root's *Cruel Sun* is another quality installment from one of the most unique bands of the modern time. Its sound is somewhere between alternative, rock and tribal music. Hailing from the Pittsburgh, the six members of Root use guitars, various percussion instruments, hand drums, wind instruments and a decent amount of bellowing to produce a very up-tempo brand of music. The band is also very environmentally and spiritually oriented, which contributes to their music sounding like something from an ancient tribal song of worship.

This fall is the perfect time to get to know the band, as they are performing at the University on October 2. Root has been characterized as a better live band, which I must agree after having seen them live in Pittsburgh. They instinctively draw energy from the crowd and return it in the form of an intense performance. This is the perfect opportunity for an aspiring Root fan to get a taste of the group before buying *Cruel Sun* or any other Rusted Root CD.

Looking more specifically at the songs featured on *Cruel Sun*, out of an available 11 tracks, I would recommend six as being songs not to skip. Track number two, "Send me on my way" is probably the band's most notable song. It features a well-known guitar intro with a unique and catchy refrain. This is one of the few songs Root has produced that does not sound like their usual tribal mix. Tracks three and eight are also good and are more along the lines of what made Rusted Root famous. Finally, the sleepers of *Cruel Sun* are definitely tracks seven, "Artificial Winter," and 11, "Back to Earth". These songs are much the same in that they both start relatively slow and simple but raise the intensity until the listener is fully absorbed by the music.

Nevertheless, this band is not always immediately loved, which may account for Root's somewhat limited impact on the trendy '90s scene. At first listen, the music can come off a little too different, but after a couple spins of the CD, the listener should start to appreciate *Cruel Sun*, even begin to like it.

I must admit the listener also has to be in a certain mood for Rusted Root's *Cruel Sun*. They are not the greatest band for studying to and they are not the most inspirational group, but for those times in-between, Root is perfect.

Advice: A definite pick-up if under 16 dollars.

Fuel: *Sunburn*
c 1998 Sony Productions

Released on March 18 of this year, *Sunburn* is the debut album for a new band on the alternative scene by the name of Fuel. In contrast to Rusted Root, Fuel sounds much more contemporary, featuring the more common array of instruments—a lead vocalist/guitar, a base guitar and a drum set.

Fuel definitely has the popular '90s sound, which makes it hard for the band to produce their own distinctive style. They attempt to break the popular alternative mold by dipping into the world of electronic rock and incorporating an electronic mix from time to time. This variation helps to give the songs an unusual character, but it does not break up the beat, but is used too infrequently to have a big impact. Fuel does, however, use a great amount of Matchbox 20-like emotion in their singing to connect on a higher level with the listener and prevent him/her from getting bored.

Track by track, *Sunburn* is a fair CD and a step in the right direction for a first installment. The winner on the album is undoubtedly track three, "Shimmer." The song, which is available as a single, uses an orchestral accompaniment as backup during the slow opening minute. With a sudden drop beat from the drums, what began as a modern love song suddenly does a 180-degree turn into a guitar-lead mix. As for the rest of the CD, numbers one, six and seven are in the same league as "Shimmer" and could tempt the listener to hit the rewind button. A few times, however, the group falls back to producing the same unoriginal sounds, thus hurting their overall appeal. Two or more tracks on the compact disc easily fall into the category of filler songs, while the remaining are mediocre.

In the end, Fuel seems to be a very promising group and their inaugural album *Sunburn* would be a nice addition to any collection. I would not be afraid, though, of holding off and waiting for better things which are likely to come.

Advice: Pick it up if it is on sale, but do not pay more than 12 dollars for it. It would not be a bad birthday gift to receive.

Invasion of the Pterodactyls

Beetna Kim—The Bucknellian

The cast of *Pterodactyls* have been hard at work practicing for their upcoming performances this Friday and Saturday.

From page 1

Any student who undertakes a showcase production will contend with a limited budget and an extremely short rehearsal period. From first rehearsal to opening night, the cast and crew is only allotted three weeks. Cast member Jen Schmermund '00 describes the process as "a complete challenge." Having participated in four-week rehearsal periods in summer theatre, Schmermund notes the difference lies in the necessity of keeping up with school work at the same time as rehearsing. "It's so hard to balance," she remarks. Even without homework, cast member Amy Gilday '00 notes that "for a full-length play, three weeks is really ambitious."

Thus, *Pterodactyls* charts new ground in several ways. The play itself delves into closeted issues such as homosexuality, denial and suicide. Presented in a factual manner, the fast-paced dialogue is thrown at the audience as though it's being shot out of an automatic ball machine set on rapid fire. Yet, surprisingly, audiences want to "catch" it. As Carpenter testifies, "I love the writing. It's very quick, intelligent dialogue juxtaposed with very intense emotional themes."

Carpenter also said that *Pterodactyls* delivers messages that need to be heard at this University. "These issues aren't displayed very openly on this campus; this is one way of breaking the bubble," he said.

The notorious bubble will sustain even more severe damage when playwright Nicky Silver arrives on campus. Carpenter began an email correspondence with Silver this past summer, getting advice and notes on directing the play from the best source possible. Eventually, Carpenter suggested that Silver come to the University to see his production and Silver accepted. As a part of this visit, Silver will conduct a workshop for aspiring writers on Friday, September 25 at 2 p.m. in Tustin Studio Theatre. All interested students, faculty and staff are encouraged to participate.

Silver will then attend the opening night production of *Pterodactyls*. Performing a play before the playwright is an unavoidably daunting task. Gilday explains that "performing is so intimate and to perform for the person who conceptualized the work is downright scary."

Luckily, the cast and crew has formed "a close-knit group" (cast member Ian McNaughton '01 observes). Working with everyone "has been a pleasure," he enthuses. Under the direction of Carpenter, Gilday remarks that, "we're all learning." McNaughton concurs, insisting, "our insights and interpretations have been welcomed." A production headed by a student director can allow such a mutual learning environment to exist. This type of experience not only benefits student directors, but actors as well.

Pterodactyls will be performed at 8 p.m. this Friday and Saturday night in Tustin Studio Theatre. Tickets can be purchased for \$1 at the door.

Visiting philharmonic orchestra features young violin prodigy

By Hillary Cuccia

The University is extremely fortunate to host the music of the splendid group of performers that compose the Rochester Philharmonic Orchestra (RHO) in its 10th Anniversary Gala Concert. This orchestra, in its 75th year, returns to the Weis Center for its second appearance.

Founded in 1923, the orchestra first began with accompaniments for stage productions and silent movies, as well as for classical music concerts in Rochester's Eastman Theatre. Today it is a nationally prominent symphony orchestra offering musical excellence that has repeatedly earned itself the ranking of one of the best in America.

The RPO operates on the belief that the power of music can enrich all our lives. Because of this principle, the orchestra does a great deal for its community in ways such as providing free, educational concerts to schools in western New York.

The orchestra has had a number of big name musicians perform with them in past years. Such musicians include Arthur Fiedler, Dizzy Gillespie, Andre Kostelanetz, Natalie Cole, Erich Kunzel, the Canadian Brass, the Smothers Brothers, Tony Bennett, the Moody Blues and Bernadette Peters.

Associate Conductor of the RPO, Daniel Hege, who will appear at the University this weekend, is dubbed one of America's finest young conductors. In the past, Hege has been honored twice by the American Symphony Orchestra League for innovative programming in his work with the Chicago Youth Symphony Orchestra. Programming and conducting over 80 concerts per year under the title of Associate Conductor with the Baltimore Sympho-

ny Orchestra, he

has also found time to work with other well-known orchestras including the Louisville Orchestra, the Louisiana Philharmonic, the Los Angeles Mozart Orchestra and California's Olympia Philharmonic Orchestra. Hege's current projects include his role as the music director of both the Hadsonfield Symphony in New Jersey and the Mid-Kansas City Symphony.

The RPO features guest soloist, 13-year-old Shunsuke Sato, who will be playing a 275-year-old Stradivarius violin that was lent to him by the Stradivari Society of Chicago. Sato began playing the violin at the age of two in Japan. After moving to the United States, he won the Philadelphia Orchestra Young Artists Competition at the age of ten. His other notable accomplishments include a feature role in a 3M *Comfort Strips* commercial which was nationally televised in 1997 in which he played the "Carmen Fantasy" with a bandage on his finger.

Sato now resides in Philadelphia and studies violin under Dorothy DeLay and Masao Kawasaki at the Juilliard School. His performances this season will include

photo courtesy of Hashimoto/N.Y.C.

Thirteen-year-old Shunsuke Sato will play a violin solo in Saturday's Rochester Philharmonic Orchestra concert.

a solo appearance with the National Symphony Orchestra and an appearance with the Vienna Chamber Orchestra.

The RPO will perform works of Beethoven (*Leonore Overture No. 3*), Wieniawski (*Violin Concerto No. 2*) and Dvorak (*Symphony No. 8*) this Saturday at 8 p.m. in the Weis Center. Tickets are \$25, or \$15 with a University I.D., and can be purchased in advance at the box office.

Information provided by the Weis Center.

Three a cappella groups combine voices

The Silhouettes

By Laura Jane Cardinal

This weekend, the three immensely talented a cappella groups on campus will join together for their annual three-part concert, Christy's. The Silhouettes, the Silhouettes and Two Past Midnight appear in this candid event in honor of Christy Matthews.

In past years the concert was performed only one night during Parents' Weekend, and consistently brought in a full house. Due to its overwhelming popularity in recent years, however, the concert will be put on twice this year.

Performances will be held at 9 p.m. this Friday and then again at 8 p.m. this Saturday in Rooke Chapel. Tickets for the shows will be going on sale for \$5 in the OCAP center, which is located on the third floor of the Langone Center. Be sure to purchase them soon since a full house is expected for both nights.

The new and veteran members of the Silhouettes practice for their upcoming Christy's concert.

By Laura Jane Cardinal

The Silhouettes and their vast talent is widely known and recognized throughout this University. The countdown is on for this weekend when they will make their most anticipated appearance at Christy's.

The all-female a cappella group is presently composed of 15 women with two members studying abroad this semester. Of course, even with the missing members the group has remained a strong bunch. Seniors Kate Cressman, Katie Hopper, Stacy Spatola and Jill Garipoli are back for their final year with the group. Juniors Jen Buoncontri and Chrissy Carter, sophomores Jina Lee, Alissa Yacko, Diana Schmit, Brett Russo and new member Amber Riley, and first-years Beth VanEpps and Megan Murphy make up the rest of the talent. The Silhouettes hold tryouts for any girls who are interested in the fall and again in the spring.

The girls have been practicing intensely for Christy's since arriving back on campus after summer break about one month ago. For the new members this year and for four girls who joined the group spring semester last year, this will be the first Christy's for them. According to Buoncontri, "All of the Silhouettes are very excited for Christy's. We are all looking forward to showcasing our new members and our new songs, and promoting our new CD."

The Silhouettes will be performing some of their older songs, but the bulk of the show will be new songs that they have never before sung at Christy's. The majority of their songs are recent ones by popular artists such as Jewel, Paula Cole, Billy Joel, Sarah McLachlan and other artists with a similar music style. Often the group takes the songs by these artists and personalizes them by creating their own arrangements.

This talented music group also has another amazing thing to be proud of, the release of their very own CD. The CD, recorded at the end of last year, is entitled *I Never*, and was released at the beginning of the semester. The CD, usually sold at the bookstore, has been temporarily sold out. Until the bookstore is replenished, the CDs can be acquired by contacting any member of the Silhouettes. The cost is \$12, and it contains some old music as well as some new songs that the group will be introducing at Christy's.

The Bison Chips

Members of the Bison Chips practice their vocal harmonies for the upcoming concerts on Friday and Saturday.

By Dustin White

The Bison Chips are back and ready for another outstanding year of musical entertainment. Next year will mark this outstanding, all-male a cappella group's 25th anniversary, and their talent demonstrates their growing foundation.

This year's 14 members comprise an extremely diverse group whose majors include everything from engineering to philosophy. The group is excited to have its leader, senior Whit Yost, back from a year abroad in Belgium. Other members of this year's Bison Chips include seniors Kevin Mahaffey, Billy Pfeiffer and Rolf Welch; juniors Colin Brokaw, Scott Pugh and Jay Van Druff; sophomores Chris Halldorson, Sean Kirnan, Jeff Leeman and Jim Ney; and new first-year members Matt Hoy,

Alex McCausland and Jordan Rice. The Chips are clearly very excited for their performance at Christy's this weekend. Pugh notes that, "the news of this weekend is that [Christy's] is two nights instead of one. We were initially apprehensive about filling the show with people both nights, but we're really excited that a lot of interest has been shown."

Look, or listen, for their performance to include some of the Chips' favorite songs including material by Dave Matthews, Phish and Squirrel Nut Zippers as well as traditional a cappella songs such as "Coney Island Baby" and "Africa." Pugh commented, "We're trying to make the show fun for both nights. We're singing different songs so the Bison Chips will come twice."

The Bison Chips have already pro-

duced three CDs, all of which are available for sale in the Bookstore: *When the Chips Hit the Fan*, *The Bison Chips: Twenty Years and the group's first CD*, *Dare to Be Dumb*. The group is currently working on their fourth release (yet to be titled), which is due out this coming spring.

In addition to their performances here at the University, the Bison Chips also travel extensively to colleges and universities throughout the northeast and have performed for thousands of people across the nation. Although it is too late to join this year's Bison Chips, the group holds auditions every September for interested students. For more information, visit the Bison Chip's home page at [HYPERLINK http://www.orgs.bucknell.edu/chips](http://www.orgs.bucknell.edu/chips).

Perspective of a human puppet

By Sarah EnDyke

He was an outlandish looking man with a gangly beard, an accent that made his "w's" sound like "v's" and hair that looked like it had never seen a brush. Yet the twinkle in his eyes and the enthusiasm in his voice proved to be the most powerful feature of all as it showcased his ability to motivate his players and captivate his audiences.

When Peter Schuman of the Bread and Puppet Theater first asked me to dance with a cardboard cut out last weekend, my first thought was, "sure, why not humor myself?" However, the next day he asked me if I could play a chair. Puzzlement swept across my face. A chair? I've played many roles in my life from little boys (back in the day when I looked like a little Asian boy because of my short hair) to an otter, but never a chair. Then, like an abstract dream, visions of a previous lesson from my Masks and Masking class slipped into my head...

The guest professor of the day started to leap and spin across the room screaming, "Pretend that you're a square! Walk, talk and act like a square!" Naturally, the first thought in my head, aside from someone's had too much caffeine that morning, was why question this fine professor? So, like the confused, conforming freshman that I am, I followed. For the first time in my life, I was what I never thought that I could be—I was a square. Yet in taking on this new role, I had to open my mind and change my perspectives. I had to develop new feelings, different thoughts and walk in the footsteps of something I never thought that I could be. Upon this reflection, I reasoned, why not become a dancing chair?

above and right: Students participated with the cast of the Bread and Puppet Theater to produce unusual plays with a political message.

Schuman then asked me if I wouldn't mind playing a little lamb (talk about pushing limits). Once again, I heard the sweet sound of chimes and I sailed back into my memories...

I was placing a mask on my face that strongly resembled a little child. "Breathe the mask, become one with the mask," urged Elaine Williams, associate professor of theater, as I playfully jumped and scurried across the room. For 15 minutes, I could do whatever I pleased. I could pretend to play with toys, jump and skip, or even kick somebody in the leg and get away with it. For that 15 minutes, I felt and believed that I was a child. Now it was time for me to feel a little bit more sheepish.

Donning the costume of a little lamb, "breathing the mask" and capturing the mask's own spirit and essence, I danced fearlessly around the lions, trembled at the cities and rescued gardens. Although I did not entirely agree with some of the views of the show, I reasoned that I was just another actor, hiding my everyday self beneath a cardboard face, portraying

someone other than myself and my beliefs.

As show time rolled around I was extremely nervous, as were the other players I'm sure. These nerves were present not because we didn't know our parts, since we had practiced days and days before the show for hours, but because we were unsure of how we would be received by the audience. What would they think when they realized that the puppet show that they had brought their families to see was not merely about puppets, but about world affairs, tragedies, ignorance and the greed of capitalism? I myself did not care much about the downplay about capitalism, but I found that there was another message contained in the story and characters.

This message said, "no one walks through this world alone. Everyone is held responsible sooner or later for everyone else."

During my time with the Bread and Puppet Theater, I not only learned how to open my mind and change my perspectives, but I also learned a key point in life: that my thoughts and actions effect more than I will ever know.

Movie and video reviews

Cape Fear, Rush Hour & The Last Days of Frankie the Fly

By Aaron Spak

Cape Fear

Most people recognize the fairly recent version of *Cape Fear* starring Nick Nolte and Robert DeNiro. If you liked that one, you'll love the original version.

Robert Mitchum and Gregory Peck starred in the film in 1961. It is available in the classics section of the video store, probably the most under-used category of movies. An old black and white movie creates something that no amount of Technicolor and digitized special effects will ever reproduce. Older films focus more on the acting and the story rather than with the biggest and best explosion sequence. Don't get me wrong; I love all of that. There's just a time and a place for everything.

Mitchum plays the role of the revenge seeking ex-con who terrorizes Peck's small town lawyer. Mitchum exemplifies Hollywood's original "tough guys," and his screen presence adds a great deal to his excellent performance. His crafty and vicious character drives the movie to its suspenseful limit. Notably, movies like this invented all of Hollywood's current techniques of suspense and thrill.

This film contains the intensity of a Hitchcock film, but differs because Hitchcock's specialized in psychological thrillers and to this day has no equal. Director J. Lee Thompson's *Cape Fear*, however, adds more elements of action in a less "spooky" manner.

The film's climax contains one of the best "cat and mouse" sequences that I've ever seen committed to film. Mitchum's terrorizing efforts lead him to hunt down Peck and his family to a secluded houseboat where every time you think it's over, it's really just beginning.

Telly Savalas makes an appearance as well, playing a private detective.

The Last Days of Frankie the Fly

If you've read this column before, you know that I love mob movies. Most of them, involve DeNiro or Joe Pesci in some incarnation, but I managed to find one that didn't. Dennis Hopper stars in *The Last Days of Frankie the Fly*, an independent film with a

star studded cast. In addition to Hopper, Kiefer Sutherland, Daryl Hannah and Michael Madsen headline.

Hopper plays Frankie, the lowest man on the totem pole in Sal's (Madsen) organization. Frankie is just a go-for who is getting tired of it. He wants to rise up. But, there's a problem: he's just not a tough guy. Try as he may, he only provides some amusement for those above him. Anyone who has ever felt put down or shut out, or anyone who just wants some respect should watch this movie.

Frankie befriends a porno actress (Hannah) and convinces her director (Sutherland) to help him with a plan to eliminate Sal. It's a fairly common premise, but it comes off very well. The plot twists make the movie interesting, but not confusing. Madsen acts as his best in the role of a real sicko (remember *Reservoir Dogs*). Frankie's plan may make them all very rich; then again it may get them all killed.

Rush Hour

On the big screen, Jackie Chan puts on a show like none other. *Rush Hour* has all of his trademark stunts, but not as the sole focus of the movie.

Chris Tucker (*Friday*, *Money Talks*) stars opposite Chan as a loud mouthed LAPD detective. Tucker's loud, manic, fast-paced humor mixes well with Chan's fast-paced—well—everything.

Hong Kong Inspector Lee's (Chan) friend moves to the United States to work in the Chinese consulate, only to have his daughter kidnapped. The FBI takes over the case, but Counsel Han wants to have one of his own men on the case. He proceeds to fly in Lee, much to the chagrin of the FBI. They then assign the task of keeping Lee busy to Detective Carter (Tucker) who believes his role to be a top secret job. As you may have guessed, they go on to solve the case on their own. Made in the same formula as *48 Hours*, *Rush Hour* has a focus more on comedy than a hard edged police story.

By the way, if you don't already know, Susquehanna has DTS digital surround sound in one of their theaters now. It makes the movie-going adventure much more rewarding.

Bison fall to Fordham for first loss

Offense comes up short, defense allows three first-half touchdowns in 20-17 loss

By Tim Scheu

The Bison were undefeated going into their game against Fordham, coming off two dominating wins against Duquesne and St. Mary's (CA). Bucknell hoped to take this momentum into their first Patriot League game against Fordham.

However, the orange and blue team that took the field Saturday was a stark contrast to the one that ran up 420 yards against the Dukes and sacked the Gaels quarterback eight times. In their 20-17 loss to the perennial league doormat, the Bison gained a measly 273 yards of total offense, allowed three first-half touchdowns and turned the ball over twice, one of which was returned for a touchdown.

Head coach Tom Gadd further emphasized this point, "Our kids played hard and we established field position early in the game, but our offense didn't do anything with it. Twice we had the ball around midfield, but we did not get any points."

Gadd continued, "Defensively, we played well in spurts, but we are a young team and when something is not going right, we don't respond very well. Once they (Fordham) got a couple of first downs, we couldn't stop them."

Fordham made a statement in the first quarter with a 13-play, 70-yard drive, culminating in an eight yard run by Rams' fullback Randy Cardona with 1:30 remaining. They followed that possession with a seven-play, 80-yard drive that ended with a 19-yard

pass from Steve O'Hare to Chris Aufiero.

Suddenly, the Bison found themselves down two touchdowns with little more than seven minutes remaining in the first half. After receiving a Rams' punt, the Bison attempted to get back into the game. But at that point, sophomore quarterback Lucas Phillips' pass was intercepted by Fordham defensive end Mike Shelley and returned for a touchdown.

Bucknell used the remaining 56 seconds to drive into Fordham territory and ended the first half on a 41-yard field goal by Ross Coleman '99.

Early in the second half, it seemed that Bucknell had grabbed the momentum as Don McDowell '00 replaced the ineffective Phillips. McDowell led the Bison to a 14-play, 60-yard drive and scored on a six-yard touchdown scamper. Later in the quarter, one of the Bison drives appeared to have stalled. But rather than calling for a traditional punt play, Coach Gadd made a gutsy call and went with the fake. The gamble paid off and after Erich Muzi '99 received the snap, he ran 52 yards for a Bucknell score. These moves brought the Bison back to within three points, giving them a chance to win the game.

At that point, the Fordham defense stepped it up and held the Bison scoreless for the rest of the game. That, along with a costly Bucknell fumble late in the game, allowed the Rams to post their second victory of the year.

Although the Bison did have

McDowell '00 made an immediate impact when he entered the game.

a good second half, their 17 points were not enough. "We lost to Fordham because they wanted to win more," Gadd said.

There is some concern that this year's squad lacks the desire that epitomized the teams of the past few years. "For the past three years the Bucknell football program has felt that they had to

prove something. Right now we are playing with the attitude that we don't have anything to prove," Gadd said. "You don't have to lose much of an edge to go from a winning team to a losing team."

This Saturday the Bison will try to rebound when they host Columbia for Parents Weekend.

Women's cross country races to third place at Penn State Spiked Shoe Invitational

By Rose Sedo

Every successful team knows that you win some and you lose some. However, what it boils down to is which races a team can afford to lose and which ones it must win. Ultimately, this concept is what is of utmost importance.

Although the Bucknell women's cross country team placed third in last Saturday's Spiked Shoe Invitational at Penn State and the men's junior varsity team placed fifth, neither Coach Gulden nor the team considers their performances to be disappointing.

In fact, individual results proved to be anything but disappointing. Personal bests were achieved by almost all when compared with last year's results. Leader Julie Sweitzer '99 finished second overall with a time of 18:08.62, less than four seconds back of Edinboro's Amy Perry, who crossed the finish line in 18:05.01. Jen Hart '00 ran an impressive 18:47.30 to catch 16th place, while Carly Graylock '00 clocked in two seconds later for 18th place. Captain Annie Hamlin '99 also placed in the top 20 individually for the Bison.

Overall, the Bucknell women finished third out of eight schools, with 72 points. Finishing first and second respectively were Penn State with 32 points and Edinboro with 50 points. On the men's side, only the Bucknell junior varsity raced because of a change in schedule. However, even without their top men, the JV team still finished fifth out of 12 teams last Saturday.

Individually, Bill Bartsch '00 led the JV team's effort with an impressive 14th-place finish with a time of

27:13.00.

Although first place this early in the season for both teams would have been nice, especially for the women, Coach Art Gulden prefers to remain realistic. "Had we beaten any one of those teams, I truthfully would have been surprised. They may be a lot more talented than we are, but we still aren't prepared for them," Gulden said. "For this being only the second meet of the season, I'm satisfied with the results."

Still, he realizes that some of the girls are starting to worry that a third place finish might put a dent in their strides. "Some of the girls may be disappointed, but they don't know the real truth of what went on," Gulden said. "The meet this year was a week earlier than last year's and it was hotter as well. Disappointment is okay, just as long as it doesn't become frustration."

Hamlin echoes Coach Gulden's confidence in the team. "We ran solid races, and our packs were tighter than last week. We have a lot of work to do, but we'll be ready by Halloween for Patriot Leagues. That's the meet that really matters to us," Hamlin said.

As far as the JV men's team is concerned, Gulden believes that they ran pretty well considering they were missing their twelve best runners. "Everybody could have folded up like a tent without our best guys at the meet, but we didn't," Gulden said. "There is no doubt that we could have pounded Penn State into the ground had we had our whole team there, but when you look at why we did it, temporarily splitting

See X-COUNTRY, page 19.

Courtesy of Bo Gibbons

The Bison made great strides this week at the Penn State Spiked Shoe Invitational. The women placed third and the men's JV was fifth.

The Streak Ends: Cal Ripken, Jr., perhaps sports' greatest ironman, ended his streak of 2,632 consecutive games played on Sunday night against the Yankees. Ripken had decided days earlier that he would sit out, but no advance warning was given. Once it became evident that Ripken would not be playing, the Yankees emerged to the top of their dugout and applauded. Ripken stood up and tipped his cap toward the Yankees, and was greeted by a standing ovation by fans at Camden Yards. But don't expect Ripken to be taking too much time off. "Now that I know what it feels like I don't want to sit out a game and watch anymore," Ripken told CNN. Ripken broke Lou Gehrig's record of 2,130 games on September 6, 1995. Taking over the consecutive games streak is Albert Belle of the Chicago White Sox, who has played in 327 straight games. Belle will only have to play for about 15 more years to catch Ripken's record. Good luck.

Goodbye Flo Jo: Florence Griffith Joyner, affectionately known as "Flo Jo", died Monday of an apparent heart seizure. The track star who captured America's hearts with her flamboyant style and amazing athleticism suffered from asthma and collapsed on a flight in 1996. The wife of Olympic gold medalist Al Joyner and sister-in-law of track and field legend Jackie Joyner-Kersey, Flo Jo won three gold medals at Seoul and still holds the world records for the 100 and 200-meter dashes. An autopsy was performed, but no results were released. Rumors have been circulating concerning Joyner's alleged steroid use and its possible connection with her death, but her family vehemently denies those allegations. Flo Jo will be remembered not only for her skintight suits and six-inch painted fingernails, but for the athletic drive that made her a champion.

Can't We All Just Get Along?: National Basketball Association owners and player's union representatives have been ignoring each other this summer, and the consequence will be the first cancellation of games in NBA history. Deputy commissioner Russ Granik and union president Billy Hunter tried to meet earlier this month, but were hindered by too many complications. One dispute being negotiated concerns guaranteed contracts; a total of over \$800 million has not been paid to numerous NBA players. A ruling from arbitrator John Feerick is not expected until early October, so training camps will be forced to push back their October 3 opening. Commissioner David Stern, who has bailed the NBA out of lockout threats in the past, has not been able to mastermind a solution. So maybe our most stable league isn't so stable.

Gator Hunting Season: It took the Tennessee Volunteers six years. Not even the great Peyton Manning could lead the Vols past the SEC powerhouse Florida Gators. It looked like the Gators' domination would continue this season as well. But no one told that to Jeff Hall. His 41-yard field goal in overtime put the Vols ahead for good, 20-17, and won the game, just as he did two weeks ago against Syracuse. Tennessee's defense overwhelmed Florida's usually potent offense, sacking their quarterbacks five times for a 54-yard total loss. The Gators were stopped dead in their tracks, rushing for minus-13 yards and turning the ball over four times. Linebacker Al Wilson was the defensive star, credited with three forced fumbles. Although the Vols only gained 99 yards in the first half, they walked into the locker room tied with the Gators at 10 apiece. After a third quarter score by the Vols, Florida quarterback Jesse Palmer connected with receiver Travis McGriff to tie the score at 17. Despite constant QB switches, McGriff was able to accumulate 176 yards on nine catches. The fourth quarter went scoreless for both squads, and Florida threatened in overtime. After Hall's field goal, Florida pushed downfield, setting up Collins Cooper for a 32-yard gimme. His kick sailed wide left, and the record-setting crowd of over 107,000 stormed the field and tore down the goalposts. Florida currently ranks dead last in Division I-A in turnover ratio, and has dropped from second to eighth in the latest Associated Press poll.

Still Chasing: Did you think that because they've both hit their 62nd mean they're going to stop there? Well, think again. Sammy Sosa belted his 64th and 65th on Wednesday, once again tying him with Mark McGwire. Sosa broke his 0-21 slump in style, tying a major league record with his eleventh multiple home run game of the season. Big Mac cracked his 65th on Sunday night and apparently hit his 66th as well, but the second base umpire called it back because a fan reached over the railing. The umpire said the ball wasn't going over the designated home run line. Sosa and the Cubs have three games remaining in Houston and are still tied with the Mets for the wild card berth. McGwire and the Cardinals will face the Montreal Expos in their final four games of the season.

Still Leading the Pack: The Ohio State Buckeyes are once again at the top of the Associated Press College Football Poll. Following the Buckeyes are the Nebraska Cornhuskers, who moved up one slot to second place following Florida's loss to Tennessee. UCLA is third, Tennessee fourth and Kansas State remains at five. Rounding out the top ten are LSU, Penn State, Florida, Washington and Florida State. This is the first AP poll in over eight years in which a team from Florida is not ranked in the top five.

Compiled by Brian Watson

Quote of the week:

"These are the lowest class people I've ever seen in my life."

Denver defensive end Neil Smith said after he had golf balls thrown at him during the Broncos' 34-17 win at Oakland.

Bucknell men's tennis opens season in impressive fashion

T.K. Kelly '00 will attempt to lead the bison to a Patriot League title.
By Andrew Kazior

The Bucknell men's tennis team began their fall season against top competition at the Cornell Invitational. The tournament featured matches against top teams from Yale, Cornell and Penn State.

The Bison proved to be strong as they won and were successful in many tough matches. The team recorded four first round victories, and played well against many strong competitors. "Considering we faced eight quality teams, I have to be pleased with the majority of the team," head coach Bob Hammerlee said.

Bucknell's strong showing was led by many individuals. Justin Quandt '00, recorded a first ever Bucknell win over an Ivy league opponent.

Men's soccer downed in first league game

Bison defeated by Holy Cross, unable to rebound against Mt. St. Mary's

By Justin Knox

The Bucknell men's soccer team got off to a rough start on the road for their first Patriot League game of the season, as they fell to Holy Cross 3-0 last Saturday. Holy Cross jumped out to a 2-0 lead 25 minutes into the game.

In what was described by Bucknell coach Craig Reynolds as a "disheartening" game, Bucknell struggled to mount an offensive front. Bucknell came into the game feeling that they had a definite chance at winning their league opener. "We just weren't as intense as we had to be, it was disappointing for us, we played sloppy and never let ourselves get into the game," Reynolds said.

Holy Cross added a late goal to tally the score to 3-0, handing Bucknell a loss.

Tuesday, Bucknell tried to rebound from the loss as they battled Mt. Saint Mary's on the road in a non-league game. But the bison came up a bit short. Saint Mary's is "a good team, with speed, strength and skill," Coach Reynolds said.

Bucknell came out of the gates playing much better. "We played harder and better the first ten minutes of the game at Mt. Saint Mary's than we played in our game against Holy Cross. We were much happier with our intensity against Mt. Saint Mary's," Reynolds said. That feeling was shared by Buck-

nell sophomore midfielder Sam Graziano. "We really came out clicking against Mt. Saint Mary's, passing, ball control, everything," he said. "I think everyone was happier with our play the first 10 minutes or so of the game. We were really dominating them."

The game took a turn for the worse for Bucknell, though. On virtually their first real offensive threat, Mt. Saint Mary's scored and followed up six minutes later with another goal. "That really took the

wind out of our sails," Graziano '01 said.

A red card foul against Bucknell did not help matters, as the Bison had to play a man short for the rest of the game. Bucknell goalkeeper Nate Fitzgerald '00, who came in after the red card, recorded 18 saves for the blue and orange, as he held Mt. Saint Mary's to one goal for the rest of the game.

"I saw a lot of positive things in our game against Mt. Saint Mary's," Reynolds said. "We had

more players step up and we just have to keep our heads up and try for a big win our next game."

Bucknell faces another Patriot League foe this weekend as they battle Colgate on Saturday at 4 p.m. Bucknell is trying to improve on their 1997 record of 6-11. "Our main goal this season is making it to the Patriot League Tournament, so we really need to bounce back after losing our first Patriot League game to Holy Cross," Graziano said.

The men's soccer team will play their second league game of the season when they face Colgate on Saturday.

Women's golf continues on road to success

By Danielle Dilkes

On Tuesday Sept. 15, Bucknell's women golfers made their debut as a varsity team. The girls played simultaneous dual matches against Mount Saint Mary's College and Saint Francis College.

The Bison are trying to improve on last year's third-place finish in the Patriot League. "We expect to finish in the top three and I'm not ruling out one or two," Hammerlee said.

The team definitely appears to be determined for another strong season. The next test is at the East Coast Athletic Conference Open at Vassar, October 2-4.

Bucknell's Hilary Mainka '02. When asked about the match, Mainka was "very pleased with [the team's] first performance as a varsity golf program. I'm excited to be a part of the new Bucknell tradition, and sure the girls will go a long way. Since we did well, I see us going on to bigger and better places as a whole team."

In addition to Mainka, Bridget O'Mara '02, Heather Mann '01, Chris Boschen '99, and Sara Horan '01 helped the Bison defeat Mt. St. Mary's with scores of 95, 96, 113, and 125, respectively. However, only the top four scores are used to calculate the team's total. "I would like to have beaten St. Francis," Bison head coach Brad Tufts said, "but we played fairly well and I am really pleased for our first time out. I have seen improve-

ments and expect to keep it up."

Keep it up they did at the Dartmouth Invitational last weekend. The Bison finished 10th of 14 teams, coming in only 16 points behind Mount Holyoke and defeating Dartmouth's second team, as well as Harvard, Bryant, and SUNY-Albany. Being the only first year golf program in attendance, and due to the highly competitive level of the tournament, Bucknell was not seen as a real competitor among top teams such as Yale, Hartford and Princeton. However, Coach Tufts feels as though the girls "did well and let [the other teams] know we'll be around."

The improvement which Tufts wants to see from season to season was projected even from day to day last weekend; four of the five golfers' scores improved from Saturday to Sunday. Mainka, who lead the team on Saturday with a score of 87, held her place in the front of the Bison pack on Sunday with a solid 81, bringing her invitational total to 168. O'Mara split 95 and 86, Mann shot 93 and 104, Christine Freda '01 scored 110 and 99, and Boschen tallied 117 and 109.

With a team total of 755 points earned and over 1000 miles traveled, the Bison returned home to prepare for Sunday's Patriot League Individual match. The team will take on two Patriot League teams, Lehigh and Lafayette, and then a non-league dual match against the University of Maryland-Baltimore County. The matches will begin at 8 a.m. at the Bucknell Golf Course.

Field hockey rebounds from loss to defeat LaSalle

By Sarah Chance

With a record of 3-3, the Bison field hockey team has opened their season with tremendous potential. While losing to Drexel and Towson, the Bison defeated Davis & Elkins and Columbia.

Last Saturday, the team was defeated at Holy Cross. The Crusaders came out strong early in the game, scoring their first goal at 0:36. They managed to put in three more goals late in the first half, but were held to one goal late in the game. Holy Cross outshot the Bison 18-10 and led in penalty corners 12-5.

Sophomore Brett Russo expressed her frustrations with the score of the game. "Even though we had a lot of shots on goal we didn't capitalize on them, which made it difficult for us to put the ball in the net," Russo said.

However, the 5-0 score was not a true reflection of the team's ability, according to head coach Heather Lewis. "We dug ourselves into a hole early in the game," Lewis said. "We got beat by a very good team, however I don't think that Holy Cross was five goals better than us."

The game was played on an artificial turf field which placed the Bison at a disadvantage. "Holy Cross is a turf team, we are a grass team," Lewis said. "This puts us at a slight disadvantage when we play on the road."

Starting at center midfield, co-captain Jen Zimmerman '99 came out very strong. "This is the best

The Bison will be on the road this weekend to take on Lafayette.

game I've seen her play in three years," Lewis said. Maureen Breslin '99 stepped up, saving 13 goals despite letting in five.

After the disappointing loss at Holy Cross, the Bison showed their versatility and strength as they bounced back to defeat LaSalle at home, 5-0. Breslin recorded her third shutout of the season, while Dena Ebert '02 collected her first hat-trick. Freshman Larissa Carso was able to score 10 minutes into the game with an assist from co-captain Katey Twombly '00. Ebert scored two more goals in the half, her first being assisted by Russo.

Marissa Linda '02 remarked about the team's successful comeback from their loss at Holy Cross. "Our attack was strong at being in the perfect places for deflections," Linda said. "Our back sides came up and did overlapping which helped by making more of an offense."

sive threat when we went out there to play."

All five goals were scored by freshman, showing how aggressive and athletic this year's team is. "This team is a very young team which is more athletic than teams I've had in the past," Lewis said. "We are very balanced in all of our classes. Our lineup is very versatile, which is a good thing."

The Bison outshot the Crusaders 20-7, although LaSalle held a 9-8 advantage in corners.

The orange and blue play their next game at Lafayette on Saturday. Last year, the Bison beat Leopards for the first time in over 15 years.

"It will be a battle," according to Lewis. "They have always been one of the better teams in the league."

Field hockey coach gains national recognition

By Peter Van Emburgh

Coming off a 5-0 win against LaSalle on Tuesday, field hockey coach Heather Lewis is optimistic about the team's success. Lewis is also excited about her recent appointment as President of the National Field Hockey Coaches Association (NFHCA). In January, Lewis will begin her term that will last through the year 2000.

Lewis will begin her newest challenge starting in January. The NFHCA serves all levels of field hockey competition from the NCAA to the Junior High School levels. She looks forward to helping the sport grow with innovative ideas, goals and accomplishments. Lewis will continue coaching the Bison and believes that her new position will be beneficial to Bucknell and to the team. "She is the most organized person you'll ever meet. She is so organized and dedicated not only to the team but to the sport as well," Maureen Breslin '99 said.

Lewis was a standout at the University of Maryland during her field hockey career. She collected Regional All-American and All-Atlantic Coast Conference honors in addition to being a team captain and an All-ACC Academic selection for three years. After an intercollegiate assistant coaching stint at the University of Massachusetts, she was appointed to the athletic staff at Bucknell. This is Lewis' seventh season coaching at Bucknell and her third season of primarily coaching field hockey.

"She's very conscious about having a good field hockey program," Maureen Higgins '01 said. "You can tell that just by how much she cares about us."

The field hockey team has a large portion of freshmen this year. "They are the most athletically gifted class I have brought in ever," Lewis said. Her expectations for the freshmen include "having them look back in four years and feel good about their athletic experience on the Bucknell field hockey team."

"The freshmen have come in, worked hard, been dedicated, excited to play and have gained confidence, especially in the last few days. It is great to have them," Breslin said.

Her top goal going into each season is to win the Patriot League Tournament. In order to do that, she aims for the team to qualify by finishing as one of the top four teams in the seven team league. Her main goal for every practice, every

Heather Lewis has gained national acclaim for her success in field hockey.

game, every individual is "to play consistently better each day." She uses the term "success" to explain Tuesday's game against LaSalle. "Success is coming out with confidence after being beaten badly by Holy Cross and earning a very solid win. It was a pleasure to watch the satisfaction on the players' faces throughout the game."

A Quaker Voice -

When we are, however, able to accept being accepted, able to receive the loving, listening presence of God both embodied in others and hidden in our hearts, we experience God as Love. The experience of such love results spontaneously in gratitude, praise, and joy. This is not the "duty of being grateful" I'm speaking of. I mean an upwelling of heart-breaking, heart-opening thankfulness and joy that such love could be, that we could be in it, that it could be in us, that we are all in it together.

These feelings will find expression. Joy may issue as tears that are, in themselves, a sign of the overcoming of ego. It may lead to almost any kind of creative expression in movement, artistic media, or simple reaching out to others, either in physical embrace or in deeds of love.

Excerpt from Patricia Loring, *Listening Spiritually*. BX 7748 .M92 1997

NEW YORK CHIROPRACTIC COLLEGE

A Healthy Investment in Your Future

If you're looking to continue your education with an advanced degree in health care, consider New York Chiropractic College. It's a solid choice and a wise investment in your future.

NYCC:

- Boasts a curriculum with an excellent balance among the Art, Science, and Philosophy of Chiropractic.
- Employs talented and diverse faculty.
- Features modern, state-of-the-art facilities.
- Is a fully residential campus located on 286 acres.
- Is conveniently located in the scenic Finger Lakes region of Central New York.

How many crimes are enough?

What is the deal with professional sports these days? Aren't their governing bodies familiar with the concept of justice? While crimes are becoming increasingly common, it seems that the consequences are becoming less strict. In the most recent events surrounding Mike Tyson, boxing officials are considering giving him his boxing license back. Their decision will be based upon a psychiatric evaluation that will attempt to determine whether or not he will "snap" again in the ring. Tyson was quoted as saying, "Trust me, this won't happen anymore. I've learned, man. I'm sorry. I'm so sorry." In addition, he declared that if his license was reinstated that he would "spend the money feeding the disabled and his kids." Honestly, is it possible that Tyson is the changed man he claimed to be? Let's take a moment to examine his past record:

Commentary

Tim Scheu
Sports Co-Editor

In 1992, Tyson was convicted of rape and served three years in an Indiana prison. After converting to Islam, he claimed that he was a new man. During a boxing match last year against Evander Holyfield, Tyson chomped on Holyfield's ear, not once, but twice. As a result, Tyson was disqualified and his license was suspended.

And finally, in August Tyson allegedly assaulted two men after his wife's Rolls Royce struck their car. This lawsuit is also pending.

When reading Tyson's rap sheet, one question comes to mind. Why is it that the boxing world is so quick to disregard his past? I am confused.

This is not the only incident involving violence and sports. As all of you probably know, Latrell Sprewell was the center of a substantial controversy involving his coach, P.J. Carlesimo. While a player for the NBA's Golden State Warriors, Sprewell strangled Carlesimo after becoming enraged with Carlesimo's coaching style. After leaving the site of the incident, Sprewell returned in attempt to confront Carlesimo for a second time. At that point, Sprewell was restrained by his teammates and immediately suspended for ten games.

After further review, the Warriors decided to terminate Sprewell's contract, which would potentially cost Sprewell \$24 million. The NBA then added a one-year suspension to the aforementioned punishments.

Feeling that he was somehow wronged in the punishment process, Sprewell appealed the league's decision. After a lengthy hearing, arbitrator John Feerick ruled in favor of Sprewell, and shortened the sentence to 68 games. Feerick also voided the Warriors' decision to terminate Sprewell's contract and made him a member of the team again.

A final example of violence and misconduct involving a professional athlete involves Dallas Cowboys' wide receiver, Michael Irvin. Irvin's rap sheet is nearly as long as Tyson's:

In July 1996, Irvin pleaded no-contest to felony drug charges. The incident that brought the case to trial allegedly involved topless dancers and cocaine.

In December 1996, a woman accused Irvin of being an accessory to rape. She claimed that Irvin held a gun to her head, while his teammate Erik Williams raped her. The two men were cleared, when Dallas police revealed that the charges had little merit.

In July, 1997, Irvin was accused of assault when he allegedly punched a man in the chest and refused to release him until security guards arrived. The event took place just outside a San Francisco nightclub.

Even after all the events took place, Irvin missed a mere five games and is presently enjoying the benefits of a contract that included a \$4.5 million signing bonus.

How is their behavior of Tyson, Sprewell and Irvin suggestive of a professional athlete? Why is it that these men get second chances, and even sympathy, when committing such heinous crimes?

One possible reason is that those who commit crimes attract attention. Realistically, more people would watch a Tyson-Holyfield rematch than some random challenger fighting for the heavyweight crown. As a result, the boxing world would be a little more forgiving if they receive the revenues that would be generated by Tyson's return to the ring. This example suggests that morals are set aside, and that justice in professional sports is driven by the marketability of the accused.

Furthermore, we could also examine the very nature of sports. Through playing sports, many people relieve aggression through healthy competition. In higher levels of competition, people have to be more aggressive in order to perform at their highest level. For example, the nature of boxing dictates that the victor must physically dominate the individual that is threatening him. It may be the case that such athletes have trouble separating their game face from their off-the-field persona. Their aggression may be misplaced at times and crimes will result. We, the fans, play witness to this and because we are used to seeing them in their natural element, we are more likely to forgive them.

One could also credit society with the blame. We have a certain obsession with violence. Whether on the television, in video games, or on the big screen, it is everywhere. Even the individuals we label as heroes have often killed or maimed others. Because we trivialize violence, we are then more likely to forgive and forget. We do not understand the true nature of their crimes until it happens to someone dear to us. This mindset is what allows these athletes second, third and even fourth chances.

While I have attempted to fully explain the justice system of athletics, this discussion merely scratches the surface. The world of professional sports is dissimilar to that of any other profession. The athletes participating make more money and can get away with murder. Who is to blame?

Water polo goes 4-0 at BU Invitational

Blixt '99, Greditzer '01, Permisohn '01, and Watts '00 lead the Bison to 7-5 record

Paige Cull-The Bucknellian

Brian Baker '99 and the men's water polo team had an impressive showing at the Bucknell Invitational.

By Brian Watson

The men's water polo team trounced their opposition at the Bucknell Invitational last weekend, going 4-0 and upping their record to 7-5.

The Bison entertained capacity crowds at the Freas-Rooke Pool by

winning all four games by at least six goals.

"I'm very happy with how we played this weekend," head coach Mike Wooster said. "It was a nice way for our seniors to end their home water polo careers."

On Saturday morning, the Bison defeated Salem-Teikyo, 12-6. Tate Greditzer '01 led the way with three

goals on four attempts, while Josh Watts '00 and freshmen Ryan McCarty and Bill Ruth added two goals apiece. Zach Blixt '98 played well in goal, stopping four of seven shots and contributing five steals.

The Bison continued on later that morning by pummeling Boston College, 12-6. McCarty and his brother Justin '01 each scored four

goals and co-captain Kevin Permisohn '01 chipped in with four assists and three steals.

Bucknell cruised on to another victory over Lehman College. Alex Bozic '00 tallied four goals on six attempts and added three assists, while Halsey Otto '99 contributed five steals and two assists. Greg Anderson '01 and Dave Kennedy '02 held the Lehman squad to only four goals.

The Bison topped off Saturday by rolling over Richmond, 14-7. Watts led the attack with four goals, Greditzer added a goal and four assists, and Permisohn continued his outstanding performance, racking up five assists and six steals.

"The crowd on Saturday was greatest," Wooster said. "I tried to explain to new players what a Saturday night game will be like, but each year it surpasses their wildest imaginations each year."

"This was a great weekend to build on," Wooster added. "If the team remembers how much fun it is to win, puts that much effort into each game, and corrects the mistakes we made, we will be one of the top teams in the conference."

Women's soccer looking to rebound

By Matt Fraser

The 1998 season has been a struggle for the Bucknell women's soccer team thus far. Coming off a disappointing weekend that saw the team drop two games in as many days, the women had hoped to get things going against the Big Red of Cornell.

The Bison put forth a formidable effort but simply could not penetrate the powerful Cornell defense. Leading just 2-0 at halftime, the Big Red erupted with four goals in the second half and coasted to a 6-0 victory over Bucknell. It was a disheartening loss for the Bison, who were once again victimized by an inability to score. The shutout was the Bison's second in three games.

Despite the disappointing loss, head coach Chrissy Findlay was not upset with her team's overall performance. "The final score definitely did not reflect how the game went," Findlay said. "I really thought we played well. They just put their shots away and we didn't."

Bucknell looked to put their trip to Ithaca behind them as they returned home to face Lehigh. It was the first Patriot League game this year for the Bison and only their second home game. Lehigh led 2-0 in the second half before junior Katie McElligott scored on a penalty kick. A possible Bison rally was deflated just minutes later when the Eagles answered with their third goal of the game. Sarah Klang-Glienna '02 added her second goal of the year in the final minutes, but it was simply too late. The women's fourth consecutive loss dropped them to 2-5 overall.

and 0-1 in the Patriot League. In those four straight losses, Bucknell has displayed virtually none of the offensive firepower that gained them two early victories. In their first three games this year, the women out-shot their opponents 51-14, scoring ten goals. Since then, however, the Bison have managed just 32 shots on goal, with only three of those attempts finding the back of the net.

Bucknell will travel to St. Joseph's this week and then returns home for a Parents' Weekend match-up against Holy Cross.

This week will be crucial for the Bison, who are determined to put an end to their current losing streak. As they near the midpoint of the regular season, the team's playoff hopes are getting slimmer. Two more losses this week would undoubtedly leave the team in a very difficult po-

sition. Coach Findlay believes that the team will turn things around. "We're struggling right now," she said, "and there's not much we can do other than to continue working hard and stay positive. The effort is certainly there, so that should eventually produce some positive results for us. We like to think we're learning something in every game."

Jason Aines-The Bucknellian

The women's soccer team is trying to find its rhythm and start playing like it did to open up the season.

University celebrates Awareness Week

Stephanie Metz—The Bucknellian

A Japanese dinner was held earlier this week as part of Awareness Week.

By Aimee Nicklaus

When one is part of a dominant culture group within the community, it is sometimes easy to overlook the fascinating variances amongst us. Maxine Young '99, chair of Bucknell Student Government's (BSG) Multicultural Affairs Committee and coordinator of Awareness Week, is emphasizing the importance of being aware of the differences that make up our community. To be open minded and ready for new ideas is the ultimate goal of BSG's Second Annual Awareness Week, entitled "Celebrating Diversity: Cultures of Bucknell."

Awareness Week focuses the University's collective attention on important issues of culture and ethnicity here and elsewhere. Steve Bixby '99 said, "during our four-year experience at Bucknell, a change in students' attitudes is apparent; they've grown more aware. Going abroad is a great way to open you mind, and Awareness Week helps bring it all together."

This year's week-long series is open to the entire University and community, who are urged to participate in positive and open campus dialogue around issues of both diversity and unity. Each day there is a panel discussion from noon until 1 p.m. in the Cave of the Langone Center including topics such as Greek Life, Sexual As-

University responds negatively to Clinton

Issues of trust and morality are important factors for faculty and students

By Jared Silliker

As seen last week in this space, members of the University do, in fact, hold strong opinions about the current status of our nation's leader. Through discussion and survey, the Bucknell community seems, as one might expect, to be varied in their feelings toward President Clinton and his scandalous private life.

This article will attempt to break this very complex issue into several major arguments based on student, faculty and administration response. The purpose is to make readers aware of the many angles one may take in analyzing Clinton's situation. Of course, many of these positions overlap, and each can lead to different views on what should happen to Clinton.

One of the more popular aspects of the scandal is the investigation itself and what

"Ken Starr seems to be more like Joseph McCarthy than anyone else."

The role—and motivation—of the legislature

Reflecting on the investigation also involves questioning the role of the United States legislature and the balance of power within our federal government.

"The investigation presents problems for the system. It suggests that the executive branch may be losing power relative to the legislature, which is left to control the President," said Tony Matejczyk, associate professor of political science. "This implies a move toward a parliamentary system, where Congress can just throw [the president] out whenever they want."

Charles Ormsbee, media services information specialist, thought otherwise. "Over the past several decades, Congress has allowed [its] power to be reduced, with the Executive Branch (the Presidency) assuming more and more power. One way to [change this] is for Congress to exercise its constitutionally-mandated powers by beginning the process of trying the abuses of the president."

In addition to the balance of power, the motive of the investigation has become an important facet of the scandal.

"The issue that has not been discussed yet as far as I can see is whether the Starr investigation and the acts of the Republicans in Congress might not be considered high treason," said Carl Milofsky, professor of sociology. "The Republicans seem to be running a public campaign to attack President Clinton's reputation for the purpose of swinging public opinion enough, in a negative direction, to justify an impeachment trial. The Congressional action to date seems

openly partisan."

"I happen to believe that Clinton has been the victim of a vicious political vendetta. His sexual behavior was, to say the least, unwise, but it should have remained in the private domain," added Pauline Fletcher, professor of English.

Many respondents also focused on the taxpayers' money that has been spent on the investigation.

"We are we, the public, funding this [investigation]? We could feed a Third World advance medical research, or do a plethora of other exponentially more important and more necessary deeds with so much money," Chris Radcliffe '02 said.

country, or

research, or do a plethora of other exponentially more important and more necessary deeds with so much money," Chris Radcliffe '02 said.

An alternate view shows that those behind the investigation are not to blame for the dollars spent. "Starr didn't spend \$50 million dollars of our tax money on the investigation. Clinton spent it by not being honest up front," David Andescavage GR, said.

John Carey '99 summed up one angle on the Starr investigation, "I believe this entire investigation has made a mockery of the American people. It shows that with half the world in recession all we care about is the

See CLINTON, page 4.

Second article of a two-part series

life at will?

"The wrecking on the system is what bothers me the most and seems to be much more of a problem—not to make light of Clinton's actions," said John Kendrick, professor of sociology. "The investigation seems to be a form of McCarthyism, in that it's going after one's private life."

Trevor Rutledge-Leverenz '01 agreed,

SBDC supports local business

Six counties receive aid from the University SBDC

By Chris Ellis

Need assistance in developing a business plan for your local bridal boutique? The Bucknell Small Business Center (SBDC) can help. Need help doing a patent search for your synthetic, rebreathable karate kick-board? The center can help you with that, too.

The University SBDC, now in its 21st year of existence, has been giving free assistance to local businesses and entrepreneurs trying to expand or start a small business. Come

to the SBDC with an idea, and chances are the center will be able to help.

"The spectrum of ideas in invention is boundless," John Politis, the newly-appointed director of the SBDC, said. "You never know when someone is going to walk in with an idea that seems impossible or foolish, but really has the potential to be successful. It's a fun place to work."

The SBDC, like the 16 other centers in the state of Pennsylvania, provides free-of-charge, individual counseling to individual businesses in surrounding areas. But it is the University's SBDC, with its breadth and depth of innovation, that makes it one of the best.

The SBDC, located in the Dana Engineering Building, uses the aid of eight full-time employees and six interns to serve the small business community. The center, funded through grants from local and federal governments, private grants and University dollars, provides assistance to businesses in a six-county region containing Lewisburg and surrounding areas. The extensive funding allows most SBDC services to be provided free of charge.

Like the other centers, the University SBDC gives help to local business in writing business plans, obtaining loans and organizing business structure. The University center also contains a product development center—the only one of its kind in the state of Pennsylvania. That means that the University center is sometimes the deciding factor in helping inventors and would-be entrepreneurs turn ideas into marketable products.

Since its inception in 1978, the SBDC has assisted more than 4,000 clients develop or refine their ideas. "We work with inventors not just to build a product, but to build a business case," Politis said. "We look at the marketability of their product, the competition for it and anything that could help to make the project successful."

Politis, a who came to the University in June, brings more than 20 years of experience working in and with small businesses. Politis, an electrical engineer by degree, worked with several information technology firms in the Washington D.C. area and also founded two small businesses. He came to the University for an opportunity to put his considerable experience in small business development to use in a consulting role.

"When you have experience as an employee and founder of a small business, you have a special appreciation for what it takes to be successful in a small business," Politis said.

Jason Aines—The Bucknellian

John Politis, director of the Small Business Center

Politis inherited the directorship of an already thriving center. The SBDC provided over 16,000 consulting hours and assisted nearly 450 business in 1997. But for Politis, the success of the center is matched only by its potential.

In an effort to better acquaint the SBDC with the local political community, Politis has invited state legislators from the counties served by the SBDC to the University to receive a tour and information session on the working of the center and exam-

ples of its successes. So far, five legislators have taken advantage of the program.

"We want to show [the legislators] that we share common goals of economic development, job creation and individual wealth," Politis said.

In addition, Politis envisions the future of the SBDC as a place where selected area businesses can enlist the help of the center to assist them in every step of their early economic development. The "business incubator" is a goal.

Diversity quilt to be displayed

By Anne Monoky

In celebration of the 140 year anniversary of the University's first International student, International Student Services has comprised a "Diversity Quilt." Coordinator and graduate intern assistant of the International Student Services, Marci McCuean has been organizing the first-ever quilt for quite some time.

McCuean's position in the International Student Services Office aids foreign students with the legal work including official documents and visas for their stay in the United States. Her position also attempts to keep these students involved in campus activities through different accommodation programs.

One such program, the Diversity Quilt, serves as a way for clubs and organizations around campus to participate in this recognition of diversity. McCuean contacted a large range of organizations throughout the University and asked them to create a small square for the quilt. These squares were supposed to be designed to represent each individual organization in cooperation with University life as a whole.

Representing the organization, International Spectrum, Sandra Amoako described its

SBDC offers internships

By Chris Ellis

After four years of undergraduate study, there are typically two options for a student: he can enter the work force and begin applying his experience through employment, or he can remain in school in search of graduate degrees. The University Small Business Development Center (SBDC), though, has provided some University students an opportunity.

In exchange for the chance to earn two graduate credits free of charge, four University graduate students have the opportunity to put their education to work through the center, consulting and assisting small businesses in the area.

The students in the program work toward their masters degrees in various fields while working with SBDC director John Politis and

Applicants approved to study abroad

Spring semester "cap" did not affect students wanting to study abroad

By Tracy Thiffault

Despite the anxiety many juniors faced when applying for University approval to study abroad this spring, the Office of International Education has recently determined that it will be able to accommodate all applications.

"We just got to the point where we were able to approve all eligible students," Barbara Rowe, director of international education, said.

New this year, students wishing to study abroad in the spring filed a separate application which the Office of International Education would use to determine, if necessary, the 160 students who would be approved. The application included a general information form, a statement of purpose in essay form, professor's recommendation and academic advisor's approval.

The "cap" on the number of students allowed to study abroad in the spring was established last year in an effort to even out the number of students studying abroad each semester. Prior to the "cap" the number of students choosing to study abroad in the spring was

considerably higher than those opting to study in the fall.

According to Rowe, in the fall of 1996, 75 students went abroad whereas 176 went in the spring. In 1997, the numbers were 119 in the fall and 181 in the spring. This fall 135 students are abroad, with less than 160 going in the spring. These numbers do not include Bucknell sponsored programs such as Bucknell en France, Bucknell in London and Bucknell in Barbados.

"For Barbados, in April, we had more applications than normal," Rowe said.

As a result of the "cap," applicants were fearful they would not be able to study abroad or would have to postpone their trip to the fall of their senior year. "I was worried that I wouldn't be approved," Elizabeth Bogado '00 said. "It wasn't going to be fair if they denied people," Leanne McFadden '00 said.

Rowe said that she was trying to predict how many students would apply, she counted the number of students who had come in to the office inquiring about abroad programs. This number was approximately 190 students.

"I expected there would be more [applications]," Rowe said. "It was hard to tell, until the last day, what we would get."

Rowe said that it was hard to determine exactly how many students were deterred by the spring semester "cap." "We also had fewer students with marginal academic records apply," Rowe said.

Students seem to think the application process was fair. "It wasn't bad," Bogado said. "[The essay] was something I would have to do anyway." "It makes you think about why you want to go abroad," McFadden said.

"I have not personally heard of any concerns, but I do think students have been unhappy [with the application process]," Rowe said.

Rowe estimates that between 70-80 parents attended a presentation last weekend on study abroad, the majority being parents of first and second year students. This is just one sign of the continuing popularity of study abroad programs at the University.

"I haven't really decided [to go in the fall or spring]," Keri Reiter '01 said. "[With the 'cap'] it makes it easier to go in the fall."

"We're focusing on juniors right now," Rowe said, but sophomores will be receiving information soon to begin the process.

Changes in the "cap" for next year will be determined by the Committee on Instruction.

Barbara Rowe, director of international education

Public Safety Log

September 23, 1998

INFORMATION—A University student reported to Public Safety having been approached and verbally harassed on S. 6th Street by four black males on 9/18/98. Lewisburg Police Department was notified and the incident is under investigation.

MEDICAL ASSIST—Public Safety responded to Smith Hall for the report of a University student having an asthma attack. The officer transported the student to Student Health Service for treatment.

INFORMATION—Public Safety responded to Bertrand Library for the report of a University student stuck in an elevator. The student, who was not injured, was assisted in exiting the elevator.

SIMPLE ASSAULT/HARASSMENT—A University student reported to Public Safety having been approached and verbally harassed by six black males on 9/6/98 on S. 7th St. Lewisburg Police Department was notified and the incident is under investigation.

September 24, 1998

INFORMATION—A University student reported to Public Safety having been approached by two white males in a vehicle on S. 7th St. Lewisburg Police Department was notified and the incident is under investigation.

INFORMATION—A University student anonymously reported harassing phone calls for public record. The individual was apprised of the available legal recourse.

RECOVERED PROPERTY—Public Safety responded to Martin House for the report of a wallet found near Vedder Hall by a University student. The wallet was returned to the owner.

MEDICAL ASSIST—Public Safety responded to Larison Hall for the report of a University student having difficulty breathing. The student was transported by a Student Health Service driver to Evangelical Community Hospital Emergency Room for treatment and later returned to campus.

VANDALISM—A University student reported to Public Safety that a car was scratched while parked in the Farm Lot. East Buffalo Township Police Department was notified and the incident is under investigation.

HARASSMENT BY COMMUNICATION—A University student reported to Public Safety having received harassing phone calls in a Larison Hall room. Lewisburg Police Department was notified and the incident is under investigation.

RECOVERED PROPERTY—A University student reported to Public Safety having found a knapsack in the Farm Lot. The property was returned to the owner.

HIT & RUN—A University student reported to Public Safety that a vehicle was damaged while parked on S. 7th St. by Smith Hall. Lewisburg Police Department was notified and the incident is under investigation.

INFORMATION—A University student reported to Public Safety having received a suspicious phone message in a Kress Hall room. The incident is under investigation.

September 25, 1998

DISORDERLY ACTIONS/MEDICAL TRANSPORT TO STUDENT HEALTH SERVICE—Public Safety responded to the Langone Center for the report of a disorderly person. The student was transported to Student Health Service for treatment and later released.

VEHICLE ACCIDENT—A visitor reported to Public Safety having driven into the shrubbery at Davis Gym. Information was recorded for insurance purposes.

THEFT—A University student reported to Public Safety that personal property was removed from SAE, possibly over the summer. Lewisburg Police Department was notified and the incident is under investigation.

HIT & RUN—Public Safety received an anonymous call stating that an unknown person has driven into a tree near Kress Hall and left the area.

Lewisburg Police Department was notified and the incident is under investigation.

September 26, 1998

UNDERAGE DRINKING—While on routine patrol, Public Safety observed an individual attempting to climb in a window of Swartz Hall. The University student was issued a University citation for underage drinking.

CRIMINAL TRESPASS—Pub-

lic Safety responded to an alarm at Christy Mathewson Stadium and observed 3 individuals inside the stadium area. The individuals were transported to Swartz Hall and university citations are pending.

ASSAULT/HARASSMENT—Public Safety responded to a fight between juveniles at the Lewisburg Football Game. East Buffalo Township Police Department was notified and will conduct the investigation.

MEDICAL TRANSPORT—Public Safety responded to the Langone Center for the report of a finger laceration. Public Safety transported the University employee to Evangelical Community Hospital for treatment.

September 27, 1998

UNDERAGE CONSUMPTION/DISTURBANCE—Public Safety responded to the Delta Upsilon Fraternity for the report of a fight in progress. All parties involved indicated that the altercation had resulted from a misunderstanding. One university citation for underage consumption was issued.

INFORMATION—R & P security officer reported to Public Safety having observed individuals throwing a dormitory refrigerator that they had taken from the dumpster at Harris Hall. The individuals were gone on the arrival of Public Safety and could not be located in a search of the area.

INFORMATION—R & P security officer reported to Public Safety having observed an excessive amount of smoke coming from the cigarette holder on Smith Hall. Public Safety responded and extinguished the burning material.

September 28, 1998

MEDICAL—Public Safety responded to Vedder Hall for the report of an unresponsive University student. The individual was transported by ambulance to Evangelical Community Hospital Emergency Room for treatment.

September 29, 1998

HARASSMENT BY COMMUNICATION—A University student reported to Public Safety having received harassing phone calls in a Gateway Silberman room. Lewisburg Police Department was notified and the incident is under investigation.

IN THE NEWS... National

Fed cuts interest rates

NEW YORK—The Federal Reserve cut a key short-term interest rate Tuesday in a move designed to stave off a slowdown of the U.S. economy and reduce the cost of borrowing. In a widely anticipated move, the Federal Open Market Committee cut the federal funds rate by a quarter of a point to 5.25 percent. The federal funds rate is an overnight bank lending rate that is a benchmark for other short-term interest rates.

In a brief statement, the Fed said it made the move because the United States was starting to feel the effects of the global economic turmoil.

Georges lives on, drenching coast

PASCAGOULA, Mississippi—Georges is now a tropical depression and remained over land Tuesday, spawning tornadoes and dumping more rain on the already soaked Gulf coast. New Orleans and Biloxi, Mississippi were among cities where curfews were lifted, but hundreds of thousands of people along the coast were without power and tens of thousands remain in shelters.

It could still be days before authorities, concerned about safety, allow some evacuees to return to their homes. Georges was downgraded to a tropical depression Tuesday. Nevertheless, the slow-moving system could dump another ten inches of rain before it goes away.

Tobacco on trial in Washington state

SEATTLE, Washington—Washington, the latest state to put the tobacco industry on trial in a bid to recover health expenses, accuses cigarette makers of a 45-year conspiracy to hide the truth. With the defense due to begin telling its side of the story on Tuesday, there was behind-the-scenes maneuvering toward a possible out-of-control settlement.

In a huge, packed courtroom, the state's lawyers told a King County Superior Court jury that evidence will show seven companies cost Washington state billions of dollars by jointly campaigning to mislead and misinform consumers.

JonBenet's father writes letter blasting Boulder police

DENVER—The father of slain child beauty queen JonBenet Ramsey blasted Boulder police Monday, saying the murder investigation is in the hands of the unskilled and the unknowing.

"The killer could never have guessed that he or she would be so lucky as to have the resulting investigation conducted by such closed-minded police," John Ramsey said in a letter faxed to news organizations. "We don't fault you for initially including us under your umbrella of suspicion," but we will forever hold you accountable for following a theory rather than the evidence."

Boulder police declined to comment.

World

Arafat accepts revised Mideast peace deal

WASHINGTON—Palestinian leader Yasser Arafat said he's accepted a proposal under which Israel will turn over another 13 percent of the West Bank. He spoke at the White House after meeting with President Clinton.

Under the latest plan, 3 percent of the land that Israel yields back would be turned into a nature preserve—under the oversight of Israel and the Palestinians. Arafat told reporters, "We have accepted it."

Arafat and Israeli Prime Minister Benjamin Netanyahu accepted Clinton's invitation to return to the United States in mid-October to resolve details of the issue.

Former U.N. weapons inspector says he consulted Israel

JERUSALEM—A former U.N. weapons inspector sought and received Israel's help in tracking down Iraq's non-conventional arms program, he was quoted as saying in an interview published Tuesday.

The former inspector, Scott Ritter, was quoted as telling the Haaretz daily that he asked Israel in 1994 to "formulate analytical models, analytical techniques and to advise on operational issues."

Ritter, an American, quit his job as a member of the U.N. Special Commission last month, saying the United States and Britain undermined efforts to uncover Iraq's arsenal of weapons of mass destruction.

Kosovo Albanians reject provisional government

BELGRADE, Yugoslavia—Kosovo Albanians on Tuesday rejected Serbia's new provisional government for the province, along with claims that the rebels had been defeated.

Fehmi Agani, chief negotiator for the Democratic League of Kosovo, the leading ethnic Albanian party, said it would not join the provisional government and did not expect other Albanian parties to do so. "There is absolutely no possibility of us participating in the work of the provisional executive council because this is an organ of the Serb authorities," he told the Belgrade news agency Beta. "I do not expect any party in Kosovo will agree to take part in the work of that body."

Car explodes in West Bank industrial area

BEITUNIA, West Bank—A car rigged with large amounts of explosives blew up in a West Bank industrial area Tuesday, killing one Palestinian and wounding two other men, Palestinian police said.

There was no immediate word on who was responsible for the blast. Israel has been braced for bombing attacks by the Islamic militant group Hamas, and today sealed its borders with the West Bank and Gaza Strip ahead of the Jewish holiday of Yom Kippur to prevent possible violence.

There have been several previous incidents in which Hamas activists were killed or injured while trying to rig a car with explosives before a planned attack.

National and World News Briefs compiled by Jeff Scepanski from the CNN Interactive Website

Lewis brings enthusiasm, expectations to office

Interest in politics has led Lewis to international politics as a possible career goal

By Anne Monoky

Since her first year of high school, Marsha Lewis '02 has been a major part of the political life in her school. This interest in governmental issues has continued on into her endeavors at the University, as she was recently voted in as freshmen class president.

She has already noticed several changes that have occurred from her days of high school politics to the University level. First, the campaigning process for her was greatly shortened; consequently, she took it upon herself to introduce her ideas and face to nearly all freshmen.

"I went around to every freshmen hall and dorm and knocked on the doors. I wanted people to hear what I had to say, so I encouraged them to ask me any questions." She found that this campaigning technique worked well because she realized that even if she did not go on to become class president, at least she had met a great number of new students.

As for her expectations as class president, they greatly depend on the involvement of her class as a whole. She said, "I don't want our decisions to be a Cabinet

decision but a class decision. I want everyone's input so no one can go on any power trips."

This goal was developed from the beginning, as Lewis noticed the overall participation and enthusiasm from her class during Orientation activities such as Playfair. Another main aspect of the Class of 2002 that Lewis plans to take advantage of

is its size. She takes on the attitude that "bigger is better."

Lewis also expressed promise in her ideals as a student body leader. She said that she "is the voice" for her class. She stressed that she must act as the representative for

her class as a whole, so she greatly wants each and every member's opinions to be incorporated in her decisions.

Lewis also expressed interest in continuing on with this political career both at the University and afterwards. "I think that politics are very interesting and important because you, as a politician, have the ability to bring about change. You can help others out."

Lewis voiced a great curiosity for the division of international politics as a possible career.

Marsha Lewis '02 looks forward to her role as the newly-elected freshman class president.

QUILT

From page 1.

piece as having, "The Gynemane symbol of Ghana, the Chinese Ying-Yang, the Pisa building of Italy and Eiffel Tower in France. Our square symbolizes the coming together of a diverse group of students from around the world, including the U.S."

Overall, the quilt will have 30 separate squares, each completed by groups around campus.

McCue said, "It is very exciting and interesting to see the creativity that some of these clubs came up with. They had such a small space to represent themselves in."

However, McCue did voice some disappointment with overall participation in this event. After attempting to get in touch with organizations through Activities Unlimited, she expected a bigger turnout. "I wish that perhaps some of the fraternities and sororities around campus would get involved, but I guess that 30 out of the 100 clubs on campus is not too bad."

The quilt will be presented at the International Food Festival on October 3 in the Terrace Room. The quilt will hold a permanent spot in the Taylor Hall lounge, as it serves a conference place for the International Student Services Office and the Multicultural Office.

Beata Kim—The Bucknellian

Kappa Alpha sponsored a pancake breakfast on Parent's Weekend to benefit their philanthropy. The breakfast received support from the community and noted a good turnout by parents and students.

BUSINESS

From page 1.

tor" would select certain area businesses or entrepreneurs that are believed to have a high likelihood of success and give them a jump start on their development through monitoring and consulting by the SBDC. The center would work closely with the business until it has outgrown the need for the center's assistance.

In the present, though, Politis simply wants to enjoy his newfound role as consultant and mentor. After more than 20 years working in business, he is ready to experience the satisfaction of working with business.

"I really enjoy the school and the tremendous amount of support that we have received," Politis said. "This opportunity provided me with a chance to apply my experience in a productive and satisfying manner."

AWARENESS

From page 1.

sault, the Women's Resource Center and "Moving Beyond Tolerance."

"So far the panel discussions have been impressively energetic and informative," Young said. She encouraged more students to attend Friday's lunch which addresses tolerance and issues of apathy.

Monday, the Japan Society hosted a successful ethnic dinner in Larison; Tuesday, Kappa Alpha Psi showcased their talents in the Bostwick Cafeteria; Wednesday, the Caribbean Club in the Bostwick; Thursday, Progressive dinner in the Small Houses; and Friday, Mardi Gras Dinner in the Bostwick. Bostwick Cafeteria, LC, dinner is open to the community at large for meal credit, declining balance, \$6.85 to non-Bucknellians, and half-price for children.

A highly acclaimed, one-woman play took place Wednesday night in the Weis Center at highlighting multiculturalism through the eyes of Generation X. Additionally, several movies were scheduled this week, including Monday's showing of "Rising Sun," which portrayed stereotypes of Asian Americans.

Dean of students, Richard Chapman said, "BSG and its Multicultural Affairs Committee perform a very valuable and important service in organizing this event and (he is) pleased to recommend it."

Young said that all that is needed to make this year's celebration a grand success is more participation and open minds.

Jonah Hall—The Bucknellian

Panel discussions will be held throughout the week to talk about subjects such as Greek life and women's issues.

MANAGING YOUR MONEY:

Rocky market leaves buying opportunities for bulls

By George Jenckes

In recent weeks, Wall Street has experienced one of its rockiest roller coaster rides ever. The Dow Jones Industrial Average has taken single day hits of 350 and 500 points respectively, rebounding just weeks later by soaring 380 points in a single trading session, its largest gain in point terms ever. We have seen huge sell-offs, as well as large buybacks, both apparent by billion-share trading sessions.

The market is extremely volatile right now and especially vulnerable to any bad news. Lately, there has been a ton of it. With the global financial crisis spreading and Clinton's testimony flooding television across the country, individual investors have had trouble sleeping at night. Many investors feel the market's recent extreme volatility indicates the conclusion of an eight-year bull market. The bears are out and many of them are calling for an extended bear market.

I can't help but see the recent market differently. An extended bear market is unlikely. The U.S. economy is strong and it will continue to push forward at a moderate pace. There has been some weakness in the manufacturing sector of the economy, largely because of softness in Asia, but our overall economy continues to grow at an acceptable rate.

The worst bear markets, seen throughout the 70's and in 1987, all have experienced interest rate hikes prior to them. Today, interest rates are not looking to go anywhere but down from here. Greenspan has been giving mixed signals on whether he is planning to lower interest rates. Still, despite the Fed Chairman's indecisiveness, we have not heard any talk from him about an interest rate hike with inflation at a meager 1.6% annual rate for this year. Inflation is right around its 40 year low, barely registering a blip. With low unemployment, around 4.5%, and stable interest rates, we are far from the recessionary levels that would cause an extended bear market.

There is still one problem. What about the Asian financial crisis crippling U.S. earnings? This should be our main concern right now. With earnings season right around the corner, many companies are going to start pre-announcing soft earnings for the third quarter because of Asia. If companies start announcing third quarter earnings per share that fall short of the Street's expectations, companies are going to get hammered more than they have previously experienced. This is usually the case during "confession season," especially with "whisper" numbers circulating the Street.

However, analysts have cut their earnings forecasts considerably. According to IBES, with the exception of blue chip techs and financial firms, most companies in the S&P 500 should report positive earnings gains. If most companies in the S&P can meet analysts' lowered expectations, then a spark of optimism should rally this market.

Things might work out this quarter without too many disappointing surprises.

However, this does not mean we will come close to the 20%+ annual returns we have seen over the past three years. The Dow Jones Industrial Average is slightly up for the year, at around 1%, and has fallen off its July all time high of 9337 considerably. The S&P 500 is up only around 4% for the year and the Russell 2000 small cap index is down an astounding 16% for the year, approaching bearish territory. We will be extremely lucky this year if we even come close to the historic 11% average return by stocks.

Does this mean we should dump stocks and run to bonds? Not yet. If you are a long-term investor, I suggest you sit back, close your eyes and watch this thing ride out. In 20 years, most of the companies in the S&P should earn more than they do now and you are going to kick yourself if you let this buying opportunity slip by.

Just keep up the same discipline that you've had all along. Hopefully, you have been investing in regular time intervals, no matter what the market is doing. Use dollar cost averaging. It is effective. Stick to it. I would start buying again once the third quarter earnings reports start coming out. Wait a little longer for stock prices of attractive companies to fall a little more. Look for the financials and tech stocks to drop a little more once their earnings are announced. It is not easy for long-term investors to start buying their favorite blue chip companies right now, but it is the best advice for the long haul. It is almost impossible to predict once the market has hit rock bottom, but during this earnings season, it might be the time for the long-term investor to pick up some good bargains.

For the short-term investor, I would not get in quite yet. The premiums are extremely expensive on put options right now and shorting the market is not exactly the safest thing to do right now with daily 100-point swings in the Dow. I would let the arbitrageurs and hedge fund managers pinch for points in this volatile market. Unless you are an expert in hedging the market, I would stay away in the short term.

This is not a bear market, people. This is a much-needed correction to bring high valuations and price to earnings ratios back down to normal levels. Things are going to get shaky in the short term, but I guarantee 20 years from now stock prices are going to be higher than they are now. Besides, you do not think renowned value investor, Warren Buffett, is sitting on nine billion in cash for nothing. He's looking to buy. And so should you.

CLINTON

indiscretions of our President."

The president's immorality

Aside from the investigation, the president's immorality is a key point to consider. Some hold that, although immoral, the president's actions are not impeachable offenses and/or do not affect his leadership abilities. Others, however, argue that the President of the United States should have higher moral standards and serve as a role model.

"The lying is the issue here—not the actions in his private life."

—Charles Ormsbee
Media services specialist

el.

Ernie Keen, professor of psychology, landed with the former position citing the irony of Congress holding the president responsible for his private life. "If Clinton is impeached, the politicians who vote on the issue would, by a similar ratio, try to avoid submitting to a comparable scrutiny of their personal life."

Peter Zawadzka '01 agreed, "I believe it would be incredibly hypocritical for the U.S. Congress to impeach our President for a crime which many of its members are most likely guilty (whether you refer to the crime of adultery or obstruction of justice). While the American people have come to accept a certain lack of moral standing among their elected officials, there's certainly no reason to draw attention to this sad fact on a global scale."

"This is completely a moral issue and nothing more. We should not, by any means, spend any more of the taxpayers' money to investigate this charade. I do not feel this whole ordeal has affected [Clinton's] ability to execute his duties as President of the United States," Brian Scaria '00 said.

Thomas Courtney '01 was even more forgiving. "As a Christian I do not condone his actions, but I can forgive him for acting in an improper manner. As a country we should do the same. It is obvious that he is truly sorry for his actions and we should accept his apologies. We should allow him to pull what's left of his life together and

Photo courtesy of Public Relations

Ernie Keen, professor of psychology

heel what is left of his relationship with his wife."

On the flip-side, however, many see a moral president as an important and necessary facet to our society.

"He has made a mockery of the American family which at one point he so strongly supported. Sure the President is only human, but don't we expect him to be a little better than only human? Shouldn't we have someone to look up to? Don't we deserve a role model?" said Russell Munson '01.

"This isn't about Clinton anymore—it's about the American people. It's ridiculous that we have to put up with a president with no morals whatsoever," Ashley Blaschak '01 said.

Brad Jordan, professor of geology, had similar thoughts. "Anything that the president does can have a dramatic influence on our country's (and the world's) affairs. Further, I want a president who is better than I am... who I can look up to and respect. I can deal with a conflict between my views and his/hers as long as I can respect them as a person."

"Bill Clinton looked us in the eye, pointed his finger at us and blatantly lied to save himself. It's about being the best, doing the best and not settling for less. That is the message that I want to continue to send to our people, especially the kids and certainly the world."

Peter Zawadzka '01 agreed, "I believe it would be incredibly hypocritical for the U.S. Congress to impeach our President for a crime which many of its members are most likely guilty (whether you refer to the crime of adultery or obstruction of justice). While the American people have come to accept a certain lack of moral standing among their elected officials, there's certainly no reason to draw attention to this sad fact on a global scale."

"This is completely a moral issue and nothing more. We should not, by any means, spend any more of the taxpayers' money to investigate this charade. I do not feel this whole ordeal has affected [Clinton's] ability to execute his duties as President of the United States," Brian Scaria '00 said.

Thomas Courtney '01 was even more forgiving. "As a Christian I do not condone his actions, but I can forgive him for acting in an improper manner. As a country we should do the same. It is obvious that he is truly sorry for his actions and we should accept his apologies. We should allow him to pull what's left of his life together and

"When a president goes in front of a federal grand jury and openly lies under oath—here not the actions in his private life. If he would have told the truth then this should do the same. It is obvious that he is truly sorry for his actions and we should accept his apologies. We should allow him to pull what's left of his life together and

Eric Fair '01 centered on being able to trust the president. "What scares me is that [Clinton] could be lying, not only

the people of the US, but to members of his own cabinet, other nations and he could be lying about international affairs. It is no longer a matter of sexual relations, but it is a matter of trust. Can we trust William Clinton?"

"There is no doubt in my mind that Bill Clinton is a disgrace to this great nation. He lied to the whole nation in a weak attempt to obscure his rather perverted personal life," Scaria said.

With the investigation, the president's immorality and his lies covered, the interpretation of the legal language involved in the scandal is an area that brings much discussion. This is a very vague area in that very few can agree on some key definitions used in the investigation (i.e. sexual relations, impeachable offenses).

"An interesting thing to consider is the interpretation of the legal language, and Clinton's use of linguistic acrobatics," said Amy McCready, professor of political science. "People like to believe that there is one specific definition, but legal interpretation is much less clear cut than we think."

"He's been playing word games with the American public and the judicial system," Adam Ackley '02 added.

The general view

Lastly, there were many responses which were general in nature and overlapped several of the arguments discussed above. Here is a sampling.

"Not only did he disgrace the office (and the country), but he lied about it. The American public should demand his resignation. I would hate to see the money that would be spent on impeachment proceedings," said Brad Tufts, assistant athletic director and women's golf coach.

"Clinton's only mistake was in lying under oath—he has as much a right as any one else to carry on an affair. The President's job does not extend into the private life of that man," said Eileen Kennedy

(Editor's Note: Many of this article's responses were prompted by an email survey posted by this writer. A total of 66 students, faculty and administration returned comments. Thank you to all who responded—the replies were impressively well thought through and well written. Apologies to those not included in the article. Your opinions were read and contributed to the overall piece.)

A quote during the Watergate scandal (in reference to Richard M. Nixon):

"Yes, the president should resign. He has lied to the American people, time and time again, and betrayed their trust. He is no longer an effective leader. Since he has admitted guilt, there is no reason to put the American people through an impeachment. He will serve absolutely no purpose in finishing out his term; the only possible solution is for the president to save some dignity and resign."

—William Jefferson Clinton, 1974

John Kendrick, professor of sociology

'01. "Clinton should have thought of the repercussions when he disgraced the office of the presidency by carrying on the affair in the oval

"There is no doubt in my mind that Bill Clinton is a disgrace to this great nation."

—Brian Scaria '00

office and when he shamed his wife but most of all, his daughter."

"His behavior is completely unacceptable. First is the fact that he had an affair in the work place with a subordinate, an act that would get most people in the 'real world' dismissed immediately. More importantly though, is his complete disregard for the truth and the legal system which he has sworn to uphold," said Michael Wooster, water polo coach.

"I regret he isn't being cornered on some of the really evil things he's done, such as Filegate, Travelgate, or threatening potentially hostile witnesses [Kathleen Willey, Tripp, etc.] instead of what is an irrelevant sex scandal, which, because of his misdeeds, has dragged the reputation of our country down," said Robert Kurland, professor of management.

(Editor's Note: Many of this article's responses were prompted by an email survey posted by this writer. A total of 66 students, faculty and administration returned comments. Thank you to all who responded—the replies were impressively well thought through and well written. Apologies to those not included in the article. Travis offers skiing trip to Austria

Photo courtesy of Tom Travis

This photo depicts the beautiful scenery and amazing ski slopes that University students could encounter if they participate in the 1999 trip to Austria with professor of political science Tom Travis.

By Beth Slaby

Breathtaking scenery. Crisp, newly fallen snow. Challenging slopes. All of this and more can be found on the trip to Austria next semester sponsored by Professor Tom Travis, of the political science department. In January 1999, Travis is planning to take Bucknell students to tour the cities of Munich, Germany, and Innsbruck and Salzburg, Austria. From January 2-10, they will ski the Zillertal Valley, while staying in the lovely, Tiroler village of Mayrhofen. This area includes the Hintertux Glacier, with its huge snow fields, and according to Travis, it is "known for some of the most challenging glacier skiing in Europe."

Not only will students be able to enjoy the exhilarating scenery and slopes, but they will be able to participate in classroom discussion. According to Travis, here "they can explore readings on the philosophy and psychology of mountain exploration and skiing, or the politics and foreign policy of the countries" in which they are currently staying. "Off the slopes, students expand their cultural horizons, having to communicate in a foreign language, eating European food, and

meeting young people from [all parts] of Europe at evening entertainment spots."

Professor Travis is very excited for this "adventure" because he loves the challenge skiing offers. He has been skiing since he was eight years old when his aunt and uncle "erected a rope tow in the hilly apple orchard of a farm they owned in northwest New Jersey."

Travis recounts his childhood. "I eagerly and avidly listened to their stories about skiing in Europe in a foreign culture and on wide slopes above the treeline." Soon, Travis was an avid skier, and would visit his aunt and uncle in Sugarbush, VT, which remains his "favorite ski area in the eastern USA."

Travis enjoys the sport for many of the same reasons other skiers do. "I adore mountain scenery. I am fascinated by winter weather, and I experience great freedom of making my own decisions, charting my way down the slopes, communing with nature and the snow."

He experiences a great sense of "play" and "joy" from skiing. According to Travis, the joy he receives from skiing increases even more when skiing the beautiful landscapes of Europe. Here, one can ex-

perience different cultures, diverse languages, breathtaking architecture and interesting cuisine. "It is a challenge to communicate in different languages and to dredge up smatterings of French, German, and Italian from high school and college courses. I like meeting people from all over the world who ski in Europe."

In addition to the many other reasons Travis loves to ski, he adds to them a love of vertical drops. "The vertical drops of many European areas are enormous, compared to North America. Zermatt has a vertical drop of 7,200 feet; Chamonix 9,200 feet; Verbier 6,600 feet, and so on." "At the Grand Montet in Chamonix, my favorite ski area in the world, one can ski on a 6,880 vertical, across wide, crevassed glaciers, leading to vast, challenging snowfields and chutes." Unfortunately, challenging slopes and danger often go hand in hand. One piste that is quite treacherous is the Pas de Chevre. Two Januarys ago, according to Travis, "Professor Murphy, three students and two alums were guided down this infamous piste. Skiing a narrow couloir, one of us (not I) took a nasty 100-foot vertical fall. Fortunately, he was not hurt." Despite such danger, it's hard to resist skiing the beautiful landscapes. "The scenery is simply awe-inspiring, whether in Zermatt and the Matterhorn, Chamonix and the Mont Blanc spires, Val Gardena and the Dolomites, or the Zillertal, Austrian Alps," Travis said.

For the trip this January, Travis chose the Zillertal Valley in Austria because it's a "beautiful mountain range and valley, with several quaint Tiroler villages, and 11 ski areas, offering diverse, mostly intermediate skiing." He also chose this area because it is "off the main international tourist path, is very scenic, has excellent skiing, and is conveniently located to Innsbruck and Salzburg, two lovely Austrian cities we will visit."

Travis, who believes this is a once-in-a-lifetime opportunity says, "I am already dreaming about this trip."

For any student who is interested, the trip includes round-trip, non-stop flight from Newark to Munich, visit of Innsbruck on the way to Mayrhofen, six nights accommodation at the four-star Hotel Neuhaus, five skiing days in Mayrhofen, and a half-day tour of Salzburg on return to Munich. The cost for air travel, ground transportation, hotels, breakfasts, dinners and tours, including all taxes and service charges is \$1,095, which is quite inexpensive. A deposit of \$300 is needed to reserve a spot and full payment is due Nov. 2, 1998. This is not just a vacation, it is an adventure, and Professor Travis is eager to share the beautiful landscape of Austria with fellow Bucknellians. If you would like a brochure or have any questions, please contact Professor Travis at travis@bucknell.edu. This truly is an opportunity of a lifetime.

College students sometimes viewed as toddlers

By Beth Slaby

support from parents. Such issues that confront them include "career choice, racial and ethnic identity, relationships, what it means to be a man or woman, political issues, their role in the family. There's much more on their emotional path than academics," Affsprung stated.

Upon returning home for fall break, students often sleep until noon and expect someone to fix the meals and do the laundry just like when they were children (sound familiar)? This is acceptable for a while, but it is important to realize that college is often a difficult time for parents as well. Affsprung offers advice for parents, "The best stance to take may, in the final analysis, be very similar to that of the parent of an actual toddler. In spite of inevitable setbacks and disappointments, the wise parent of a toddler strikes a balance between protecting and letting go, between providing guidance and allowing the child to venture out on his or her own. Such a parent listens and is patient, firm, clear and consistent, both in love and praise and in meting out consequences for inappropriate behavior."

Just like any other town of 3,400 people, the University acts as a microcosm of sorts for the rest of society. There will always be some people who are hurting in one way or another. Af-

fsprung estimates that Bucknell counselors see 35-40% of students with concerns ranging from academics to failed relationships.

Besides the typical adjustments of college life, students often experience their first true love in college. "When that ends, they think their world has ended. They can't imagine life without that person," Affsprung said.

Affsprung emphasizes that they cannot break the confidentiality of the student in discussing their concerns with parents. Counselors urge students to talk to their parents, but sometimes this "may not be a good idea because the student is struggling with issues related to independence and separation from family," he said. "The college community needs to be challenging to students, but it also needs to be supportive. It's a balance, just as you do with a younger child."

When it is, then, that college students truly become adults? "In our culture, by the mid-20s ideally, adulthood is reached. Realistically, some never reach true maturity. And none of us reaches adulthood without some emotional injury," Affsprung said. "For most of us, the college years are exciting, challenging and sometimes rather difficult." "I'm sure we can all agree to that."

An Abroad Perspective: Nicaragua

Photo courtesy of Jamie Cistoldi

Jamie Cistoldi '99 poses with two street boys during a brief visit to Bluefield, located on the Atlantic Coast.

By Jamie Cistoldi

Nicaragua? Why would anyone choose to spend a semester abroad in Central America? By the way, where is Nicaragua? Oh, now I remember. It is located between Costa Rica and Honduras. There was a war in the 1980s; the Sandinistas and the Contras, right? Didn't Reagan have something to do with that?

I began to search for answers to these questions during my Junior year. I found that Nicaragua is known for its socialist revolution of the 1980's. Throughout the last decade, quite a bit has happened in this country.

My choice to study in Nicaragua during my second semester off-campus gave a whole new meaning to the term "study abroad." There would be no travel by Euro-rail, no bars that are just opening at midnight, and few places to dance the night away. I found a culture and a society in crisis; one that I never imagined I would soon grow to love.

I lived with a working-class family supported by three incomes. The total of these incomes still placed the five people living under their tin roof at the poverty line. Although I lived with few amenities compared to American standards, I still carried some cultural baggage with me. Such baggage induced a sense of security (in a place that is often unsafe), and the promise of basic alimentary (when many went hungry).

My study abroad program, the School for International Training, had a philosophy that promoted intense learning and individual research. The

draining to see children go hungry and fight each day for another chance at life.

I believed that after four months it would be a relief to step on an airplane and return home to our land where there exists the possibility of achieving the American dream. I did not realize that it would be so difficult to leave behind people and a country that I had grown to love.

Nicaragua has left its mark on me. I feel a connection and a duty to educate others about its history of foreign dominance, dictatorship, and the brief hope that the revolutionary forces brought to Nicaragua in the 80s.

It is shocking to realize that our current foreign policies, created to maintain our American way of life, have perpetuated Nicaragua's Third World status and continue to do so as we enter the new millennium.

I challenge students at the University to choose a non-traditional country like Nicaragua for a semester or a year abroad. I can only promise that you will return with the power of first-hand experiences that few have ever dreamed of, and the tools necessary to view the world in a dramatically different light.

FORUM

EDITORIAL

Are you aware?

Student Number one: "Did you know that this is Awareness Week?"

Student Number two: "No. What is Awareness Week anyway?"

Student Number one: "I don't know, some kind of multi-cultural thing."

Similar to student number one and two—fictitious students for those inquiring minds—most students, up until the huge pink signs were posted in the LC on Wednesday, did not know that Awareness Week is going on. Or what it is.

As soon as people hear "awareness," they automatically assume that it pertains to racial multi-culturalism. But this year it focuses on different aspects of the University, namely the organizations that play a large role in the University but are not recognized or understood. The immense and admirable project has been tackled by BSG in order to, as the title may tip off, make students more aware of the events and organizations operating on campus.

Unfortunately, no one seems to know what is going on. While the ideas are great and the panel discussions intriguing, the necessary enthusiasm and advertising has been lacking. Before this editorial proceeds, it should be noted that advertising on this campus is difficult, as e-mails are soon deleted and mailings discarded. Nonetheless, banners make a difference, as do fliers around campus. Up until Wednesday, these were not to be seen.

Furthermore, BSG did not seemingly entice professors and administrators to promote the event, or for that matter, to attend many of the events. Professors, perhaps contrary to what they may believe, carry a great amount of weight on campus, particularly with students. It may even be wise to invite professors to partake in the panel discussions on a large scale. One idea might be to involve the organizations on campus in the planning and orchestrating of the events, thus drawing them in to Awareness Week as well as making them aware that it exists. An additional possibility is to have Awareness Week coincide with a major campus event, such as Founders Day or, if Awareness Week deals with multi-culturalism, Martin Luther King, Jr. Day.

However, it is shortsighted to blame BSG for the flaws of Awareness Week without praising what it accomplishes. For those students who choose to attend, Awareness Week provides a fresh perspective on the University, as well as making them more aware of campus activities.

The concept of students bringing this editorial to its final point. Despite the lack of big-time publicity, Awareness Week was advertised. Yet students choose not to take part in its activities. Tuesday's panel discussion on Greek Life had as many people (five) on the panel as in the audience. And of the audience, one was there to run the event and one to check meal credit for the offered lunch (this is not a wisecrack). Awareness Week provides students, particularly underclassman, a glimpse into the breadth of the University outside of scholastics. This is something students should be taking advantage of!

Despite its reputation and the supposed Bucknell Bubble, a term any real student should refute, this University has a lot to offer—that is, if you know what it is, where it is, or if you care to go.

If you want to write about the world as you see it, email Beth at emartin@bucknell.edu.

OPINIONS

We need a war to hold us together

By Chris Beatty

You know what this country needs right now? This country needs a war. I'm not talking about a bunch of tanks rolling over a grossly inferior opponent in the desert. And I'm not talking about a political debacle in the jungles of Southeast Asia.

What I'm talking about is a big war against a powerful evil empire that threatens freedom and liberty. I guess that a huge natural disaster would do, but nature certainly

New logo project is a big mistake

By Beth Martin

Do you know that the University expects to have a new logo on its admissions pamphlets and other publications by January? Do you really care? Well, you should. The project, involving too much money and attention, is a much more massive undertaking than it needs to be.

It is estimated that the project will cost somewhere in the tens of thousands of dollars range, not including the costs of reprinting publications with the new logo and copyright privileges. Of course, this money will be taken from the school's budget, made up of our student tuition and fees.

The project will also involve large time commitments from various members of the campus community. The graphic identity committee, made up of administrators, faculty and students, is in the process of hiring a design consulting firm out of the three that have been interviewed. Once the firm is decided upon, it will meet with several groups of faculty, administrators and students "to get a better sense of the University."

The University should redirect its money towards more suitable projects, such as increasing campus safety patrols and renovating classrooms and dormitories. Obviously, the funds expected to cover the logo project are not comparable to such undertakings. But, at least we would see this money—our money—go towards projects that students really care about.

In addition, the faculty, administrators and students involved in the creation of a new logo should spend their time more productively. For example, faculty could extend office hours or do scholarly research, administrators could attend more student recitals and athletic events and students could do homework or even catch up on much needed sleep. Actually, I would not be surprised if many members of the committee do not really want to be on it and are only doing it as a favor or as a resume-builder.

wouldn't be as good an enemy to fight this war against as an aggressive and oppressive empire.

What is essentially lacking in America is a common goal. We have no rallying point. We don't even have an Iron Curtain to cause us to duck under our desks.

The only goal our generation has to pursue is the accumulation of monetary wealth. The betterment of society is irrelevant next to the lure of a fleet of Lexus's, a house at the shore and a portfolio of GE stock and

triple A-rated bonds.

Nothing in the world threatens the US, and therefore, each individual is concerned with his or her own advancement. That is why we need a nice big war, with a draft and a cause to fight for.

I say our cause should be freedom. It's always nice to be fighting for freedom and it would make a snappy war slogan or two and a song that living Berlin would have envied. That is what we really need.

Basically we need something that is more important than the stock market and the President's cigar habits to focus our national attention on and to get some patriotism back.

Patriotism. It's almost a curse word nowadays. Love for your country is out of fashion. War, a common enemy, is the greatest thing in the world to bring people together and get them to stop thinking about themselves and start thinking about everyone else.

We are complacent. Our battles have been fought and won by our grandparents and our great-grand-

parents. Our generation thinks that the worst thing that could happen to our country is a fall in the stock market of 1000 points. War, a real national suffering, is completely inconceivable. There is no reason for us to think about the country and society as a whole. Patriotism has joined God in the pile of dead, antiquated ideals.

I'm not saying that war would solve all of our problems, but it would force us to think about OUR problems instead of my problems. Maybe it would make my life-styles of Lexus's and GE stock take a back seat to our life-styles that is being threatened.

I call for Bill Clinton to find an evil empire to make us forget about Monica Lewinsky. Bring us a war. Or if not a war, bring us something with some good propaganda, a war slogan or two and patriotic song that would bring patriotism back from his poker game with Zeus, the Christian God and the patron saint of marital fidelity.

Parents Weekend a success

By Rebecca Rowland

Going to college was the best thing I could have ever done. I'll get a good education; I'll get a good job; I'll be a productive member of society; but, most importantly, for the next four years whenever I go home I will get everything I want!

I have learned anything since I have been at Bucknell, which I hope I have, is that my mom and dad really miss me. Your parents probably miss you too (if not, this column doesn't apply to you, and I urge you to stop reading and call Jerry Springer immediately). To make sure they do, just do what I did: ask for lots of stuff they normally wouldn't buy you. I don't mean go crazy and demand that, if they really loved you, they would buy you that yacht that you desperately need, that is just greedy! I mean, when engaged in normal conversation with your folks, just throw out a request and see how they react. Here's an example:

Mom: "How are classes, honey?"

You: "Great mom. Hey, by the way, I really need a new cashmere sweater from Banana Republic."

And, before you can say "charge it" you are on your way to the mall with Mom's Visa in tow.

Last weekend my parents came up for Parent's Weekend. I have never seen my parents so compliant in my whole life. They agreed to everything I asked. When I go home over October break I get to go to the mall and shop till I drop! But getting stuff from your parents is not the purpose of Parent's Weekend (even though by Sunday night all of our fridges were full), no!

All things considered, I had a positive first Parents' Weekend. I got some cookies, had a healthy dose of mom and dad love and I feel confident that I will be able to get through the two weeks before October break without missing them. Of course, the promise of a massive trip to the mall isn't hurting either!

Bombers still belong in the Bronx

In push for stadium, don't lose sight of the benefits Yankees bring to community

By Emily Novick

On game days, you can hear the roar of the crowd from any direction. Whether approaching the stadium from Harlem River Drive, the Major Deegan Expressway, River Avenue or East 161st Street, you can taste, feel, smell and almost touch the car in front of you since the traffic is so thick! This is just part of the Yankee game ritual. Either come three hours early or listen to the game on the radio while you're sitting in traffic on the way to the game. It is a Yankee-Bronx thing.

Yet, the aggravation of traffic is well worth the tradition of the New York Yankees. The 75 year old stadium is the history of baseball. It was the first three-tiered ball park, and

the first to be called a "stadium." However, instead of celebrating three-quarters of a century with New York style this year, George Steinbrenner III, the Yankees principal owner, is deciding on a new site for the New York Yankees to play, since the lease with the borough of the Bronx expires in 2002.

A new site? The idea is a joke. The Yankees were born and raised in the Bronx; they belong there and only there. The stadium they've played in for 75 years (with the exception of the year of renovations when they played in Shea Stadium) was first constructed in 1923. The day the stadium opened on April 18, 1923, Babe Ruth hit his first home run. The building is monumental along with the events that occurred

there. Anddy Carmona '02 from the Bronx is very opposed to the transport of Yankee Stadium. He said, "Once you hit 161st Street, the whole area becomes alive; Yankee Stadium is good for the Bronx."

But now Steinbrenner and Mayor Giuliani must make a decision on the stadium. Yes, the stadium is rundown and in major need of renovations. The parking is atrocious, and the area is not so hot, but this is Yankee Stadium we're talking about.

You can't pick up and move a history and an environment and just expect the sacredness of the place to move with it.

Financial Aid Dept. comes up short

By Meredith Kramer

OK, so what's the deal with the financial aid around here? I just transferred here from Penn State in order to get away from the large class sizes and the non-personality of student and teacher relationships. However, when I applied and eventually got accepted to Bucknell, I didn't know there was a catch.

You see, my family can only afford so much when it comes to education, as I have two other siblings. The catch seems to be this: according to Bucknell's financial aid department, in order to be able to afford this first class, private school education (the kind that I was looking for) you have to walk into the financial aid office wearing nothing but rags and carrying nothing but a change can.

Now, my family is not by any means poor. However, \$28,000 plus expenses is certainly a hefty price to pay for any institution. More specifically, the University is not even ranked any better than the Pennsylvania State University (both Tier 2). I think anyone can agree this is a lot of money. Yet, Bucknell does have the facilities and opportunities that I personally am looking for, those of which could not be provided for me by Penn State. I do not, nor will I understand how a school that is so well-endowed, such as Bucknell, cannot give financial aid to those who show that they need it.

There is that catch again. What do I, personally, have to do in order to show that I NEED IT? I would like that question answered.

I have spoken to many students

around here and they all seem to say the same thing about the financial aid program here. The most common response is, "It's virtually impossible to receive adequate financial aid here."

Almost as bad as the program here are the people who are in charge of it. One man, who will remain anonymous, for I would never want to shatter any sort of "reputation" that he has here (ha ha), has been nothing but an ill usage of Bucknell's dollars that could be otherwise better spent.

When a student walks into the financial aid office, I think that he or she certainly is saying something: "Hey, listen up! I need help, can you help me?"

Those employed in the financial aid department should be nothing other than considerate, sympathetic and most importantly, ready to help in any way that they can. I have found this to be completely false here at Bucknell. The person whom I am speaking of clearly has a condescending attitude. I feel he is looking down at me and that if I waved around some cash in front of his face, I would receive better treatment. If this is what he expects from the students who come into the financial aid office, then I have some news for him: THAT ISN'T HAPPENING ANYTIME SOON!

I think my point is perfectly clear here. The financial aid department gets a big fat "F" on my report card. I guess I shouldn't even bother applying for financial aid next year. The amount that they give here is an insult to the term "aid."

"I didn't really want anybody to break the Yankee's record, but if it had to be broken by a non-New Yorker, I hoped it would be Sosa because it would have been a surprise since everybody expected McGwire to win."

Kate Cornell '02

"McGwire, because he's more publicized in the media as a nice role model for today's youth. He's a family man, and has his son act as bat boy all the time."

Andrew Kohn '01

"Sammy Sosa. I don't like McGwire."

Kelly Morgan '00

The final proposal made is logical. Fernando Ferrer, the Bronx Borough President, has proposed the construction of Yankee Village right in the spot of the present stadium. The proposal plans to renovate the old stadium to the extent of restoring original ornamentation that was stripped from the building during its first renovation. Yankee Village will add 120 new luxury boxes, thousands of additional parking spots and the placement of restaurant and retail stores in the surrounding area to help the year-round economic stature of the area.

The New York Yankees have to stay in the Bronx. There is no alternative; if they do move from their current residence, it just won't be the same. That soon-to-be famous #9 rookie will never get the chance to break Whitey Ford's pitching record.

The situation is just like that of the Brooklyn Dodgers and Ebbets Field. Although the Dodger's move was across the country, Ebbets Field was sacred territory. Never again can the Brooklyn Dodgers be what they were, especially since the destruction of their sacred land, Ebbets Field. New York already lost one historic ball park; they can't afford to lose another.

New York is a no-win situation.

SURVEY

WHO DID YOU HOPE TO SEE SET THE HOME RUN RECORD- SAMMY SOSA FROM THE CHICAGO CUBS OR MARK MCGWIRE FROM THE ST. LOUIS CARDINALS?

"Personally, I would have had Sosa win because I like to root for the underdog. But we all know what is best for baseball."

Valerie Stetts '99

"Mark McGwire, because throughout his career he's worked very hard to overcome injury and from year to year he has been a consistent power hitter."

Ted Chiacchio '99

University lacks environmental responsibility

By Maren Johnson

Outside the Bubble there is a whole other world. There is a world of global warming and depleted resources. There are environmental activists and recycling plants galore. But here, inside the Bubble, we too are trying to do our part. However, trying is one thing; success is another.

A friend brought to my attention the other day, that despite all the lip service here concerning environmental action and recycling, we still use unbelievable amounts of styrofoam on this campus everywhere. The cafeteria, along with the Bison, Larison dining hall and the Seventh Street Cafe all use styrofoam products on a regular basis.

Now, I'm not going to claim to be an expert on environmental issues because I am certainly not, but my basic knowledge tells me that this mass consumption of styrofoam products is not as environmentally sound as other options that are available.

On a personal level, consider this: how many foam products do you use in one day? For those of you dining in Larison, there is no other option but styrofoam cups and plates for both breakfast and lunch. The Bison also offers only foam cups for beverages. In addition, a slice of pizza in The Bison must be purchased on a styrofoam plate.

The "to-go" cups at Seventh Street are also foam products.

While I have noticed that these cups offer a phone number to call for information on foam recycling, please raise your hand if you've ever called this number. That is what I thought.

There are other options out there. I am a little surprised that a school which seems to place such emphasis on recycling has not considered a switch to paper products. Paper plates and cups are a viable substitute for our current foam products. They are far more environmentally sound and easily recycled.

There is the apparent lack, or downright absence, of "cardboard recycling receptacles" on campus. This is not to say that there aren't any, but I have yet to see an easily accessible, clearly marked cardboard recycling bin since I've been here. Considering the amount of cardboard boxes that I see when exiting the mail room everyday, I would think this to be a resourceful idea.

Basically, if we truly want to pride ourselves on being an environmentally respectful school, then we must give more than promises to the environment. Although it is unlikely that we will greatly impact the world, we can at least make a difference inside the Bubble.

Arts & Entertainment

Rusted Root concert expected to rock the campus

By Christina Jenckes

After hearing all of the false entertainment rumors at the University, one rumor is finally coming true. The highly acclaimed musical group Rusted Root will perform here this Friday night.

Anyone who has ever seen them live

has probably been waiting anxiously to see them again. Not only is their music incredible, but their concerts are filled with soul and inspiration. They are considered one of the most powerful rock music forces to emerge in the '90s.

Rusted Root originally formed in Pittsburgh in 1990. The group was founded by lead vocalist and guitarist Michael Glabicki, supporting vocalist and percussionist

Liz Berlin, bass guitarist and percussionist Patrick Norman and drummer Jim Donovan. John Buynak (wind and percussion) joined the group later that year while John DiSpirito (drums and percussion) made the band complete in 1993. Since then Rusted Root watched their dreams come alive as their musical hits, such as "Send Me on My Way," skyrocketed up the charts.

This group has a different vision of their music than other bands. Rusted Root incorporates a blend of African, Middle Eastern, Latin American and Eastern influences into their music. With the unique rhythm, Glabicki's lyrics and the rich supporting vocals of Berlin and Wertz, Rusted Root composes music with soul, emotion and illumination.

On its second Mercury release *Remember*, the sextet pushed its audience and music further into unexplored territory and created a new, but different, type of music that was instantly embraced by the public. The group cultivated a resplendent array of textural and compositional elements with their incredible ability to take American song structure and blend it with an Eastern beat. The result of this musical combination is Rusted Root's critically acclaimed major label debut, *When I Awoke*, which sold more than one million copies.

Other evidence of this type of musical blend is apparent in songs like the Eastern-tinged "Faith I Do Believe," and the driving "Voodoo" that are mysterious and luminous. Along with their songs, Rusted Root concerts have been praised because of their innate tendency to jam on stage and their extent to exchange role and instruments from one song to the next. For example, Norman and Buynak often exchange guitars and percussion instruments.

Early in the band's career many people began to follow and tape

their hypnotic live shows. To meet the demand of the public, Rusted Root released *Cruel Sun*, an album that quickly sold over 80,000 copies nationally.

The strength of the group and their music set them on tour in 1994 to the Pacific Coast, where Rusted Root signed with Mercury and released *When I Awoke*. When this album became instantly popular, they put more of their African and Middle Eastern melody into *Remember*. On songs like "Virtual Reality" and the meditative "River in a Cage," Glabicki exuberates his talent by coaxing riffs from banjo and mandolin while his bandmates craft rhythmic filigrees in the background.

To say the least, the University is incredibly lucky to have this talented group perform for us this Friday. Kari Conrad, assistant dean of students and director of the Bucknell Activities Council, explained that the band committee works through a middle agent by putting a bid in for a band. BAC picks the group by student preference, much of which pointed to Rusted Root. Conrad said, "We put out a bid in for Rusted Root last January and we are really excited that they will be here on campus. It is an event to bring the whole student body together. It is the hard work of the Concert Committee that allows this opportunity for students, and it should be a great one."

The concert will take place at 8 p.m. this Friday night in the Fieldhouse. Tickets are on sale in the bookstore for \$15 with a University I.D., and \$18 for the public, but they are going fast. There are under 1,000 tickets left to be sold. The strength and talent of the band comes alive in their concerts and their music. Rusted Root uses the elements of tribal percussion, African melody and strong affluent voices which will bring a powerful performance to the University.

Photo by Dana Tynan 1996, courtesy of the Bucknell Activities Council. Rusted Root members (from left to right) John Buynak, Jim DiSpirito, Patrick Norman, Michael Glabicki, Jim Donovan, and Liz Berlin. The group will perform in concert Friday night at 8 p.m. in the Fieldhouse.

Celebrated poet gives reading

By Courtenay Mastain

While many students on campus stake their claim in front of the television for Monday Night Football, the University offers a diversion for those who prefer to indulge in the beautiful poetry of John Haines. An esteemed and gifted poet, Haines will capture the University community with a reading as part of the fourth annual Sandra and Gary Sojka Visiting Poet Series.

The Sojkas established the series in 1995 to give students the opportunity to enjoy the works of established poets.

An Alaskan homesteader, Haines is also an essayist, environmentalist and teacher. His rich background contributes to the talent he has cultivated as a writer. Haines is well deserving of the praise he receives from Robert Michael Pyle, a

critic who touts him as "a writer of rare vision and poetic eloquence." He demonstrates these notable abilities in his works *Fables and Distances: New and Selected Essays*, *The Stars, The Snow, The Fire*, a memoir, and his most recent effort *The Owl in the Mask of the Dreamer: Collected Poems*.

Haines' remarkable skill has earned him many prestigious awards and honors. Among them are two Guggenheim Fellowships, a National Endowment for the Arts Fellowship, the Alaska Governor's Award for Excellence in the Arts and a Western State Arts Federation Lifetime Achievement. He was most recently recognized in 1995 with a Literary Award from the American Academy of Arts and Letters. His achievements reflect the tremendous capacity for writing he possesses.

Thoroughly deserving of the abundant praise bestowed upon him, Haines is sure to entice his University audience with his work. Another critic Donald Hall says, "Haines has always written with a beautiful ear. His early work distinguished itself by combining lucid images from the natural world with a dreamy inwardness. The later work adds more of the world and more of Haines' rigorous intelligence." Such spectacular admiration of Haines supports his abilities as a writer.

The first poet in this year's series, Haines will share his collection at 8 p.m. this Monday night in Bucknell Hall. The opportunity to hear Haines' celebrated poetry is open to all and is a wonderful chance to escape the rowdy energy sure to rock your dorm this Monday night.

Company! performance led by students

By Melanie Taylor

This weekend Company! will open its 1998-1999 season with its fall play presentation of *Red Cross*, written by Sam Shepard and directed by Karen Forgiore '99. The fall production of *Red Cross* brings Company! full-circle. Director Forgiore was the first Company! director ever, directing the fall of '95 show of *Chocolate Cake* as a freshman. Now as a senior, she will direct her final Company! show this weekend.

Through her experiences with Company! Forgiore has had the opportunity to direct, act, design and produce several shows that have benefited her theater major and helped prepare her for whatever lies in store for her next year in the real theater world. She chose to direct *Red Cross* in her senior year because she felt that it would be an interesting play for Company! to perform, both from the design angle and the complex acting work that the play requires from her actors and herself as a director.

For those who aren't familiar with Company!, it originated at the University in the fall of 1995 to give students more of a hands-on ap-

proach to theater. In the Company! process, the entire production is run by students, therefore creating a unique theatrical experience. In Company! the students produce, direct, act, design and see the play straight through from beginning to end.

Red Cross continues the Company! tradition with actors Amy Wilson '01, Sam Feeney '00 and Miriam Sand '01, with designs by Meghan Somers '99, Ian McNaughton '01, Jen Schermund '00 and Sharon Savage '01.

Feeney and Sand both debut on the stage as new Company! members this weekend. Company! is also pleased to present for the first time on the University stage the design work of McNaughton and Schermund on set design, and Savage on light design. Veteran designer Somers also designed sound for *Red Cross* which is her final Company! performance as a senior.

The play will be presented at 5 p.m. this Friday (the audience will be out in time for the Rusted Root concert) and at 8 p.m. this Saturday in Tustin Studio Theater. Admission is free.

Students practice for the play *Red Cross* which is completely student-produced.

The playwright and the director:

Pterodactyls director David Carpenter tells of Nicky Silver's visit to campus

By David Carpenter

This past weekend was the opening of *Pterodactyls* by Nicky Silver. As the director for the production, I had the opportunity to witness an amazing transformation take place in just three weeks. Through the hard work and dedication of a small group of people, a beautiful piece of theater was presented on campus. This production, like all theater on campus, is the result of an enormous effort. Yet, *Pterodactyls* did have something which rarely comes along at the University—the playwright.

I first found *Pterodactyls* while I was working in New York this past summer for a theater company as an intern. I was talking to the artistic director about searching for a play to do in the fall and he suggested the works of Nicky Silver.

Some time after that, I went to a bookstore to find his plays. I picked a few up and began reading *Pterodactyls*. I couldn't put it down. I was working on a show at night, so every chance I got during that show I would pick up the play and read between the cues. After I finished *Pterodactyls*, I went on to his next play and so on. I fell in love with his work and *Pterodactyls* was the perfect choice for what I wanted to do in the fall.

After the show closed in New York, I went home to Atlanta for a couple of weeks. The show ended that night and he and I chatted right afterward. Mr. Silver was incredibly nice and hysterically funny. He asked politely if he could give me a few notes about the show. We talked about a couple of things and he put me right at ease. Single-handedly he was able to relieve all the tension from myself and the nervous actors. He made us all feel like we had honored his work. It was amazing.

Mr. Silver spent the next two days with us. He led a writing workshop with a group of University students. He saw the show again on Friday, and led a forum after the show.

At some point during our correspondence this summer he mentioned the possibility of coming to the University to see the show. I never expected it to happen. Even two weeks before the show when I was making final preparations for him to visit I still expected something to come up. Fortunately, nothing came up and four days before he arrived, we confirmed everything.

I was terrified. The man who wrote the show I was directing was coming to see it. What had I gotten myself into? Mr. Silver was to arrive on Thursday in time for our dress rehearsal. None of us would have had the opportunity to talk with him before he saw the show. Needless to say, this was nerve-racking.

The tension in the green room was ferocious. He arrived at two of the actors were taking their places. In he came with bags and bags of snack food. I wasn't there to witness his entrance, but I heard he rushed up to the actors, told them not to be nervous at all and to have a wonderful show. It couldn't have been more wonderful.

The show ended that night and he and I chatted right afterward. Mr. Silver was incredibly nice and hysterically funny. He asked politely if he could give me a few notes about the show. We talked about a couple of things and he put me right at ease. Single-handedly he was able to relieve all the tension from myself and the nervous actors. He made us all feel like we had honored his work. It was amazing.

Mr. Silver spent the next two days with us. He led a writing workshop with a group of University students. He saw the show again on Friday, and led a forum after the show.

Director David Carpenter '00 (with Ian McNaughton '01) was influential in bringing Nicky Silver, the playwright of *Pterodactyls*, to give writing workshops.

Having the playwright sitting with the cast talking about the show was an opportunity I never thought I would have in college. He gave us insights we never even dreamed of, and something which is so rare in this world these days: confidence. His compliments and upbeat attitude made us all feel at ease and proud about what we were doing.

This experience can only be described as unforgettable. I could not thank him enough for coming out here and sharing his knowledge and humor with the University community. It makes me respect his work even more.

A&E Calendar

Friday, October 2

*Hilpop Film: "Il Bell'Antonio"
Vaughan Lit Auditorium, 4:30 and 8 p.m.
*Cap & Dagger Company! Performance
Tustin Studio Theater, 5 p.m.
*Fall Concert: Rusted Root
Fieldhouse, 8 p.m.

Saturday, October 3

*Cap & Dagger Company! Performance
Tustin Studio Theater, 8 p.m.
*BAC Band: Lisa Cerbone, acoustic guitar
and vocals, Bison, 9 p.m.
*BAC Movie: "Wild Things"
Langone Center Forum, 10:30 p.m.

Phobias—why are we afraid of the dark?

By Kate Nowak

Professor of psychology Roger Tarpy, an expert on learning theory, said in a recent interview: "The origin of phobias is complex; there is no one source."

According to the American Psychiatric Association, approximately five to nine percent of Americans experience one or more phobias, ranging from mild to severe, each year. A phobia is defined as an uncontrollable, irrational, and persistent fear of a specific object, situation, or activity. Phobias usually first become evident between the ages of 15 and 20 years, but also occur in early childhood. Exposure to the feared stimulus provokes anxiety which may take the form of a panic attack. In children, the anxiety is exhibited through crying, tantrums, freezing, or clinging.

An interesting study, published in the 1988 Harvard Medical School Mental Health Letter, surveyed 1,000 children, 90 percent of whom were found to possess a specific phobia. These children, aged between two and 14, had fears that are typically found in a child: fears of noise, strangers, separation from parents, darkness, animals, etc. The question that the study posed was how to classify these childhood fears and when and how these harmless apprehensions develop

into incapacitating anxiety or phobias.

Anxiety disorders have been shown to be prolonged and exaggerated versions of normal childhood fears. Phobias in children come and go rapidly up to the age of 10 and rarely require any form of treatment. It is when phobias become persistent and recur at an inappropriate age that treatment in the form of counseling, behavioral therapy, visualization, as well as drugs are put into effect. Simple phobias, in both adults and children, are generally eliminated by exposure to the feared object. Exposure treatment takes the shape of more than 50 different forms including flooding, systematic desensitization, and reciprocal inhibition.

What are the sources of these fears? Innate temperament is definitely important, but a history of anxiety or panic disorder is not necessary for the emergence of phobias. Current insight into human phobias involves the perception that phobias stem from stereotypes and biases, both cultural and universal. A mother's fears, distinct to her heritage and culture, are often feared upon her children.

Social stereotypes may be important. Research in humans and monkeys alike has shown very powerful social-learning—we learn to fear from others, especially our par-

ents. The culture overall may be important as well; remember Little Miss Muffet was scared by the spider! How many of us have had that message (that spiders are scary) presented to us from an early age? Tarpy said.

There are biases in the ways humans process information which encompass inaccurate judgments.

"One of the biases is our willingness to believe that certain objects or stimuli are associated with unpleasant things," Tarpy said.

A completely neutral stimulus can become threatening when it is repeatedly paired with an inherently frightening stimulus.

Many of these fears themselves appear to be quite adaptive, as well as universal. These fears are our defenses against darkness, predators and heights.

"Fears helped our ancient ancestors cope with environmental threats of all sorts," Tarpy said.

As mentioned, when these fears become disrupting or interfering with normal adaptive functioning, they become classified under the label "phobia."

"Many fears are usually quite irrelevant to our everyday lives. Snake phobias for instance—their terrible fear does not affect their normal day-to-day living. It may be when the person, at the encouragement of friends and family, is wishing to become more active in the outdoors, hiking and camping, and so forth. This person may then decide to seek help so that the phobia would not interfere," Tarpy said.

Considering another angle, it appears as though when these human fears grow into phobias, become maladaptive, they actually work in reverse when dealing with animals. These animals, when extra observant or cautious, increase their chance at survival, meanwhile, the mental health of a human being may face danger.

"Fears play an important role in keeping animals away from harm. Their symptoms, therefore, are not judged to be inappropriate

or unrealistic. For humans, however, many of these fears are irrational and inappropriate (in that they don't really pose serious threats) because we live in a world that differs dramatically from the one inhabited by pre-technological humans. Excessive fears of heights, darkness and so forth may be irra-

ther than control words.

"This could be accounted for by several theories, including a biological 'predisposition' theory and a cognitive bias theory. However, what was interesting was that ontogenetic fear words, such as gun, bomb, razor, and so forth, were not perceived in this fashion. They were just like the control words such as ankle, leg, shirt. So, we get a mixed message here; there is some evidence for the biological position but certainly no definitive evidence," Tarpy said.

In his other studies, Tarpy was curious to see whether reading words in a matrix containing the word snake, for example, would slow the recognition process for words "hidden" in the matrix.

"It does so—animal fear words cause some kind of perceptual or cognitive 'disturbance' but other words, either control words such as eyelid or technologically new threats such as gun, do not."

In other words, subjects were shown two charts or matrix, one of which contained the word "snake" hidden among the remaining words on the chart "chair." The one "snake" among the "chairs" was quickly found, more quickly than "chair" on an entire chart of "snake" words, due to this disturbance or fear evoked when the subject was presented by a chart filled with the word "snake." This disturbance caused hesitation, and hence the subject took longer to find "chair" among the snake matrix.

Whether these disturbance are biological or learned is not clear. Further research conducted by Tarpy is challenging some existing research done in Sweden which claims to provide unequivocal support for a biological position.

"Some of our research revolves around whether exposure to threat stimuli can cause 'unconscious' anxiety. Our other studies are focusing on the relationship between a person's sense of control and the degree of fear experienced," Tarpy said. Perhaps one day it will be possible to stop phobias before they start.

Roger Tarpy, professor of psychology, researches the complex origin of human phobias.

tional in the sense that our control over the environment, which humans have developed in the last few thousand years, has changed the degree to which they threaten our survival."

Tarpy's recent study involved the demonstration of the biases in human thinking. One of his more detailed studies involved the presentation of flashing words upon a computer screen so rapidly that conscious recognition by subjects (college students) was improbable. The flash duration was gradually lengthened until recognition was possible, and the first words to be identified were snake, spider, lion, and tiger.

NSBE brings engineers together

By Kathy Chevalier

The National Society of Black Engineers (NSBE), has more than 10,000 members and is one of the largest student-managed organizations in the country. The National Society of Black Engineers is, according to Milton Baxter '00, "an organization based on career development." Every fall and spring, the NSBE holds workshops in which the entire weekend is business-centered. Leadership and resume workshops are designed to help members increase their skills and prepare them to make future career choices.

The objectives of the NSBE are "to situate and develop student interest in various engineering disciplines, strive to increase the number of minority students studying engineering at both the undergraduate and graduate levels, and function as a representative body on issues and developments that affect the careers of black engineers."

At the University, the National Society of Black Engineers strives to bring engineers together. Part of this project involves activities through which upperclassmen engineers help first-year engineering students. The National Society for Black Engineers has an annual bake sale during the University's Homecoming Weekend.

Next Week:

Water Polo at Air Force Invitational

Football at UPenn

THE BUCKNELLIAN Sports

Athlete of the Week

Water polo player Josh Watts '00 has netted 42 goals on the season, and has been a main contributor to their seven game winning streak.

Polo extends winning streak

By Brian Watson

The men's water polo team showed just how talented they are by dominating the Bucknell Invitational early this week. The momentum the Bison gained from this impressive performance propelled them to three victories at last weekend's Southern Divisional Games at Salem-Teikyo.

Bucknell took the pool against Slippery Rock on Saturday morning, looking to capitalize on the progress made at home the previous weekend. The team came out strong, scoring 14 first-half goals and never surrendering the lead, closing the match 25-21. Josh Watts '00 continued to carry the scoring load, netting eight goals, including a pair of two-pointers. Watts displayed his versatility by chipping in two steals and an assist. Justin McCarty '01 played solidly for the Bison, scoring five goals in as many attempts along with three steals and two assists.

Next up for the Bison was the home team, the Salem-Teikyo. Once again, the Bison jumped ahead early and never looked back, winning 13-5. Senior co-captain Brian Baker teamed up with McCarty to score three goals apiece while Tate Gredtzer '01 (three as-

Paige Cull—The Bucknellian
The water polo team captured three more victories, and in doing so, upped their winning streak to seven.

sists, four steals), James Miente '01 (three assists, five steals), and co-captain Kevin Permisohn '01 (three assists, four steals) turned in tremendous performances.

Zach Blitt '99 stopped 10 shots on goal while allowing only three.

The team finished its run on Saturday night, downing the nationally-ranked Princeton Tigers 13-7. The Bison were led once again by Watts, who scored four goals, bringing his team-leading season total to 42, while Permisohn

contributed three assists and three steals.

The Bison have won their last seven games and look to continue their streak as they head to Colorado for the Air Force Invitational this weekend.

Men's cross country off to fast start

By Rose Sedo

This past weekend, Patriot's Weekend, was initially supposed to have been one of rest for the men's cross country team.

Instead, a last minute decision was made to split the team, having the top 12 men varsity runners run in a dual meet at Navy Triangular on Saturday morning. Neither the Women or the JV Men had a meet this weekend.

The team was to gain a feel for the regional course fairly early in the season. However, there was a catch.

Technically, Bucknell had to take a loss at the invitational last week at Penn State, which could have easily been another win had the whole men's team been present.

Even so, the Bucknell men's cross country team remains undefeated at 8-0, after defeating Navy and Purdue in dual-meet competition on Saturday. The Bison placed three runners in the top six, out of a field of 31 competitors.

Matt Kodak '99 finished second overall on the five-mile course, with a time of 25:13.7 and Dave Brofenbrenner '00 took third, crossing the line at 25:19.0. John Dietrich '99 finished with a time of 25:37.3, placing sixth overall.

However, although it was a win for the men, it wasn't a very pretty win. According to Coach Gulden, "Four people ran pretty good, after that I think it was a little disappointing. We need to do something about our fifth and sixth men. But when you run average, and you still beat a team like Navy on their own turf, it's a good indication of what will come later in the season. You don't run great all the time."

See CROSS COUNTRY page 15

Men's soccer still struggling

Bucknellian File Photo
The Bison will play Army in their third league game this Saturday.

By Justin Knox

The Bucknell Men's soccer team continued to struggle this week as they took on Colgate at home on Saturday in their second Patriot League game of the season.

Colgate jumped out to a 1-0 lead a little over 10 minutes into the game. The Bison were able to contain the Red Raiders for the rest of the game, though Colgate did manage a late goal to hand Bucknell a 2-0 loss, their second Patriot League loss of the year. "We did have a few chances to score, we just didn't capitalize on them, that's been our prob-

lem all year," Bill Epley '01 said.

Bucknell, who have been held scoreless in their last four games, tried some different strategies to help alleviate their problems. Bucknell sophomore Sam Graziano said "We moved some players around, trying to jump start the team a little, but we just couldn't get rolling." Goalender Nathan Fitzgerald '00 recorded 14 saves for the Bison. Teammate "Overall, I thought we played pretty well against Colgate, we just needed to finish, and we didn't do that," Epley said.

Bucknell traveled to Niagara on Tuesday to battle the Purple Eagles,

in non-league action. Niagara scored the only goal of the game, as they scored off a Niagara corner kick. The corner kick resulted in a flourish of action to the left of the goal, and was struck into the net by a Niagara player. No other goals were scored for either team, as Niagara took the win, 1-0. Epley said "We really had the advantage the whole game against Niagara, but we just couldn't finish on any of our chances. Chemistry seems to be a problem for us right now. We aren't reading each other very well right now."

Graziano agreed on this point. "The team is pretty young. Once certain guys get used to how we play on the field, and we start reading each other's actions on the field, I have no doubt the goals will come. It is just going to take some time."

Bucknell, now 0-2 in the Patriot League, will take on Army at home this Saturday at 2:00.

"The Army game is by far our most important game yet this year. This will be our third Patriot League game, and starting out 0-2 in the league, we have to start winning games, if we want a shot at the Patriot League Tournament."

Bucknell will hope that the third time is the charm for them in the Patriot League. Epley said "Yeah, long term we're looking at the tournament, but right now we just have to win a game. If we can win, and get some confidence back, that will get us rolling again. That's what we're hoping for," Graziano said.

Women's golf makes statement

By Laura Hough

Bucknell's women's golf team took five of the top seven individual places at the Patriot League Individual Tournament.

Reflecting on the win, Hilary Mainka '02 remarked that "it was a great accomplishment for such a young team like ours to beat experienced teams like Lehigh and the other members of the Patriot League."

Lehigh's Samantha Woods shot a 97 for fifth place and the Mountain Hawks' Danielle Theibalt shot a 105 for seventh place out of fifteen. Bucknell's overall record is 2-1 as a result of the win over UMB on Sunday.

The Bison also defeated UMB in a dual match, winning with 354 strokes to UMB's 383.

To begin the match, sophomore Kate Hoppel shot 12 over par 82 to capture top honors in the individual tournament.

Two other members of the team, Mainka and Heather Mann '01, were also medal winners. Mainka shot an 85 to take second place and Mann shot a 93 to take the bronze medal.

Bridget O'Mara '02 shot a 94 for fourth place and sophomore Christine Freda shot a 104 to complete the domination over the Retrievers.

The Bison will compete at the two day Princeton Invitational starting Saturday, October 3.

Jonah Hall—The Bucknellian
The Bison took five of the top seven places in the league tourney.

Bo-oring: The Boston Red Sox should be dancing in the streets. Closer Tom Gordon earned his 42 consecutive save, future Hall-of-Famer Dennis Eckersley tied the all time record for most pitching appearances, Mo Vaughn had his 200th hit of the season, and the Boston Sox won the wild card. The locker rooms were covered in plastic to prevent champagne spillage, and the fans were partying in the stands. Yet, the Sox were surprisingly quiet. They did not celebrate, and they did not dwell on the fact that they had clinched their second playoff berth in the last four years. Nomar Garciaparra, whose two homers and four runs led Boston to their clinching victory over the Orioles was one of the few players that was willing to comment. "It is a small step. We understand that," said the Red Sox second baseman. "But there is still postseason play." This mindset is a result of the fact that the Red Sox have one of the longest championship droughts in baseball, not having won the title since 1918. This season, the Sox are determined not to let history get in their way, and look to win not only their first series against Cleveland, but eventually the World Series as well.

Mad Mac: Mark McGwire is one for the ages. He not only eclipsed one of the most celebrated records in all of sports, he smashed it. When McGwire hit his 69th and 70th home runs Sunday afternoon, he did something that few men can ever dream of, let alone accomplish. Maris' 37-year-old record of 61 dingers in a season was the stuff made of heroes. McGwire's mark of 70 is the stuff made of legends. But McGwire's contribution to baseball is more than what it appears to be. The record means a lot, but it pales in comparison to the contribution he has made in remaking baseball into the national pastime. With every homer McGwire hit, another memory of the strike shortened season was left behind. People are following baseball again, and are going to more and more games. In breaking the record, McGwire not only became a part of baseball lore, he made baseball the game that all of us love to watch.

You win one you lose ... 80?: Earlier this week Prairie View A&M did something that they had not done since 1989, win a football game. The Panthers had set a NCAA record with 80 consecutive losses, and there seemed to be no hope in sight. But in a dramatic turn of events, Prairie View actually defeated Langston on Saturday 14-12, when they stopped a two-point conversion attempt late in the fourth quarter. Ironically, Langston was the very team that handed the Panthers their first of the 80 consecutive losses by the score of 19-18 on November 11, 1989. Their streak included some incredible statistics: four different coaches; 19 shutouts, including a 92-0 loss to Alabama State; and a cancelled 1990 season that was a result of a financial scandal. The streak was really never threatened until last week. Prior to that point the closest the panthers had come to winning was a 12-8 loss to Arkansas-Pine Bluff for loss #33.

Cubs Win!!: When the Cubs beat San Francisco Monday night, they wrapped up one of their most successful regular seasons in recent history. They won 90 games, and were guided by the play of MVP candidate Sammy Sosa and rookie phenom Kerry Wood. The best part of their season is that they are actually going to the playoffs. Although the odds are slim to none, they have a chance to win their first World Series since 1908. The trouble is that they have to beat the Braves before they can even think about the NLCS, let alone the World Series. If Harry Caray were only around to see this ...

Locked out: NBA players and owners met last week for the first time since August 6. Unfortunately, the only conclusion they came to was that 24 NBA preseason games had to be cancelled. The lockout has been going on for over 90 days now, and there is little hope in sight. "Nobody wants to miss the whole season, but there are 29 owners that are willing to do so if they have to," deputy commissioner Russ Granik said. The owners are looking to put a definitive limit on salary costs and phase out the "Larry Bird exception," which allows teams to exceed the salary cap when signing their own free agents. In contrast, the players, who are represented by union president Patrick Ewing, won't agree to any sort of "hard" salary cap. The games cancelled included exhibitions in Israel, Buffalo, Honolulu and Green Bay among others. But perhaps the most anticipated game cancelled was one, which matched the Bulls and the Pacers. This game was to be played in Ames, Iowa and would have marked the homecoming of projected Bulls head coach and former Iowa State skipper Tim Floyd. The league imposed the lockout on July 1 after neither side could agree on a collective bargaining agreement.

Gawd Awful: Coming off one of the worst seasons in NBA history, the Denver Nuggets thought they had to do something to improve. Few expected that solution to be in the form of long term Italian League coach, Mike D'Antoni. The Nuggets '97-'98 season included an NBA record 23 straight losses, and they became only the fourth team in NBA history to lose 70 games in a season. "I was hired to bring the team back to respectability. When I think respectability, I think of making the playoffs," D'Antoni said. With those sort of expectations, it may be a long season in the mile high city... if there is one at all.

Ultimate comes up short at sectionals; begins preparation for spring season

By E.J. Crawford

One win at Sectionals would give the Mudsharks, Bucknell men's Ultimate Frisbee, their pool and achieve the team's goal for the Fall season—making Regionals. The Mudsharks, already victorious over rival Lehigh and club team Mr. Fun, had nearly erased a five point deficit, pulling to within 11-10 of Philadelphia club team Louder than Worms.

As Mudsharks tri-captain Dan Heckman '99 said, "This team has been looking forward to the prospect of this tournament ... this is what we've been building towards."

Twenty-four hours later the Mudsharks were on their way back to Bucknell, dropping the last four points against Louder than Worms and suffering a heartbreaking loss to Penn State's club squad.

The Fall season is known as the club season. There is no age or eligibility limit for the teams entering, and the majority of the teams consisted of players long past the college eligibility of five years, which must run concurrently.

The disappointment of the Mudsharks 'A' squad was balanced by the success of the 'B' team, known affectionately as the Bomb Squad. The Bomb squad, playing against other college 'B' teams, posted an undefeated Saturday, going 4-0 with impressive wins over UPenn, Haverford and Carnegie Mellon, as well as a convincing defeat of Pitt's 'A' squad. "I think we did a really good job and had some fun," team captain Brian Baughan '99 said. "The freshmen were really enthusiastic for the games. I think they learned a lot and kept learning every game."

The Mudsharks 'A' team, seeded second in their pool (out of four teams) to Louder than Worms,

Courtesy of Mike Brophy

The 'Sharks opened the weekend with a bang, as they dominated in their first two games. Unfortunately, they could not carry that momentum into their next contest. They finished 2-2 on the weekend.

opened Sectionals impressively. The squad rolled rival Lehigh, the team that had defeated them in the finals of last Spring's college sectionals, 13-6. The Mudsharks built upon that win with a blowout of respectable club team Mr. Fun, 13-3, dominating every facet of the game. These two wins set up the showdown against Louder than Worms, the third-seeded club team (out of 17 teams at Sectionals) that the Mudsharks had upset the previous week in a New Jersey tournament.

The Mudsharks failed to open with the same intensity as they had against Lehigh and Mr. Fun and fell behind early, 5-1. After falling behind 10-5, the Mudsharks made a

run to pull within one point at 11-10. But it seemed that the run had taken the legs of the Mudsharks and Louder than Worms closed them out, 15-10.

However, due to their earlier wins, the Mudsharks could still qualify for Regionals with a win over a Penn State squad that included three strong club players (not college eligible).

The Mudsharks, remembering the slow start against Louder than Worms, opened strong, running out to a 10-4 and 12-6 leads.

Then the wheels came off.

Penn State came roaring back, closing the deficit to 12-10. The Mudsharks rebounded to go up 13-

10 and give them game point. It was the last point the Mudsharks would score. "We started looking past the game at hand," Heckman said. "We were looking ahead and Penn State did a great job of coming back."

Penn State subsequently took the last four points of the game to win, 14-13.

"We were really disappointed to not make Regionals, especially considering the success we've had the last few weeks," Heckman said, alluding to the Mudsharks' 14-3 record going into Regionals.

The team now focuses on the all-important college season, where it is a favorite to take the section and a serious threat to make Nationals.

This week in college football and baseball

By Tim Scheu

#7 Penn State @ #1 Ohio State

This is the best team Columbus has seen under John Cooper's reign as head coach. Ohio State was the early season favorite to win the national championship, and have dominated their first two games. In contrast, Penn State struggled to put away an apathetic Pitt team in their last game. Both teams have a week to prepare for this matchup, but the Nittany Lions cannot compete physically with this stacked Buckeye squad.

OSU 38 PSU 10

#11 Syracuse @ N.C. State

The Wolfpack's upset of FSU was just a matter of being in the right place at the right time. N.C. State's next game, a loss against Baylor, gave them a dose of reality. This weekend they are matched up against one of the most talented teams in the country. This could be the year the Orangemen finally break out and take the college football world by storm.

Syracuse 42 N.C. State 17

Bucknell @ Pennsylvania

The Bison bounced back from their loss against Fordham to defeat a talented Columbia team. On the other hand, Penn struggled in their loss to Richmond. I doubt the Bison will have another leadown. They will continue their streak of six consecutive victories against Ivy League teams.

Bucknell 24 UPenn 10

I am a baseball fan too, so here are my predictions for the first round of the playoffs:

Chicago and Atlanta

The Cubbies needed every one of Sosa's 66 home runs to reach the playoffs. Now that they are in, every part of me wants them to win the series, but they won't. Atlanta is just too good. They have the best pitching staff in baseball, and one of the best hitting lineups to boot. I will be surprised if Chicago makes it close.

Braves 3 Cubs 1

San Diego and Houston

This is probably the best matchup of the playoffs. Both teams have strong pitching staffs anchored by the Padres' Kevin Brown and the Astros' Randy Johnson. Both have a power hitter in Vaughn and Bagwell, and both have heart in Biggio and Gwynn. But I think the Padres have an edge. They are a veteran team, and have an incredible closer, but this one could go down to the wire.

Padres 3 Astros 2

Boston and Cleveland

While Boston did have the better regular season, they are lacking in one particular department, experience. Their leaders are barely into their mid-twenties, and have little to no playoff experience. Not only that, but the Red Sox have to live up to all the pressure of not having won a World Series since 1918. The Indians may not have the pure talent, but they have what it takes to do well in the playoffs. They lost last year in the 11th inning of the seventh game of the World Series, and they are going to take their frustration out on the Red Sox.

Indians 3 Bo Sox 1

Texas and New York

The Yankees are just too good. No one can get lucky and win 114 games. This may be the best team New York has seen since the days of Mantle and Maris. They have one of the best rotations in the majors, and a rock solid offense. Texas will not be able to stop them.

Yankees 3 Rangers 0

My record for last week was a stellar 4-1. I may not be the prediction god, but I am certainly one of the gods.

HOW TO USE THE BATHROOM.

When it's time to use the bathroom, you probably want to know how to use the bathroom. But you may not know that you can use the bathroom in many different ways. Here are some tips to help you use the bathroom more effectively.

1. Use the toilet. The toilet is the most common way to use the bathroom. To use the toilet, you should sit or stand over the bowl and push down on the handle to flush. You should also flush after you are done.

2. Use the shower. The shower is another common way to use the bathroom. To use the shower, you should turn on the water and soap, and then wash your hair and body. You should also turn off the water when you are done.

3. Use the sink. The sink is another common way to use the bathroom. To use the sink, you should turn on the water and wash your hands. You should also turn off the water when you are done.

4. Use the bathtub. The bathtub is another common way to use the bathroom. To use the bathtub, you should turn on the water and fill the tub with water. You should also turn off the water when you are done.

5. Use the toilet paper. Toilet paper is used to clean yourself after using the toilet. You should use toilet paper to wipe yourself dry after using the toilet.

6. Use the towel. A towel is used to dry yourself after using the shower or bathtub. You should use a towel to dry yourself after using the shower or bathtub.

7. Use the soap. Soap is used to clean yourself after using the shower or bathtub. You should use soap to wash your hair and body after using the shower or bathtub.

8. Use the mirror. A mirror is used to look at yourself in the bathroom. You should use a mirror to look at yourself after using the shower or bathtub.

9. Use the door. The door is used to get out of the bathroom. You should use the door to get out of the bathroom when you are done.

10. Use the lock. A lock is used to lock the door to the bathroom. You should use a lock to lock the door to the bathroom when you are done.

11. Use the handle. A handle is used to open the door to the bathroom. You should use a handle to open the door to the bathroom when you are done.

12. Use the knob. A knob is used to turn the water on or off. You should use a knob to turn the water on or off when you are done.

13. Use the faucet. A faucet is used to turn the water on or off. You should use a faucet to turn the water on or off when you are done.

14. Use the spout. A spout is used to turn the water on or off. You should use a spout to turn the water on or off when you are done.

15. Use the drain. A drain is used to drain the water out of the sink or bathtub. You should use a drain to drain the water out of the sink or bathtub when you are done.

16. Use the overflow. An overflow is used to prevent the sink or bathtub from overflowing. You should use an overflow to prevent the sink or bathtub from overflowing when you are done.

17. Use the plug. A plug is used to stop the water from draining out of the sink or bathtub. You should use a plug to stop the water from draining out of the sink or bathtub when you are done.

18. Use the stopper. A stopper is used to stop the water from draining out of the sink or bathtub. You should use a stopper to stop the water from draining out of the sink or bathtub when you are done.

19. Use the strainer. A strainer is used to catch hair and other debris from the drain. You should use a strainer to catch hair and other debris from the drain when you are done.

20. Use the brush. A brush is used to clean the drain. You should use a brush to clean the drain when you are done.

21. Use the plunger. A plunger is used to unclog the drain. You should use a plunger to unclog the drain when you are done.

22. Use the snake. A snake is used to remove hair and other debris from the drain. You should use a snake to remove hair and other debris from the drain when you are done.

23. Use the auger. An auger is used to remove hair and other debris from the drain. You should use an auger to remove hair and other debris from the drain when you are done.

24. Use the wire. A wire is used to remove hair and other debris from the drain. You should use a wire to remove hair and other debris from the drain when you are done.

25. Use the hook. A hook is used to remove hair and other debris from the drain. You should use a hook to remove hair and other debris from the drain when you are done.

26. Use the comb. A comb is used to remove hair and other debris from the drain. You should use a comb to remove hair and other debris from the drain when you are done.

27. Use the comb. A comb is used to remove hair and other debris from the drain. You should use a comb to remove hair and other debris from the drain when you are done.

Women's soccer bounces back against St. Joe's

By Matt Fraser

Wins have not come easily for the Bucknell women's soccer team in 1998. Going into last week's showdown with St. Joseph's, the Bison were fighting a four-game losing streak and were plagued by an inability to score goals. All that changed for them against the Hawks as Bucknell knocked home three big goals to secure their third win of the season.

Striker Colleen Butler '00 opened the scoring with ten minutes remaining in the first half. Melissa Montefusco '02 scored her first goal as a Bison just three minutes later, giving Bucknell a 2-0 lead at halftime. Hoping to avoid another second-half collapse, the women came out fighting after the break. Their efforts were rewarded in less than five minutes when Sarah Klang-Glienna '02 netted her third goal of the year. St. Joseph's managed score a goal midway through the half, but the damage had already been done. Bucknell improved to 3-5-0 overall and put the team's losing streak to an end. Andrea Fisher '00, who made her first start in goal this season, recorded nine saves for the Bison. Head coach Chrissy Findlay was very enthusiastic regarding her squad's overall performance. "It was a great win," she comments. "We dominated every facet of the game, and the early goal was critical for us. Playing with the lead gave us that much more confidence."

After the big win against St. Joseph's, the Bison came home for a Parent's Weekend game against league rival Holy Cross. Bucknell had recorded six straight wins against the Crusaders, dating all the way back to 1991. Looking to continue this dominance, the Bucknell women came out strong in the opening minutes. Despite continued pressure, the Bison were unable to score early. Unfortunately, the team's intensity let up just long enough for Holy Cross to sneak two quick goals past Bucknell keeper Dana Rofey '00. The first half ended with the Crusaders holding on to a 2-0 lead. The second half began in much the same way as the first half. Bucknell came out firing and had several chances to close the gap. However, as has been the case too often this year, the team was unable to put its shots away and walked away with a 2-0 loss. It was the third time this season that Bucknell was shut out, as they dropped to 3-6-0 overall and 0-2-0 in the Patriot League. Coach Findlay was less than impressed with the women's performance against Holy Cross. "We put too much pressure on ourselves by surrendering those first-half goals," she said. "Playing from behind is always physically and mentally draining. We simply made too many mental mistakes."

As the second half of the season gets underway, the Bison will be looking to secure a place in the Patriot League playoffs. The team has a big home game this week against the Princeton Tigers. They will then hit the road for a tough three-game road trip beginning at Colgate, who are the defending league champions. There is no doubt that this team has the ability to be successful in the upcoming weeks, but it will require a total team effort. "We've got so many great individual players here. What we need to do now is work on being a great team," Findlay said.

CROSS-COUNTRY

From page 11.

Captain Jon Dietrich '99 winded up with the same conclusion. "We ran very tough, but just not very well. We didn't run to the team's potential, but we still beat Navy. That in itself is a testament to what we can do in the future. We made a couple of mistakes, but we still came out on top," Dietrich said.

As for the mistakes made by the team, they could have been due to the extreme heat that day. Said Dietrich, "It was like running in a microwave for 25 minutes."

Nevertheless, Dietrich says the problems with the fifth and sixth runners "will definitely be solved. We were lucky that we won, and we learned some lessons from that. We'll beat Navy by a larger margin next time."

The men's and the women's next race is at home against Rider on the 10th of October, and the next three weeks are going to be in preparation for the Michigan Invitational on the 17th of October.

Equestrian opens with victory

Bucknell looks to win the Intercollegiate Horse Show Association title

By Melanie Taylor

This past Sunday, the Bucknell Equestrian Team opened its fall season with a full-fledged first place victory at Slippery Rock University (SRU), establishing itself as the team to beat this year in their Region of the Intercollegiate Horse Show Association (IHSA). The team traveled to SRU to compete against the other teams from the region, including major competitors Penn State University (main campus), and West Virginia University. Other teams in Bucknell's region include California University of Pennsylvania, Dickinson College, Duquesne University, Indiana University of Pennsylvania, Penn State (Fayette Campus), Seton Hill College, Slippery Rock University, University of Pittsburgh, University of Scranton, Westminster College, and Wilson College.

The team opened the morning with a superb showing in the jumping classes. Jessica Jacobson '01, marked herself for success in her first Intercollegiate Competition,

taking 7th place in the Open division of Fences, the highest level of jumping in the IHSA. From there, the day exploded with Team Captain Meridith Cormman '01 taking first place in Intermediate Fences, and Robin Meckling '01 finishing with a fourth place in the same division. As Bucknell pulled for first place going into the afternoon flat equitation classes, the team rallied around its competing members urged on by the support of Coach Jan Phillips of Milton, PA.

The afternoon flat classes proved a tremendous success for the Bucknell Team with 4 more first place finishes as the other teams watched in frustration. Jacobson took a sixth place in the Open Flat division in her class of nine riders. In the next division, returning senior Jackie Summer demonstrated to the other teams what a good rider should look like by taking first place in the first Intermediate Flat class of the day. Following her example in the next class,

The Bucknell equestrian team looks to keep the momentum going Saturday when they travel to Penn State for their next competition.

Courtesy of Melanie Taylor

Meridith Cormman '01 successfully clears the first jump of the series.

Robin Meckling '01 rode to a first place victory as well, while team newcomer Steph Hewitt '02 took third place in her first Intercollegiate Show, establishing herself as a formidable opponent to the other teams.

As the day moved on, Bucknell earned more triumphs and victories. In the Novice Class, Jamie Grimley '01 also took first place in her first competition, and Cormman pulled in a fifth place. In the Advanced Flat Class, Jamie Kosele '01 rode to a red ribbon second place victory in her class of eight riders. In

the Walk, Trot, Canter Division, Team President Melanie Taylor '00 earned a first place victory, qualifying her to move up to Advanced Flat, while freshman Kate Durton established herself on the team with a second place win after an excellent ride. As the day's competition neared a close, Molly Saghirian '01 cinched victory for the Bucknell Equestrian Team with a first place win in the Walk Trot Division.

This weekend the Bucknell Equestrian Team travels to Penn State to once again claim victory over the Region.

FOR THE EDUCATION AND RESEARCH COMMUNITY

OVER ONE MILLION OF THE BEST MINDS IN AMERICA HAVE ALREADY CHOSEN THE BEST RETIREMENT SYSTEM.

TIAA-CREF.

When it comes to planning a comfortable future, America's best and brightest turn to the expert: TIAA-CREF. With over \$230 billion in assets under management, we're the world's largest retirement system, the nation's leader in customer satisfaction,* and the overwhelming choice of people in education, research, and related fields.

Expertise You Can Count On For 80 years, TIAA-CREF has introduced intelligent solutions to America's long-term planning needs. We pioneered the portable pension, invented the variable annuity, and popularized the very concept of stock investing for retirement. In fact, we manage the largest stock account in the

world (based on assets under management). Today, TIAA-CREF can help you achieve even more of your financial goals. From tax-deferred annuities and IRAs to mutual funds, you'll find the flexibility and choice you need, backed by a proven history of performance, remarkably low expenses, and peerless commitment to personal service.

Find Out For Yourself To learn more about the world's premier retirement organization, talk to one of our retirement planning experts at 1 800 842-2776. Or better still, speak to one of your colleagues. Find out why, when it comes to planning for tomorrow, great minds think alike.

Sports

It's all about the Benjamins, baby

The National Basketball Association (NBA) isn't running too smoothly these days. Believed to be the most stable and well-run league in professional sports, the NBA is facing a lockout that will almost certainly postpone the opening of the regular season for the first time in league history.

For one reason and one reason only—money. The NBA boasts many of the most talented athletes in all of professional sports. Unfortunately, these phenomenal abilities are often paired with egos that loom larger than life. This arrogance is not limited to the players though. Owners and executives aren't exactly the personification of frugality these days either. Both sides are involved in a seemingly unending argument over the salary cap, rookie contracts, free agency, and overall league power; sadly, the only true victims are the fans.

Sorry to all you multimillionaire hoopsters, but it's true. And while the rich battle to get richer, the ticket buying, commercial watching, player idolizing basketball enthusiasts sit back and wonder, "What is going on here?"

Well, this conflict, or conflict of interest, can't be summed up in a few words. The core disagreement involves the salary cap and the "Larry Bird exception." Named for the legendary Boston Celtic and current Pacer head coach, the exception allows teams to ignore the salary cap and pay whatever amount they want to re-sign their veteran players. The players feel that this option is just, but the owners won't go down without a fight. The front offices are pushing for a "hard" cap, or a concrete limit that execs can spend to sign players. The consensus throughout the league's hierarchy is that half of their franchises are in fact losing money due to exorbitant contract spending. The players scoff at this suggestion, claiming that only a few teams are actually falling behind.

Another looming issue involves rookie salaries. Three seasons ago, both sides decided that rookies would receive a three-year, guaranteed contract with a capped salary depending on when they were drafted. Owners are not thrilled with the idea of giving their cash away to budding superstars who will most likely walk once their contracts run out. They propose bumping the three-year deals up to six years, with the final three being unguaranteed. The key word here is "guaranteed," and the union will not approve anything that says otherwise. Players want guarantees, protection against injury or failure. This issue is more likely to be resolved than the Bird dispute, but that doesn't solve the problem.

One more bump in the road concerns free agency. The owners want to get rid of the '95 agreement and reintroduce the "restricted" type of free agency, which gives them the chance to match offers from other teams in order to keep their players. The players aren't biting though. No player wants to end up a Vancouver Grizzly for his entire career, and players see unfettered free agency as the only way to get on a contender's roster.

This power struggle might get even uglier when it comes down to who exactly has the power. Stern and the owners maintain the authority to fine or suspend players as they feel appropriate, although teams can fine and coaches can bench their athletes for minor reasons. The players' union does not like the dictatorial power that the execs have been flexing, especially in the Latrell Sprewell incident. They're demanding stiffer ground rules covering what Stern and his cronies can and cannot do.

Sure, there are a lot of issues on the table. The only problem is that no one is at the table.

Right or wrong, it's an argument that could be settled with a few serious meetings. But it hasn't happened. David Stern, the NBA commissioner and "master mediator" who bailed the player's union out several years ago, Russ Granik, his deputy, Billy Hunter, the National Basketball Player's Association representative and Patrick Ewing, the NBPA President, can't seem to pick a day where their schedules don't conflict with endorsements, book signings, or television interviews. All parties are now planning to resume talks on October 8, which will definitely cut out 25 exhibition games, and, unless a compromise is reached in a matter of days, the season will have to be pushed back.

Sounds a little ridiculous, right?

The sad truth is that these conflicts are all too common in the current world of sports. As players get better and better, they get greedier and greedier. As owners start raking in more money from ticket sales and revenues, they get greedier and greedier. As rookies declare their eligibility for the draft, knowing they are clear-cut lottery picks, they get greedier and greedier.

And who benefits? As far as anyone can see, no one does. When the basketball season finally rolls around, many relieved and anxious fans will be tuning in. Hopefully that day will come sooner than we think.

Until then, this writer will be tuning into ESPN, watching the best league around—the NCAA.

Bison rally to defeat Columbia, 27-20

By Tim Scheu

When the Bucknell football team took the field last week in a Parents' Weekend game against Columbia, there was some concern about their focus. They were coming off only their second loss in the past two years, and it was at the hands of Fordham, the perennial Patriot League doormat. There was some question of whether they had the heart or, according to head coach Tom Gadd, if they "felt they had anything to prove."

In the Bison's 27-20 victory over Columbia, those questions seemed to be answered. They not only rebounded, but they did it against a talented Columbia team who had just come off a big win over defending Ivy League champion Harvard. Bucknell dominated on defense, allowing Columbia a mere 49 yards on 46 carries, and sacking the Columbia quarterback five times.

"They did one thing that we had to have them do, and that was play hard," Gadd said. "I think that really added to the physical nature of the game, and to our ability to stop the running game."

The game did not have a prodigious start. Up until the very end of the second quarter the Bison trailed 14-3. At that point Shawn Redd, a junior linebacker, intercepted a pass and set up the Bison's first touchdown. The score came in the form of a 17-yard touchdown strike from

Don McDowell '00 to wide receiver Ron Rockett '99, and brought the Orange and Blue to within four.

The Bison came out roaring for the second half. On the opening kickoff Jabu Powell '02 returned the kick 93 yards for a touchdown. The return was the fifth longest return in Bison history, and propelled the squad to a lead that they would never relinquish. The two teams then exchanged field goals before Rockett and McDowell hooked up for their

second touchdown. The score came after Rockett broke free down the right sideline, and McDowell hit him with a 32-yard pass.

At that point it seemed that Columbia was out of the game, but a field goal breathed new life into the Lions. After Bucknell punted on its next possession, Columbia got the ball back with just under two minutes to go. From their own six-yard line the Lions drove all the way to the Bucknell 37. They were threat-

ening to send the game into overtime. But after Columbia quarterback Paris Childress' pass fell incomplete on fourth down, the Bison knew they had the game won.

Coach Gadd was quick to comment on his team's performance. "That was a big win for us. It was important that we won that football game, but we still have to prove that we can do something like that two weeks in a row. We need to define who we are on a consistency level."

In contrast to weeks past, the players who impacted the game the most were not playing on the offensive side of the ball. Defensive players Jason Bowman '99 and Kevin Eiben '01 each had 11 tackles and linebacker Vince Ficca '00, a transfer student from Boston University, made 10 stops including five for a loss.

"I was happy with our performance because it seemed that everybody was hustling to the ball," Redd said. "Everybody played together, and no one was selfish."

The most remarkable thing was that the Bison were able to keep a clear head after falling behind early. "I think the key was that we held Columbia to 20 points," Ficca said. "Because the defense played so well, it gave the offense and special teams a chance to get things going."

The Bison will try to keep their momentum when they travel to the University of Pennsylvania on Saturday.

Lamario Bradwell '01 was part of the offensive surge that allowed the Bison to come back from an eleven point deficit and defeat the Lions.

Men's golf takes fourth at Bucknell Invitational

By Brian Watson

The men's golf team hosted 17 other teams at the Bucknell Invitational on Saturday, September 18-19.

The Bison captured fourth place overall, combining for a score of 610. "The Invitational went very well," head coach Tommy Thompson said. "There were many teams within one or two shots of each other."

Ken Kosteva '01 led the team with a first round of 77 and closed out with a two-over-par 72 on Sunday, placing him seventh overall individually. Tom Marks '02 shot a par 70 on Sunday, 15 shots better than his previous round.

"I thought we played well as a team, but we had a chance to win the tournament," Kosteva said. "We had a solid finish and Tom shot really well."

Several of the underclassmen put in an impressive showing at last Saturday's Susquehanna Fall Tournament, finishing fifth out of 18 teams. The team's top four golfers finished with a combined 325 for the round.

Marks led the Bison, finishing four behind the lead with a 79. The Gale brothers, Dan '01 and Mike '01 shot an 80 and an 85, respectively, and Nick Leibowitz '02 fired an 81. Freshman Dan Gershey's round of 87 was counted as a tiebreaker, bringing the Bison to fifth place overall.

The Bison will head for the Patriot League Championship on Saturday at 8 a.m.

Field hockey steps up offense, defeats Lafayette for first time

By Sarah Chance

The Bucknell field hockey team was able to up their record with by defeating Lafayette, 3-2, on Saturday, September 26. Lafayette came out strong, scoring the first goal 59 seconds in off a penalty stroke; however, the Bison rebounded as Dean Ebert '02 was able to find the net and put the Bison on the board. At the end of the half, the Leopards managed to net another goal, putting them ahead 2-1.

In the second half, the Bison came out with power and aggressiveness. Ebert scored again at 19:33 off a two-on-one break with an assist from Maura Higgs '01. Ebert collected her second hat-trick of the week off a centering pass from freshman Lauren Campbell.

"The defense and offense played really strong and we adjusted well to the field at Lafayette," Ebert said. "It was really an exciting game and I hope we can keep it up."

At the end of the game, the Bison had collected 11 shots on goal as well as 12 corners. Goalie Maureen Breslin '99 blocked 16 shots while allowing only two. The Bison were able to get off eight shots inside the circle, which proved to help them get on the board.

"Everyone worked well together and we had a good attitude going into the game," Katie Yingling '01 said. "We had a lot of opportunities in the circle and were able to capitalize on them."

Bucknell has upped its offensive

unity and commitment," co-captain Katie Twombly '00 said.

This proved to be a crucial win for the Bison, as it was their first Patriot League victory of the season. "We were down 1-0 and then 2-

1, but we battled back and won

The women's field hockey team will take on Lehigh on Saturday.

ability, obtaining six goals in the last two games. On defense, Missy Williams '02 kept both of her marks from scoring any goals in the past two games. She was able to save three goal line shots against Lafayette, securing the Bison victory. With a combination of great offense and sound defense, Bucknell collected its first win ever at Lafayette.

"We came out there with team

which is not easy to do at another field," head coach Heather Lewis said. "We never stopped playing and we played steady the entire game. In the second half we went out there with a lot of confidence and were able to capitalize on scoring opportunities."

The Orange and Blue play their next game at home against Lehigh on Saturday, Oct. 3.

Rusted Root Performs for campus community

Lead vocalist and guitarist, Michael Glabicki, performs for the University last Friday night for a crowd of students and community members. The highly acclaimed rock group was anxiously awaited by many. Craving the tribal percussion, African melody and strong voices, the campus was pleased with the University's concert selection.

President Adams speaks at Open Forum

Student and faculty receive the opportunity to voice questions and concerns

By Tracy Thiffault

William 'Bro' Adams was asked a diverse multitude of questions at an open forum for students on Tuesday night. Questions ranged from topics of intramural sports to the environment to Greek life. While the event was considered a success by most, it was lacking in inquiries into an important University concern: safety on campus.

"I was not surprised that the recent assaults on campus were not addressed. I think that University officials, including Vince DeCerio and Peggy Plympton, have adequately addressed safety issues on campus in various ways," Laurel Ziegler '99 said.

Students, deans and faculty began by listening to the President speak of the status of the University and future plans resulting from the Bucknell Campaign, including the construction of two new facilities to begin in March. Adams also addressed his other goal for the University, which is to "keep enhancing the values of liberal learning."

To a number of questions, Adams encouraged the students to initiate change. For example, Bowman Hallagan '99 inquired about the lack of quality social events on campus. Richard Chapman, dean of students, responded by saying that students must "make their interests known."

"Our intention is to continue to promote activities on campus... We are very aware of our obligations to do that," Adams said.

Ziegler also expressed her concern of the town/gown relationship as a result of more social activity moving off campus because of stricter Greek enforcement.

"Preventing incidents which put stress on the relationship is important," Adams said.

Paige Cull—The Bucknellian

Jessica Jackley '00, BSG president, speaks with President Adams at the Open Forum held Tuesday night. Student questions included environmental and safety issues.

Roy Baker, dean of Greek affairs defended the system. "We are beginning to follow our own [national] rules," he said. However, he blamed students for the problems associated with Lewisburg. "[Students] have chosen to move off campus where [they] think there are no rules," he said.

Regarding another question of the Greek system in general at the University, Adams

responded, "I came [to the University] with full realization that Greek life was a big part of the social life here... but I do lodge some part [of the alcohol situation] at the Greek system."

The one question inferring the recent incidents on campus was solicited by Matt Lutz '99 in which he inquired about the re-

Religion professors to attend conference at UN

Tucker and Grim will represent the University at two religion conferences in NY

By Sarah Palmer

This October marks an eventful time for University professors of religion Mary Evelyn Tucker and John Grim, as well as several other environmental activists, as they anticipate two conferences to be held at month's end. The conferences are part of the "Religions of the World and Ecology" conference series and are entitled "Religion and Ecology: Discovering the Common Ground."

The first conference, on Oct. 20, will take place at the United Nations in New York City; the second, on the 21st, will take place at the American Museum of Natural History also in New York, followed by an evening celebration at the Harvard Club. These conferences are the result of a project effort conceived and initiated by Tucker in 1986.

"The project's concern is to connect religion with everyday environmental issues in an effective way," Grim said.

The project, which focuses on learning from and improving the earth/religion relationship, aims to achieve three established goals: to inspire research, to promote educational outreach and to be influential in public policy decisions. All of these goals maintain a common denominator of using religions and other fields of study to find ways to pre-

serve the environment.

"One very important question that arises from this project is: how can religions motivate people to take responsibility for the environmental decisions that they make?" Tucker said.

"The environment is the next important agenda for the religious community."

—Mary Evelyn Tucker, associate professor of Religion

Tucker said, "The environment is the next important agenda for the religious community."

By reflecting on religious texts, traditions and the historical significance of resources Grim and Tucker feel that people become more aware of human/earth relations.

"Not only do we gain a deeper understanding and knowledge of their effects on one another, but we are provided with a tool to utilize in our decision-making processes regarding ecology."

Ten conferences on individual religions have been held since 1996, including conventions on Buddhism, Confucianism, Christianity, Judaism, Shinto, Hinduism, Islam, Taoism, Jainism and indigenous religions.

The two scheduled conferences as well as a culminating conference in September in Cambridge, Massachusetts, are quite different from their initial meeting. After the indi-

vidual conferences, Tucker and Grim concluded that, rather than merely invite religion academics to upcoming conferences, they would request that scholars from various disciplines attend and participate in discussions as well.

"We decided that [after the individual conferences] it would be more interesting and more challenging to engage four sectors that have been very active in thinking about and acting on ecology concerns," Grim said.

These conferences are an inaugural opportunity for those invited to participate in not only interreligious

dialogue, but also dialogue across various fields of study.

Several well-known, venerable scholars have attended past conferences and are scheduled to attend this month's anticipated conferences as well. Among the speakers attending will be representatives from the United Nations, such as Maurice Strong, founder of the UN Environmental Program in 1972, and Timothy Wirth, president of the UN Foundation.

Bill Moyers, acclaimed public television reporter who has received 30 Emmy awards in his lifetime, will

"Midnight Mania" kicks off '98 basketball season

By Brian Watson

The Athletic Department, the Office of the Deans, Campus Activities and Programs (CAP), Dining Services, Panhellenic Council and the Bookstore, in correlation with numerous local businesses, will be sponsoring the University's first-ever "Midnight Mania" to help kick off the men's and women's basketball seasons.

In observance of National Collegiate Alcohol Awareness Week (NCAAW), the event will be entirely non-alcoholic. The University hopes to attract 50 percent of the student body to this celebration in order to promote school spirit and unity.

Burmese art displayed in Bertrand Library

By Aimee Nicklaus

Special Collections and University Archives director, Doris Dysinger, has assembled an extensive showcase of Burmese art and literature that will be displayed in the lobby of the Bertrand Library until Dec. 31.

In addition to the comprehensive lobby exhibit, sacred texts with Buddhist scriptures written in Burmese language on palm leaves are also shown in the lobby of the library along with the "Burma bowl and teakwood box," which was brought back from Burma in 1843 by Eugenio Kincaid.

The most extensive work is presented in the lobby of the library. It contains works ranging from as early as 1813 until today. This collection was created to capture the bond between Burma and Bucknell through hospitality, friendships, and understanding of cultural heritage. Presented in the showcases are

paintings, photographs, and reproduced articles.

The ties between Bucknell and Burma began in 1846 when Burmese Baptist missionary, Eugenio Kincaid, became chapter trustee of the University of Lewisburg, the University's name before 1888. Kincaid encouraged Maung Shaw Loo to study here at Bucknell as our first international student.

Included in the exhibit is Burmese folk art of village life and an article on Irene Khin Myint Jensen, the first post-war international student from 1947 until 1950. Photographs captured such topic as Burmese antiques, Helen Hunt, Shaw Loo and several Burma-Bucknell events—especially annual Burma-Bucknell weekends. Until 1965, Burma-Bucknell weekends have strengthened ties and understanding with visitors like leaders of the

Homecoming Hosts and Hostesses '98

Willie Callahan

Major: Business Management

Callahan is the president of the Kappa Alpha Psi Fraternity and three year member of the varsity men's basketball team. He also participates in the Big Brother program for underprivileged boys and is a member of the Inroads Intern Organization.

Tracey Alan Gray

Major: Business Administration

Gray has participated in a number of different activities during his four years at the University holding offices as Bucknell Student Government (BSG) president, vice president, finance, Class of '99 vice president and Building on Foundations coordinator. He also was a member of the White House Advance Team for the Office of the Vice President and the White House Intern Program. As a student, Gray has also received the Dean of Students' Leadership Award and the Stephen Barowsky Prize for a junior demonstrating campus leadership.

Page Hall

Major: English/Religion

Hall has been an active member of the Residence Hall Association and BSG throughout her career at the University, which has led to her receiving numerous recognition awards from these organizations including Resident Assistant of the Year in 1998. She has served on her class cabinet, the alcohol review committee and Committee on Instruction along with being chair of the Academic Affairs Committee. "I am especially interested in bringing a sense of tradition back to Bucknell," she said.

Cameron Xavier Jones

Major: Economics

Jones has served the campus well as co-president/co-founder of the Caribbean Club, treasurer of the Sigma Alpha Mu Fraternity and congressman of BSG for the Class of 1999. He was awarded the Fremont Scholarship and has been a member of the men's varsity water polo team since 1994.

Tracy Lynn Kutch

Major: Management and Education

Kutch has acted in a number of leadership roles during her career at the University including a Resident Assistant for three years, teaching assistant for MGMT 101 and Career Development Peer Consultant. She was an administrative assistant for the Institute for Leadership in Technology and Management (ITLM) and achieved Dean's List status four semesters.

Ryan Matthew Mastil

Major: Accounting, Minor: Religion

Mastil has highlighted his four years with his involvement as president of the Bucknell Catholic Campus Ministry and BSG Class of 1999 secretary/treasurer. He was the recipient of the 1998 BSG Outstanding Service Award for the Class of 1999 along with several academic scholarships including the Frederick C. Moor Jr. Scholarship, the 1997 Sigma Alpha Epsilon Warren Waber Scholarship and the 1998 American Optical Scholarship. Mastil was Chief Executive Officer of his MGMT 101 company, "D-Briefs" and has been named to the Dean's List five semesters.

Jessica Ange Quintana

Major: History and Social Studies

Quintana has been active in promoting diversity on campus by serving as a Student of Color Recruitment Intern for the Admissions Office, Co-President of Cum-bre and a Student of Color volunteer. She is also a member of the women's varsity track and field team in which she was awarded Patriot League honors and selected for the All Patriot Team. She was the recipient of the Beverly Crane Memorial Scholarship.

Julie Sweitzer

Major: Mechanical Engineering

Sweitzer has received a number of awards as a result of her athletic ability and academic success during her four years at the University. As the captain of the Cross Country and Track teams, she was awarded Patriot League Scholar Athlete during 1996, 97 and 98, East Coast Athletic Conference Medallion, 1998, GTE Academic All-American, 1998 and the Charles F. White Memorial Prize, 1997. Athletically, she has been named Patriot League Cross Country Champion, Indoor 800 Champion and Indoor Mile Champion. Sweitzer works as a teaching assistant and has been named to the Dean's List every semester since 1995.

Public Safety Log

September 29, 1998

HARASSMENT BY COMMUNICATION—A University student reported to Public Safety having received harassing phone calls in a Smith Hall room. The incident is under investigation.

September 30, 1998

ASSIST RESIDENTIAL ADVISOR—A University student reported that profanities had been written on bulletin board advertisements in Smith Hall. The incident is under investigation.

INFORMATION/MISSING PROPERTY—A University employee reported to Public Safety that a table was missing from Rooke Chapel. The incident is under investigation.

October 1, 1998

INFORMATION/PUBLIC DRUNKENNESS—Lewisburg Police Department requested Public Safety to respond to 7th and Market Sts. for the report of an intoxicated University student. The student was issued citations for Public Drunkenness by Lewisburg Police Department and the University.

October 2, 1998

MEDICAL ASSIST—Public Safety responded to Swartz Hall for the report of a University student with neck pain. The individual was transported by ambulance to Evangelical Community Hospital Emergency room for treatment.

Julie Sweitzer

Major: Mechanical Engineering

Sweitzer has received a number of awards as a result of her athletic ability and academic success during her four years at the University. As the captain of the Cross Country and Track teams, she was awarded Patriot League Scholar Athlete during 1996, 97 and 98, East Coast Athletic Conference Medallion, 1998, GTE Academic All-American, 1998 and the Charles F. White Memorial Prize, 1997. Athletically, she has been named Patriot League Cross Country Champion, Indoor 800 Champion and Indoor Mile Champion. Sweitzer works as a teaching assistant and has been named to the Dean's List every semester since 1995.

MEDICAL ASSIST—Public Safety responded to a University student. The individual was transported by ambulance to Evangelical Community Hospital Emergency room for treatment and later released.

INFORMATION/SUSPICIOUS PERSON—Public Safety responded to Spratt House for the report of a suspicious visitor to that building. The officer later located and identified the individual, who then left campus voluntarily.

MEDICAL ASSIST—Public Safety responded to Swartz Hall for the report of a University student experiencing a seizure. The individual was transported by ambulance to Evangelical Community Hospital

Emergency room for treatment and was later released.

INFORMATION—While on routine patrol, Public Safety observed a University student cleaning up glass from a University Avenue street light which had been accidentally broken by a ball. Citizen's Electric Co. was notified to repair the light.

INFORMATION/PROPERTY DAMAGE—Public Safety responded to Vedder Hall for the report of a picture thrown out a room window. The incident is under investigation.

UNDERAGE DRINKING/DISORDERLY CONDUCT—Public Safety observed an intoxicated University student at the rock concert in the Field House. The student was issued University citations for underage drinking and disorderly conduct.

INFORMATION/SUSPICIOUS PERSON—A University student reported a suspicious person outside the Vaughan Literature Building. No one was located in a search of the area. East Buffalo Township Police Department was notified and the incident is under investigation.

October 3, 1998

INFORMATION/SUSPICIOUS CIRCUMSTANCE—While on routine patrol, a University student told Public Safety that three individuals attempted to enter Dana Engineering building under suspicious circumstances. No one was located in a search of the area although a vehicle, believed to belong to the individuals was observed in the Dana/Olin parking area. East Buffalo Township Police Department was notified and the incident is under investigation. Persons later identified and warned by Public Safety.

INFORMATION—Public Safety responded to Vedder Hall for the report of two males entering a room without authorization. The individuals, University students, later met with Public Safety officers to discuss the incident. Lewisburg Police Department was notified.

INFORMATION/ASSIST—Lewisburg Police Department requested Public Safety to respond to S. 6th St. for the report of a disturbance. A University student was transported to the Public Safety Office.

INFORMATION/ASSIST—Lewisburg Police Department requested Public Safety to respond to S. 6th St. for the report of a disturbance. A University student was transported to the Public Safety Office.

From page 1.

for identification and questioning. No charges were filed by Lewisburg Police Department or university officials.

October 4, 1998

UNIVERSITY PROPERTY DAMAGE—A University student reported to Public Safety that a window was broken in a Kress Hall door. The incident is under investigation.

INFORMATION/ASSIST—Lewisburg Police Department requested Public Safety to respond to Edwards House for a noise complaint. The problem was determined to be at a neighboring residence where Lewisburg Police Department issued a University student a citation for disorderly conduct.

INFORMATION/ASSIST—Lewisburg Police Department requested Public Safety to respond to St. George St. carrying an open container of alcohol. The individual was issued citations by Lewisburg Police Department and the University for underage drinking and disorderly conduct.

October 5, 1998

HARASSMENT BY COMMUNICATION—A University student reported to Public Safety having received a harassing message on a telephone answering machine. The incident is under investigation.

October 6, 1998

POLICE ASSIST—East Buffalo Township Police Department requested an officer to respond to the University West gate for the report of a tackling dummy on Rt. 15. One University student, who claimed no knowledge of the event, was located in a search of the area and issued citations for underage drinking and public drunkenness by East Buffalo Township Police Department and the University.

INFORMATION—Public Safety responded to the Farm Lot for the report of a minor vehicle accident involving a University student driving into a parked car. The incident was non-reportable and insurance information was provided.

INFORMATION—Public Safety responded to the Farm Lot for the report of a minor vehicle accident involving a University student driving into a parked car. The incident was non-reportable and insurance information was provided.

Reverend Oliver "hope(s) people recognize the past of the connection and what the future may hold."

Artwork and a portrait of Dr. Shaw Loo have been placed outside the University Art Gallery on the third floor of the LC and the diversity quilt created by Bucknell's multicultural student organizations in honor of the Focus Semester Program on display on the first floor of Taylor Hall. Susan Zingale-Baird, Director of International Education, urges the community to see the artwork on the third floor LC, especially the drawing of the young man in a boat: the oar is held by the right foot, which is a customary form of rowing only done in the Shan state of Burma.

Union of Burma, ambassadors, State Department and Embassy officials. Voice of America, Burmese students and faculty from the University of Rangoon, Burmese visitors and residents of Lewisburg.

This connection between Burma and Bucknell was severed in 1965 by the Burma military government, who created barriers to continued participation and the program has since fallen apart. Ian Oliver, University Chaplain and coordinator of the Burma Focus Semester asserts that the exhibit is powerful "since a lot of people, like (him), had no idea that the history even exists between Burma and Bucknell." These displays help to emphasize awareness of the political situation in Burma as the Focus Semester winds down.

Judiciary Committee votes for impeachment inquiry

WASHINGTON—The Republican-controlled House Judiciary Committee voted late Monday to recommend a full impeachment inquiry into the sex, perjury and obstruction of justice allegations against President Bill Clinton. The full House could vote on the panel's proposal Thursday or Friday.

Following a day of historic deliberations, the panel approved, 21-16, a Republican proposal for a free-ranging House probe that would not be limited to Independent Counsel Ken Starr's report on the Monica Lewinsky matter and would have no deadline for completion.

California wildfires grow

BANNING, California—Hot, dry Santa Ana winds were expected to pick up speed again Tuesday in Southern California, where wildfires have charred more than 22,000 acres and contributed to two deaths. A fire captain suffered a heart attack, and an air tanker pilot was presumed dead after his plane crashed.

The largest of two wildfires remained out of control Tuesday in a hilly area of Riverside County, about 90 miles east of Los Angeles. Roughly 1,500 firefighters were deployed to battle that blaze. The cause of the fires was under investigation. Flames and smoke have destroyed five structures since the fires erupted early Monday and quickly spread through timber dry brush.

Eruptive couple and children found in Montana

BILLINGS, Montana—A malnourished toddler was back in a hospital, more than two weeks after being kidnapped in Utah, allegedly by his mother and father. The parents belong to a religious cult and fed 21-month old David Fink only watermelon and lettuce because they thought he was the Christ Child and wanted to keep him pure, authorities said.

The father, Christopher Fink, 23, faces an arraignment on Tuesday. The boy, his parents and his 13-day-old newborn brother were discovered Monday in south-central Montana during a nationwide search. An official at St. Vincent's Hospital said the children and their mother were in satisfactory condition.

Kentucky school shooter 'guilty but mentally ill'

PADUCAH, Kentucky—A judge on Monday accepted pleas of guilty but mentally ill from Michael Carneal, 15, who was charged with killing three high school classmates and wounding five others in December 1997.

Carneal, who admitted opening fire with a .22-caliber pistol on a student prayer circle at Heath High School in West Paducah Dec. 1 of last year, will be sentenced on December 16, Judge Jeff Hines ruled.

Under a plea arrangement, the judge agreed to accept the pleas on condition that the maximum penalty "life in prison without possibility of parole for 25 years" would be imposed.

World

U.N. proposes timetable for lifting of Iraqi sanctions

UNITED NATIONS—The United Nations for the first time has proposed a timetable for the Security Council to determine what Iraq needs to do to have eight years of punishing trade sanctions lifted.

News of the proposal came late Monday, hours after a senior Baghdad official had reiterated to the United Nations that Iraq would not resume cooperation with arms monitors unless the sanctions were lifted.

Iraq has been under stringent trade sanctions since August 1990 when its troops invaded Kuwait and were driven out by a U.S.-led coalition early in 1991. Under an April 1991 Gulf War cease-fire resolution, the embargo on oil exports can be lifted once Iraq's banned weapons are accounted for and destroyed.

Former Philippine first lady escapes jail sentence

MANILA, Philippines—The Philippine Supreme Court has overturned a trial court verdict sentencing Imelda Marcos to 12 years in jail on graft charges.

The Supreme Court voted 8-5 to acquit the former Philippine first lady of the charges, the court said in a decision released to the media.

An aide said Mrs. Marcos, 69, received a call informing her of her acquittal. The case is the only one in which Mrs. Marcos has been convicted on corruption charges, although she faces numerous other criminal and civil cases related to the 20-year strongman rule of her husband.

Pakistani shelling kills Indian soldier in Kashmir

JAMMU, India—Pakistani shelling in Kashmir has killed an Indian army captain less than two weeks before the neighbors resume talks on their troubled relations.

An Indian defense spokesman said on Tuesday that Capt. S.K. Sharma died on the Siachen glacier on Monday when he was hit by an artillery splinter fired by Pakistani troops.

The defense spokesman said firing was continuing on Tuesday in some sectors in Kashmir along the 720-km (450-mile) cease-fire line dividing the region between India and Pakistan. At least five people have died in recent cross-border firing.

Three dead as S. African troops intervene in Lesotho

MASERU, Lesotho—South African troops crossed into Lesotho at dawn Tuesday to quell weeks of anarchy. They secured two army bases and the royal palace after heavy fighting in which three soldiers died, the South African military said.

The action, post-apartheid South Africa's first major military intervention, follows weeks of opposition party demonstrations over allegations of election-rigging and an army rebellion that had effectively paralyzed the government in this tiny mountain country.

Three South African soldiers were killed and at least 11 wounded, none seriously, a military spokesman, Maj. Louis Kirstein, said in Pretoria.

National and World News Briefs compiled by Jeff Scepanski from the CNN Interactive Website

University begins search for new Vice President

By Greg Venbrux

The University has begun a nationwide search for candidates to fill the newly created position of Vice President of Enrollment Management and Student Affairs. The new position was announced by President Adams in his recent State of the University report. The new office will likely be implemented beginning next year upon the retirement of Dick Skelton, Assistant Vice President for Enrollment Planning.

The new vice president will become the senior officer responsible for admission, financial aid, student affairs, enrollment and athletics. It will effectively combine some of Skelton's current responsibilities with those formerly belonging to the Vice President of Student Services. As President Bro Adams explained, "It's shedding some of the operational responsibilities that Dick has in admissions ... and combining [them] with student services. This [will be] the person responsible for the recruitment of students to the University and [also for] their lives, social and extracurricular-wise, while they're here."

In order to locate and select potential candidates for the new position, President Adams has established a six member screening committee. These committee members will work in conjunction with a consulting firm to identify good candidates.

Ben Marsh, of the screening committee, said, "We're working with a consulting firm that will help identify good candidates across the nation and encourage them to apply. Once the candidate pool is complete, the committee will review the applications, agree on a short list for us to meet, and host the three best candidates on campus in Spring."

Trudy Cunningham, also of the committee, added, "The [consulting] firm is doing the organizational paperwork...the committee is being used to create ideas, test ideas, interview people and make recommendations."

One of the qualities President Adams and the committee are looking for in a candidate is experience. Cunningham said, "I think the primary qualification would be someone with extensive admissions and enrollment planning/management experience...essentially someone to look at where Bucknell is now, where it wants to be in 10 years, and how to get there."

President Adams added, "We're looking for someone who will relate well to students [and] communicate well with prospective students and parents."

The new position is expected to be filled this summer. Many involved with the search process hope to have the candidate at work by June of '99, although this could occur before or after this target date. "It's a very important position ... it's crucial that we get the right person, and we'll keep looking for the right person until we find him or her," Adams said. "The position should be filled no later than July 1, 1999."

President Adams and the committee members appear eager to locate new candidates for this large position. They are especially interested in hearing student's opinions on candidates and are open to their suggestions. As Marsh concluded, "the process is meant to be as open as possible...the committee would be pleased to receive any communications from students about [prospective] candidates."

porting of public safety issues involving students to those involving faculty members. Gerald Commersford responded, "We try to advise the community on general circumstances." "A personnel transaction that involves an act which violates institutional policy is almost always confidential," Adams said.

Karen Fadely '99 emphasized that she is "very disappointed that faculty members have lost interest [in environmental issues on campus]." She and other members of the environmental studies department urged for further recognition and awareness of issues on campus.

"The real solution is to develop institutional policy [regarding the environment] ... We have the opportunity to be more responsible with the construction of the two new buildings," Adams said.

"I think the dialogue was successful; both sides were honest but respectful in their questions and answers, and I know that at the very least, BSG learned a lot about some issues that need to be looked at more thoroughly," BSG president, Jessica Jackley '00 said.

"I think that some important issues and student concerns were addressed," Cy Rubel '01 commented. "I thought any student had the opportunity to address Bro. I wish more students had come, but we can't control that," said Kari Conrad, associate dean of students.

"The real solution is to develop institutional policy [regarding the environment] ... We have the opportunity to be more responsible with the construction of the two new buildings," Adams said.

No talk and no action: Is the University covering up coach's altercation?

Picture in your mind a hallway in one of the academic buildings on campus. You are casually walking down the hallway to class, thinking about the reading you skimmed last night, but your attention quickly turns to an altercation in the hallway between a professor and a student. The professor, noticeably angered, picks up the student by the throat and does not let go until witnesses intervene.

What would you expect to happen after this hypothetical incident? You would probably anticipate an article about the professor's impending dismissal (or at least a formal apology and some sort of sanction) in an upcoming issue of *The Bucknellian*. You might even expect to receive a formal statement on the matter from President Adams in your campus mailbox. Regardless of the provocation behind the incident, an investigation and a public statement from the University would seem inevitable.

In the real world, justice is not as swift as one might expect. About one month has passed since football coach Norries Wilson allegedly assaulted a University student in the Fieldhouse. Three weeks have passed since *The Bucknellian* first reported on the incident, and in that time, the "no-comment" from prominent University administrators have remained unchanged. After a brief absence, Wilson has returned to the sidelines, but the Director of Athletics, the University Counsel and the East Buffalo Township Police have consistently failed to explain the incident or its ramifications for the coach's future. A paragraph in the Public Safety Log is the only formal evidence that the incident has actually been confirmed by the University.

Sources within the football program have reported that Wilson's suspension lasted two weeks. Sources close to the victim of the alleged assault report that he has received a letter of apology from the coach. Without University confirmation, however, our coverage of the story has stalled, and the campus community remains in the dark. The University's failure to comment suggests an attempt to cover up the situation, which it, turn raises several questions. What is the University trying to hide? Is there a double standard for sanctions in the athletic department? Are administrators ashamed of the minimal punishment levied on Wilson?

The only way for the University to shut down the rumor mill and answer these questions is to issue a statement on the sanctions placed on Wilson and the process behind the decision. Hiding this incident does a great disservice to the student involved and to the student body in general. If this shady, secretive process is indicative of the other University decisions, we have reason to be very concerned.

If, on the other hand, the University can justify their actions and explain their investigation, there is a chance for redemption in this case. The University community has a right to know what is going on, and the student newspaper must be able to report the facts based on statements from official sources.

After the extensive bickering in Washington over the Starr Report, our report seems almost trivial. It's not like we are asking for a videotaped confession of adultery from the President of the United States.

In light of the potential for legal action in this case, it is understandable that some parties involved are unwilling to talk about the situation. After a month of investigation, however, the University should at least release a formal statement on the incident and the investigation. We want to know what type of investigation is being conducted and by whom. We want to know who made the initial decision to suspend Wilson, and we want to know the terms of any future action. Quite simply, we want the facts. It is the University's failure to speak and stop concealing what we deserve to know.

A Germany without Helmut Kohl Can Gerhard Schröder lead the nation into the 21st century?

By Meredith Shreiner

The recent German elections placed into office a new Chancellor, Gerhard Schröder. This marks a momentous change in German history. For the past sixteen years, Helmut Kohl has held the office and halted the development of a new, united Germany. Although in office during German Unification, his subsequent actions were those of a politician looking to avoid change in order to assure himself future votes. The voters change in support sets a new precedent calling for a new diverse and liberal state.

Kohl, a Roman Catholic, reflects his nationalistic and conservative upbringing in his political policies and maneuvers. His father, an officer in the German army during World War II, instilled in his children a love and respect of traditional Germany.

Throughout Kohl's terms as Chancellor, he endured much ridicule for his treatment of Holocaust survivors. Many of his reparations were seemingly political moves to appear as if he was truly sorry for

the damage done to those killed or hurt during the war.

Homosexuals were angered by Kohl's refusal to acknowledge their pain and unfair treatment in the camps. For example, he refused to reimburse those people traumatized by medical operations.

Another controversial issue is Kohl's treatment of the property violations in former East Germany. Although he and his fellow politicians promised the return of taken properties once unification was complete, their minds quickly changed. Kohl claimed, in fact, that returning these properties would be detrimental to the newly united Germany.

When the Russian Republic began to issue rehabilitation to those victims who applied, Kohl quickly raced to Moscow to prevent any more compensations from being

rope. His policies promise to embrace a new tolerant nation with more enthusiasm for foreign residents. This is a dramatic shift from Helmut Kohl's mockery of tolerance. In other areas, Schröder also shows a new voice in German liberty. There are signs that Schröder may allow unions to moderate between employees and business. Furthermore, he has promised to restore the cuts Kohl made in worker's benefits.

Schröder has a close affiliation with the Green party, a political party that strongly, but realistically, encourages pacifism and environmental awareness. Schröder has promised that he will continue to follow Kohl's movement towards Germany's integration with the rest of Europe.

The future of Germany may now take a road that has previously been inaccessible because of politicians, like Kohl.

granted. Obviously Kohl's priorities changed once he became Chancellor of the reunited Germany.

Schröder, 54, reflects a different generation than Kohl, 68. Schröder has no firsthand experience with the depression and humiliation that Germany suffered during postwar Eu-

Walking to fight AIDS

By Emily Novick

Imagine the naive look of disappointment on an eight-year-old's face. This is a child who is desperately trying to understand what is being explained to him, but this inexperienced eight-year-old mind cannot grasp the concept. Finally it becomes somewhat clear. The "life juice," the nickname given to his needed blood plasma, which is taken by many hemophiliacs, is not "life juice" after all. Instead, Alex's life was the carrier of a virus, a virus that will eventually take his life.

But like most eight-year-olds, Alex doesn't completely understand the concept of death, so he just continues to live his life as he had before. Only now his life juice has been stripped of its respectable name.

When the virus starts to take over, the concept of death becomes more comprehensible. To Alex, it means at some time saying good-bye to mommy forever, never growing up to be a big sixth-grader and never playing football with his brothers again. When Alex finally loses his battle, he leaves a legacy of pain and heartache for all that knew him.

The world continues to search for a cure for the AIDS virus. AIDS has had an effect on almost everyone by now. Think about it. Do you

know someone who is HIV positive? Do you have a friend or a relative that is helping someone fight the virus? It is too prevalent in our society today.

AIDS is now a preventable disease. Years ago, the American government was "unaware" of the virus. And because of this, blood containing the HIV virus was distributed to those in need of blood. Thousands were infected with the virus through these means. And Alex was stripped of his life because of it. But today, the story is different. Today, the HIV virus can only be transmitted through sexual contact or by sharing blood with an infected person. AIDS is preventable. Now the world has to stop transmission and find a cure. But the numbers are still climbing and people are becoming infected daily with this deadly disease.

A battle has been waged and the people of America are stepping up. Last Sunday, in Washington DC, the twelfth National AIDS Walk was held. Almost 30,000 people came to fight for prevention and cure. People of every race, gender, religion, socio-economic background and sexual orientation were there to support the cause. The money raised by the walkers will go to support the Whitman-Walker Clinic, the largest and most respected clinic for AIDS treatment and research.

LETTER TO THE EDITOR

Wake up—8 a.m.'s not so bad

To the Editor:

This letter is in response to Maren Johnson's Opinion, "A Call for no more 8 a.m.'s." As an Engineering student, my schedule was heavily laden with 8 a.m. start times, and this was not by choice. I too had my fair share of early morning absences (sometimes they even stretched into late afternoon). Some of these actually could have been attributed to my biological alarm clock "not being set for such an early hour," but then again, I can remember sleeping through 1:00 classes too. Like Johnson, I will also admit that I was not very efficient in the mornings (or in the afternoons).

As a recent alum, I can still vividly remember running to Dana unshowered, unshaven, and sometimes still in my pajamas. Unfortunately,

my life is no longer controlled by my biological alarm clock, but rather the digital one that sits in my room. Every morning I wake up at 4:30 a.m. so that I can make it to work by 6. I have found that skipping is no longer an option, even when I can think up a good excuse. Although I never considered myself to be a morning person, I am still expected to perform up to my "potential" and be efficient.

According to Maren Johnson, having more classes moved to 8 a.m. should prove to be an unpopular move with both the students and faculty alike. While this may be true, take comfort in the fact that you don't have to move to shut the alarm every day, two hours before dawn.

J.P. McFadden '98

Alex's family continues. Every day they are faced with the evils of the AIDS virus, not only in their struggle with grief, but also in their struggle to find a cure for their other son, Charlie, who is now at the full blown stage of AIDS. I walked for Charlie last Sunday. I walked in hope that maybe someday he will be able to do all that he longs to do in his lifetime. But now Charlie cannot

do what the majority of his graduating class did, go away to college; he cannot leave his family doctors, his weekly tests, or his familiar hospital which is only a two minute drive from his home.

I walked for Charlie. Thirty thousand people walked for friends or family and some walked for all those in need of help. There are millions who need our support.

Look, we're not so conservative And what does that mean anyway?

By Allyson Demerath

I would like to know the criteria for labeling a university conservative. Although Bucknell University has been given this name, I often wonder what characteristics were the determining factors? Traditionally, conservative values have referred to political beliefs. However, the use of the word in this context seems to encompass a much broader spectrum. One walk through the mailroom will show the plethora of J. Crew apparel Bucknellians love to sport on fall days. Yes, it is true we are known for our love of wool sweaters, khakis, pea coat and anything from Abercrombie and Fitch. However, so is the rest of the country!

Just because students like these fashions does not mean they are conservative dressers. A closer look would reveal the numerous belly button rings beneath our wool sweaters. Perhaps, if they listened to

us talk, they would see pierced tongues.

When I think of conservative, knee socks with a plaid skirt and pearls come to mind. Images of guys dressing in regimentally striped ties with pants that are too short appear. These characteristics of conservative dress are few and far between on this campus. Granted, we may not have too many students with green hair or dread locks. If we did, we would probably be automatically coined as a liberal school. Thus, our appearance does not merit the conservative label so commonly associated with the University.

Perhaps then, this label emerges from our conservative political views. However, I find that reasoning hard to believe as well. If you were old enough, did you vote in the last election? What about any of your friends? Whether you did or not, a conservative label could only be given to the student body if we discussed our choices.

Concerning presidential politics, most of us would like to know exactly what Clinton did with Monica. However, we are not holding campus sit-ins to discuss it. Many students may have extreme views concerning political issues, but most of these passionate beliefs are discussed only in the comfortable environment of close friends.

I am not trying to say we should all make a list of our political views and strap them to our backpacks. What I am saying is where do these people get off calling us a conservative school? We are not overly passionate or passive about our political views. Not to say that there is anything wrong with those who are. However, why do we not feel as though we can discuss our beliefs in a more open manner? Is it because we are afraid of what people will think of us? Or have we simply accepted the label we have been given without much thought? Even if we hold liberal views, and I personally do, the student body, myself included, seems to shy away from creating any controversy concerning the conservative label.

I think the University has been unfairly judged. Our personal beliefs, conservative or liberal, are our own. Whether we choose to openly profess them or not is our decision. Anyone is free to label us as they choose. However, they should remember that first impressions and skimming the surface do not suffice as proper means for making such a massive judgment.

By Erin Corbo

Much to my dismay, I am unable to think of a humorous topic for this week. Nevertheless, just having had my Acting 101 class, I feel a bit inspired about the topic of inhibition. Tired, annoyed and overwhelmed, I slowly ambled to Tustin Theater to find out that our class was being run by the new modern dance teacher.

Having not one graceful bone in my body, I quickly became alarmed at the fact that we were going to be doing something called "Contact Improvisation." This form of dance requires agility, human contact and an incredible lack of inhibition. Although some people may be extremely flexible here at Bucknell University, I have not run across many sober individuals that are comfortable with acting upon impulse.

I have come up with some reasons for why people at this age and in this type of environment lack the ability to take risks. First of all, in order to be truly comfortable with yourself, you must be able to accept rejection and humiliation. At a time in our lives when we are all looking for approval, these two things are not necessarily desired. However, they really are not as bad as we think. Who really cares if someone laughs at you when you decide to

dance without any rhythm or wear a pair of shoes that your friends think are ridiculous? Why not ask them to dance or buy some funkier shoes?

Secondly, many people on campus are pretty intelligent and have a tendency to overanalyze situations. Thus, we tend to read too deeply into a scenario that might be plain and simple.

For example, last year I was talking with one of my friends and she said that she actually finds herself contemplating whether or not to say "hello" to people for fear that they may not respond. I do not know about you, but this strikes me as sad. Saying "hello" is something that should not be agonized over.

Finally, maybe there are only a small percentage of people that have in fact experienced the natural state of being carefree. Speaking from the experience that I had today in my acting class, this feeling of a natural loss of inhibition was both fun and liberating.

Everyone has these childlike, spontaneous instincts, but we have the tendency to resist them as we get older. Maybe Contact Improvisation is not the way for everyone to get in touch with these qualities, but I know that once you tap into this ability, there will be no going back to "normal."

Enough with the brand names

By Rebecca Rowland

Banana Republic! There, now that you are all paying attention, I would like to address a topic very near and dear to all of our hearts: brand names. More specifically, what things are worth dropping millions of dollars for and what things you should just buy at JC Penny's.

Underwear, socks, plain t-shirts, and turtlenecks are several things I strongly believe you should buy at generic stores. I will admit it, I am guilty of buying expensive underwear, but in retrospect I realize what a waste it was, since no one but me sees them (although come to think of it, that is a whole other issue).

As far as socks go, your shoes are always covering them so who cares if they say J. Crew on the bottom; the only ones who know are your Steve Madden shoes and they are too busy being impressed by the fact that they are from the Steve Madden store to pay attention.

That brings me to plain t-shirts and turtlenecks. I can see spending \$263 on a t-shirt with the logo name. When I go into a grocery store, I want Rice in a box, not Rice Puffs in a bag. And as for coffee, Starbucks rocks! In Pennsylvania everyone drinks that Sheetz coffee. I have another name for it; it starts with an "sh" and ends with a "t" but the letters in the middle are different.

unless you wear it inside out, in which case everyone will think that you're trying to do that Kris-Kros thing and will be too busy laughing at you to notice where your shirt is from.

I think I'm going to leave the is-

ent! Perhaps, the most important item that one should buy is the expensive version of is beer! Wake up people, Meister Brau is not good! Sierra is not good! Milwaukee's Best is not good! Corona is good! Sam Adams is good! Honey Brown is good! Sure they are more expensive, but think of all the money you are saving on underwear and t-shirts; it has to go somewhere! I know fratern-

ties cannot afford to buy good beer and that is okay in itself, but as soon as you start saying things like "This is good, what is this?" and its Busch, you have a problem and should get yourself a case of Corona stat!

So there you have it, my opinions on what is worth paying for a brand name and what is not. Of course, no one is going to listen, myself included. We all say brand names don't matter but when it comes down to it, we are all hypocrites. That's all right though, I forgive us.

K-Mart! Okay, you can stop paying attention now.

Rusted Root

By Jared Silliker

This past weekend's Rusted Root concert brought mixed emotions to this writer and much of the campus. There were strong points, weak moments and tight security. And crowding problems in a one-third full field house? Hmmmm...

One of the biggest bands to play at the University in recent years, the Pittsburgh based group did come through with an excellent performance. Nothing bordering on ecstasy (no pun intended), but commendable. There were a few negatives that seem to be the center of criticisms.

First, the band has obviously not progressed with the same bang, which was seen in the early 90s. A majority of the songs in the concert set were off the band's debut album, *When I Woke*, such hits as "Send Me on My Way", "Ecstasy", "Cruel Sun" and "Martyr". These smashes, no doubt, thrilled the crowd, but were not really supported by equally electrifying new tunes. Rusted Root did play a few cuts from its second major release, *Remember*, but these are obviously not the band's signature songs and do not hold the energy of the older numbers.

Secondly, the encore situation, often seen as the pinnacle of the performance, was somewhat of a disappointment. This was mostly due to only one song being played. The choice was a positive one with the crowd, although not even the band's own rendition of the Rolling Stones' "You Can't Always Get What You Want." It was almost as if Michael Glabicki and company wanted to get out of Lewisburg and on to bigger stages.

You can't blame them to some degree. The Fieldhouse is certainly not on the same level as the band's next stop, the Bryce Jordan Center in State College. Suffice to say, Penn State "Root" followers might see a somewhat more spirited showing.

The crowd, which totaled around 3,000, was fairly cramped, as those in front of the stage may have felt more like sardines than concert-goers. Several times, the band had to urge the crowd to take a few steps back to relieve those closest to the stage who were somewhere between a tight squeeze and being crushed. All of this in only about a third of the entire Fieldhouse. Bucknellians probably did not know what to do with themselves with such a well-known band actually playing on campus.

And let's not forget the entrance procedure and the security in general. Upon arrival, ticket holders were split into males and females, and subsequently frisked. In addition, moshing, bodysurfing and sitting on another's shoulders were prohibited. This was probably a good safety precaution, although unpopular with some energetic fans.

Sure, this wasn't the concert of a lifetime, but the University and the Concert Committee did finally bring in a big name band. From that perspective, having Rusted Root on campus was a step in the right direction, and was an overall success.

Michael Glabicki heads Rusted Root as the lead vocals and guitar.

Student reactions to the concert

"It was a good atmosphere and a lot better show than I thought they'd put on."

—Adam Townshend '02

"The concert provided an interesting mix of students both from Bucknell and outside of Bucknell."

—Melanie Taylor '00

Liz Berlin, supporting vocalist and percussionist, excited the crowd with her vocals.

Student reactions to the concert

"It was really good, but we didn't have much personal space."

—Alysia Tobias '02

"It was a blast."

—Gregg Pompei '99

"It was a lot more than I expected. 'You Can't Always Get What You Want' was the perfect encore."

—Tim Sather '02

Beetna Kim—The Bucknellian

Patrick Norman (left), John DiSpirito (right) and John Buynak (right) all rocked the crowd not only with their guitars, but also with wind and percussion instruments used throughout the concert.

Video Reviews

Burn Hollywood Burn & Primary Colors

By Aaron Spak

Burn Hollywood Burn

A director who decides that his film has been torn apart by editors and producers and who does not wish to have his name associated with it any longer may use the pseudonym Alan Smithee. The Director's Guild is credited with the creation of this alias to allow directors (and sometimes actors) to take their names off of a project they think has been over-edited or is just plain bad. But what if the director's name really is Alan Smithee? That's the premise for this strikingly original movie.

Eric Idle stars as Alan, who has just finished directing the film *Trio*, an action story starring Sly Stallone, Whoopie Goldberg and Jackie Chan. He becomes unhappy with the domineering attitude of James Edmunds (Ryan O'Neal), and feels that his film is destroyed by over-editing. Alan goes to the Director's Guild to try to take his name off of it, but he can't use any other name.

In desperation, Alan kidnaps the master negative of his movie and destroys it. The story is told as a series of interviews following the investigation of the stolen movie. Alan relays most of the story from an asylum in England to which he has been committed. Cameos abound, including Larry King, Coolio, Billy Bob Thornton, Joe Esteas and Robert Shapiro. It is a shrewd satire of the movie making process. It is a funny, fresh movie with plenty of inside jokes for movie enthusiasts.

Primary Colors

I know this movie played on campus a few weeks ago, but I didn't get to see it until this weekend. Anyway, this is one of the more entertaining political satires that I've seen; its parallels to reality are uncanny. *Primary Colors* isn't all for laughs as I initially thought it would be. Instead, it gets downright moral at times. The film attempts to look beyond the mudslinging and lies that permeate political campaigns.

Set against a fictionalization of Clinton's first presidential campaign, it follows the campaigning of Governor Jack Stanton. His philandering is his Achilles' heel and his new deputy campaign manager Henry Burton (Adrian Lester) needs to learn to play the high stakes game of presidential politics in order to get his man elected.

Emma Thompson, Billy Bob Thornton and Kathy Bates all deliver quality performances. *Primary Colors* is a very enjoyable film, though sometimes losing the balance between light-hearted comedy and preachy moral tirades. It reminded me of a more serious *Distinguished Gentleman*, starring Eddie Murphy. Rent that one if you liked *Primary Colors*.

Music Reviews

Harvey Danger & the Swingers soundtrack

By Matt Albert

Harvey Danger: *Where Have All the Merry-makers Gone?*
© Arena Rock Recording Co.

"Welcome to the Danger Zone" reads one of the many webpages concerning the new rock band, Harvey Danger. Their debut album, *Where Have All the Merry-makers Gone?* is a treat for the perspective buyer since the band covers a wide array of musical genres in a single album. The band sometimes resembles a modern day R.E.M., yet many songs on the CD venture far away from this description and sound much harder, one step short of punk rock. Not wanting to be outdone by "Don't Want to Miss a Thing" from Aerosmith, the band throws in a couple semi-love songs, not necessarily for those times with a significant other, but more for the car ride home with your friends after seeing "City of Angels."

Harvey Danger, comprised of four members—a lead vocalist, guitar, bass and drummer—offers a total of ten songs on their first ever release. The winner with radio stations and fans alike is track number two, "Flagpole Sitta." Most radio listeners would not recognize this random title, but will easily identify the refrain that proceeds as follows: "I'm not sick but I'm not well / And I'm so hot / Cause I'm in hell." This song, also sold as a single, peaked at number three on the music charts in late summer but has since retreated to number eight.

As for the rest of the album, I characterize it as very catchy and surprisingly good. On a one to 10 scale, three are of the eight to nine variety, while only two had short, "Carlotta Valdez" and "Radio Silence." Most of the songs sound like modern rock, but two of the better songs on the CD are more like punk. "Woolly Muller" and "Jack the Lion" combine great emotion and punk sound to score big points with the listener. One other aspect of the music I noticed is that the vocals are always the main attraction of the song. Though the guitars wail, the singer is never outdone, unlike some U2 songs which are undoubtedly defined by the guitar.

There is good reason to expect Harvey Danger to make it big in the years and albums to come. I was not expecting much from their first CD, but I was very satisfied by the music the band produced on *Where have all the Merry-makers gone!* Their best hit, "Flagpole Sitta," could conceivably be their downfall. It will be interesting to see if Harvey Danger can overcome the pressures of becoming a legitimate rock band and not just another one-hit-wonder whose songs and appeal were killed by the radio.

Advice: I say, "What the heck!" if under 15 bucks.

Swingers: *The Soundtrack*
© Miramax Records/Hollywood Records

Soundtrack, baby, soundtrack! Just when you thought Vince Vaughn had hung up his wife-beater, Hollywood Records releases the songs from the 1996 movie release which successfully managed to incorporate the words "money" and "baby" into every sentence.

From start to finish, the album is packed with old-school swing music that could make the listener suddenly thirty for a Dewars on the rocks. The CD also features lighter brands of swing when appropriate and a country song here and there when the listener needs a jingle while shining his/her boots.

If nothing else, the 16 songs on the soundtrack will offer enough variety to keep the listener from becoming bored. Most swing songs are from the present popular time, yet there are a couple tracks of veteran songs hailing from the 1940s just to make sure you pay homage to the forefathers of swing.

Songs from Big Bad Voodoo Daddy are the main attractions of the release, in particular "You & Me & The Bottle Makes 3 Tonight (Baby)." This track epitomizes the new era of popular swing music and is a great song for the novice swing dancers to use during practice. Many of the driving songs used to switch scenes effectively in the movie are also on the CD. "The Car Train" performed by The Jazz Jury is an aptly named Reggae instrumental used during the scene in the movie which gives the album much of its character. There are, in my opinion, a few songs which are a little too old-school for the younger listening audience. Track number five, "Knock Me a Kiss" by Louis Jordan, is an 1920s song that was an oldie for our parents and does not have the beat to please the younger ear.

Swingers is definitely a ground breaking album in that it attempts to bridge the gap between the swing tunes of yesteryear and the attitudes of today. I believe it succeeds in doing this and also giving the listener an opportunity to get away from hip-hop and techno and still have a good time. One addition that I think the CD definitely needs is a couple of dialogue excerpts from the movie. Hearing the altercation outside the Dresden Restaurant or Trent and Sue's pep talk with Mike would give the album that much more appeal. Nevertheless, the Swingers soundtrack is well worth picking up. It's money, baby, and now you know it. I am sorry, I could not resist.

Advice: Good buy with the change from purchasing your wife-beaters.

Professor's first fictional novel elicits rave reviews from critics

Jon Cotta—The Bucknellian

Nicole Cooley is a professor of English and a new novelist.

By Heather Napolitano

Only six months have elapsed since University alum Philip Roth '54 earned the accolades of the literary world as he received his Pulitzer Prize, and yet this small community is already boasting another talent in this field. Nicole Cooley, the assistant professor of English, currently finds herself amidst the flurry of activity that follows the publishing of her first fictional novel, *Judy Garland, Ginger Love*.

The uniqueness of this work extends beyond the title. It outlines the life of a central character, Alice, and her relationships with both her twin sister and her Judy Garland-obsessed mother. Intrigued by Garland, Cooley views the mother as

Published only one month ago, the critics have been quick to print responses to the Cooley's book. Among the journals that have reviewed the piece are *Entertainment Weekly* and *Kirkus Reviews*. The latter praised *Judy Garland, Ginger Love* calling it "a quirky and appealing novel as Cooley reads a riveting story around the sometimes dangerous bonds of family." A majority of the reviews have expressed a similarly favorable opinion of Cooley's first novel. She agrees that, overall, the reviews "certainly have been positive."

Cooley admits that it can be difficult to deal with responses and criticism, particularly after forming such a close relationship with the novel that she spent five years writing. "It's hard not to get emo-

tionally caught up in this," she says. "You have to maintain a dispassionate outlook which is very hard to do." In the midst of this commotion, however, Cooley clearly maintains her sense of humor saying, "I'm afraid to re-read it!"

Cooley's present successes did not come without work. Her interest in this field was sparked in her high school years when she attended the New Orleans Center for Creative Arts (NOCCA). "I always like to credit that," she says. Notably, this public school's graduates also included famous entertainers such as Harry Connick Jr.

From there, Cooley went on to study creative writing of both fiction and poetry as an undergraduate student at Brown University. She continued her studies at the Iowa Writer's Workshop which she describes as "two years of intense fiction writing." She finally began writing her novel while working to attain a Ph.D.

While *Judy Garland, Ginger Love* is her first fictional work, it is not Cooley's first published work. In 1996, she published a book of poetry entitled *Resurrection*. Her poetry proved itself to be every bit as successful as her fiction by winning the Walt Whitman Poetry Award from the Academy of American Poets. Cooley notes, "I feel really committed to both genres."

Although she has not yet begun another novel, she does plan to do so in the next six months. Cooley intends for her next piece to be vastly different from the first. "I think that the worst thing you can do is repeat yourself," she says. "You have to force yourself to write in a new way."

Cooley is currently working to promote her novel by attending book tours across the country. In addition, she is working on other girls of the Salem witch trials in 1692. Cooley's style in this genre is distinct in that she writes fictional poetry.

"I've always thought, 'why can't poetry be read like fiction?' Why can't we read it and be transformed?" After all, the whole fun of writing is jumping into someone else's shoes.

New writer-in-residence recites and teaches poetry to students

By Jessica Adickes

This semester, our writer-in-residence is Adrian Theo Okenberg. Many University students may ask, "What is a writer-in-residence?" Each semester, the University chooses one person out of a number of applicants for a fellowship called the Philip Roth Residence to spend time pursuing his or her desire to write. It is both an honor and a privilege to be chosen for such a "luxurious" fellowship. It is described as a "luxury" because all expenses are paid, including housing and meals, so that the writer can spend his or her time concentrating on the writing.

Okenberg's interests in the University include the feminist and gay rights group and the writing students because she has previously taught women's studies at Bennington College. She was also a student at Bennington College which she chose because there were no rules and no curfews. After her time there, Okenberg attended the writing program at Columbia and law school where she studied civil rights law.

Upcoming events in Okenberg's schedule include a poetry reading at the Harvest Festival on Oct. 29, during which she will read select poems from her poetry book *The Bosnia Elegies* and other more sensual and emotional poems to contrast the graphic intensities of the Bosnia struggles in war.

She does not consider herself an academic poet like many of the poets today, rather a "poet of the emotions." She says that "poetry does not come from an intellectual source." For instance, when she was reading the articles on Bosnia near the end of the war, it wasn't the facts that inspired her to sit down and write nearly 120 poems, it was the intense rage that she had while reading about the atrocities.

Okenberg's current works include a memoir about her mother's death, a novel and a collection of poems. Her poetry and criticisms can be found in such publications as *The Kenyon Review*, *The American Voice*, *Ploughshares* and *The Women Review of Books*. Aside from poetry, Okenberg has also written reviews and essays.

Okenberg is originally from a town in Bergen County, New Jersey. However, she was quite eager to leave life in her town to attend college. She has had a number of career experiences throughout her life, including work as a bookseller, real-estate entrepreneur, lawyer, community organizer and artist's model. Despite these various careers, she has been a poet since the age of 18 when she was in her first year of college. She was inspired by her interest in painting and the arts and by a professor who encouraged her to write because of the talent he noticed in her work.

Okenberg has had plenty of experience to realize that the "struggle for a writer is finding time to write." Even when she was studying law, her passion for writing led her to stay up late and use time during vacations to work on her poetry. Okenberg describes poetic writing as an especially difficult form of

Stephanie Metz—The Bucknellian
Adrian Theo Okenberg will focus on her poetry during her semester-long stay as the writer-in-residence.

writing because there is little money involved in poetry as compared to that in fiction or screen writing. This is another reason why it is so valuable for a writer to be able to write for a fellowship.

She feels that the privilege also comes from being able to meet new and dynamic people and visit inspirational places. The next writing colony that she will be traveling to will be in San Diego and she recently returned from a fellowship in New Mexico which she described as a beautiful place to write.

Okenberg defines the fellowship as a time in her life when she can expand the aspect of her life in which she is known as a writer and not a lawyer or a bookseller. It seems to be a part of her which not many people realize and she is happy to express it through her publications. One point that she wanted to share is that "poetry helps people live and if you open yourself to it, it will help you live your life."

Bearing it all

...express yourself

enjoy poetry!

interact with your peers

share your ideas over a lunch

Come and read your favorite literature!

By Krista McCabe

Far from the noise and rush of the hectic cafeteria, there is a quiet and different way to eat lunch. Every Friday from noon to 1 p.m., students and professors gather in Smith Library in the Vaughan Literature building to partake in a group called the Naked Lunch.

Here, a small group of about six to ten meet once a week to talk about poems that they have written or have read. The group is there simply to share. The Naked Lunch is a student run organization and has been carried on year after year.

"We welcome anyone who would be willing to share," said Gene Smith, a lunch member.

Not all members of the group have to read poetry, some are just there to listen. All members have to bring in a bagged lunch and an open mind. Members of this group are very interested in gaining new participants.

It is a great way to learn about new writers and it is very informal. Karl Paten, a retired professor at the University is also an active member of this group. He is the editor of the *Westbranch Journal*, a national creative writing journal. For those that are looking for a better way to spend their lunch hour on Friday, the Naked Lunch might be just what you are looking for.

A fair to remember

Fun for people of all ages

Photo courtesy of Beth Slaby

FROM LEFT TO RIGHT: Steph Nieratka '00, Leanne McFadden '00, Tracy Thiffault '00, and Courtney Kaczynski '00 smile in front of the NASCAR game booth that simulates the actual racing experience.

By Beth Slaby

If you enjoy apple dumplings, pumpkin waffles and NASCAR racing, then the Bloomsburg Fair was the perfect fall outing for you. The 144th annual fair took place off of I-80 in Bloomsburg from September 26 until this past weekend.

Started in 1855 by Dr. John Taggart, who believed an agricultural exhibition was invaluable to a community, the fair has grown from a one-day production to a week-long celebration.

The fair has grown from its original few exhibits of fruits and grains. Now, there are numerous activities for people of all ages.

This year, fairgoers enjoyed a Stock Car Demo Derby, helicopter rides, and various performers, including The Beach Boys, R.E.O. Speedwagon and Billy Ray Cyrus. Children could fish in the duckpond, while their parents enjoyed the various exhibits including farm and garden food, needlework, poultry and rabbits, and antique farm machinery.

Even though the exhibits are entertaining, it is true that many people go to the Bloomsburg Fair just for the food. Where else can you enjoy chocolate cheesecake-on-a-stick or chicken on a pita at John The Greek's? Refreshment stands lined both sides of the fair, and there were always masses of people waiting to

enjoy what they offered. Some other fair favorites include Vance's Apple Dumplings, Cole's Oyster Stew and Kohl's Orangeade.

The Bloomsburg fair even offered activities for many college students. Four friends and I traveled to the fairgrounds this past weekend with the mindset that it would be, well, a "central PA" type of fair.

Instead we were pleasantly surprised by the variety of exhibits, amusement rides and refreshment stands that confronted us as we walked through the gates. We were just as excited to jump on the tram from our parking space, as we were to ride the Ferris Wheel and the Zip-

Photo courtesy of Beth Slaby

This tractor carries fairgoers all day from the parking lot to the fairgrounds.

per. We talked to the man in charge of the poultry exhibit, who told us there were 750 different varieties of chicken from all over Pennsylvania, and we even played a few games.

It turned out to be quite an enjoyable and informative excursion. This fair to remember was quite a fun experience, and we all vowed to sample the games and food again next year.

Photo courtesy of Beth Slaby

Leanne McFadden '00 and Tracy Thiffault '00 get an up-close look at some of the award winning cows of the 1998 Bloomsburg Fair. As you can see, fairgoers can personally admire the cattle that enter the competitions.

Because of you . . . the 1998 Union County United Way Campaign

By Christi Schuman

Try to imagine your typical bad day.

First, you wake to rain. Your car is parked so far away that you'll get just as wet if you were to walk to class. To you, the rain is an annoyance, a temporary inconvenience as you move from shelter to shelter. But to someone else in Union County, it is a penetrating cold from which there is no

you finally decide on something, you spend the better part of 20 minutes looking at yourself in the mirror. A simple, day-to-day procedure for you, but to a blind Union County resident, seeing his or her own reflection is a far-off dream.

The day only gets worse as you wander down to breakfast and discover the Caf is serving nothing to your liking. Somewhere, not far away, breakfast of any

ious charities can supply the needy with clothing; Aid to the Blind can support those who, without help, would have difficulty with day-to-day tasks; Meals on Wheels can assure nourishment to those in desperate times; and Big Brothers/Big Sisters can provide a mentor or role model for children and adolescents in need of guidance. Because of the United Way, 23 different organizations can

shelter. And the thought of going to class is a seemingly unattainable goal.

While getting ready for the day, you cut yourself shaving and can't seem to locate the necessary first aid. A simple Band-Aid seems minuscule, however, when you think that somewhere in Union County, someone is bleeding so profusely that a blood transfusion may be needed.

As you stare into your full closet, you come to the devastating realization that you have "nothing to wear." Fortunately for you, this is a figurative expression, but to someone else in Union County, "nothing to wear" is literal and all too real. When

sort is tough to come by. Your day may improve, or it may even get worse, but no matter what, when it's all over, you'll have someone to talk to about it. Imagine having someone—no one to listen, no one to care. And you think your day is bad? "Hardships" like yours are realities for someone not too far away.

Because of the Union County United Way, however, Habitat for Humanity can provide shelter from the rain and cold; educational programming can enhance the scholastic endeavors of those less fortunate; the Red Cross can supply needed blood from their volunteer donors to those in need; var-

serve and aid the Union County community.

This October, the United Way can say that they are able to serve because of you. For the first time in its running, the Union County United Way is inviting not only faculty and administration to participate in this campaign, but students are as well. Its annual fundraising campaign kicked off Thursday, Oct. 1, and will run throughout the fall season. Students are encouraged to give a second thought and a caring hand to the campaign, whose organizers are looking for "maximum participation rather than maximum monetary gain."

Discussion fosters awareness for the Women's Resource Center

The Bucknellian File Photo
Director of the Women's Resource Center Janice Butler, attempts to make female University students realize that it is okay to "speak out."

By Jen LaBracio

Twelve years ago, the Women's Resource Center was run by two graduate students and occupied a small room with one typewriter and a few books. Today, it has spread throughout the second floor of Roberts Hall and brims with informative pamphlets, videos, and magazines. It serves not only the immediate campus community but also a mailing list of over 600 people.

On Thursday, Oct. 1, as part of the BSG Awareness Week, the Center sponsored a panel discussion entitled "A Safe Haven in the Midst of a Storm." Janice Butler, Director of the Women's Resource Center since 1988 remarked on the Center's progress.

"We've come a long way [since then]."

The discussion was led by two student members of the Lead Team, a group that facilitates activities between organizations and students. It also included a panel of advisors and volunteers from the Women's Resource Center.

Focusing on both its history and its purpose, panelists shared with students the basic philos-

"We've come a long way since I've gotten involved with the Women's Resource Center in 1988."

—Janice Butler

The Center focuses on crisis intervention rather than long-term therapy, and provides victims with literature on how to deal with rape and assault, as well as simply a place for them to feel secure.

"I will not judge what they say; I will not judge what happened to them. I simply want them to feel safe," said Ann DeStefano, a member of the Board of Sexual Assault Victim Advocates and a worker at the Center.

Student volunteers also voiced their opinions on the importance of providing victims with a safe place to express their emotions. "We received special training on how to help people; not neces-

sarily to tell them what to do but to listen to them," said Krystal Buhr '01, panelist and volunteer worker at the Women's Resource Center.

Joel Toluba '99, also volunteers at the Center, echoed this sentiment. "We are taught to be listeners rather than counselors. We just want University students to recognize this support that is available, and use their resources," he said.

The importance of confidentiality was also stressed by the panelists, not only for sexual assault victims but also for any person seeking guidance from the Women's Resource Center, ranging in issues "from roommate problems to eating disorders," Butler said.

The panelists and volunteers also explained other focus areas of the Women's Resource Center, such as bringing in outside speakers to campus and helping to facilitate programs which deal with gender relations. "We try to do things that are interactive and creative to get people's attention," Butler remarked.

Recent events such as the formation of the Peer Educators group, student volunteers aimed to help fellow students with various problems, and the "Take Back the Night" march, an organized protest against rape and sexual assault, were both arranged by the Women's Resource Center.

The Center may not receive much recognition, but it is an integral part of life on campus. This lack of attention, though, must not deter students from coming and using the facility.

Although there is a society stigma against speaking out, it is the Center's futuristic hope to eliminate this negative label. According to the statistics of students who use the Center, or people who are now participating in different activities sponsored by The Women's Resource Center, it is the Center's hope to promote awareness for both sexes—as equals.

Catherine Metzger details the crucial importance of artistic conservation

By Liz McCarty

As students and faculty began filing into the Arts and Music auditorium on Friday afternoon, few noticed the quiet, unassuming woman setting up brochures on the piano in front of organizing papers on the podium to the right. She worked contentedly as people settled into their seats and piano music drifted up from the floor below.

This quiet, unassuming woman was Catherine Metzger, the first speaker in a series of lectures on the arts. She is a well-educated, experienced conservator from the National Gallery of Art in Washington, D.C. She visited the campus not only to discuss conservation of art, but also to study the Kress Collection, found in the Art Gallery in the Langone Center.

Metzger gave her audience an overview of conservation of art and its progression, pointing out that before the 18th century, there were very few conservation specialists in practice; it was not until the early 1900s that resto-

ration and conservation became a recognized profession.

"Restoration of artwork is actually quite a difficult and involved process," Metzger explained. Discussing the various techniques the scientific conservation specialists use, such as fiber optics, UV light, and chromatographic techniques, she expressed just how challenging the art of restoration can be. "I give you this list not to impress you," she commented, "but to show that conservationists need a background to be able to communicate with [the scientists]."

With today's technological advances, it is astounding what conservationists can do to examine and restore works of art. Metzger demonstrated this by explaining infrared inspections, which can show the original drawings under paint on a work, and even original paintings that have been covered, or overpainted.

She showed an example of this overpainting in the work *Madonna and Child*. In the painting people see today, the child is

wrapped in a purple drape. Infrared inspections, however, showed that the drape was not a part of the original painting.

Instead, the child was naked. The drape, which was not as cracked and old as the rest of the painting, must have been added at a later time.

She also showed two of Canaletto's works, *St. Mark's Square* and *The Entrance to the Grand Canal*, which, she said, had similar vertical areas of disrepair that they had found through x-radiography. When they removed the overpaint, they found bits of one painting on another. It became obvious the paintings were not always properly stored, and these two had been pressed together while they were still wet.

The latter part of Metzger's lecture dealt with Gerard David's painting, *The Saint Anne Altarpiece*, which consists of three separate panels: Saint Nicholas on the left, Saint Anthony of Padua on the right, and Saint Anne with the Virgin and Child in the center.

The entire piece was first examined in 1982, when they began studying the Cloth of Honor and the carpet, both of which appear in the center panel. They found a murky gray mottle Metzger mentioned, which they believed was not the original color.

The conservationists compared the work to David's *The Cervanna Altarpiece*, which had the same carpet. They found that the gray areas were green in this piece, and that an oil had been applied to the Saint Anne work by a third party. Since it was not applied by the artist or his shop, she concluded, it was removed. This is the general rule of conservationists, whose main objective is to restore artwork to its original state.

Overall, Metzger's presentation was a wonderful start to the Universities Lectures on the Arts series. Informative and honest, her discussion was a refreshing introduction to the conservation of the arts, and a wonderful presentation of the benefits of preserving our masterpieces.

SCIENCE & TECHNOLOGY

How have humans caused global warming?

By Adam Parris

"Every angle that you think the issue comes from is going to be altered in the next hour and a half," said Dr. Patrick Michaels, Virginia State climatologist and professor of environmental science at the University of Virginia, this past Monday. He presented a panel discussion held by the Environmental College in Rooke Auditorium.

Michaels came to speak to students about an issue which has plagued the minds of America since the late 1980s: the issue of human effects on global warming.

"In June 1988, the greenhouse issue really took off," Michaels said.

Michaels explained that the reason the issue took off in 1988 was a study done by scientist Jim Hansen, indicating the projected temperature increase of 0.45 degrees Celsius. Although this statistic seemed foreign to those who knew little about the issue, the United Nations' Intergovernmental Panel on Climate Change (IPCC) felt that it was necessary to heed Hansen's research as a drastic warning, and released a paper on the issue in 1990.

"When the latest atmospheric models are run with the present atmospheric concentration of greenhouse gases, their simulation of present climate is generally realistic on large scales," the IPCC report read.

What the IPCC report and Hansen's model addressed was the correlation between the amount of carbon dioxide that humans were emitting and an expected temperature increase.

Michaels acknowledged only that humans have drastically increased the greenhouse affect by emitting carbon dioxide, methane and CFCs. However, Michaels showed the audience the present climate models which indicated a lack of temperature increase.

"It simply did not warm the way it was projected to, and therein lies the great scientific issue," Michaels said.

Indeed, Michaels maintained that there was a problem of global warming. He also demonstrated to the audience that the largest warming in the 20th century occurred before 1930.

Photo courtesy of the Geology Department
Dr. Patrick Michaels, University of Virginia, and Steven Percy, CFO, British Petroleum Corporation, presented a panel discussion on global warming.

"It is very clear that much of the warming occurred before World War II, which is before human beings could have caused it," Michaels said.

Michaels challenged the issue of warming from many standpoints. He presented to the audience a barrage of staggering statistics, all of which hinted at the lack of real threat for human impact on global warming.

"As students of science, you have to exercise a critical capability on this issue and that is not necessarily to believe what you read in the newspaper or in fact in some scientist's account of something. Rather, what you have to look at are the real numbers."

The United Nations took a look at the real numbers again in 1995 and released a new paper.

"We were overestimating the amount of warming that carbon dioxide was causing by 15%," Michaels said in summary of the paper. This is a staggering statistic.

Despite such an overwhelming amount of discrepancy, the United States along with other nations signed a document called the Kyoto Protocol, promising to reduce carbon dioxide emission by 7% below the 1990 level.

"If every nation in the world did what they said they were going to do under the Kyoto Treaty, the temperature would only be .07 of a degree less," Michaels said.

"We think it's enough of an issue that

we should forget about our business and start to find solutions in the event that it is something serious," Steven W. Percy, CFO of British Petroleum of America said in his follow up speech after Dr. Michaels.

Percy is the CFO of one of the world's largest oil companies. He spoke not to debate what Michaels said, but to give students a perspective of a very large business and even a political perspective.

"I sit on the President's council for sustainable development and we're dealing with matters of public policy when it comes to these issues. I can assure you that I hear just as passionate arguments on the other side," Percy said.

Whether or not industry subscribes to either side of the scientific debate is negligible from the perspective of British Petroleum of America. Instead, they wish to focus on the long term goals of the company and the globe. They want to focus on their emissions.

"Particularly, it could have an impact on the new billion people we're going to add to this planet over the next 10 years and those people need energy just to sustain the very basic lives," Percy said.

Percy noted that British Petroleum was an exception to the rule as far as the industrial opinion of global warming.

"The question that you have to decide as a whole society is how much money do

Thoughts from the editor

By Adam Parris

Global warming is just one of the many debates concerning human impact on the environment. It has been both highly publicized and widely spoken of over the entire span of the 1990s. More importantly, it reflects a history of debate between science, industry and the world community.

Often times, people are coaxed into believing, or subscribing, to opinions which are presented as facts. With the recent development of information about global warming, we face a blatant example of this ability of the media, industry and government to endorse scientific concepts, as well as cultural concepts, in such a fashion as to mislead people into believing what is convenient for their purpose.

When the United Nations released a report effectively matching a global warming trend with increased emission of carbon dioxide, methane and CFCs into the atmosphere, they were supporting an idea which is now considered somewhat false.

In truth, increased carbon dioxide emission cannot be tied concretely to the global warming trend. It may eventually be proven that it does. For the meantime, scientists must look for answers, and perhaps, the media must judge the truth of what they print more accurately. Certainly, the government must be careful as to what kind of warnings to accept, and industries must pay close attention to their effect on the environment.

In all of these scenarios, there is one party which has been left out. This party is none other than the public.

Before pointing the finger at any of these other parties, one must ask himself or herself whether or not he challenged the idea that global warming is effected by increased carbon dioxide emission.

A strong responsibility exists in everyone which requires steady thought and careful interpretation of what they see and what they believe. For instance, without straying too far off the topic, consider the recent events with the President of the United States.

What did you believe, and what did he have you believe? The recent panel discussion on global warming demonstrated several opinions. Both of these opinions retained questionable ideas. However, they reach towards a valuable outcome.

Dr. Patrick Michaels, who is part of the United Nations' Panel on Global Climate Change, believes global warming is not a problem, and the world should challenge its conscience with the question of whether or not to spend money to decrease what is, according to him, insignificant carbon dioxide emission. He passionately supports this idea because it makes up the bulk of his scientific career.

Mr. Steven Percy, who has a very large role in one of the most influential oil companies in the world, British Petroleum of America, believes that the problem, despite its scientific outcome, is significant enough to consider taking action. Mr. Percy is merely addressing what may eventually cause a decrease in both the profit of his company and the people who use their products.

In 1988, when the United Nations released a paper warning people about global warming, they were trying to protect the best interest of their countries.

The historical relationship between all three of these parties hasn't been healthy. The recent change in opinions over the issue of global warming reflects a trend of minimal effort to reach a compromise over the matter. It also reflects a much more environmentally related outlook to the development of the human race.

One thing still remains—the opinion of the people. The public often expects problems such as global warming to be solved for them. Therefore, they believe a lot of what they hear. Before a compromise can be met and before a difference can be made, it is assumed that each individual would want their voice to be heard.

The issue then becomes: what lies behind your voice, fact or fiction?

you want to spend to stop warming the planet 1.5 degrees in the next century, for putting something in the air that makes the planet greener, not browner!" Michaels said at the end of his speech.

Percy and Michaels entertained ques-

tions from the audience, and then left to travel to different parts of the globe for more conferences. Luckily, their paths crossed briefly at the University, and the audience was able to catch a brief glimpse of this complex debate.

Next Week:
The Bucknellian will not publish next week due to Fall Break.

Look for our special Homecoming issue in two weeks.

Julie Sweitzer '99 finished first overall at the Tidewater Fall Classic with a time of 17:51

Field hockey hammers league foes

Russo '01 and Zimmerman '00 lead Bison to victories over Lehigh and Ursinus

By Sarah Chance

The Bison field hockey team was defeated by Patriot League opponent Ursinus on Sept. 30. This past weekend, they made sure it would not happen again, defeating league foes Ursinus and Lehigh en route to a 2-0 week. This week the Bison were able to improve on their record, making them 6-3 overall and 3-1 in the Patriot League.

Bucknell was able to sink its first goal early in the first half as co-captain Jen Zimmerman '00 found the net off a give-and-go from co-captain Katie Twombly '00.

With 12:13 left, freshmen Dena Ebert was able to put one in off an end line pass from Brett Russo '01. This continued Ebert's three-game scoring streak and, with eight goals, she became the team's leading scorer. In the second half, the Bison were able to find the net once more as Malina Anderson '00 scored her first goal off an assist from Zimmerman. Zimmerman then fed the ball from the end line, giving the Bison their game winning goal.

"Overall we played a great game. We had great passing plays and we played a great offensive and defensive game," Zimmerman said. "The freshmen really stepped up and picked things up for us."

Senior Maureen Breslin was able to block out Ursinus' three shots on goal for a shutout.

"We did really well against Ursinus," Breslin said. "We were mentally prepared to play out there."

The Bison were able to get off 15 shots and nine corners, while Ursinus collected only three shots and four corners. The offense dominated the game, capitalizing on their 10 shots in the circle.

"We have been continuous in our play overall and we are more confident when we get out on the field," Ebert said. "We are really playing well together and coming together as a team."

The Bison were able to up their home record to 4-1 with a win against Lehigh on Oct. 3, Maura Higgs '01 was able to put the Bison on the board twice with a goals in the first and second half. With 20:06 left in the first half, Higgs found the

Andrew Robinson—The Bucknellian

Katie Twombly '00 has been a key contributor in the field hockey team's recent success.

goal off of a direct shot. Going into the second half, Twombly sunk one in, unassisted off of a goal keeper's rebound. Higgs found the net once again off an assist from Erin Plasteras '02. Plasteras crossed the ball from the right, allowing Higgs to find the net.

Lehigh was able to find their way to the net with only nine minutes left, but Ebert rebounded for a goal off an assist from Russo, giving her a four game consecutive scoring streak. Bucknell managed to obtain 15 shots on goal to Lehigh's six and tied Mountain Hawks in corners with 10 a piece.

"Lehigh was a tough game, but I think that we came out prepared and that the offense really dominated and connected," Breslin said. "We are

definitely a more confident team. We have come together and worked hard. The freshmen have really made the difference, they are more experienced and are less hesitant to talk and go to the ball."

"The past two games we were able to capitalize on our opportunities to get the ball in the net," Ebert said.

The Orange and Blue will host Monmouth on October 10. "It will be nice to be at home for a few games. We can step up and get ready for our last two league games," Zimmerman said. "Maryland is a real powerhouse, being nationally ranked, so we are happy that we will be able to work on the things we need to improve on and get ready."

Bucknell Alumni win the Hood to Coast

By Samantha Otuski

What do you get when you combine a grueling relay race of 193.8 miles over rocky terrain with a talented group of Bucknell alumni men...? the 1998 winners of the Hood to Coast Relay!

On Saturday, August 29, twelve alumni won the men's elite Hood to Coast Relay. The race begins at the picturesque Timberline Lodge on Mount Hood, about 80 miles east of Portland, Oregon. The relay meanders 193 miles (coupled with a dramatic change in altitude) west to the coast and the town of Seaside, OR. The runners begin at midnight and each leg runs an average of 16 miles to reach their next runner—with the Pacific Coast as their final quest.

Teams from all over the United States train rigorously for this notorious race. The Bucknell team, out of Newton, CT, were one of only a handful of runners from the East. The majority of the teams fall from the Portland or Seattle area. Other teams came from Alaska, California, Utah, Minnesota and others.

Out of 981 teams to start, the Bucknell Alumni Distance Team took first place with the elapsed time of 16:52:46, with an average pace of 5:14/mi. The Runnin' Woodies out of Gresham, OR finished several minutes later with a time of 17:08:07, and a 5:18/mi pace. The Haakin' Smackin' PSU Alumni Team of Sidney, NE

X-country cruises to victory

Sweitzer '99 and Wertz '01 pace respective teams

By Rose Sedo

Teams get worse when they lose the motivation to get better. When a team is already "good" because it is undefeated, sometimes laziness or conceit overshadows the hunger and desire to be "great."

However, after the Tidewater Fall Classic at Salisbury State University on Saturday morning, the Bucknell cross-country team continue to show that for them, winning comes as second nature.

The Bison defeated Salisbury State, Rowan, Swarthmore, Western Maryland, Delaware State, Ramapo, Christopher Newport, and the University of the District of Columbia in order, by margins ranging from 58 points to 288 points.

On the women's side, Bucknell placed first in a field of 10 teams with 20 points. The runners-up in the women's competition were Salisbury State (78) and Rowan (80), both of whom were apparently no match for the Orange and Blue.

Julie Sweitzer '99 finished first individually and ran a 17:51, nine seconds faster than the second place finisher, Suzy McCulloch of Salisbury State. Carly Graystock '00 (3rd - 18:21), Annie Hamlin '99 (4th - 18:26), and Jen Hart '00 (5th - 18:26) rounded out the top five finishers in the race.

In the men's race, Bucknell took first out of 11 teams, also with an amazing 20 points. George Mason (67) and Rowan (75) finished second and third, respectively, to round out the top three.

Individually, Jonathan Dietrich '99 placed second to lead the men's team to a first place finish. Dietrich ran an impressive 25:35 to take second place behind George Mason runner Dan McKay (25:09). Remarkably, 11 of the top 15 finishers were Bison, with Dave Brofenbrenner '00 (3rd - 25:40), Matt Kodak '99 (4th - 25:42), and Scott Sehon '00 and Brad

Bucknellian File Photo

The women placed seven runners in the top ten at the Tidewater fall classic.

Wertz '01 (75th - 25:44) joining Dietrich in the top five.

Any coach would be happy with these results, especially in preparation for the bigger meets later in the season. "We did what we wanted to do, and we knew that going into the meet it would not be a tough win. I was pleased because we got some good races out of some people that needed to have them," coach Art Gulden said. "We got some real good races out of Wertz and Colburn. We were just waiting for them to really run up to their potential, and they did."

Both the men's and women's captains shared the coach's sentiments. "It was good to be in a situation where it wouldn't hurt us if we weren't perfect," Dietrich said. "We learned lessons that you can't learn

in a pressure-type meet like Michigan or Patriot Leagues. It was good that we had an opportunity like this before a bigger meet to boost our confidence."

"Saturday was a good step forward to what we want to do at Patriot Leagues," Sweitzer said. "We were tight as a pack and we learned to make ourselves hurt in the first mile so that when it comes to a big meet, we'll be prepared to race fast."

Bucknell's next meet will be on Saturday against Rider, which should be another easy win for the Bison.

"Rider will be more of a good test for our young ones," Gulden said. "We're just training through this week, and getting ready for Michigan on the 17th and Patriot Leagues on the 31st."

Squeezing the cheese: The Green Bay Packers entered their Monday night showdown with the Minnesota Vikings at 4-0, boasting the NFL's top-rated defense. That would all change at the hands of the Vikings revamped offense. Randall Cunningham, the Minnesota quarterback who was out of the NFL two seasons ago, threw for 442 yards as the Vikings stomped the Packers, 37-24 at Lambeau Field in Green Bay. The receiving trio of Cris Carter, Jake Reed and rookie sensation Randy Moss helped the Vikings rack up 545 yards total offense as Cunningham completed 20 of 32 attempts. The Viking defense held league-leading passer Brett Favre to 144 yards on 13 of 23 passing and intercepted him three times. Minnesota joins defending the Super Bowl champion Denver Broncos and the Jacksonville Jaguars as the only undefeated teams left in the NFL.

Quieting the tribe: The Indians downed the Yankees in the playoffs last year before losing the World Series to the Florida Marlins. The Bronx Bombers came right back to become the most successful American League team ever, winning 114 and breaking the '54 Indians' mark. And now the two teams will square off for the American League pennant, and most experts think it may get ugly. After Yankees' second baseman Luis Sojo was hit by Cleveland hurler Jaret Wright, sidelining him for over six weeks, many sportswriters believe that the slightest bit of chin music could start World War III. "Sometimes it can be personal through the course of the year," said Yankees ace David Wells. "They are an aggressive team, and I think we are, too. It is something—you just got to go out there and fight to the death. When you go out there and try to win ballgames, things can happen, guys get a little bit out of control at times." The Bombers rolled over the Texas Rangers, holding the team to a .141 batting average, and capitalized on the success of the league's hottest hitter, rookie sensation Shane Spencer. The Yanks also have added incentive as they look to take home the crown for their fallen slugger Darryl Strawberry, who had a cancerous tumor removed from his colon this weekend. "The Straw factor is part of it," Yankees' manager Joe Torre said. "He keeps giving orders to go out and do it." And the Yankees are listening. They took the first game, 7-2, behind the dominated pitching of Wells. His opponent, Wright, surrendered five quick runs and lasted only 2/3 innings. David Cone will look to continue the Yankees' home dominance on Wednesday night.

A True Forty-Niner: Eddie DeBartolo Jr., the majority owner of the San Francisco 49ers, agreed to a plea bargain stemming from his involvement in an extortion scheme involving former Louisiana governor Edwin Edwards and his son Steven. DeBartolo was placed on probation and fined nearly \$1 million for admitting his knowledge of the Edwards' illegal involvement in the riverboat casino industry. No judgment was made concerning the National Football League's capacity to punish DeBartolo, nor was anything ruled about his possible future ownership of the 49er franchise. Recently ranked among the 250 richest Americans, DeBartolo became the NFL's youngest owner when he purchased the 49ers in 1977. In the years since, he has transformed the team into a perennial playoff contender and has won five Super Bowl championships.

More Iron Filings: Former heavyweight champion Mike Tyson has hit another major speed bump on his seemingly long road to reinstatement to the boxing world. A Nevada court ruled that Tyson's psychiatric records would not be kept private before his reinstatement hearing on October 19. Tyson's lawyers are considering dropping the case, which can still be appealed to the Supreme Court, to focus on the hearing. "It doesn't look real good for them for an appeal to the Supreme court so they just might have to face the music and release the reports," said Kirk Hendrick, a deputy attorney general for the Nevada Athletic Commission. Shelley Finkel, Tyson's counsel, believes that the evaluations performed by the Massachusetts General Hospital will clear Tyson to re-enter professional boxing. Tyson has undergone extensive psychiatric testing since he bit part of Evander Holyfield's ear off in a title bout last year.

Unlocking the Lockout: Despite the cancellation of training camps scheduled to have begun on Wednesday, numerous NBA players arrived at their training facilities to express their anxieties to start the season. "We're here to show the public that we, as players, want to play," union president Patrick Ewing told CNN. "We just want everybody to know that the players want the season to start on time." Players arrived at 14 different sites across the country in an attempt to show that they are not to blame for the postponement. "They locked us out. It's not like we're on strike," Rockets free agent Mario Elie, one of several players who have been working out together at Houston's Westside Tennis Club, said. "Everybody's got to get that corrected. It's not on us. The onus is on them. They're the ones that closed us down." NBA Commissioner David Stern and his deputy, Russ Granik, have commented that they would rather see the entire season cancelled than accept a bad deal. Talks are being halted until arbitrator John Feerick makes his ruling concerning the fulfillment of guaranteed contracts. The decision is expected in the coming weeks.

Quote of the Week:

"Here there are so many rules about, how do you say, sexual harassment. In Italy you can make stupid with a girl. Here if you make stupid, you will be poor."

Walter "Spiderman" Zenga after returning from Italy to coach his former Major League Soccer team, the Revolution.

High hopes for the Human Genome Project

By Anita Malhotra

The seventh Ralph Spielman Memorial Lecture presented a very distinguished guest, Francis Collins, who is the director of the National Institute of Health's Human Genome Research Project.

Collins received his Ph.D. from Yale University and his M.D. from North Carolina. He is a fellow of human genetics and pediatrics at Yale as well. His career started with the identification of genetic diseases such as cystic fibrosis, Huntington's Disease, and familial breast cancer. In 1993, he became the first director of the Genome Institute at the NIH. Interestingly, Dr. Collins is also an avid motorcyclist and guitar player.

Dr. Collins' talk was entitled "Medical and Societal Consequences of the Human Genome Project." His aim was to discuss both scientific and ethical issues involved with the project with the people jammed in Vaughan Literature Auditorium. The ethics cannot be ignored.

"Science can no longer be carried out in a vacuum," Collins said. Genetics is a subject that has relevance to all of us. Virtually all diseases have a genetic component, even infectious diseases such as AIDS. However, the environment has a profound influence on the course and severity of the disease.

In fact, most diseases have a "50/50 relationship between genetic and environmental components. In this project, we will uncover all the genetic components," says Collins.

"It is a lofty claim, but one that is certainly attainable. All of us carry an estimated five to 50 significant flaws," but most do not show up in the average person.

These flaws represent a misspelling in the genetic code. For those who do not know the details, the genetic code is present in DNA. Hundreds of thousands of nucleotides, which are four nitrogenous bases that are specifically paired, make up one molecule of DNA. Collins used hilarious cartoons to illustrate the basic science of the scheme.

The human genome consists of approximately three billion bases which make up about 80,000 genes. To grasp the scope of that number, Collins offers the following analogy: if printed out, the stack of papers would be as high as the Washington monument. However, with modern technology the way it is, the whole thing will fit on one CD-ROM.

Collins calls his project the "periodic table of biology," and it

Francis Collins, director of the National Institute of Health's Human Genome Research Project, presented a lecture entitled "Medical and Societal Consequences of the Human Genome Project."

certainly is. DNA contains the instructions for every living organism on earth.

To date, 102 diseases have been figured out thanks to the sequencing of the genome. The project is far ahead of schedule. Initially, the final date was set for 2005. But, they anticipate being finished by 2003, which just happens to correspond to the 50th anniversary of the discovery of DNA by Watson and Crick. The part of the genome which is richest in genes will be done by 2001.

On to the ethical and social aspects. The idea of being able to patent a gene is troubling to Collins, but biotech companies are already rushing to do just that.

The best way to deal with this issue, Collins says, is to make everything public. If someone has a patent on a gene, then no one else will be allowed to use that particular sequence. Let's say that you have some disease with a high genetic component. The treatment involves gene therapy, but the only way you can get treatment is to go to the company that has the sequence. So, this company can charge whatever they want and nobody can do anything about it. This is just a hypothetical example. However, there is currently complex legislation passing through Congress about the ethics of genetic patenting.

Many people are also worried that once they start genetic testing, discrimination will be a problem. This is a legitimate worry.

What health insurance company will give you a policy if they know you are going to develop a debilitating and ultimately expensive disease? The law now says that genetic information may not be used for insurance companies utilizing group plans. But, that says nothing for the individual.

There are several other issues that need to be resolved. Collins feels that the FDA should step in to protect the people from commercialism in the field. Physicians need to be further educated on how to deal with the new technology that will result from this project. A limit to manipulation of DNA must be set.

Finally, people need to be reassured that free will is not affected. Succumbing to genetic determinism is not an option. The environment will not be less important.

Collins ended his lecture by saying that this project "ought to be our greatest hope. We have responsibility and obligation to use this information appropriately."

Buyer beware of mislabeled supplements

By Brian Watson

In the past decade, multitudes of performance-enhancing products have exploded onto the fitness scene. Supplements like creatine, pyruvate, and, most recently, androstenedione, have been used, endorsed or recommended by fitness experts and professional athletes. This relatively new industry has received almost no monitoring by the Federal Drug Administration (FDA) concerning ingredients and content, which many industry experts believe may be harmful to consumers.

As reported by FitnessLink, an Internet health and fitness publication, a recent study has shown that many companies have been falsely advertising the exact composition of their high-priced supplements. Advance Supplement Testing Systems, L.P. (ASTS), released a 1998 study entitled "The Moment of Truth" which documented an extensive investigation into over 100 popular, commonly-used fitness enhancers. The tests, which were performed in conjunction with a highly-accredited California research laboratory and then duplicate-tested by two other reputed labs revealed that over 50 percent of the products studied at random mislabeled their content, mismarking their ingredient quantities by roughly 20 percent. A few notable products that included drastic mislabelings include Muscle Tech's Creatine 6000ES (\$58.95 per 11.4 ounce container), which advertises six grams of creatine per serving but only contains 2.25 grams; and Xplode (2.5-lb. jar costs

Jonah Hall/The Bucknellian

Many popular training supplements have been mislabeled in stores throughout the country.

\$39.95), a weight-gainer claiming to contain roughly 50 grams of protein and no carbohydrate, actually holds only four grams of protein and an astounding 53 grams of carbohydrate.

According to ASTS partner Trey King, the everyday consumer must watch out for the rip-offs

that are running rampant through this unregulated industry. "We are concerned that customers are not getting what they are paying for, and that some of these mislabeled products could actually jeopardize the consumer's health," King said.

Men's soccer struggles in loss to Army

By Justin Knox

The Bucknell men's soccer team headed into Saturday's home game against Army looking for their first Patriot League win this season, and also looking to snap a four game losing streak.

However, a quick goal by Army just three minutes into the game left Bucknell on the short end of the score.

"I think Army pretty much dominated us the first 15 minutes of the game, before we started to play well," Ian McVeigh '02 said.

Bucknell started to come on, however, after Army scored their goal. The Bison controlled the ball much more in the latter part of the first half, and continued to play well into the second half.

"We slowly evened the momentum out," McVeigh said.

Bucknell continued to have scoring chances until Sam Chamo-vitz '01 scored from a Sam Graziano '01 assist to even the score at 1-1 with eight minutes left in the game.

"After we scored, we definitely

picked our play up even more. I really thought we were going to win. We had so many chances to score, we just couldn't put the ball in the net," McVeigh said.

However, with under a minute left in the game, Army scored to take a 2-1 lead and the win.

"It was very frustrating," McVeigh said. "We came into the game expecting to do well, but we just couldn't finish it out. Our captains are keeping everyone's heads up, though. We just have to keep going out there and giving it our best, its going to come for us."

Bison goaltender Nathan Fitzgerald '00 played the entire game, finishing with 17 saves. Bucknell also ended a four game scoreless streak with their goal against Army, and they hope to further improve their offense at St. Francis this Saturday, in a non-league game.

"We have three more Patriot League games left, if we win all of those, we are in the playoffs, and that's what we're shooting for," McVeigh said.

Steve Deluca '00 and the soccer team play St. Francis in their next game.

This week in college football and baseball

By Tim Scheu

The focus has shifted to baseball, so I thought I would start with that:

New York and Cleveland:

As of late, these two teams have become the biggest rivals in the American League. Last year the Indians spoiled the Yankees title hopes, as Cleveland and "Yankee killer" Jaret Wright defeated New York in six games. This year is different. The '98 Yankees are possibly one of the best teams in major league history. They won 114 regular season games, and are motivated by the Indians' game six win a year ago. The Yankees are stacked. They possess one of the best hitting lineups, and their starting four are the best in baseball. The names of Pettie, Cone, Hernandez, and Wells will haunt the Indians. As much as I hate to say this, the Yankees are just too talented to not make it to the World Series. If the Indians beat them it will be the biggest playoff upset since the Phillies defeated the Braves.

Yankees 4 Indians 2

Atlanta and San Diego:

Both of these teams' regular season exploits were overshadowed by the success of the Yankees. But the fact of the matter is that both these teams are very talented ball clubs. The Padres possess possibly the best 3-4-5 hitters in all of baseball in Caminiti, Vaughn, and Gwynn. They have one of the best closers in the game in Trevor Hoffman and their pitching staff is one of the top couple in the National League. The Braves have consistently had the best pitching staff in the National League, and their top three of Maddux, Smoltz, and Glavine can rival any three pitchers in big league history. Atlanta is stacked when it comes to hitting as well. Galaraga proved to be the best free agent pickup of the year and has led the Braves to much of the success they have encountered. This series will be really close, but I think that since the Padres have the better bullpen, they will take the pennant.

Padres 4 Braves 3

Oh yeah, there are some great college football games, too:

#12 LSU @ #6 Florida:

The Gators may be the most overrated team in all of college football. They lead the nation in fumbles lost and are in the midst of a quarterback controversy. On the other hand LSU is fresh off a loss at the hands of Georgia, and is looking to get revenge on an ailing Gator team. The Tigers have the most prolific backfield in all of college football and will probably run wild on the offensive-minded Gators.

Tigers 31 Gators 24

#5 Tennessee @ #7 Georgia:

In the second marquis SEC matchup of the week, the Bulldogs are looking to further establish their national title hopes. They are taking on the Vols, a team that just lost Heisman candidate and starting running back Jamal Lewis for the season. While Georgia did defeat LSU in last week's game, they did so by a 28-27 margin. I think the Bulldogs are in for a lesson.

Vols 35 Bulldogs 17

#4 Kansas State @ #14 Colorado:

Kansas State is the best team in the Big 12 and maybe in the nation. They are grossly underrated, and I think this game in Boulder will give them a chance to show a national audience just how good they are.

Wildcats 52 Buffaloes 13

#3 UCLA @ #11 Arizona:

Cade McNown and the Bruins high-powered offense will be severely tested this week. This matchup marks the first time UCLA will play a ranked team this season, and it will be the toughest test yet for the undefeated Wildcats. The winner of this game will win the Pac 10.

UCLA 38 Arizona 24

Ok, ok, ok, so I may not be a prediction god anymore. My record last week was 1-2 in college football, but I was still 4-0 in baseball predictions. Excuse me while I pat myself on the back.

Good girls don't normally do that: An overdue tribute to the sport of women's rugby

By Diana Walleigh

Hookers, girls wrestling in the dirt and grabbing each other in ways that you don't even want to know. Interested? We aren't good girls; we are the women's rugby team. Everything your mother told you was wrong to do, we do it. Women's rugby is not something that is usually recognized by many people, even though rugby is a sport played by men and women worldwide.

This sport is different from a lot of other sports because in rugby both men and women have the exact same rules; this is the epitome of women's lib. Anything guys can do in rugby, we can do too, and we do. Our games are eighty minutes of pure hitting, kicking, passing and adrenaline. Sure we take a break during the game but only at half time and when someone is bleeding heavily; there is no such thing as a substitution.

Now you may think this is a sport of pure brute and chaos but it actually isn't. It is the same as most other sports in that there are strategies and plays, there is just a lot more contact, and most of it is legal.

We are a club sport yes, men and women everywhere, but we play on a Varsity level. Rugger is what we are nicknamed and all players answer to that name proudly; it is hard what we do, but all rugger love to do it. The women's rugby team has about 35 players this semester, which is normal; the number of players range from 30 to 40. Of course, through the semester, we lose a few to academics and injury but that is common in any sport.

Woman's rugby has done very well in the past few years. Our fall season is league and our spring is when we play tournaments and work on improving our skills. This year we are going strong and as of yet we are undefeated playing teams like Swarthmore and Shippensburg. We hope to continue on to play Princeton and Navy like we did last year; we have some old scores to settle.

After this year we will lose a lot of strong senior players but we are confident that the team will continue to improve and keep giving Bucknell a good name as a strong women's rugby team.

Courtesy of Christina Virgilio

Christina Virgilio '01 is part of a team that has more than 30 participants and plays in matches all year. The team is improving and is one of the best around.

Men's tennis struggles at North Regional Championships

Bretna Kim/The Bucknellian

Aaron Webster '01 and the men's tennis team will compete in the Patriot League Tournament this weekend at Lehigh.

By Andy Kazior

The Bison competed in the ECAC North Regional Championships this past weekend. The tournament included 19 schools and over 100 players. Head Coach Bob Hammerlee sent three singles players and one doubles team to compete in the event.

Playing number one singles, T.K. Kelly '00 lost his opening match to a University of Connecticut opponent in three sets. Kelly commented, "I'm not finding my way to win." He then rebounded to win soundly against

Sacred Heart 6-0, 6-0 in the consolation match.

Captain Steve Bomberger '99 led off his day with an impressive 6-1, 6-1 win against a Middlebury player. "I felt I was on top of my game, and made the shots I needed to in order to win," Bomberger said. He then went on to lose his second round match, 2-6, 2-6 as bad conditions favored his competitor.

Alex Danning '99 lost to a Fair-field opponent in the first round of the tournament. He was then defeated in the consolation match.

The Bison doubles team of Jeff Gould '01 and Justin Quandt '00 won their first match 6-1, 6-0. They then fell in the second round 5-7, 2-6.

Coming off an impressive fourth place finish in last year's south site tournament, the Bison were disappointed.

"This year's tournament was a wake up call," Hammerlee said. "We have to learn from our mistakes."

"We have to take a few steps back in order to go forward," Bomberger added. "The team has a little too much confidence and cant float into the fall tournaments."

The men's tennis team looks to rebound from its disappointing tournament finish. "The team is trying to prepare for Patriot's and get back to where we left off last spring," Kelly said.

The fall schedule continues as they compete in the Patriot League Individual Tournament at Lehigh, Oct. 17-18.

Stat of the Week

Randall Cunningham threw for an astounding 442 yards, completing 20 of 32 attempts in the Vikings' Monday Night thrashing of the league's best defensive team, the Green Bay Packers.

The men's water polo team will look to rebound as they take on four divisional squads this weekend.

Water polo loses two to Air Force

By Brian Watson

The men's water polo team left for Colorado without several key players to face 14th-ranked Air Force and returned with two losses.

In their first match, the Bison were met by an onslaught of early goals by Air Force, entering the half down 9-1. Bucknell showed strength in the second half, outscoring the Falcons 9-7, but still lost 16-10.

Josh Watts '00 led the Bison attack with five goals on six attempts, while co-captain Kevin Permisohn '01 chipped in with

three assists and four steals. Transfer Tate Greditzer '01 played a sound all-around match, chalking up two goals, three assists, and two steals. Zach Blixt '99 stopped eight shots on goal and added three steals in the loss.

"It was a tough weekend," Chris Kempton '01 said. "We were missing three key players, so many others had to step up."

The Bison had a rematch with the Falcons that proved to be more competitive. The team trailed by only a goal after the first quarter, but yielded three Falcon goals in the second, bringing their lead to 9-6. Air Force pulled away in the

second half, tallying nine more goals, closing the game at 18-11.

Watts led the Bison with three more goals, bringing his team-leading season total to 52. Permisohn and James Mianie '01 contributed two goals apiece, while Ryan Mueller '02, Justin '01 and Ryan McCarty '02 chipped in a goal each.

"Overall, everybody played well, not just a select few," McCarty '01 commented.

The Bison travel to Annapolis, Maryland, this weekend for Southern Division games versus George Washington, Navy, Johns Hopkins, and Richmond.

NFL offers better fan experience

Throughout the years there has been some speculation that the National Football League (NFL) is dead and that professional football does not hold a candle to its collegiate counterpart.

To that, I say "baloney."

This past weekend I attended a Buffalo Bills game in Orchard Park, New York, and that experience changed my outlook on sports forever.

I grew up in Columbus, Ohio, home of Wendy's and the Ohio State Buckeyes. Columbus is one big college town, and I have experienced first hand the emotion and fanfare that goes into Buckeye football. We have Brutus the buckeye, Script Ohio and the horseshoe. There are college students going crazy over the prospects of their team winning a national championship. I thought this represented the epitome of sports excitement.

The key word in the last sentence was "thought." I have now come to the realization that, in terms of atmosphere, the game of professional football is the best thing since sliced bread. The bottom line is that the NFL is just more fun, and the company of Adam Feldman, Lori and Amy Hart, and Christina Virgilio only added to the experience..

We arrived at Rich Stadium in Buffalo at 9:30 in the morning, an early time considering the game did not start until after one. But, much to our surprise, the parking lot was already packed with all sorts of fanatical people. It seemed that the entire city of Buffalo was there, for this team belonged to not only a few college students, but every individual who lived within a half of an hour of the city limits.

These were not your average fans. These were folks who totally disregarded all sense of fashion to sport blue and red zebra pants, homemade shirts with the number of their favorite player, and countless styles of ballcaps and winter hats. There were people lining up to pay a guy with an airbrush to paint "GO BILLS" on all parts of their body. There were people who had died their hair red and blue to let everyone know just who they were cheering for, in case others could not tell by the construction hat they were wearing adorned with the team logo and two beer cans. People were throwing footballs in the parking lot pretending to be their favorite quarterback, and making sure they drank just enough beer so that they could criticize each and every call that the ref made. The home fans booed anything and everything that represented the opposing team, while people played darts on dartboards with a picture of the opposing quarterback as the target.

Then we entered the stadium. The Buffalo faithful cheered as the Bills came storming out of a giant inflatable helmet, onto the field, and booed as the opponent conspicuously eased out onto the visitors' sideline. The game matched the high powered and undefeated San Francisco 49ers against the lowly Bills, who were yet to win a game. There were a few Niners fans here and there, but they made sure they remained quiet under threat of physical and mental abuse. The Bills fans were excited, making predictions the likes of which "Saturday Night Live's" superfans had never seen. Buffalo 546, San Francisco ... 2.

With the opening kickoff, the fans rose to their feet expecting the Bills' receiver to return it all the way. When he failed in his attempt, the fans made all sorts of excuses and suggested that the Niners were just lucky. The Bills threw a bomb on the first play of the game and, much to the delight of the 60,000 Bills fanatics, wide receiver Eric Moulds caught it. This brought everyone to their feet and the stadium was filled with high fives and unnamed individuals yelling, "HO!"

The Bills scored 13 additional points in the half and effectively shut down the high powered 49ers offense. By the time the first 30 minutes had come to an end, everyone in the stadium was horse from yelling and proceeded to get in the face of every 49ers fan they could find. Chants of "o-ver-rated" were heard as fans dumped beer on each other.

In the second half, the Bills charged out to a 23-0 lead, as everyone cheered out "Let's go Buff-a-lo." The Jumbotron played scenes from Dances with Wolves when the buffalo stampede, and everyone yelled "D-fence."

The Niners came back though. They scored three quick touchdowns in the fourth quarter and trailed by five with a little over a minute to go. The majority of the Bills fans had chewed their fingernails, for they knew that if San Francisco got the ball back off the onside kick, the Bills defense probably could not stop them. Luckily, Buffalo recovered the ball and ran out the clock. Everyone in the stadium gave their team a standing ovation and breathed a deep sigh of relief.

Why is it that the atmosphere of the NFL is so much livelier than that of college? The basic reasons are that the fans seem to be more fanatical and there is more money spent on promotion. Think about it. When was the last time you saw a college football team run out of a giant inflatable football helmet to start the game? Not only that, but the players on the field represent the best of the best. There is a certain comfort in knowing that these athletes are playing the game like it is their job.

Furthermore, the NFL is focused around showmanship. It is the individual characters that make the league. This is in contrast to the world of college football, where there are so many limitations on celebration that the game lacks personality. People like to see Neil Smith pretend to hit a home run each time he sacks the quarterback and Terrell Davis salute the crowd when he scores a touchdown.

Those are the types of intangibles that add to the overall NFL fan experience. That is exactly why, in terms of pure entertainment, the NFL is superior to their collegiate counterpart.

Football falls short against Penn

Offense can't produce against the third-ranked defense in Division I-AA

By Tim Scheu

The Bucknell football team has held quite a distinguished record against Ivy League teams in the past few years. Going into last Saturday's game against Pennsylvania, they had defeated five consecutive Ivy opponents, including a win over Harvard a year ago that proved to be the Crimson's only loss of the season.

Their wish of prolonging that streak was extinguished in their 20-10 defeat at the hands of the Quakers. The hobbled Bison offense managed only 21 yards on the ground and turned the ball over twice in the loss.

"We played a really good football team," head coach Tom Gadd said. "We got behind, and did not get to run the football as much as we would have liked to, and they basically controlled the line of scrimmage."

Just as in weeks past, the Bison struggled early in the game and could not score until their opponent had already taken a substantial lead. Penn's first score was set up by an interception at the Bison 30-yard line. The Quakers then gained 11 yards to set up Jason Feinberg's 36-yard field goal with a little less than three minutes left in the first quarter.

After exchanging multiple punts, the Quakers were set to receive the ball again. In a special teams lapse by the Bison, Penn receiver Joe Piel returned the punt 52 yards for the Quakers' second score.

The Bucknell offense was struggling to move the ball and it was looking as if they could not respond. In fact, the Bison did not even get a first down until 2:36 left in the second quarter.

Looking for a spark, coach Gadd looked to his veteran quarterback Jim John '99 for support.

John replaced McDowell on the Bison's final drive of the quarter and orchestrated an eight play, 25-yard drive that culminated in senior Ross Coleman's 46-yard field goal.

When John came out in the third quarter, it appeared that the Bison were looking to come from behind for the second week in a row. On Bucknell's second drive of the quarter, John connected with wide receiver Ardie Kissinger '99 for an 86-yard touchdown pass, the longest in school history. The touchdown strike cut Penn's lead to 13-10.

"The key to our two offensive drives was that we played as one unit. We did not kill ourselves with penalties, and everyone played their role," John said. "Rather than first and 23 it was first and 10. That makes a big difference."

Down the stretch, the Bison could not drive on the tough Quaker defense (ranked third in the nation in division I-AA), and when Penn scored a touchdown early in the fourth quarter, it broke the Bucknell's proverbial back.

The score was a result of a 48-yard drive, capped by a five-yard touchdown pass from quarterback Matt Rader to tight end Ben Zagorski. The Bison did make a few late runs, but one ended in a missed field goal, and the other in an interception.

While the Bison did lose by 10 points, their defensive performance was rather admirable: The Bucknell "D" did not allow more than 48 yards on a drive and only gave up one touchdown on the day. The combined yardage gained on Penn's two drives that ended in field goals was a mere 19 yards. Each of Penn's three scoring drives began in Bison territory.

"The defense played a really good football game, but the one thing we need is them (the defensive players) to force more turn-

Calder Cruikshank—The Bucknellian

Dan Palko '00 and the Bison offense were limited to 21 yards on the ground, and did not get a first down until halfway through the second quarter.

overs," Gadd said. "But by in large the defense has played really physical and emotional over the last two games."

After a week off for Fall break, the Bison will take on Cornell on the Oct. 17 in Ithaca.

John again emphasized the importance of offensive improve-

ment. "We need the offense to play better and more consistently. We can't have two good drives and eight bad ones," John said. "We just need to practice hard over the next two weeks, and hope we can put it all together in the next game."

1. The Cleveland Indians; 2. The Big Ten (Wisconsin, Michigan, Michigan State, Penn State, and Indiana); 3. Herschel Walker (Ron Dayne just moved into second place).

Destruction of sculpture draws ire of University

By Chris Ellis

It was intended to be a simple display of modern sculpture on campus. Instead, its destruction may serve as the beginning to a dialogue regarding free expression on campus.

Less than one week after it was constructed near the Olin Science Building, a sculpture created by nationally-renowned artist Carol Hepper was destroyed by an unknown group of vandals. The effects of the destruction, though, go far beyond the loss of the work itself. To many administrators and faculty, it symbolizes a lack of respect and tolerance for other's ideas.

"I am extremely disappointed," said Jim Rice, assistant Vice President of Academic Affairs, about the vandalism. "The destruction of the sculpture can't be dismissed as a cute 'college prank'—it shows an intolerance and fundamental lack of respect for the creative work of others—the antithesis of what an academic community should stand for."

"I would hope that we can agree as a community that we want to see lots of art in public places," said University President William Adams. "And we should make it clear that we won't tolerate actions of this kind."

The work was created for display by the University by New York-based sculptor Carol Hepper, as part of a two week art residency program at the Cow-

Bomb threat strikes campus

By E.J. Crawford

Public Safety and the East Buffalo Township Police Department are continuing to investigate Friday morning's bomb threat on Coleman Hall. The call, received by the Public Safety, caused a complete evacuation of Coleman Hall and Freas Hall during the 11 a.m. classes and kept the buildings closed until 1:15 p.m. Public Safety recorded the call and, according to Public Safety director Vincent DeCerio, "the police are in the process of contacting the Buffalo Valley telephone company to investigate the call."

The threat proved to be false. East Buffalo Township Chief of Police Barry Hosterman confirmed the investigation and noted that the offense would result in a high grade misdemeanor. Hosterman

and DeCerio would not further comment on the investigation.

The dispatch unit of Public Safety received a call at 10:43 a.m. from what has been identified as an off-campus phone. The contents of the call were initially indeterminate, as the voice of the caller was spoken through a scrambler. Upon review of the tape of the phone call, DeCerio and the Public Safety dispatcher deciphered the message to be a bomb threat. The call said that there was a bomb in Coleman Hall that was set to go off Friday at 11:30 a.m.

"It was a very brief message. The dispatcher called me and I listened to the message a number of times to determine what [the caller] was saying," said DeCerio, who added that it was a "garbled" message. "We contacted Union County communica-

tions and both police departments (Lewisburg and East Buffalo Township). The police came up, listened to the tape [and] ascertained that the message was genuine."

"We then went over to Coleman Hall about 11:10 [a.m.] and activated the fire alarms and started to evacuate the classes," DeCerio added.

Phil Kaczor '99 was in the middle of a mid-term when the alarm went off. "These random bells went off—they weren't at all uniform. We (the students) didn't know what to do and the professor told us to keep working. At that point Public Safety came in and instructed us that a situation was taking place ... and to get out immediately," he said.

DeCerio said that "we

Paige Cull—The Bucknellian

Coleman and Freas Halls had to be evacuated as a result of a bomb threat. The buildings were closed until East Buffalo Township Police could inspect the building.

did not tell the students it was a bomb threat [at the time] because we didn't want to alarm anyone. Once the building was secured we notified everyone of the circumstances."

Upon evacuating Coleman Hall, the East Buffalo Township police proceeded to inspect the building. "We had some personnel familiar with the building search for any suspicious items, and we had a bomb dog from the Lewisburg Penitentiary search the building," said Hosterman, adding that "both the interior and the exterior were searched."

The building stayed closed for the duration of the noon classes and until midway through 1 p.m. classes, forcing the cancellation of the majority of the 1 p.m. classes. During that time, Physical Plant officials

stood outside the doors to prevent anyone from entering. "We waited until 1:15 as a precautionary measure," Hosterman said.

Campus reaction to the bomb threat was that of surprise and skepticism.

Said Jan Smarton '00: "I'm kind of shocked and surprised ... [The caller] probably had a test or something."

"I think that this is bogus. It is due to the general stupidity of someone who would start such a scare," Brian Snider '99 said.

"It's a crime to call in a bomb threat ... and the pursuit of the criminal act is important," said Peggy Plimpton, vice president of Finance and Administration. "The police are pursuing the incident with our full support. Of greatest importance to me is that everyone is safe."

Vincent DeCerio, director of Public Safety deciphered the bomb threat that was received Friday morning.

Homecoming events planned

Reviving tradition is the focus of '98 homecoming festivities

By Greg Venbruch

Bucknell will be hosting a multitude of events for students and alumni as it celebrates its eighty-seventh annual Homecoming weekend. Approximately 1,100 to 1,200 alumni are expected to visit this weekend to watch the Homecoming football game against Lafayette. Activities will begin on Friday, Oct. 23, and continue through Sunday, Oct. 25.

In addition to the football game this weekend, Bucknell will be offering many other activities. Some of the scheduled events include Cap and Dagger's Company! Performance of "All in the Timing," Imagine—The Beatles Tribute, the Tailgate Lunch at Swartz field, Saturday's concert featuring Bela Fleck and the Flecktones, the Athletic Hall of Fame induction, and of course the traditional Homecoming parade.

Nicole Loyd, the assistant director for Alumni and Constituent Relations, is in charge of the Homecoming weekend. She said, "One of the biggest events during Homecoming is the parade. The parade is special this year in that we're combining the traditional Bucknell Homecoming Parade with the Lewisburg Halloween Parade creating a true celebration of 'town and gown.' The result is a

larger community parade that will hopefully draw a nice crowd."

The parade, which takes place at 10:30 am on Saturday, will begin at Eighth and Market streets and proceed through downtown Lewisburg. It will include floats, bands, the Homecoming Hosts and Hostesses, the Athletic Hall of Fame inductees, and other alumni.

Homecoming has been an ongoing tradition at Bucknell for many years. The first Homecoming celebration took place in October of 1921, in which

Bucknell battled Lafayette to a 20-7 defeat at Loomis field. By 1923, a reported 10,000 people were on hand to witness the Homecoming game, and the following year over 17,000 people filled the recently constructed Christy Matthews Memorial Stadium.

Over the years, the Homecoming celebration grew in popularity as more events were scheduled. Some of these events developed into Bucknell traditions that alumni and students could look forward to year after year. These traditions included the Bison Club Breakfast, the pre-game luncheon, election of a Homecoming Queen, a Homecoming Dance, a Pep Rally

and Bonfire at the Gymnasium, the parade, and the numerous social functions hosted by the fraternities. All of these events became annual traditions at every Homecoming celebration. However, not all of these traditions have survived the test of time. Only about half of the traditions remain currently.

One Bucknell alumnus recalls, "in the 1950s and early 1960s there was a homecoming queen and it was a somewhat honored position: whoever was elected got to ride in a convertible in the parade. Also, the homecoming parade was much more a centerpiece of homecoming than it now is. In the late 50s and early 60s, there was a rather large contingent of ROTC cadets in the parade and the ROTC band also marched in the parade."

Fitz Walling, who began his Bucknell career in 1939, saw it interrupted by service in World War II, and graduated in 1946, thinks that most of the big traditions have survived through the years. "Going back to the early '40s, the students always attended the big football game. That was the main even going on. [The University has] stayed pretty much with the old traditions and expanded on some things."

The theme for this year's Homecoming celebration is "Relive

See HOMECOMING, page A2.

Title IX transfer excels in new environment

By Tim Scheu

Homecoming is an event that has traditionally brought smiles to the faces of all those involved. Students laugh and joke about the idea that one day they will actually be in the shoes of the alumni, while student-athletes savor the fact that eager fans will pack the stands and watch them perform in their biggest game of the season. At the center of the festivities is the annual homecoming football game, pitting the home team against their biggest rival. Often times, such a game can be the highlight of a young football player's career. In Vince Ficca's case, last year's homecoming game was tragic.

Ficca was a sophomore at Boston University and was a key player for the Terrier football program. After making the freshman transition from high school, he was finally settling in and looking forward to a long and successful football career. He had truly established a home in Boston, and what better place to show off your school pride than your homecoming football game?

His team played its heart out during the contest and it headed to the locker room for a postgame meeting. Much to the players surprise there would be no discussion over the events of the game. The somber mood that accompanies a homecoming loss was abandoned, replaced by one of outrage.

See FICCA, page A11

Beetna Kim—The Bucknellian

Nearly 200 people attended the vigil for Matt Shepard, the college student who was beaten to death because of his sexual orientation.

University community remembers Matt Shepard

By Jared Silliker

The University of Wyoming sits thousands of miles from Lewisburg, Pennsylvania. What, then, does Wyoming student Matt Shepard have to do with the Bucknell community?

Quite a bit, it seems. This relevance was evidenced by FLAG&B's (Friends of Lesbians, Gays and Bisexuals) Sunday night vigil for Shepard, who was beaten to death because of his sexual orientation. The crowd of nearly 200 did not merely witness prayers for Shepard, but rather an opportunity for members of the University to speak out against such "hate crimes."

Shepard's life was cut short on Oct. 14, after being beaten badly and left tied to a fence in near-freezing temperatures the day before. Only minutes prior to being beaten, Shepard had conversed with his would-be killers, Russell Henderson, 21, and Aaron McKinney, 22 at a campus hangout. After taking a ride from the two, Shepard was driven out of town, tied to a fence and beaten repeatedly. Henderson and McKinney then left the unconscious Shepard to hang, spread-eagled, on the deer

an Conference Center. Hepper, whose work had been displayed in prominent galleries and at the White House, produced the exhibit at the Cowan residency and returned to Lewisburg last week for its re-construction near Olin Science. The work was completely installed by last Wednesday, and was likely destroyed sometime Friday night. Stuart Horodner, director of the University Art Gallery and the driving force behind the installation of the sculpture on campus, had been advised by students that the sculpture was a likely target for vandalism.

"Many students offered that the piece would come to some kind of demise," Horodner said of the conversations before the vandalism. "It was disheartening to hear that being said, and it was disheartening that those sentiments would turn out to be accurate."

"There was history of public sculpture being attacked, stolen or vandalized here," Horodner said. "We went ahead with the project, being optimistic—we felt that if people saw us working on it, that it may be left alone."

"I would hope that we can agree as a community that we want lots of art in public places. And we should make it clear that we won't tolerate actions of this kind."

—William "Bro" Adams
President of the University

ments even further.

"I would hope that we can agree as a community that we want to see lots of art in public places," Adams said. "And we should make it clear that we won't tolerate actions of this kind."

For more information, please see a reaction to the vandalism by Horodner in "I wish us," the Editor," page 1.

A Quaker Voice -

Our days are often governed or guided by lists of generic "musts" or "oughts" that are fine in the abstract. In the aggregate, however, in our individual lives, they leave little time for quiet or reflections, for opening ourselves to guidance, for receiving or honoring nudges of the Spirit.

Discernment becomes extremely important at this point. In his great work of Quaker spirituality, *No Cross, No Crown*, William Penn distinguished between the Lawful Self and the Unlawful Self. The greatest problem for the well-intentioned person, he saw, did not come from things that are Unlawful. The serious issues invariably arise from things that are good in themselves unless or until they are placed or allowed to come between the individual and God. The question then is not, "How worthwhile is the activity in itself but "What is my motivation for taking it on? Is this task in fact mine?"

Excerpt from Patricia Loring, *Listening Spiritually*.

Senior Gift Drive underway

By Anne Monoky

The Senior Gift Drive has been run by a number of seniors that ask their fellow students to give back to the University in monetary funds since 1967. This year's drive, which began Tuesday, is underway until Dec. 4.

The drive is set up in a systematic way with several recruiters who ask a select number of students for money. Publicity chairman Page Hall '99 said, "This makes the process very personal."

The money is then contributed to several different aspects of the University. If so desired, the student may request an actual site for their money to be directly distributed. "This way, students know exactly where their money is going," Hall said.

This year's gift drive designation areas include The Bucknell Fund—which incorporates a general fund for the operation of the University—the Association for the Arts, the Bion Club, the Engineering Fund and the Weis Center Events.

The money is needed by the University for a number of reasons. Tuition at the University only covers 80 percent of the cost of an education. In actuality, Bucknell education actually costs \$5,200 more than the comprehensive fee. The University, thus, relies on such gifts and endowment to make up the difference.

The steering committee, headed by Christine Boschen

'99, is anticipating a high percentage of participation for the graduating class. The committee expects that 80 percent of students will give money. Last year, 65 percent of the class donated, a number much higher than in the past years.

The amount of money given is not really an issue. Hall commented that the committee understands that many students do not have the money to give right now; however, she also indicated that students have the option of paying anytime throughout the course of a year from now. She pointed out that there is no maximum or minimum, but very small donations are not "really worth the paperwork." Furthermore, with each donation given by a student, the Parent's Board with increase the amount by \$150.

Students that donate \$50 or more will be awarded with a tee-shirt that was designed by the members of the Senior Gift Drive Steering Committee.

A number of different locations have been created on campus, but for the next several weeks, a table will be set up in the Langone Center for collection. A box at the front counter of the Student Bookstore will serve as a collection stand. Also, students will shortly have the opportunity to download a pledge card from the gift drive's website in order to make a donation.

Boschen said, "The drive provides an excellent opportunity for seniors to learn the importance of alumni support."

HOMECOMING

From page 1.

the Tradition." This theme was chosen last spring by the Alumni Office because they feel that traditions will provide people with a sense of "familiarity." As Nicole Loyd explains, "Traditions, in my opinion, strengthen groups — and provide a wonderful way to link the past with the present as well as the future."

Many students at Bucknell would like to see Homecoming traditions continue into the future. Additionally, many more would like to see some of the old traditions return to the Homecoming celebration. Page Hall '99 believes that Bucknell lacks a strong sense of tradition and wants to make changes. "I'd like to see some of the old Homecoming traditions return to Bucknell, I think it would give students a stronger sense of unity and a better understanding of their heritage."

Although some of the old traditions at Bucknell are no longer celebrated, the Homecoming Game has remained the centerpiece of the celebration. Sam Feeney '00 said, "I like seeing all the alumni come back for the football game. After all of these years, school spirit still remains."

Mike McGuire '01 agreed, "It's nice to get everyone together, everyone enjoys the football game, and everyone shares the fact that they're a Bucknellian regardless of the generation." Chris Beers '01 remarked, "Homecoming is a great time where alumni and friends come back to Bucknell...my favorite events are the football game and the Catholic mass."

Bucknell also implements many new events every year for the Homecoming celebration. Some of these events are already being heralded by students. Annie Richards '01 said, "I look forward to the Women's alumni Lacrosse game." Aileen Shanahan '01 added, "I am really looking forward to the play, 'All in the Timing.'"

The Alumni Office is always eager to hear from other students about Homecoming. They would be very interested in new ideas for the celebration as well as personal opinions. (Special thanks to the Bucknell Archives for providing valuable information)

Jonah Hall—The Bucknellian

This sculpture, located near the Olin Science building, was destroyed by students sometime Friday night or early Saturday.

Public Safety Log

October 18, 1998

INFORMATION/SAFETY CONCERN—Public Safety responded to Swartz Hall for the report of students sparring with hockey sticks. All individuals cooperated with a request to end the activity due to safety concerns.

MEDICAL ASSIST/TRANSPORT—A University student contacted Public Safety for transportation by SHS to Evangelical Hospital Emergency Room for treatment of an illness. The student was later admitted to a local hospital.

October 15, 1998

TAMPERING WITH FIRE EQUIPMENT/VANDALISM—Public Safety responded to Veder Hall for a fire alarm activation caused by discharging a fire extinguisher. The officers also found two additional areas that had been vandalized. The incident is under investigation.

THEFT—Public Safety responded to the Langone Center for the report of property taken from a vendor's display. The incident is under investigation.

INFORMATION/LOST PROPERTY—Public Safety reported to the Field House for the report of missing property. The incident is under investigation.

October 16, 1998

PUBLIC DRUNKENNESS—While on routine patrol, Public Safety observed an individual staggering while he walked on Fraternity Road. The individual did not have identification and was identified by East Buffalo Township Police Department as a University student. The individual, who was determined to be intoxicated, became ill and was transported by ambulance to Evangelical Community Hospital Emergency Room for treatment.

October 17, 1998

ment. Charges by the police are pending.

BURGLARY/CRIMINAL TRESPASS/HARASSMENT/UNDERAGE CONSUMPTION—Public Safety responded to Chi Phi Fraternity for the report of unauthorized entry. The victim supplied a description of the suspects who could not be located in a search of the campus. Public Safety and East Buffalo Township Police Department are investigating the incident.

BOMB THREAT—Public Safety received a brief telephone call from an off-campus caller in which a reference was made to a bomb in Coleman Hall. The proper authorities were notified. Public Safety, following the university bomb threat response procedures, evacuated Coleman and Freas Halls immediately in cooperation with the local police. The bomb threat was false, and after a search of the building, it was responded. East Buffalo Township Police Department and Lewisburg Police Department are investigating this criminal act. A Public Safety alert was issued.

INFORMATION—A University student reported to Public Safety that a vehicle was operated recklessly in the Gateway parking lot. The incident is under investigation.

INFORMATION—Public Safety responded to Sigma Phi Epsilon Fraternity for the report of a fire alarm activation and found that exit doors were blocked and individuals did not exit the building. The officers discussed the severity of the situation with the house president. Charges will be filed.

INFORMATION/POSSIBLE ACT 64—Public Safety responded to Gallo-way House for the report of the odor of marijuana. Upon investigation, it was determined to be unfounded.

INFORMATION/VEHICLE DAMAGE—Public Safety responded to the Car Pool lot for the report of damage to a University employee's vehicle parked there. The incident is under investigation.

INSTITUTIONAL VANDALISM—Public Safety responded to the grassy area near Olin Science building for the report of vandalism to a sculpture. The incident is under investigation.

October 18, 1998

POLICE ASSIST—Public Safety responded to S. Seventh St. to assist Lewisburg Police Department to disperse individuals attending a party at that location.

INFORMATION—A University student reported to Public Safety having received a call at a Bucknell West Mod that was believed to be a telephone scam. The incident is under investigation.

October 19, 1998

UNIVERSITY PROPERTY REPORT—A University student reported to Public Safety that a tree outside Roser Hall had been damaged. The incident is under investigation.

MEDICAL TRANSPORT—Public Safety responded to Swartz Hall for the report of an ill student who was transported for treatment by Student Health Services to Evangelical Community Hospital Emergency room and later returned to campus.

ASSIST RESIDENTIAL LIFE STAFF—Public Safety responded to Taylor St. House for the report of a student who had a chin laceration. Upon arrival, the officers found that the student had obtained transportation by private vehicle to Evangelical Community Hospital Emergency room for treatment.

IN THE NEWS...

National

Report: Military told not to criticize Clinton

LOS ANGELES—Military authorities are warning officers and enlisted personnel that "contemptuous words" about President Bill Clinton could lead to disciplinary action, the Los Angeles Times reported on Tuesday. The threat reportedly reflects a concern over public criticism of Clinton for his relationship with Monica Lewinsky.

It was unclear what punishments were possible, though an Air Force officer said they tended to be mild unless comments came from high-ranking officers or were widely distributed.

A Marine major has denounced Clinton in a newspaper column and an Army colonel criticized the president in a letter to the editor.

Women barred from one in six military jobs

WASHINGTON—Congressional auditors say barring women from direct combat roles makes them ineligible for one in six military jobs.

Women served in harm's way in the 1990s in military operations in Bosnia and Somalia, where servicemen were killed, but there were no clearly defined battlefields, the General Accounting Office said in a report Monday.

The GAO didn't recommend the Pentagon change its definition of the forward combat jobs that are barred to women. Instead, it simply cautioned that modern-day warfare may require a change in the future.

U.S.-Florida pact targets illegal mass migration

TALLAHASSEE, FL.—The next time masses of refugees try to come ashore in Florida, the federal government, not the state, will pay to round up the would-be migrants.

A deal signed on Monday allows Florida officials to respond more quickly to an immigration emergency, such as the massive 1980 Mariel release of Cubans or the influx of 30,000 Cubans and Haitians in 1994.

The state estimates the 1994 refugee influx cost it \$50 million; the federal government picked up less than half of that tab.

Farrakhan: Jews may cloud Clinton administration Mideast policy

WASHINGTON—Nation of Islam leader Louis Farrakhan suggests the Clinton Administration's Middle East policy could be clouded by Jews who advise the president.

"Every Jewish person that is around the president is a dual citizen of Israel and the United States of America," Farrakhan said Monday during a news conference at the National Press Club.

"I would beg my brother Arafat not to give in and make himself a tool of Israel's policy to destroy the militant members of Hamas. I'm frightened because we need a guarantee of security," the African American minister said.

Bucknell also implements many new events every year for the Homecoming celebration. Some of these events are already being heralded by students. Annie Richards '01 said, "I look forward to the Women's alumni Lacrosse game." Aileen Shanahan '01 added, "I am really looking forward to the play, 'All in the Timing.'"

Chernobyl boy's family fears deportation could mean death

MILLBURN, New Jersey—A Ukrainian family that survived the 1986 Chernobyl nuclear reactor disaster is calling on U.S. authorities to let them stay in the United States, saying a forced return to Ukraine could be a death sentence for their son.

Olga Malienko is worried that deportation may amount to a death sentence for her son, Vova, who was diagnosed with leukemia in the wake of the Chernobyl disaster. Vova and his mother moved to the United States for cancer treatment and Vova's father, Alexander, followed two years later. Vova's cancer is currently in remission.

Whitney Stewart spoke of her experiences of interviewing Aung San Suu Kyi, the 1991 Nobel Prize winner when she went to Burma in the fall of 1995.

Stewart spoke of how much of her experience in Burma was influenced by her overwhelming fear that while leaving her husband and three-year-old son at home, she may fall victim to the over-controlling government; the author was concerned with "bugged phones, random searches, and being followed."

To conceal her contact with Aung San Suu Kyi from the government, she spent most of her time visiting Buddhist temples as a Buddhist tourist.

The Burmese government places restrictions on travel, books read and education, just to name a few. Consequences include being arrested and jailed. Burmese are virtually enslaved, as governmental permis-

sion is required for nearly everything: overnight visitors, using fax machines, and traveling outside the country's boundaries. Using a fax machine illegally results in up to ten years in jail.

Student disension has resulted in closing of universities, demolishing universities and even killing hundreds of students. Members of the League of Democracy are jailed without terms. The speaker explained how the repressive nature

completely warps the minds and hearts of the Burmese people.

Now a doctoral candidate at the Wharton School, University of Pennsylvania, this Fulbright scholar is working to support human rights, organize refugees, and to educate about Burmese political, cultural, and social issues, especially the concerns of women.

Khin Aye Than also delivered this lecture Wednesday, October 21, in Walls Lounge, Langone Center.

an Conference Center. Hepper, whose work had been displayed in prominent galleries and at the White House, produced the exhibit at the Cowan residency and returned to Lewisburg last week for its re-construction near Olin Science. The work was completely destroyed sometime Friday night. Stuart Horodner, director of the University Art Gallery and the driving force behind the installation of the sculpture on campus, had been advised by students that the sculpture was a likely target for vandalism.

"Many students offered that the piece would come to some kind of demise," Horodner said of the conversations before the vandalism. "It was disheartening to hear that being said, and it was disheartening that those sentiments would turn out to be accurate."

"There was history of public sculpture being attacked, stolen or vandalized here," Horodner said. "We went ahead with the project, being optimistic—we felt that if people saw it, that it may be left alone."

The destruction of Hepper's piece was not the first prominent piece of sculpture to be destroyed on campus. Horodner and other members of University staff believe the destruction of sculpture underlines problems or tolerance and appreciation for others on campus.

"We want to make this a place where we can examine ideas with tolerance and re-

spect," Horodner said. "When there's an antagonism toward other people's ideas or expression, we have problems. A University environment isn't supposed to be a place where you have a huge disregard for someone else's efforts."

"I am deeply saddened at the vandalism that resulted in the destruction of the Carol Hepper Sculpture," said Vice President for Academic Affairs, Dan Little. "All of us are enriched as a result of the availability of more public art on campus, and all are impoverished by this act."

Despite the destruction, though, the University is unlikely to slow down its efforts to display more works of art on campus. The display of the Hepper sculpture was enthusiastically encouraged by the President's council, and the University will continue to persuade prominent artists to display their efforts here.

"The University will make every effort to continue to place works of art in public places," Little said. Adams carried Little's senti-

—William "Bro" Adams

ments even further. "I would hope that we can agree as a community that we want to see lots of art in public places," Adams said. "And we should make it clear that we won't tolerate actions of this kind."

For more information, please see a reaction to the vandalism by Horodner in "Letters to the Editor," page 6.

Senior Gift Drive underway

By Anne Monoky

The Senior Gift Drive has been run by a number of seniors that ask their fellow students to give back to the University in monetary funds since 1967. This year's drive, which began Tuesday, is underway until Dec. 4.

The drive is set up in a systematic way with several recruiters who ask a select number of students for money. Publicity chairman Page Hall '99 said, "This makes the process very personal."

The money is then contributed to several different aspects of the University. If so desired, the student may request an actual site for their money to be directly distributed. "This way, students know exactly where their money is going," Hall said.

This year's gift drive designation areas include The Bucknell Fund—which incorporates a general fund for the operation of the University—the Association for the Arts, the Bion Club, the Engineering Fund and the Weis Center Events.

The money is needed by the University for a number of reasons. Tuition at the University only covers 80 percent of the cost of an education. In actuality, Bucknell education actually costs \$5,200 more than the comprehensive fee. The University, thus, relies on such gifts and endowment to make up the difference.

The steering committee, headed by Christine Boschen

'99, is anticipating a high percentage of participation for the graduating class. The committee expects that 80 percent of students will give money. Last year, 65 percent of the class donated, a number much higher than in the past years.

The amount of money given is not really an issue. Hall commented that the committee understands that many students do not have the money to give right now; however, she also indicated that students have the option of paying anytime throughout the course of a year from now. She pointed out that there is no maximum or minimum. But very small donations are not "really worth the paperwork." Furthermore, with each donation given by a student, the Parent's Board with increase the amount by \$150.

Students that donate \$50 or more will be awarded with a tee-shirt that was designed by the members of the Senior Gift Drive Steering Committee.

A number of different locations have been created on campus, but for the next several weeks, a table will be set up in the Langone Center for collection. A box at the front counter of the Student Bookstore will serve as a collection stand. Also, students will shortly have the opportunity to download a pledge card from the gift drive's website in order to make a donation.

Boschen said, "The drive provides an excellent opportunity for seniors to learn the importance of alumni support."

HOMECOMING

From page 1.

the Tradition." This theme was chosen last spring by the Alumni Office because they feel that traditions will provide people with a sense of "familiarity." As Nicole Loyd explains, "Traditions, in my opinion, strengthen groups—and provide a wonderful way to link the past with the present as well as the future."

Many students at Bucknell would like to see Homecoming traditions continue into the future. Additionally, many more would like to see some of the old traditions return to the Homecoming celebration. Page Hall '99 believes that Bucknell lacks a strong sense of tradition and wants to make changes. "I'd like to see some of the old Homecoming traditions return to Bucknell, I think it would give students a stronger sense of unity and a better understanding of their heritage."

Although some of the old traditions at Bucknell are no longer celebrated, the Homecoming Game has remained the centerpiece of the celebration. Sam Feeney '00 said, "I like seeing all the alumni come back for the football game. After all of these years, school spirit still remains."

Mike McGuire '01 agreed, "It's nice to get everyone together, everyone enjoys the football game, and everyone shares the fact that they're a Bucknellian regardless of the generation." Chris Beers '01 remarked, "Homecoming is a great time where alumni and friends come back to Bucknell...my favorite events are the football game and the Catholic mass."

Bucknell also implements many new events every year for the Homecoming celebration. Some of these events are already being heralded by students. Annie Richards '01 said, "I look forward to the Women's alumni Lacrosse game." Aileen Shanahan '01 added, "I am really looking forward to the play, 'All in the Timing.'"

The Alumni Office is always eager to hear from other students about Homecoming. They would be very interested in new ideas for the celebration as well as personal opinions. (Special thanks to the Bucknell Archives for providing valuable information)

Jonah Hall—The Bucknellian

This sculpture, located near the Olin Science building, was destroyed by students sometime Friday night or early Saturday.

Public Safety Log

October 14, 1998

INFORMATION/SAFETY CONCERN—Public Safety responded to Swartz Hall for the report of students sparring with hockey sticks. All individuals cooperated with a request to end the activity due to safety concerns.

MEDICAL ASSIST/TRANSPORT—A University student contacted Public Safety for transportation by SHS to Evangelical Hospital Emergency Room for treatment of an illness. The student was later admitted to a local hospital.

October 15, 1998

TAMPERING WITH FIRE EQUIPMENT/VANDALISM—Public Safety responded to Vedder Hall for a fire alarm activation caused by discharging a fire extinguisher. The officers also found two additional areas that had been vandalized. The incident is under investigation.

THEFT—Public Safety responded to the Langone Center for the report of property taken from a vendor's display. The incident is under investigation.

INFORMATION/LOST PROPERTY—Public Safety reported to the Field House for the report of missing property. The incident is under investigation.

October 16, 1998

PUBLIC DRUNKENNESS—While on routine patrol, Public Safety observed an individual staggering while he walked on Fraternity Road. The individual did not have identification and was identified by East Buffalo Township Police Department as a University student. The individual, who was determined to be intoxicated, became ill and was transported by ambulance to Evangelical Community Hospital Emergency Room for treatment.

ment. Charges by the police are pending.

INFORMATION/VEHICLE DAMAGE—Public Safety responded to the Car Pool lot for the report of damage to a University employee's vehicle parked there. The incident is under investigation.

INSTITUTIONAL VANDALISM—Public Safety responded to a grassy area near Olin Science building for the report of vandalism to a sculpture. The incident is under investigation.

BOMB THREAT—Public Safety received a brief telephone call from an off campus caller in which a reference was made to a bomb in Coleman Hall. The proper authorities were notified. Public Safety, following the university bomb threat response procedures, evacuated Coleman and Freas Halls immediately in cooperation with the local police. The bomb threat was false, and after a search of the building, it was reported. East Buffalo Township Police Department and Lewisburg Police Department are investigating this criminal act. A Public Safety alert was issued.

INFORMATION—A University student reported to Public Safety that a vehicle was operated recklessly in the Gateway parking lot. The incident is under investigation.

INFORMATION—A University student reported to Public Safety that a tree outside Roser Hall had been damaged. The incident is under investigation.

MEDICAL TRANSPORT—Public Safety responded to Swartz Hall for the report of an ill student who was transported for treatment by Student Health Services to Evangelical Community Hospital Emergency room and later returned to campus.

ASSIST RESIDENTIAL LIFE STAFF—Public Safety responded to Taylor St. House for the report of a student who had a chin laceration. Upon arrival, the officers found that the student had obtained transportation by private vehicle to Evangelical Community Hospital Emergency room for treatment.

IN THE NEWS...

National

Report: Military told not to criticize Clinton

LOS ANGELES—Military authorities are warning officers and enlisted personnel that "contemptuous words" about President Bill Clinton could lead to disciplinary action, the Los Angeles Times reported on Tuesday. The threat reportedly reflects a concern over public criticism of Clinton for his relationship with Monica Lewinsky.

It was unclear what punishments were possible, though an Air Force officer said they tended to be mild unless comments came from high-ranking officers or were widely distributed.

A Marine major has denounced Clinton in a newspaper column and an Army colonel criticized the president in a letter to the editor.

Women barred from one in six military jobs

WASHINGTON—Congressional auditors say barring women from direct combat roles makes them ineligible for one in six military jobs. Women served in harm's way in the 1990s in military operations in Bosnia and Somalia, where servicemen were killed, but there were no clearly defined battlefields, the General Accounting Office said in a report Monday.

The GAO didn't recommend the Pentagon change its definition of the forward combat jobs that are barred to women. Instead, it simply cautioned that modern-day warfare may require a change in the future.

U.S.-Florida pact targets illegal mass migration

TALLAHASSEE, FL.—The next time masses of refugees try to come ashore in Florida, the federal government, not the state, will pay to round up the would-be migrants.

A deal signed on Monday allows Florida officials to respond more quickly to an immigration emergency, such as the massive 1980 Mariel release of Cubans or the influx of 30,000 Cubans and Haitians in 1994.

The state estimates the 1994 refugee influx cost it \$50 million; the federal government picked up less than half of that tab.

Farrakhan: Jews may cloud Clinton administration Mideast policy

WASHINGTON—Nation of Islam leader Louis Farrakhan suggests the Clinton Administration's Middle East policy could be clouded by Jews who advise the president.

"Every Jewish person that is around the president is a dual citizen of Israel and the United States of America," Farrakhan said Monday during a news conference at the National Press Club.

"I would beg my brother Arafat not to give in and make himself a tool of Israel's policy to destroy the militant members of Hamas. I'm frightened because we need a guarantee of security," the African American minister said.

World

Chernobyl boy's family fears deportation could mean death

MILLBURN, New Jersey—A Ukrainian family that survived the 1986 Chernobyl nuclear reactor disaster is calling on U.S. authorities to let them stay in the United States, saying a forced return to Ukraine could be a death sentence for their son.

Olga Malifenko is worried that deportation may amount to a death sentence for her son, Vova, who was diagnosed with leukemia in the wake of the Chernobyl disaster. Vova and his mother moved to the United States for cancer treatment and Vova's father, Alexander, followed two years later. Vova's cancer is currently in remission.

Whitney speaks of Burmese experiences

By Aimee Nicklaus

Two speakers presented the final lecture for the Burma Focus Semester: "Fearless Voice of Burma: Aung San Suu Kyi and Other Women in the Freedom Struggle" on Tuesday. The first of two powerful speakers was Whitney Stewart, author of *Aung San Suu Kyi: Fearless Voice of Burma*, a biography for young adults who was followed by Khin Aye Than, a Burmese scholar.

Stewart spoke of her experiences when she went to Burma in the fall of 1995 to interview Aung San Suu Kyi, the 1991 Nobel Prize winner. Her half-hour presentation included both compelling stories and a slide show from her trip to Burma.

Stewart is a graduate of Brown University and has written two biographies of the Dalai Lama, a life of Sir Edmund Hillary, and is working on three more biographies with an Asian focus. She is a regular lecturer and visiting writer at American schools and colleges.

The focus of Stewart's lecture, Aung San Suu Kyi, was placed under house arrest for six years after speaking out against the government, with no chance of seeing her husband or two sons. This national female hero works tirelessly for democracy.

Stewart spoke of how much of her experience in Burma was influenced by her overwhelming fear that while leaving her husband and three-year-old son at home, she may fall victim to the over-controlling government; the author was concerned with "bugged phones, random searches, and being followed." To conceal her contact with Aung San Suu Kyi from the government, she spent most of her time visiting Buddhist temples as a Buddhist tourist.

Than followed Stewart's presentation with "Academic Repression in Burma: from the Voice of an Exile." A former Burmese University faculty member, Khin Aye Than discussed the nature of the military government's control over the daily lives of Burma's people. The details included by Khin Aye Than were nearly tear-jerking. She, herself, was exiled by the Burmese government in 1990. As an international student in Philadelphia, she was "one of six scholars to leave Burma to study in twenty years."

The stories shared described how the people of Burma are fully socialized to thinking everything is censored, and she had difficulty adjusting to speaking without fear here in the U.S. Stewart added an anecdote of how it is a severe crime to criticize the government; even children who condemn the authorities are "punished" by being forced to build roads by hand in the scorching sun and fed only rice water for months.

The Burmese government places restrictions on travel, books read and education, just to name a few. Consequences include being arrested and jailed. Burmese are virtually enslaved, as governmental permis-

sion is required for nearly everything: overnight visitors, using fax machines, and traveling outside the country's boundaries. Using a fax machine illegally results in up to ten years in jail.

Student dissension has resulted in closing of universities, demolishing universities and even killing hundreds of students. Members of the League of Democracy are jailed without terms. The speaker explained how the repressive nature

Paige Cull—The Bucknellian

Whitney Stewart spoke of her experiences of interviewing Aung San Suu Kyi, the 1991 Nobel Prize winner when she went to Burma in the fall of 1995.

completely warps the minds and hearts of the Burmese people.

Now a doctoral candidate at the Wharton School, University of Pennsylvania, this Fulbright scholar is working to support human rights, organize refugees, and to educate about Burmese political, cultural, and social issues, especially the concerns of women.

Khin Aye Than also delivered this lecture Wednesday, October 21, in Walls Lounge, Langone Center.

A Quaker Voice -

Our days are often governed or guided by lists of generic "musts" or "oughts" that are fine in the abstract. In the aggregate, however, in our individual lives, they leave little time for quiet or reflections, for opening ourselves to guidance, for receiving or honoring nudges of the Spirit.

Discernment becomes extremely important at this point. In his great work of Quaker spirituality, *No Cross, No Crown*, William Penn distinguished between the Lawful Self and the Unlawful Self. The greatest problem for the well-intentioned person, he saw, did not come from things that are Unlawful. The serious issues invariably arise from things that are good in themselves unless or until they are placed or allowed to come between the individual and God. The question then is not, "How worthwhile is the activity in itself but "What is my motivation for taking it on? Is this task in fact mine?"

Excerpt from Patricia Loring, *Listening Spiritually*. BX 7748 .M92 1997

EDITORIAL

Lack of seriousness paid to bomb threat and art vandalism

Recently the University seems to have made significant strides at shedding its apathetic label. Significant participation and public outcry are very visible following the rape on Seventh Street, as well as strong support at the vigil following the brutal beating and subsequent death of a gay student at the University of Wyoming. On smaller levels, the poetry reading at Tato Laviear filled Bucknell Hall and the Salvation Army was able to buy over two hundred pounds of food with the help of donations at the Rusted Root concert.

However, undermining and overshadowing the positive efforts of many are the acts of half-brained nitwits, such as those that would call in a bomb threat or destroy a piece of artwork in the quad behind the Biology building. At this juncture, this editorial should note that University students have not been found guilty of either crime, and that this editorial is making an assumption of guilt. Even if these crimes were not the result of University students, hopefully it will open the eyes of University students to acts of utter and complete idocy. The bomb threat and the destruction of the modern-art tree are not the first acts of senseless vandalism to occur on campus. They are just the latest.

Many people out there probably look at these events as mere practical jokes or gags. People who feel this way only serve to perpetuate these acts of stupidity. A practical joke is short-sheeting a bed or stealing the legs off of a foosball table, not implying that, without a complete evacuation, hundreds of lives would be at stake and thousands of dollars would be lost. Moreover, what if this call was truly serious, the act of a deranged individual? People on campus assume that the call was from someone with a test that day or with too much time on their hands. The Seventh Street rape should reinforce that the University environment is not immune to disaster and tragedy.

Additionally, the false threat unnecessarily taxes the divisions of Public Safety and the respective police departments of the area. Despite what many on campus feel about the police or Public Safety, they serve an important function that needs to be reserved for legitimate incidents.

Similarly, public opinion of the artwork in the quad has been largely negative, with most students remarking on the perceived obscurity of modern art. Nonetheless, art is an important form of expression, not to speak of the money, time and commitments of the artist and of the University to construct the artwork. The quad is commonly attacked for focusing on the negative, many times a largely substantial claim. But maybe attention should not be turned towards the press. Without the actions of a few, this editorial could focus on the positive actions on campus.

The University is growing and thriving, both academically, socially and in aspects of awareness. A bomb threat may make good press, but it is senseless and unnecessary. This editorial just hopes it will not have to cover its like again.

Destruction of artwork is a senseless crime

TO THE EDITOR:

Carol Hepper was one of 13 artists who participated in HIDE & SEEK, the summer arts residency that I organized at the Forrest D. Brown Conference Center at Cowan and white PVC plumbing joints. With these elements, she constructed a work which continues her interest in and exploration of the marriage of nature and culture, energy flow, stress and body like systems. The artist has shown such sculptures, related drawings and prints at galleries and

museums around the country and a recent large scale work was included in Hillary Clinton's Sculpture Garden at the White House.

It was my intention that the sculpture Hepper made this summer could be re-installed on campus, contributing to the presence of art in public places and acting as a reference to the residency and what was achieved there. The President's Staff enthusiastically approved my proposal to install the sculpture in the quad near the science and engineering buildings—disciplines that Hepper's work speaks to. This location is also a busy walkway on campus, a site where the sculpture would be very visible.

We (myself, the artist, Cin-

dy Peltier and helpers from Physical Plant)

took the sculpture apart at Cowan and brought it to campus on Monday, October 12th. We spent the next days re-assembling it. The work, titled "Sap Green/Forest Brown" was completed on Wednesday afternoon and was destroyed by Saturday afternoon.

Many people—administrators, faculty and students worried about whether the sculpture would be safe. Would students climb it? Would they try and destroy it? Either because they didn't like it or art in general, or were tooling around, or were drunk and thought breaking something would be fun, etc. Too many people (espe-

cially students) offered the thought that the piece would not last.

Now we are charged with answering the following questions: How do we use this unfortunate incident to draw attention to the role of art and ideas on campus? How do we address issues of personal property, responsibility and respect for the efforts of others? What kind of place is Bucknell and what kind of place do we want it to be?

How do we get "there"? Who is responsible for the attack on this artwork? I would like your help in keeping the pressure on such questions and the possible answers.

LETTERS TO THE EDITOR

A defense of the Financial Aid Office

TO THE EDITOR:

A recent article in the forum section of *The Bucknellian* claimed that "in order to be able to afford this first class, private school education... you have to walk into the financial aid office wearing nothing but rags and carrying nothing but a change can." My intention in this article is to dispel this overgeneralized and inherently false assertion. My response is simply that if one chooses to publicize his or her opinion, at least know the facts and be sure to explore all alternatives before denouncing community figures and entire university departments. The only "catch" in Bucknell's financial aid process is that one must take the time and effort to understand how to benefit most from the system rather than expecting a full scholarship be handed to them upon acceptance, or even just because they filled out an application.

I understand the complaint of many average-income students who could certainly use financial help in paying tuition, but I think that many overlook the fact that financial aid does not have endless funds to allocate to students needing help; for the most part, they grant scholarship money to those students who absolutely require financial assistance in order to meet the tuition requirements. In general, however, there are lots of ways to alleviate some of the burden of an expensive education: Become a Resident Assistant and eliminate the room and board charges; contribute to bills from summer jobs and on-campus employment; Evaluate with one's parents whether a valid appeal may result in additional scholarship money. It is important to realize that most of the financial aid recipients help themselves, as well, by working on

campus, applying for outside scholarships, or accepting multiple student loans. Also, statistics indicate that a large majority of parents who qualify for institutional scholarships also take out low interest loans to support the cost.

Many factors, though unknown to the majority, go into the entire system of determining students' individual financial aid packages. First, examine the numbers. A two-semester academic year is approximately \$27,360 for '98-'99 (based on tuition, average room and board fee, a 19 meal/week plan, and the student activities fee). The average family income for the Class of 2002 who applied for aid is \$91,400. Students who are recipients of aid packages range in family income from \$40,000 to \$80,000, and the average institutional scholarship awarded is \$13,000. Not only are these impressive figures, but one must realize that many factors contribute to the decision to award financial aid. Does the candidate have other siblings attending college? Are there extenuating financial restraints within the family? Possibilities as such increase a student's need.

Bucknell's financial aid office honors the appeals of parents who respond to their aid package with additional information warranting a greater need for assistance, and are often offered supplemental financial help.

Let's look at the facts. In response to the previous article, though a very reputable four-year institution, Penn State is not on the same level as Bucknell, a private institution, in such a way stated; in fact, it is ranked lower competitively. Secondly, Bucknell is not "so well-endowed"; rather, consider the following analogy: endowment can be related at Bucknell as about \$100,000 per student, while our

academic competitors average a half of a million dollars per student. Moreover, endowment serves as funding for numerous demands, not simply financial aid.

It is normal circumstance that funds are simply limited. Bucknell has no discretion regarding the amount of work study options available—money for work-study is financed from the federal government. As far as institutional awards, total this year, about \$20 million is awarded in scholarships. Since Bucknell's endowment does fall rather short relatively, only about 3 million dollars of financial aid awards is from endowment and the rest is from current operating income. Comparatively, take for example Princeton—all institutional scholarships are awarded directly from endowment money. Bucknell's endowment simply does not contend. Moreover, this operating income could be used in many other ways, for example, lowering tuition costs or increasing faculty salaries, but rather much is used for aid. This money is used as efficiently as possible. Additionally, the University is not ignoring such disadvantages. One attempt to ameliorate the current situation is the "Capital Campaign," which is hoping to raise \$150 million, of which the biggest piece, \$60 million, will be given to financial aid.

Financial aid awards are actually not solely determined by the Financial Aid Office. The admissions office also plays a role in the process. With each application for aid, the admissions office sends a rank of whether or not they recommend the student be awarded an institutional scholarship. Financial aid packages generally consist of a combination of work-study eligibility, student loans, and money granted from Bucknell. When admissions ranks a candidate highly, he

or she will likely be awarded a "preferential package." This is an increase in the quality of the package: an augmentation is made to the scholarship in addition to work-study and student loan options. In other words, outstanding credentials contribute to one's potential award when coupled with financial need. The reality here, as unattractive as it seems to some, is that the top 20% can be offered preferential awards, and if a student is not in that top 20%, surely he or she would be in the top 20% of other fine 4-year institutions where they could receive the top financial awards. This is part of the stratified society in which the country operates, and one of the reasons Bucknell students can benefit from the plethora of advanced opportunities that Bucknell offers while those with lesser merits generally do not.

Another harsh reality that plays a significant role in the aforementioned student's gripe, is that there is a limited amount of money for transfer students due to the budget established by the president. Even then, priority is given to transfers who are graduate students or coming from two-year programs, as they must go on to higher education and also offer diversity to the campus community. Again, admissions will send with the transfer's application for aid whether or not he or she is recommended. This year alone, over \$200,000 was allocated for aid to transfer students. This is unfortunately not enough to satiate all of the need of transfer students, but that is beyond the control of the financial aid office. Still, institutional scholarships are awarded to about 1450 students yearly; this is almost half of the undergraduate population.

Moreover, while only 6,900 students qualify for work-study, there are 1600 maintaining jobs on campus, and 16-1700 receiving Stafford Loans. Overall, more than \$35 million is awarded amongst all scholarships. In other words, there are many students taking advantage of the options.

In my fourth year at Bucknell, I can honestly say that I have never had anything but satisfying experiences with the financial aid office. Perhaps those in the financial aid office are, in fact, "considerate, sympathetic, and most importantly, ready to help in any way that they can," (as stated in our original editorial) to those students who graciously cooperate with the processes and explore all avenues patiently rather than to those who unfairly attack a praiseworthy system that has proved dedicated and successful for decades.

STUART HORODNER
DIRECTOR OF ART GALLERY

IMF has imperialist policies

By Chris Beatty

From the end of the eighteenth century through the nineteenth century, and into the twentieth century, the sun never set on the British Empire. The end of the nineteenth century saw the beginning of America's Manifest Destiny. We now consider ourselves above the territorial power struggles that caused the exploitation of numerous lesser developed peoples. We laugh at the term Manifest Destiny and cringe whenever the "white man's burden" is brought up. True, we are the policeman of the world, but that is only to ensure stability and peace for all citizens of the world. We don't prescribe the notion that we should "make the world America," as the British did three hundred years ago. Or do we?

There are many forms of imperialism. Some are as overt and flagrant as the invasion and colonization of another country. Others are much more subtle because the aim is different. To invade and occupy a country is very expensive, both monetarily and politically. Very few politicians could ever justify an armed incursion into foreign territory, with the express purpose of colonization and exploitation, at the cost of American lives and billions of dollars. What they do justify is a multi-billion dollar bribe, in the form of an IMF loan.

The battle for the American way of life is no longer fought between galleons on the Atlantic Ocean, but instead it is fought at the bargaining table of the World Trade Organization. We need cheap labor in Mexico and Indonesia and other developing countries to manufacture our clothes, our sneakers, our computer parts, and countless other goods. If we didn't have this cheap labor, prices would rise dramatically in the US and our standard of living would be irreparably damaged. We must now think monetarily, instead of militarily. We need these cheap imports to support

our way of life and to ensure that we get these goods. Subtly, we make these countries our economic territories.

Indonesia's economy has experienced massive problems lately. If you read the paper, you have read about the incredible rise in poverty, the collapse of the Indonesian baid, and the rioting that has ousted President Suharto after 30 years. The IMF sent billions of dollars to Indonesia in the form of a loan to help bail out their struggling economy. In exchange for this loan, certain guarantees of low trade barriers and privatizing of industry had to be agreed to. We put ourselves of the back because we helped bail out a struggling country. But, to applaud the IMF as saviors is to laud the nineteenth century British as messiahs, as opposed to twentieth century imperialists. With that 40 billion dollars in IMF money, the west bought itself cheap raw materials, cheap labor, cheap consumer goods and lower competition for its industries. It bought itself a resource to exploit and a country to economically enslave.

I am not ignoring the benefits for Indonesians, but the stipulations that Indonesia is saddled with will ensure that we get what we paid for far more than we deserve. There are a number of ways to help Indonesia that would have been more beneficial to its people than the current one that was chosen to maximize our own profit. The point I want to make very clear is that this criticism is based on my feeling that the actions of the IMF are motivated by the same things that motivated colonial imperialism. That motivation is the betterment of the domestic way of life and standard of living at the expense of the colony.

I suppose we have made progress. We no longer physically colonize foreign countries, raping the land for its raw materials and its people for slaves with our military. We now do it with the most powerful weapon in the world, the American dollar.

The woes of parking

By Erin Corbo

Parking. For anyone who has driven a car on this campus, I am sure that this word has become synonymous with frustration. I have heard so many complaints about this that it would be an injustice not to raise the issue.

Despite the fact that I do not mind walking, there is a reason why I brought my car to school in the first place.

First of all, I have yet to meet a car owner that has not received at least one ticket. This would be fine if there were ample parking available, but clearly this is not the case. Every parking space has its price to pay: leave on your flashers, park here at night but not in the day, Tuesday is okay here but not Wednesday. Personally, I cannot keep track of the infinite amount of restrictions that are placed upon one 16 by 20 foot space. I do not think that we, the students, should be penalized for the lack of safe and reasonable parking spaces that the University provides. Secondly, one student on cam-

pus had her car ticketed for being outside the Langone Center with the flashers on; public safety charged her \$5 and the Lewisburg Township charged \$50. This seems absurd seeing as how the signs read that this type of "stop and go" parking is supposedly allowed. In addition, the concept of flashers is also ridiculous. Aside from the fact that this looks bizarre, my car battery has just died and I am willing to bet that the use of my flashers certainly contribute to this significant problem that I am currently facing.

Finally and most importantly is the issue that concerns me the most: safety. Although all of the issues that I have addressed do have merit, I think that safety is something that cannot be taken lightly especially because of the recent problems that have struck our campus. Although there are parking spaces that are permitted, many of them tend to be somewhat far away from the dorms. Being a female with only my keys for protection, I would rather pay a fine for a space close to my dorm. However, I do not think that I should have to pay for my safety.

OPINIONS

Avoid roommate conflicts with consideration

By Maren Johnson

It's October. The leaves are changing color, the air is getting cooler, and the abundance of squirrels on campus are hoarding every acorn that have fallen from overhead.

Other indications of October? The country music is beginning to wear on you, the congested pizza on top of the fridge is no longer funny and the way your roommate talks to her boyfriend on the phone for hours at a time is no longer cute. Yes, it is that time of year when even the most compatible of roommates could use a break from each other. Well if you fall into this category, (and I'd bet that a good deal of you do) you're not alone. Even the handbook sent home to Bucknell parents suggests that October is the time of

year when roommates begin to find their differences. To put it simply, the honeymoon is over, folks.

Now is the time when those compromising skills that we all have get to shine. This is not to say that everyone loathes his or her roommate(s), or that every roommate problem can be solved through compromise, but before you get ready to give your roommate the boot, you should think about what it takes to live with someone else.

Consider, for instance, a tale of two triples. I am fortunate enough to have two triples at my disposal, one that also happens to be on different ends of the roommate spectrum.

The first triple, consisting of all girls, has had its problems. I asked one of the members of the triple what went wrong. After talking to her about the possible causes of an-

imosity in her room, it seemed as though the main problem is compromise. Two of the roommates get along well, due to similar schedules, work habits and social attitudes. This seemed to alienate the third member of the room right off the bat. Farther along down the road, issues like studying times and guests became an issue.

While two of the roommates study at similar times, the third opts to do other activities. However, when she decides to study and the other two can't provide an ideal environment, the third roommate refuses to go to a private study room or the library. The catch is that neither party is wrong. They both have what they feel is the right idea, which causes a clash of interests.

In contrast, I also spoke to another triple that is uncommonly close. These girls will be the first to admit that they are a lucky group, but are certainly not the norm. They suggested that their compatibility was due to similar personalities and non-conflicting class schedules.

They all agreed that they were involved in so many activities that they had little time to get sick of each other or even bother with small problems. One of them also added that she felt they were all at similar stages in life, which accounted for the lack of arguments over differences in lifestyle.

Looking at these two scenarios, it is apparent that there are a few basic helpful hints for cohabitation. First, compromise is key. One of my friends living in a double, who gets along well with her roommate, suggests discussing nighttime study hours ahead of time to avoid conflict.

Second, pick your battles. Getting mad at your roommate for leaving a dirty sock on the floor is not grounds for World War III.

Finally, be considerate. If you and your roommate(s) aren't clicking, don't instigate disputes or act obnoxious just to spite them; that will only make the situation worse. Basically, common courtesy and a little give and take goes a long way.

Coming home to homecoming

By Rebecca Rowland

I chanted in unison with the 2,500 other people at my high school's Homecoming game last Friday night. Making the decision to go to the game was pretty easy; I really wanted to see my friends, some of whom were flying in from school for the game, and in a way I missed my high school. I thought the weekend would be great and it was, but not how I imagined.

When I got to my school's stadium, the seats were already packed. I climbed over people until I found the friends I wanted to sit with. I thought things with my friends would immediately go back to how they were before we left, but they didn't. Sure we hugged and squealed and said how much we missed each other but something was just a little off.

It felt great to be back at school, though. Everyone treated me like some celebrity. "How's school?", they'd ask and I'd tell them how much I liked it, all the while beaming, happy to be home. I felt like the king of the castle again. I wasn't even a senior! I was beyond senior, I was college! I watched my friend crowned Homecoming Queen and cheered with pride when the Sherwood Warriors crushed the Quince Orchard Cougars 39-7. The game ended and I went crazy with the rest of the fans, glad my team won the homecoming game.

After the game, I went to spend the night in my friend's room at the University of Maryland. Once 11 of us were crowded into a double size room, things quickly loosened up. We reminisced about old times and talked about things we were doing at school.

I did a lot of thinking that weekend and I came to some conclusions. First, Sherwood High School will always be my school. I spent four great years there and my sister will spend four more years there. It's in my town, I know the teachers, it's my alma mater. Second, my old friends will always be my friends and making college friends is not cheating on them. The high school friends you keep in contact with will join your college friends to make your friends. Not new, not old, just plain old friends. Something I realized while I was sitting with my best friends, wondering what my friends at college were doing, was that I really like it here at Bucknell. There is room in my life for more than one stage of experiences and people.

I hope these realizations helped some other freshman see that what you are feeling is normal and okay. I know I'm not the only one who was pretty sure how to deal with the changes. However, once you realize that things don't have to be replaced, just added to, everything becomes a lot clearer.

"I think it is unlikely, but still possible. With an atmosphere like the one at Bucknell, it's so conservative many students would not be open about their homosexuality. Still, I cannot see anyone taking violent means towards these people."

Greg Philambolis '01

"Initially yes, because Bucknell is a conservative school and it seems homosexuality isn't accepted here. But no, because I don't think the students here have enough guts to do something like that."

Hellen Phan '00

SURVEY

DO YOU THINK THAT A SIMILAR TYPE OF EVENT TO THE MURDER OF MATT SHEPARD, A GAY STUDENT FROM THE UNIVERSITY OF WYOMING, COULD HAPPEN AT A PLACE LIKE BUCKNELL UNIVERSITY?

"Yes, because I think hate crimes don't just happen on huge campuses like the University of Wyoming. It only takes one person with distorted views on what is right and what is wrong to start something like that."

Stephanie Smith '00

"I guess it could because it could happen anywhere. Individuals will act as they wish. It is not likely at Bucknell, but there's always that slim chance."

Monica McCorry '02

"No, I don't think so because I do not think the students here get fired up about too much. I don't think they would get rowdy enough to do something like that."

Mike Lewis '00

"Yeah, I think it could have because our school is even more conservative than a large state school like the University of Wyoming. It's possible anywhere."

Jennifer Neumann '99

MANAGING YOUR MONEY:

Long Term Capital Crashes,
Sending Investors an
Important Lesson

By George Jenckes

In recent weeks, Washington and Wall Street have faced yet another moral dilemma, only this time it has had nothing to do with the Clinton sex scandal. Alan Greenspan and the Federal Reserve two weeks ago organized the bail out of Long Term Capital Management, a high-flying hedge fund based out of Greenwich, Connecticut. The Fed's bail out included 16 banks and brokerage houses that put forth \$3.5 billion to rescue Long Term Capital. Consequently, the Federal Reserve's rescue of Long Term Capital has left many politicians in Washington asking why the influence of the Federal Government should come to the rescue of a private investment firm. Besides, Long Term Capital is not a bank, so why should the Fed bail it out?

Federal Reserve officials told Congress last week that they feared letting Long Term Capital go under. Some of the nation's largest banks and brokerage houses have invested millions in Long Term Capital. If the hedge fund went bankrupt these banks and other large creditors would have been damaged, stirring up a wave of selling that would have rocked Wall Street more than it has already.

So does this mean that banks can keep making risky investments in private funds, only to have the government bail them out if they get into trouble? This is one of the fears shared by many Congressmen in the past week. Congress is concerned that banks will start thinking the government is getting into the habit of saving banks' risky investments. Federal Reserve Chairman, Alan Greenspan, assures us this is not the case. However, Congress has already begun discussing ways in which they can enforce tighter regulation on hedge funds and the banks that extend credit to them.

Long Term Capital's collapse has also left investors worried that their hedge funds share the same financial worries as Long Term Capital's. However, this may not be the case. Long Term Capital had a unique investment style. Just because your fund shares the same name, does not mean that your hedge fund shares the same investment style. Hedge funds are typically divided into three categories of investment strategies. They are all supposed to hedge risk in the market, but as we have learned from Long Term Capital, they do not always do what they say.

The first category of hedge funds is the market neutral fund. Market neutrals mainly invest in U.S. and foreign equities. They use borrowed money, called leverage, to make their investments, but they usually are not leveraged more than 2:1. These types of hedge funds truly "hedge" the market because they are in for the short-term and the long-term. By selling short, borrowing and selling stocks they think will go down in the short term and by going long, buying stocks they think will go up, these two investment strategies tend to balance each other out, thus hedging market risk.

The second type of hedge fund is a hybrid fund. Hybrid funds are similar to market neutrals, but they use a little more leverage, or borrowed money to make their investments. They usually are not leveraged more than 4:1. Hybrid funds buy long and sell short in global equity markets and they also speculate in bond and currency markets.

Now, the third type of hedge fund is the highly leveraged and extremely risky type, which Long Term Capital fits right into. This type of fund, sometimes called a quasibank, does just the opposite of hedging risk. Quasibanks use large amounts of borrowed capital to make speculative bets in foreign markets. The rewards from these types of funds can be astronomical, but at the same time the risks are substantial. A normal hedge fund of this type is leveraged no more than 50:1. Long Term Capital was leveraged as much as 300:1.

So how did Long Term Capital, a fund headed by John Meriwether, once Salomon Brothers' legendary bond trader, and his Nobel-prize winning economists, bring this once \$200 billion fund close to bankruptcy? It's pretty simple actually. The global economic crisis spreading from Asia to Russia threw Meriwether's complex investing formulas into frenzy.

Meriwether designed computer programs that used mathematical formulas to bet on the future direction of interest rates, stock indexes and foreign currencies. The global financial crisis drew foreign investors to U.S. Treasury bonds, driving up prices that Meriwether's program said should be falling. As a result, Long Term Capital lost billions in just a few months.

There is much to be learned from the collapse of Long Term Capital. The returns this hedge fund got were because the risk they took was substantial. Unfortunately, the risk caught up with them. As investors well know, the market humbles those that do not respect it. Smart investing does not have to be complicated. Most hedge funds' investment strategies are kept extremely secretive. Here is my advice. If a mutual fund cannot explain what it is doing, you should not be in it. Always know what you are investing in, no matter how great the manager.

Off-Campus Study fair to be held

By Aimee Nicklaus

The annual Off-Campus Study fair will take place on Tues., Oct. 27 from 9-11 p.m. in the Bison. Approximately 15 countries and 40 study abroad programs will be represented by students who have studied there.

This program is specifically geared toward those of you who are still in the initial stages of planning, and is also ideal for those students who think spending a semester off-campus is unfeasible, too complicated or expensive, or not for them. The coordinators of the fair, Bison Abroad staff and Susan Zingale-Baird, hope to increase awareness and arouse interest in the possibility of international studies for first-year students and sophomores who have not previously considered a semester abroad.

Advisors from the Office of International Education will be present along with students who have studied off-campus representing their respective countries and trained peer advisors to offer advice to prospective abroad goers. The event will be informal.

Students will have photos, memoris, souvenirs and stories from their off-campus experiences. A special table designed for engineering majors will be coordinated by Marianne Forza, Study Road Advisor.

various engineering professors and a number of engineering students who have studied in multiple countries.

These students and faculty will all be there to help first and second-year students realize the opportunities before them, and the ease with which they can make it all happen. It seems that a common misconception among uninformed students is that it is difficult to transfer credits and finances, and scheduling becomes an obstacle.

The University's International Education team has developed a system that makes it easier than most would imagine to arrange an exciting semester, or even year, off-campus and still graduate on time.

Photo courtesy of Off-Campus Study participants

The Off-Campus Study fair will be held on October 27 from 9-11 pm in the Bison. Advisors and students will be on hand to discuss programs and answer questions.

The fair is an opportunity for students who are not sure where they may like to study to get a more vivid picture of what would suit them best. The services that this event offer are one-of-a-kind since the students representing the various countries and programs were in exactly the position of today's prospective abroad travelers only a year ago, and can therefore relate unlike any other to the plethora of questions, doubts and excitement that these students have.

MATT SHEPARD

From page 1.

fence, where he was found 18 hours later by bicyclists.

Those in attendance formed a large semicircle around the Bertrand Library front door which ran five rows deep at times. Candles were burned, poems read, emotions stirred, and most importantly, requests were made for our society to not lose any more Matt Shepards.

Cindy Peltier, advisor to FLAG&B, introduced the evening, reviewing the details of Shepard's murder and setting the tone for the vigil. "This kind of event shakes us up, and it should," Peltier said. "We have the power to end this by speaking out. I invite you to end the silence."

After a prayer from University chaplain Ian Oliver and a rendition of "Stand By Me" by the Silhouette, the

University's all-female cappella group, individual speakers were invited to come forward and speak their mind. Some gave inspirational thoughts, others presented appropriate poems while still others expressed simple outrage at Shepard's death.

"This seems to be an occasion locally for us to recommit ourselves as a community at Bucknell," President William D. Adams said.

"I'm upset and a little scared," said Ted Burns '00. "It could happen here or to someone I know." An emotional

Burns then pleaded with the crowd. "Please, don't let this happen again."

"This murder is a reminder that we live in a gender-policed state which can lead to taunts, violence and death," said Peg Cronin, writing center consultant.

"It's important as students at this University that if you hear a remark that is homophobic, you don't let it go," David Carpenter '00 said.

Other speakers included Sandra Morris, assistant professor of English; Sue Ellen Henry, assistant professor of education; Tom Travis, professor of political science and international relations; Stuart Horodner, director of the art gallery; Elizabeth Crespo, race/gender co-coordinator; Marilyn Mumford, professor of English and race/gender co-coordinator; Teresa Amott, assistant professor of economics; and Ruth Burnham, associate dean of students.

Some interesting observations were made by two speakers near the end of the vigil. Residential College program coordinator Jim Wiltgen made reference to the many candles that had almost all burned out and the continuing work that must be done to prevent hate crimes. "As light brings enlightenment, it's amazing how quickly the candle burns. Now we must keep spreading the light," Wiltgen said.

Men's soccer rolls past Millersville

By Justin Knox

The Bucknell men's soccer team busted out of a six game losing streak with a very impressive win over Millersville last Wednesday. Millersville, who came into the game with a ten and two record, is a very skilled team, and the Bison handled them easily.

Wilson Pyle '01 led off the scoring with an assist from Steve Deluca '00 25 minutes into the first half. Millersville answered with a goal ten minutes later, however, sending the game to halftime tied at 1-1.

The Bison came into the second half fighting, as Deluca's second assist of the game set up a goal for Bill Epley '01. This was Epley's career high fifth goal of the season and leads the Bison in scoring this year. Millersville, however did not give up. Seven minutes later, they tied the game at two apiece.

"Millersville has a very good team this year," head coach Craig Reynolds said. "They have a lot of dangerous players who are able to turn the game around on short notice."

The game became very competitive after it was tied at two, with the last 25 minutes seeing three players ejected; one player from the Bison, two from Millersville.

Then, with under seven minutes to go in the game, Geza Lendvai-Lintner '01 scored a header on a cross from John Stewart '02. The Bison did not let Millersville knot it up again, as they kept the Mariners

out of the net and held on for the 3-2 win.

"It was a very good win for us, it was a wide open game, and we controlled the ball well, and finished our chances," Reynolds said.

"It was a combination of a lot of things for us. We had more opportunities to score, and we capitalized more on those opportunities than we have been doing in the past," Lendvai-Lintner said. "But both of those were results of us just playing more aggressively."

The Bison could not keep their momentum in their next match, however, as they dropped a game against Philadelphia Textile, 3-1.

"We were optimistic going into the Philly Textile game," Reynolds said. "We had a few good practices. I really thought that maybe we would finish the year strong, but we just had a sloppy performance, and we took a step backwards."

"The Philadelphia Textile game was just a totally different game for us," Lendvai-Lintner said. "We didn't play nearly as aggressive as we needed to. We have three more Patriot League games left this season. If we win them all, we could go to the playoffs."

The Bison take on the Nittany Lions Wednesday night at Penn State. "It will be a very tough game. Penn State has a scholarship program there, and its hard to compete against that. But, we come into the game with nothing to lose, and we'll just see what happens," Reynolds said.

Brian Carr '00 (right) and the Bison soccer team snapped a six-game losing streak with a 3-2 victory over Millersville.

Eight inducted
into Bucknell
Hall of Fame

By Brian Watson

Eight new members will be inducted in the Bucknell Athletic Hall of Fame this weekend. The induction ceremonies will take place during halftime of the football game on Saturday, Oct. 24. These former Bison standouts will join 133 other players, coaches, administrators and friends in the Hall of Fame, which was established in 1979.

Ann Kerwin Anderson '87: She was a former basketball star, and received Academic All-American honors in 1986 and 1987. She was the East Coast Conference's (ECC) Scholar-Athlete of the Year in 1986 and won the Christy Mathewson Award for the most outstanding Bison senior athlete.

Neil Blaisdell '27: He was a standout running back for the 1924 football team that went 8-2. He played professional baseball before transferring to Bucknell and served as an assistant coach to "Uncle Charlie" Moran in 1926.

Stan Durtan '73: He was one of the most outstanding linemen in Bison history, and is the fourth member from the 1972 squad to be inducted into the Hall of Fame. Durtan received All-Pennsylvania honors by the Associated Press and was drafted by the Canadian Football League's Winnipeg Blue Bombers.

Bill Gravely '77: He set both the indoor and outdoor triple jump records for Bucknell, including the 800-yard freestyle relay mark that stands today. She too was awarded the ECC's Scholar-Athlete Award and received the Christy Mathewson Award during her senior year.

Kathy Lynch '77: She is a former swimmer, set 10 individual and relay records for Bucknell, including the 800-yard freestyle relay mark that stands today. She too was awarded the ECC's Scholar-Athlete Award and received the Christy Mathewson Award during her senior year.

Captain Katie Roland '99 and the women's tennis team stand at 3-1 overall.

Women's tennis kicks off
fall season on high note

By Dani Dilkes

Women's tennis opened its fall season with three wins and one loss, decisively defeated Cleveland State, 9-0, Saint Joseph's University, 7-2, and the University of Buffalo, 8-1. Unfortunately the Bison fell short at Bloomsburg in a very difficult match, with their only win of the day from the number two doubles players Katie Roland '99 and Carey Wolford '02.

Blakely Lauria '00 commented, "Although our second doubles team won [Bloomsburg] had very strong doubles. All of the matches [doubles and singles] went three sets. I'm very optimistic about the season, the doubles teams have improved a lot since last season, and the singles line is strong."

Leading the Bison are singles players, Leah Lenox '01, Kerry Callaghan '00, captain Katie Roland '99, Tracy Honko '00, Blakely Lauria '00, and Beth Wurzburg '01; and doubles duos, Callaghan and Lenox, Ro-

land and Carey Wolford '02, and Wurzburg and Kristin Inglis '02. As is reflected in the lineup, the team is very young and has a lot of room to grow.

Growth is inevitable for the Bison because just last season a new coach, Rebecca Helt, took over after playing four years at Lock Haven University. Helt coached at various schools, including her alma mater, WilliamSPORT High School, and came to Bucknell with a championship in the front of her mind. Roland describes her coach as, "new, great, a lot of fun and extremely helpful."

Helt has instituted a new training policy which includes an intensive strength and conditioning workout. The new regimen is designed to help the girls on both a short and long-term basis. Although the Bison are physically ready for their fall season, they will be in tip-top shape to open their "traditional" season in the spring after an intense winter workout. "I'm really excited about the up-

See WOMEN'S TENNIS page A9

What Time Is It?: When Lefty Diesel decided to start practice at midnight on October 15, 1970, he thought he was merely drawing attention to his University of Maryland basketball team. He had no idea that he was giving birth to what has become one of the greatest traditions in collegiate athletics. And so, as it has for the last 28 seasons, Midnight Madness kicked off at the stroke of 12 last Saturday morning. Over one-third of Division I schools participate in the annual start-up to the season, giving their students and fans all across the country the opportunity to check out new recruits, hear from the coach and players and basically get psyched up. Since ESPN began coverage, Midnight Madness has become the pinnacle of pep rallies and arguably college's largest frat party.

The top-ranked teams truly put on a show, including everything from dunk contests, music performances and contests for students, with prizes often including a full scholarship, all of which are televised nationally and covered by the Dickie V's of the land. One twist on the night takes place at the University of Kansas, where "Late Night with Roy Williams" includes some unusual antics by the popular coach as well as the players. Last year, the five starters put on Jackson 5 costumes and lip-synched and danced for the capacity crowd. Last week, point guard Ryan Robertson did his best Jerry Springer impression as players and cheerleaders acted as usual hostile, sketchy characters that appear on the daily talk show. Although the production may be a little much, Robertson told CNSI, "It's great fun for us, and great fun for the fans. It's fun for us to get out there and goof around and make fools of ourselves."

Tyson Back? Must be Magic: When the Nevada Athletic Commission last week permitted Mike Tyson to box, it wasn't Don King taking the mic and all the praise. It was none other than Laker legend, failed late night talk show host and sports agent wannabe Earvin "Magic" Johnson. After testifying on Tyson's behalf, Magic claims that he will be "the closest guy to" Tyson, though sources close to the former heavyweight champion say that fight manager Shelly Finkel will continue as Tyson's lead adviser. On the other side of the coin lies Don King, who still holds legal rights to Tyson's fight promotions. Iron Mike has sued King multiple times in attempts to get out of the contract, but the issue remains unresolved. King told CNSI, "I'm delighted that Tyson will be able to fight again." Then again, who wouldn't be, knowing that you'll make millions off him while he's clobbering second-rate competitors (remember Peter McNeely!)

These Bombers Are No Joke: Before the season began, a lot of people were criticizing the New York Yankees' acquisition of third baseman Scott Brosius. In fact, a lot of people were wondering who he was. Still wondering? Either come out of your cave or ask the San Diego Padres. Brosius, who had a career year for the Bronx Bombers, entered game 4 hitting .538 in the World Series, and supplied a crucial single in the eighth inning to break open the game and give the Yankees a 3-0 victory over Padres ace Kevin Brown, not to mention a World Series sweep. The sweep, which capped one of the most impressive seasons in baseball history, was ensured when Brosius fielded Mark Sweeney's grounder and threw over to Tino Martinez for the final out. Andy Pettitte went 7 and a third for the win, and Mariano Rivera picked up the save. In addition to his game 4 highlights, the Series MVP Brosius hit two home runs and had four RBIs to help his team to a 5-4 victory Tuesday night, raising their Series lead to 3-0. The Yankees took the first two games, thanks to some clutch power hitting, including a Game One grand slam by Tino Martinez and a three-run dinger by Chuck Knoblauch.

Jets Take Tuna Bowl III: When Vinny Testaverde came to the New York Jets he expected to step into the starting role. After going 2-0 while Glenn Foley recovered from an injury, head coach Parcells demoted Testaverde to the backup spot. Foley's inconsistency propelled Testaverde back into the starting lineup, and with last Monday's impressive 24-14 victory over the New England Patriots, he should be staying there for a while. Testaverde connected with tight end Kyle Brady, who has been practically invisible (despite his 6'6", 260-lb. frame) since his hyped entrance into the NFL, for two key touchdowns. The Jets' QB amassed 294 passing yards and three touchdowns. Parcells was more than happy to beat his old team on national television. "I have warm feelings for what's happened here in New England," Parcells said. "When I first got here, you could have held archery practice in the stadium." The Jets defense played admirably, holding quarterback Drew Bledsoe to 204 yards passing and one interception.

Jesse the Body: In this age of political controversy, a new candidate is making waves. Former World Wrestling Federation superstar Jesse "The Body" Ventura is campaigning in the gubernatorial elections in Minnesota. The Reform Party candidate is looking to depose incumbent Democrat governor Hubert H. Humphrey III, but is currently third in the polls.

Police Crack Down on LT: Former Giants' Pro Bowl linebacker Lawrence Taylor was arrested Sunday night after attempting to purchase crack-cocaine from an undercover police officer. In a profanity-laced tirade, Taylor proclaimed his innocence and says that he was set up. Taylor struggled with cocaine abuse throughout his playing career and has been arrested multiple times since his retirement.

Sports

WOMEN'S SOCCER

The women's soccer team has struggled this season with a 6-9 overall record, but will look to its youth contingent to improve in the coming years.

Co-captain Brian Baker '99 (above) looks to lead the second-ranked Bison water polo team to the Southern Division Championship at Princeton on Saturday, Oct. 31. The Bison are currently 13-8 overall for the season.

HOMECOMING

MEN'S SOCCER

Men's soccer boasts a strong recruiting class as well as numerous talented lettermen like Sam Graziano '01.

FOOTBALL

The Bison football team has amassed a 3-3 overall record after facing several tough early season opponents. Quarterback Don McDowell '00 (above) and tailback Dan Paliko '00 (left) have anchored Bucknell's offense thus far. The Bison host Patriot League rival Lafayette on Saturday, Oct. 24 at 12:30 p.m.

FIELD HOCKEY

Katie Twombly '00 (above) ranks second in scoring for the Bison, who currently hold a 3-1 Patriot League record. The field hockey team will take on Fairfield on Saturday, Oct. 24, at 11 a.m. at the Mod Fields.

MEN'S WATER POLO

The men's water polo team, including Ryan McCarty '02 (above), will head to the Eastern Coast Athletic Conference (ECAC) Championships this weekend at Navy.

Sports

CROSS COUNTRY

Both the men's and women's cross country teams have performed brilliantly during the 1998 season. They are currently preparing to make a run at the Patriot League title on October 31.

1998

Fall Sports Update

VOLLEYBALL

The outstanding all-around play of Emily Pomeroy '99 (above) has led the Bison volleyball team to a 4-0 record. They currently sit atop the Patriot League as its only unbeaten team, and will host Coppin State, Marist, and Robert Morris this weekend in the Subway Invitational.

WOMEN'S GOLF

In their inaugural season, Chris Boschen '99 (above) and the women's golf team have made an remarkable showing. They are looking to establish their name as a future powerhouse in the Patriot League.

Steve Deluca '00 (above) and the men's soccer team will try to capitalize on their recent win over Millersville as they travel to Lehigh and Lafayette this week.

MEN'S RUGBY

The Bucknell All-Blacks have dominated league foes this season and crushed Lafayette 61-0 last weekend in playoff action. The team will travel to St. Joseph's this weekend to play the Hawks in the second round of the playoffs.

CREW

After impressive performances at the Bucknell Invitational in early October, men's and women's crew put in outstanding rows at the Head of the Charles Regatta in Boston last weekend.

New college football championship format lacks needed answers

Well, it's mid-October and we are off to another exciting college football season. Like every year, there are many teams who have a shot at winning the national championship, but now there is a new formula for postseason play. While the format is not one of a postseason playoff that many people had hoped for, it is one that will attempt to accomplish the same objective. The newly formed Bowl Championship Series, or BCS, is a coalition of bowl games that will host the top postseason games every year.

The coalition includes the Fiesta, Rose, Orange, and Sugar bowls, and in joining the BCS these games dropped their traditional ties. The plan calls for the top two teams in the nation at the end of the season to play in a so-called national championship game.

Sports writers and fans everywhere have long called for a solution to the dilemma of declaring a national champion in Division I college football. Every year there's always quite a bit of controversy surrounding the poll results. Last year, Nebraska and Michigan could have met in a national championship game if it weren't for their ties to the Orange and Rose bowls, respectively.

This year everything changes. The theory says that the top two teams in the nation will meet in the Fiesta bowl and play a game to determine who wins the championship rather than trying to run up the score to impress sportswriters. The top two teams will be determined by a four-step formula. Officials average their ranking in the three major polls, the ESPN/USAToday poll and the average compiled by the Associated Press. They then add that figure to the Sagarin power rankings and throw in an estimate of schedule strength. Finally, the officials take into consideration the win and loss record of the potential championship contender and add up the points. The two lowest scores will be representative of the two best teams. It seems like the college football world has just become a lot more fan friendly, right?

Well the answer to that question may be a bit surprising. While the BCS seems like a good idea, there are some complications that it cannot fix. Look at the situation this year. Right now there are five undefeated teams in college football, none of which face each other. Ohio State doesn't really have another challenge until they play Michigan in mid-November. Arkansas team in the SEC championship game. UCLA is steam rolling to a Pac 10 title, while Kansas State is well on its way towards winning the Big 12. The final undefeated team is Wisconsin, and due to the fact that there are 11 teams in the Big 10 (?) they do not play the top-ranked Buckeyes.

So here we are, our first year into the BCS, and we really did nothing to limit the controversy surrounding the national championship. The teams that do not play in the Fiesta Bowl will feel as if they were snubbed, and all of the postseason games will be about abandoning sportsmanship and running up the score so as to impress the pollsters.

Furthermore, it takes away from the whole concept of conferences. It will turn the college football world into one giant amorphous group of teams rather than regional groups. Very competitive conferences such as the Pac and Big 10's will often produce title teams with a blemish on their record no longer holding the rights towards an obligatory Rose Bowl appearance. In addition, teams from conferences such as the WAC who start low in the preseason polls will have a very difficult time making it to these games even if they run the table. Conference titles will cease to mean anything. Many players share the same feeling about the BCS.

"I think it would be bad, especially if it kept sending the same few teams back to the same bowl games year after year," said Kevin Ferick, a player for Brigham Young. "I really worry whether or not an underdog can get into the BCS. That is what would make it exciting."

The biggest debate over the BCS has dealt with the tradition of the existing bowl system. Each and every year for most of the 20th century the Big 10 champion has met the Pac 10 champion in the Rose bowl, affectionately called the granddaddy of the matchups. Kids grow up wanting to attend schools like Michigan and USC and do so for the probable opportunity to play in such a championship game. The Rose Bowl always had a certain mystique surrounding it that could not be duplicated by the matchup of two second-rate teams.

Players have echoed this opinion. "I don't believe in breaking tradition. Bowl traditions are a major part of college football. It doesn't seem right that the Big 10 and the Pac 10 won't be playing in the rose bowl in the very near future," said Sedrick Irvin of Michigan State. "When I'm 80 years old I hope I can tell my grandchildren about playing in the Rose Bowl against a Pac-10 team."

The bottom line is that the BCS is not a cure all for the controversy surrounding the national championship. While it does contain certain aspects that may help to clarify which team goes to what bowl, it does not ensure that the selection of a national champion will be completely straightforward. Moreover, it does not guarantee that teams who are passed over in the championship selection will feel that the choice was a just one.

It seems that there is little solution to the problem of selecting a national champion in college football. We just have to keep improving the system that we have, and if this is the first step, so be it.

Sports Trivia Quiz

1. What college won the first Orange Bowl?
2. Name the three ex-United States Football League players who are still active in the NFL.
3. Who holds the record for most career home runs without ever appearing in a World Series?

1. Bucknell, they defeated Miami in 1934; 2. Doug Pister, Reggie White, and Steve Young; 3. Ernie Banks.

Last-second TD breaks Bison's back

Defense dominates, but Bison offense comes up short against Cornell Big Red

By Tim Scheu

The Bucknell football team had a simple objective: rebound from their heartbreaking defeat at the hands of the Penn Quakers. Following that loss, there had been some concern over whether or not the Bison had the mental game to complement the physical. It seemed that in every contest in which they participated, the Orange and Blue dominated the statistical game but often times fell short in terms of score. The defense had been overpowering, and the offense continually outgained opponents in net yardage, yet the Bison stood at 3-2. The Bison desperately needed a win over Cornell to prevent this recent lack of mental toughness from becoming a season long pattern.

In Bucknell's game at Cornell last Saturday, it appeared that the Bison had shaken the mental mishaps that had plagued their last few games... that is, until the last thirty seconds. Despite a brilliant defensive performance, the Bison suffered another heart-wrenching defeat when the Big Red scored the game-winning touchdown with under a minute to go. The 23-19 score marked the second time in a row the Bison lost to an Ivy League opponent after winning the previous six.

"I felt we lost the game to Cornell because of a lack of discipline," head coach Tom Gadd said. "It just takes a play here and a play there to cost us the game. There are a hundred plays that if they go the other way we win the game."

The game opened with a prominent start when Bucknell quarterback Don McDowell '00 hooked up with Corey Hurley '00 for an 11-yard scoring strike. The point after made it 7-0 with a little over six minutes

left in the first quarter.

The Big Red answered right back though, when Mike Hood, the Cornell quarterback, muscled his way into the end zone from a yard out to tie the score. Hood's plunge capped a nine-play 40 yard drive for the Big Red.

The second quarter was all Bucknell. The Bison thundered ahead with two touchdowns of their own, making the score 19-7. The first of the two scores was a result of junior Dan Palko's one-yard end zone dive following a 19-yard scamper by McDowell. The second was the product of Palko's 26-yard punt return to the Cornell 19-yard line. McDowell then capped the drive with another 19-yard dash that culminated in the touchdown.

The offensive statistics do not even begin to demonstrate the domination of the Bison. It was the defense that carried Bucknell for the entire first half. When the second quarter came to a conclusion, the Big Red running game was going nowhere. For the half, the Bison held the Cornell backs to minus-27 yards rushing.

"Everybody goes into the game trying to prevent the other team from running the football," Gadd said. "They played with a fairly young offensive line, and our defense got after them."

Usually the raw yardage does not tell the story because quarterback sacks count against the running totals, but this time the number has some significance. For the first half the Big Red only had one positive running play, and that was on Hood's touchdown run. The leading rusher for Cornell had minus-3 yards.

Vince Ficca '00 also credited the defensive line for shutting down the

Jabu Powell '02 (#32) and the Bison take on Lafayette this Saturday.

Big Red running game. "They are really physical and fast, and kept the opponent's offense off balance," Ficca said. "They never knew what they were going to see."

Then the second half began. Cornell immediately made a statement. They drove 57 yards in ten plays for their second score of the day, and John McCombs' 25-yard field goal cut the Bison lead to nine.

A Bison fumble help set up the Big Red's next score. When a Cornell drive stalled their punter, Charles Watson, kicked to an anx-

The Flecktones perform at the Weis Center

Béla Fleck leads a group of musicians with a unique and innovative sense of music

By Dustin White

Homecoming weekend promises a wide variety of fantastic entertainment, including one of the semester's best musical events as the Weis Center hosts Béla Fleck and the Flecktones in concert. The Flecktones' performance is the first event in the Weis Center Series 2: Special Effects!

According to Bill Boswell, director of cultural events at the University, "Béla Fleck and the Flecktones provide a unique musical experience with a unique blend of styles." The word "unique" hardly seems adequate to describe the group's innovative mix of jazz, bluegrass, funk, rock, reggae, world-beat and even classical music.

Never heard of the Flecktones? The group's relentless touring has helped them to gain the respect of music lovers across the globe, and since 1990 they have sold out over 200 shows. Much of the group's success can be accredited to their raw musical talent and innovation; the Flecktones are well known for pushing the boundaries of music, always looking to try new things.

Béla Fleck started playing the banjo 25 years ago at the age of 15, and he is now considered by many to be the world's greatest banjo player. Since that time, the group has also appeared on national television on both "The Tonight Show" and PBS's "Evening at the Pops." Most recently, the Flecktones song "Sister Minister" from their CD *Live* received a Grammy award for Best Pop Instrumental Performance.

The Flecktones' three current members have combined for countless musical distinctions. Headman Béla Fleck has been nominated for 10 Grammy awards in several categories, including bluegrass, country, jazz and pop, and *Frets* magazine has named him the best banjo player for the last five years straight.

Victor Wooten is a world-renowned bass player, receiving acclaim from such authorities as the *Nashville Music Awards* and *Bass Player* magazine. The third member of the Flecktones is Victor's brother, Roy Wooten, who goes by the name Fu-

Béla Fleck and the Flecktones will be performing at the Weis Center this weekend. The Flecktones combine elements of jazz, bluegrass, funk, rock, reggae, world-beat and classical into their music.

ture Man. Future Man is best known for his ability to create and play original instruments such as the synthaxe drummer, an instrument he invented, which produces an unprecedented number of percussive sounds.

Dave Matthews, a name familiar to many University students, has collaborated often with Fleck, most recently in September, when Fleck played with the Dave Matthews Band at the MTV Awards Show. Fleck contributed to a number of songs on the Dave Matthews Band's

recent CD, *Before These Crowded Streets*, and Matthews also sings on a few tracks from the Flecktones' latest release *Left of Cool*.

The Flecktones' stop at the University is part of a tour this fall that also includes seven dates with the Dave Matthews Band. In the past, the group has toured with Bonnie Raitt, the Grateful Dead, as well as with Sting and Hootie and The Blowfish.

The concert will take place at 8 p.m. this Saturday night in the Weis Center. Ticket prices are \$15 for students, \$25 for the general public, and will be on sale all week.

Information for this article was found at <http://www.frit.com/~gnat/bela/bio/>, <http://www.npr.org/programs/anthon/bios/bfleck.bio.html>, <http://www.flecktones.com/welcome.htm>

"Religions of the World and Ecology": Part One

By Adam Parris

The growing concern for the human impact on the environment received its largest wave of support on Oct. 20 and 21 at the Culminating Conferences, entitled *Religion and Ecology: Discovering the Common Ground*, of the "Religions of the World and Economy" Conference Series.

The series began in May of 1996 at the Harvard University Center for the Study of World Religions, and reached a new level on the 20th and 21st at the United Nations and the American Museum of Natural History in New York City. These culminating series encompassed the topic of a series of articles which, with the help of professors Mary Evelyn Tucker and John Grim, will summarize the ongoing forum of the comprehensive roles of religions toward the environment.

"The moral imperative and value systems of religions are indispensable in mobilizing the sensibilities of people toward preserving the environment for future generations," Mary Evelyn Tucker and John Grim, associate professors of Religion at the University, wrote in summarizing the goals of the conference. Tucker is also the author of *Moral and Spiritual Cultivation in Japanese Neo-Confucianism*. Grim has been published as well, including such works as *The Shaman: Patterns of Religious Healing Among the Ojibway Indians*.

Tucker and Grim conceptualized and created the series based on what they perceived as a growing need for religious involvement in the most important issue facing the human race.

"No people had ever known so much about the Universe as we know, but no people were ever so ignorant of the Universe as we are," Father Thomas Berry, author of *The Dream of the Earth*, *The Universe Story*, *Buddhism and Religions of India* and self-described "geologist," said at the Evening of Celebration on the 21st, separating the two culminating conferences in New York.

Berry's influence played a significant role in motivating Tucker and Grim to act on the religious tie to the environment. Armed with inspiration, Grim and Tucker began to focus the idea, with the coordinative efforts of Lawrence Sullivan, director of the Harvard University Center for the Study of World Religions, on hosting a series of 10 religious conferences. Each conference is designed to deal with different religions and their ability to help the environmental cause, and two separate culminating conferences in New York and Massachusetts, each implementing the religious debate with other disciplines.

See RELIGIONS, page B2.

Students find marathon experience rewarding

By Beth Slaby

Your heart beats uncontrollably. With each step, the aching in your legs increases, and what energy you have left seems to almost melt into the pavement. There is an indescribable discomfort that is quickly taking over every cell in your body, and you still have six more miles to go before you reach the finish line. You know that you are not injured, and that the discomfort isn't from being hurt. You know that the moment you stop, so will most of the pain. It is tempting to stop right now. But, the goal for which you have trained for 18 weeks would be thrown away. So you (however reluctantly) accept the pain and find some way to put one foot in front of the other.

More and more individuals across the world today can relate to this scenario: running a marathon. A full marathon measures 26 miles and 385 yards in length. The whole view of running a marathon has greatly changed over the past 10 years. About a century ago, marathon running was thought to be only for the elite.

In addition, women were forbidden to run marathons because their bodies were thought to be too frail, and unable to handle the effects of long-distance running. This gender barrier was broken in 1967 when Katherine Switzer, Program Director of Avon Running for women, was the first woman to run the Boston Marathon wearing official numbers. When she was spotted by an official, he tried to rip her numbers off and force her off the course. She refused to give in, however, and completed the course successfully.

Jen Clatta—The Bucknellian

Erica Mathews '00 and Suzanne Koziol '00 have recently completed their first marathon at Scranton's Third Annual Steamtown Marathon.

Thinking about applying to medical school?

By Anita Malhotra

Applying to medical school is no picnic. It is a long, expensive, and arduous process. But, if you want to become a physician, unfortunately, there is no choice in the matter. Going stepwise through the whole procedure, we'll start with requirements.

Almost all schools require one year of biology, one year of physics, one year of inorganic chemistry, one year of organic chemistry, one year of math, and some type of writing course. Any major is acceptable as long as these requirements are met. In fact, some medical schools are encouraging liberal arts and social science majors to apply.

After meeting all the academic requirements, it is then very helpful to have done some volunteer work in a hospital or other health care setting. Medical schools like to see a commitment to their profession. Research is also a good idea, but it is not required.

Next comes the MCAT (Medical College Admissions Test). This is a long standardized test with four sections: biological sciences, physical sciences, verbal reasoning, and a writing evaluation. The test is fairly difficult, and the average scores are

Steve Stasson—The Bucknellian

usually around 8/15 for each section. It is recommended that students take the test in the spring of junior year. However, there is another test offered at the end of summer.

In past years, two prep courses given by Kaplan and Princeton Review have been offered on campus. Prep courses run from \$900 to \$1000. If this is out of your price range, you may want to consider buying the books from people who have taken the course and are already finished with the application process.

Now on to the actual application. The primary application is through a central processing service called AMCAS (American Medical College Application Service), and this is not free. AMCAS has one application that most schools accept. It covers grades, transcripts, extracurricular activities, and a personal statement. This application is forwarded to schools of your choice. There is a charge per school applied to the AMCAS fee. Most people end up spending around \$400.

Once a school receives your AMCAS application, you will be

notified and sent a secondary application. This secondary application usually includes more essays and personal questions. Letters of recommendation are sent with the secondary applications. Fortunately, the University will write a composite letter and send it. Strong letters are very important.

Overall, these applications require a lot of time. If possible, finish the AMCAS application by June/July. That way, you can do your secondaries in the summer. Secondary applications also have a processing fee which can range from \$40 to \$120 per school.

Once secondaries are sent out, then the waiting game starts. Schools will either reject, defer, or offer you an interview. Each school receives upwards of 9,000 applications and they will interview anywhere from 500 to 1,000 candidates. Interviewing is conducted from September through March. Each school accepts 100 to 200 students.

Roughly 40,000 people apply for 15,000 seats in the United States. Schools that are public prefer in-state residents and charge

extremely high tuition to those from out of state. Speaking of which, tuition runs around \$20,000 to \$40,000 per year. This does not include living and equipment expenses. Fortunately, federal loans are available and most schools will offer some form of financial aid.

The University has good percentages of applicants being accepted. Professor John Tonzeich of the biology department is the premedical advisor and the faculty advisor of the premedical society. He handles letters of recommendation, and getting AMCAS applications. Tonzeich has a great deal of information on medical schools as well as several books about applying in his office.

The school also maintains a pre-med web page at www.orgs.bucknell.edu/pre-med which can be accessed through the home page.

All in all, getting into medical school is definitely a long and difficult process, but providing you are accepted, it will be worth it in the end. Even if you are not, it is always possible to reapply the next year. This is often even advisable for many students who feel as if they need a break from school work. Medical school is a huge amount of work, so be prepared!

Anita Malhotra '99, a biology major, tells about the difficult and expensive process of applying to medical schools.

The effects of marijuana on the mind and body

By Kate Nowak

An often overlooked study at Harvard University Medical School, published in the February 1996 issue of the *Journal of the American Medical Association*, demonstrated explicit evidence of cognitive impairment during a marijuana high and even after 24 hours of abstinence from the drug.

Sixty-five college students, who had reported their own heavy use, having smoked marijuana 22 out of the 30 days prior to the study, and 64 who were "light" users, having smoked a maximum of nine days of the last 30, were recruited. After a night of supervision, which allowed for the drug to wear off in their systems, the two groups underwent a series of neuropsychological tests.

Each of the two groups were assigned such chores as card sorting and memorization of word lists. On these and other attention/executive tasks, the heavy users performed at a much greater impairment than the light users.

These differences remained consistent after control factors, such as different levels of cognitive functioning before the onset of drug use, and the use of alcohol and other substances, were examined.

"Heavy marijuana use is associated with residual neuropsychological effects, even after a day of supervised abstinence from the drug," concluded the researchers in their report.

"However, the question remains open as to whether this impairment is due to a residue of drug in the brain, a withdrawal effect from the drug or a frank neurotoxic effect of the drug."

Overall, findings are consistent and coherent, including current studies involving a group in Ottawa who have shown that the children of pot-smoking mothers are more impaired in executive functions on a consistent basis than the children of non-smoking mothers.

"The changes are not visible to the naked eye, but they are impairments in the highest brain functions, those needed to function and adjust in a technological society," said Dr. Juan Negrete, professor of psychiatry at both McGill University and the University of Toronto.

There are over 400 chemicals in the marijuana plant. The main active ingredient is delta-9-tetrahydrocannabinol (THC.) Pure resin, known as hashish, can be smoked, eaten or drunk. There are stronger forms of resin today than there were in the 1960s.

The main physiological effects are an increase in appetite, increase in heart rate and bloodshot eyes. A form of anxiety called acute anxiety, often accompanied by paranoid thoughts, as well as depression and feelings of inadequacy can result from long term use of the drug.

Mental and emotional deterioration of users has been demonstrated in a number of studies. These clinical reports of personality change, called amotivational syndrome, include accounts of passivity, aimlessness, apathy and lack of ambition as well as a lack of the ability to communicate.

There are many observations yet unclear about the long-term effects on the body's immune system, reproductive system and lungs. Damage to the white blood cells has been detected, as well as the potential of marijuana to cause cancer.

The high concentration of tar in marijuana may pose an even greater danger than tobacco. In addition, marijuana has been shown to impair the ability of T-cells in the lungs' immune defense system to fight off many infections, such as bronchitis.

As for the harm rendered on the reproductive system, adverse effects on sperm production as well as a delay of the onset of puberty in males have been observed. A single dose of THC lowers the sperm count and the level of testosterone and other hormones.

"Every single scientific study that has been done in the last several years shows alarming increases in the toxicity and danger of using marijuana," President Bill Clinton said, at the signing of the Elementary and Secondary Education Act of 1994 in Framington, MA.

"Marijuana is not a medicine. There are over 10,000 documented studies available that confirm the harmful physical and psychological effects of smoking marijuana," the California Narcotic Officer's Association said in a 1996 convention.

Future studies are destined to surface with new evidence of the effects of marijuana on the mind and body. Safety lies in abstinence.

Reclaiming the anthracite region

By Courtenay Mastain

On Tuesday evening, representatives of anthracite mining in Pennsylvania gathered in Carnegie Hall to discuss a costly problem. According to Robert Hughes, the regional coordinator for the Eastern Pennsylvania Coalition for Abandoned Mine Reclamation, or EPCAMR, Pennsylvania has a "15 billion dollar problem."

Among the valued speakers were Dan Blaschak, a partner and treasurer of a family-owned and operated anthracite mining company Blaschak Coal Corporation, and Roger Hornberger and Dan Quarry representing the Pennsylvania Department of Environmental Protection (DEP). They all addressed the causes, effects and the goals of their organizations for the future of mining in Pennsylvania.

From 1870 until the end of the Cold War, anthracite mining was a major source of income for the state. Despite the economic benefits, mining virtually destroyed the environment, primarily through acid mine drainage. Streams flowing into Pennsylvania's major water source, the Susquehanna watershed, were contaminated by acid mine drainage and the effects continue to worsen.

Today, companies such as Blaschak, the DEP, and EPCAMR are working to reclaim the mines and clean up the devastated streams. The success of such an ambitious project relies on funding by the federal government who has refused to fund the environmental clean up. Unfortunately, those concerned with the reclaiming of the anthracite region are left with an uphill battle.

A film that EPCAMR promotes explains that anthracite mining was "the backbone of the United States" because it fueled the Amer-

ican Industrial Revolution and the many wars the country has fought. In fact, coal was the main source of energy until oil and natural gas were introduced after the World War I. Blaschak noted "before there were oil and gas, there was coal."

Since the decline of anthracite mining, which was at its peak in 1917, mines have been neglected and left open. This is a serious threat to humans. Not only does it allow the remaining anthracite to drain into the watershed, but it also serves as a deadly playground for naive children. There have been several tragedies as a result of neglect to the mines. By reclaiming the mines, Blaschak argued, such tragedy would be avoided.

The DEP's lengthy mission statement for the Bureau of Mining and Reclamation is compacted into one simple saying: "Promote Reclamation—Prevent Pollution."

They are dedicated to working with companies like Blaschak to grant permits to mine and conduct inspections.

In comparison, Hughes explained EPCAMR as "an educational movement." Being a non-profit organization, it works closely with the DEP and provides access to state legislators differently than a state agency would.

"Our goal is to educate the public on the problems of abandoned mine lands," Hughes said. This was the general message that each speaker conveyed throughout the discussion.

Highlighting what the individual can do to further the efforts to fix the \$15 billion dollar problem, Dan Quarry from the DEP provided optimistic encouragement. "By getting involved with groups [such as EPCAMR], you can impact the problem," Quarry offered. He suggested "looking at the watershed as a whole and attacking each problem individually," which seems to be the general approach each organization is taking.

Jonah Hall—The Bucknellian

Dan Blaschak, treasurer of the anthracite mining company Blaschak Coal Corporation, addressed the costly problems mining has caused.

RELIGIONS From page B1

The religious conferences were held over the course of two years at the Harvard Center. They encompass a wide variety of religions, including Buddhism, Confucianism, Shinto, Hinduism, Indigenous Traditions, Judaism, Christianity, Islam, Taoism and Jainism.

"Religious beliefs have always been a significant element in the shaping of new environmental systems," Sullivan said at the U.N.

At the culminating conferences, Grim and Tucker shifted the focus of the overall forum, namely to the relationship of religion to areas like science, economy, public policy and education with the help of the Harvard Center, the Harvard Yenching Institute, the Center for Respect of Life and Environment in Washington, D.C., the University Religion Department, a steering committee and an advisory board of specialists from the respective religions.

They also received financial support from the V.Kam Rasmussen Foundation, the Aga Khan Trust for Culture, Association of Shinto Shrines, Nathan Cummings Foundation, Dharam Hinduja Indic Research Center at Columbia University, Gernsmausen Foundation, Harvard Buddhist Studies Forum, Harvard Center for Middle Eastern Studies, Harvard Divinity School Center for the Study of Values in Public Life, Jain Academic Foundation of North America, the Albert and Vera List Foundation, the John D. and Catherine T. MacArthur Foundation, Laurence Rockefeller, Sacharuna Foundation, Surdna Foundation, Theological Education to Meet the Environmental Challenge and the Winslow Foundation.

Grim described the new approach at the American Museum of Natural History as a "developing seed, rather than something culminating."

This development takes form in the 11 volumes of material being distributed by the Harvard University Press chronicling the individual religious conferences and synthesizing them in a last volume. *Buddhism and Ecology* and *Confucianism and Ecology* are already available, and future conferences such as "World Religions and Animals," scheduled for May 1999 at Harvard and the Epic of Evolution and the World's Religions, scheduled for July 1999 at the Whidbey Institute in Washington are already underway.

The passionate and wise message which made up the conferences in New York could not possibly summed up in one article. Hopefully, with the continued help of Professors Grim and Tucker, this series of articles on the messages conveyed in New York can be transferred into an equally stirring and effective message to the University Community. If nothing else, it could offer more insight from the separate religious disciplines that attended the meeting.

"You scientists have this stupendous story of the universe... but you fail to hear its music."

That's what the spiritual tradition can provide. Tell the story, but tell it with a feel for the music." Thomas Berry.

The key to comedy lies *All in the Timing*

Seth Rabinowitz '01, Spring Potoczak '01 and Jay Klaitz '01 act like monkeys in *Words, Words, Words*.

By Laura Cardinal

Prepare to be entertained as the University's department of theater puts on its first mainstage production of the 1998-99 season: *All in the Timing*.

The play, which was written by David 'ves in the late '80s, is actually a collection of six contemporary one-act comedies. This critically acclaimed play won the Outer Critics Circle Play Writing Award in 1994.

Directing the performance this weekend is N.J. Stanley, visiting assistant professor of theater and dance. She is temporarily replacing Robert Gainer, who is on sabbatical leave for the rest of the year.

The six comedic acts of this unique play combine wit, intellect and satire. The messages concentrate on the importance of language in human communication. Stanley praises lives' intelligence and talent saying, "The dialogue in each play is so clever and witty that there is lots of

humor in the language alone."

The first play, *Sure Thing*, portrays the obsessive extent to which society today has taken on political correctness. The scene takes place in a restaurant where a man sees a young woman and tries to approach her using classic pick-up lines. Every time the man says something politically incorrect, stupid or boring a gong is rung forcing the couple to start the conversation anew this time from a different angle. As the conversation progresses, the gong rings faster and more often, creating a hilarious situation for the couple in the restaurant.

In the second act, *Words, Words, Words*, the audience is watching three monkeys, named Milton, Swift and Kafka, in the middle of a scientific experiment at Columbia University. It has been predicted that if three monkeys are locked in a room with three typewriters they will eventually write a version of Shakespeare's *Hamlet*. The monkeys analyze their predicament and eventually

come up with something much too funny to be considered classic Shakespeare.

The audience is bombarded with "Unamunda," the new language that will unite all of mankind, in the third act aptly named *The Universal Language*. The audience follows the story of a man and a woman as they struggle to communicate with each other through this new language. *The Universal Language* takes a clever look at vocabulary and the essence of human communication.

The fourth act, *Variations on the Death of Trotsky*, is the hilarious look at the last day of life of the leader of the Russian Revolution, Leon Trotsky. The audience watches as Trotsky tries to relive and unravel the last day of his life, and thus the mystery of how he really died, with the ax that killed him sticking out of his head.

The fifth act, *The Philadelphia*, grabs the audience's attention with classic wit and humor. *The Philadelphia* is a place where you can't get anything you want unless you ask for the opposite of it. This act portrays the comical side of a person who is having "one of those days."

Philip Glass Buys a Loaf of Bread is the story of a small time composer, Philip Glass, and his extraordinary trip to the bakery. In the sixth and final act, Glass takes an everyday action, going to the bakery, and turns it into an outstandingly hilarious event in which everyone in the store suddenly becomes enthralled by his music and his style.

Open auditions for *All in the Timing* were held Aug. 30 through Sept. 1. Seniors Randy Faust and Chris Scholl, junior Donald Jones, sophomores Spring Potoczak, Jay Klaitz and Seth Rabinowitz, and first-year students Mollie Martin, Erika Loker and Liz McCarty make up the core group of nine actors who perform in all of the plays. Most of the actors have multiple characters and can be seen in more than one play.

All in the Timing will be performed at 8 p.m. this Friday through Monday in the Harvey M. Powers Theatre in Coleman Hall. Tickets are currently on sale for \$5 in the Langone Center Box Office and will also be sold at the door on the night of the show.

Mollie Martin '02 and Christopher Scholl '99 flirt with each other in the comedic play *Sure Thing*.

A harmony of music, theater and discussion

The *Preludes!* lecture series brings a dialogue between artists and the community

By Ted Burnes

Get ready, the invasion of the artists is about to hit campus. While many students complain that there's nothing happening on campus this weekend, the Weis Center for the Performing Arts says otherwise. With a season full of outstanding artists and a new lecture series that is sure to stimulate the artist in all of us, there is most definitely something to do this weekend—the only problem now is whether you'll have time to do it all.

As the Weis Center charges through its 10th season of bringing quality performances to campus, it is also trying something new by introducing a new lecture series, *Preludes!* This series consists of talks and lecture-demonstrations focusing on the nature of form and time in music and other performing arts. *Preludes!* gives the University community an opportunity to supplement performances by meeting artists and engaging in conversation.

"Our new lecture series will be an adjunct to the educational possibilities of the University," said Bill Boswell, director of Weis Center cultural events. Boswell, who has been working with the Weis Center for over nine years, said that "this is the first series of its kind that we have ever done; we're testing the waters." Boswell then explained that the series gives the University community a way to experience the best in art in a different way; they not only see the performance, but now they can take their understanding of art to another level.

When asked about the motivation behind the new series, Boswell went on to comment that the series demonstrates the role of the Weis Center on campus. "Bucknell is not a commuter school; people live here, and the series, like other events, is something to do. Many times, the Weis Center provides the opportunity for the students to experience the best in performance art. Students have the opportunity

to dress up and go on a formal date, or see and hear art they enjoy."

Boswell also went on to say that the series also shows the sophisticated artistic taste that the University community has. "[The artistic scene at Bucknell] is unusually sophisticated and very diverse for where we are," Boswell, who is a composer himself (his newest show being a cabaret, will be showcased in New York City in January 1999) commented that "although

Bill Boswell, director of cultural events at the Weis Center, organized *Preludes!*, an innovative art-lecture series.

Lewisburg is in rural area, the tastes of the school and the community show that Bucknell is not a rural school."

"People who live in Lewisburg, as well as students and faculty, are highly artistically educated. They read the *New York Times*, and they come from places such as New York and Washington, DC; they know who people like Laurie Anderson are. The Weis Center's events and the *Preludes!* series reflect this level of education. The series gives those on campus and in the community the opportunity to speak with artists and converse about various artistic issues," Boswell said.

The series is composed of four pre-performance lecture-demonstrations throughout the rest of the year, along with many other performances, lectures, and concerts held at the Weis Center. So when your friends are complaining of boredom, grab some nice clothes and run to the Weis Center for an evening with the arts.

PRELUDES! Schedule of Events

All events will be held in the Weis Center and are open to the public without charge; tickets are not required.

Thursday, October 15, 7 p.m.
England's The Fitwilliam String Quartet demonstrates the concepts of form in three quartets of Haydn, Janacek, and Shostakovich.

Thursday, October 29, 7 p.m.
University composer William Duckworth and pianist Judith Gordon talk about and demonstrate the temporal and formal aspects of *The Time Curve Preludes*: Can we hear "time curve?"

Thursday, November 12, 7 p.m.
The Aquila Theater Company of London performs Homer's *The Odyssey*, followed by a discussion between the artists and the audience (offered in conjunction with the University's classics department).

Thursday, February 11, 7 p.m.
The three young artists of The Ahn Trio explain the forms used by a young Johannes Brahms and a young Leonard Bernstein in their piano trios: How much difference did a century make?

This series is made available to the community in part through funding from the Bucknell University Association for the Arts.

Music Reviews *Tripping Daisy & Hayden*

By Andy Burge

Tripping Daisy: *Jesus Hits Like the Atom Bomb*
© 1998 Island Records

Before the recording of a new album, some changes were made to the structure of *Tripping Daisy*. Four of the five members were ready to begin recording, but one was missing; he never showed. In came the new drummer and, along with him, a new album: *Jesus Hits Like the Atom Bomb*. This was their follow-up set to *I am an Elastic Firecracker*.

This album is best described as layered, full and promising. *Jesus Hits Like the Atom Bomb* contains pure pop songs such as "Your Socks Have No Name" and "Sonic Bloom," but are careful not to fall into a rut of pop songs that would make any sane person scream. Some songs that mix things up a little bit are "Wanted A Light Year" which features a great beat accompanied by a solid guitar riff, and "Human Contact" which is slow and seems almost methodical in style. This is one of the few songs on the album that is not fast paced at any point and makes you feel very content with life.

One thing I have found out about *Tripping Daisy* is their style of music is not one that jumps out and grabs you from listening to it once. Their style necessitates an acquired taste. The closest resemblance to another band would be Blur, but without the British accents and maybe slightly less poppy. What makes *Tripping Daisy* different from everybody else is their lead singer: he has a voice that puts him in a league by himself.

Some people might be scared off by the previous album, *I am an Elastic Firecracker*, which was dubbed by many as a one-hit-wonder. *Jesus Hits Like the Atom Bomb* is more complete, and with the new addition to the group it is unlikely to suffer the same fate. The album is different from most and takes time to acquire a taste, which is why I would give slight caution for its purchase. It is a good CD, but are you willing to spend the time to like it?

Hayden: *Everything I Long For*
© 1995 Outpost Recordings

Hayden Desser, who goes by Hayden, is as mellow as a person can be. Though only 27-years-old, he is quite insightful about people's downfalls and insecurities. Hayden is a man who has apparently suffered hardships in his life because he sings about his problems. His strong delivery aids in bringing more meaning to his words. He does not hide these meanings behind loud guitars and pounding drums. It is just him and his acoustic guitar. If you have not guessed by now, Hayden fits into the folk genre.

People can relate to Hayden because he sings about problems that normal people have; he reaches a large audience. "We Don't Mind" is a perfect example. It is so simply told and so universal that it is impossible not to make a connection with the song's quiet ending. This song also proves that he is a romantic at heart by describing a time he spent at home with his girlfriend. The song fragment "Stem" continues with this subject matter as it describes buying a rose for his girlfriend, only to have all the petals blow off.

Although Hayden's music is sad and depressing, he occasionally offers us some hope for solving our problems, but in order to detect it one must listen closely. Because his lyrics are so simplistic and are related to everyday life, one can almost compare him to a Seinfeld episode, but replacing the laughter with a depressing mood. What adds emphasis to the meanings Hayden portrays and the moods he creates is his rustic and sometimes scratchy voice.

Everything I Long For is a great CD to listen to when you get tired of the complexities of life and want to listen to simple problems to which you can relate. He offers a great alternative to the poppy-feel-good music that has absolutely no meaning. Hayden puts all his feeling into each song, making it great. Although Hayden's style is folk-rock, and not my usual taste in music, I find it to be a breath of fresh air.

Intense images in the art gallery from the Spanish Civil War

By Jamie Troxell

Boldfaced letters on posters around campus announce its presence like a fire siren, yet many students remain oblivious to it. The Center Gallery on the third floor of the Langone Center gives students and guests the opportunity to browse unique, historically significant exhibits without charge.

One of the Gallery's six projects this year is the exhibit "Shouts from the Wall," a vivid collection of posters and photographs brought back by volunteers from the United States and dozens of other countries after the Spanish Civil War. These posters portray the international struggle against fascism in Spain. Fascism, a type of government in which civil liberties are repressed in the interest of enriching relatively few, was very prominent in Spain in the 1930s.

These posters, which were plastered on walls throughout many Spanish cities, became a source of courage and strength to many. A simple image on a poster became the universal language of a nation, especially for the illiterate 50 percent of the country's population. They were an effective way to rally people for specific causes such as keeping soldiers sober during their leaves of absence and encouraging women to join the front as fighters.

The 34 posters on display in "Shouts from the Wall" were brought back or sent home by American volunteers, who referred to themselves as the Abraham Lincoln Brigades, who went to support the Spanish Republic during their civil war.

As part of the 60th anniversary of the Spanish Civil War, the Abraham Lincoln Brigade Archives is launching a major national exhibition of the Spanish Civil War posters that will bring the wall art to a new generation of viewers, and our University is one of the few fortunate enough to have that privilege.

Stuart Horodner, the director of the Center Gallery, and Cynthia Pelletier, the Center Gallery coordinator, recently provided some insight on determining how art can be used to express politics.

Why did the University want to bring this exhibit here and what can viewers expect to see when we look at it?

Horodner: If somebody comes to see this show, they're going to wind up confronting some pretty intense images and some very striking graphics in terms of the design and layout of these posters, which is one of the many reasons we want to bring this kind of thing here. This is not an art about art; it is an art about abstract ideas and an art that is dedicated to the quiet and calm of a museum. This was an art which, on some levels, was never intended to be shown in a place like we are showing it. It was intended to be in the middle of people's lives at a historical moment, trying to raise people's anger and awareness. We are now looking at it as a historical entity.

Pelletier: This is a traveling exhibition, and this is the first time that it is even being seen in the states. These are posters that are striking in their beauty, and I think that they bring to mind some very modernist ideas about art and art deco. You're going to look at them from at least two vantage points: one will be visual, and you will also look at them for their message.

J. Bauset's *The Iron Column—Peasant! The Revolution Gave You The Land, 1936?* from the "Shouts from the Wall" exhibit in the gallery.

How effective do you think that this artwork is politically?

Horodner: How well they serve their purpose is completely linked to how good they are as artworks. If you look at them, and you look at what they protest, what happens is you try to combat horrible things with horrible images. That's a strain that runs through most political art. Any white-protest art, or political art is incredibly interesting. This is a visual form of information, which was pre-television. These things were produced to give information and affect people in a way that is almost inconceivable now. If you wanted to get a message out now, about something going on in our present culture, you would not use a poster to do it necessarily. These posters are very complex and incredibly sophisticated in terms of how they were put together. Their design helps carry their message.

Pelletier: When we're looking at these modernist views of that time,

Jose Bardasano's *Treballadors* from the Spanish Civil War.

surrealism, art deco, and photo montage, all of those things were being looked at that time. You'll see all of that in these posters.

Paul Susman, chair and associate professor of geography, was very instrumental in arousing the gallery's interest in this exhibit. Susman's father was one of only 2,800 Americans who volunteered to fight in the Spanish Civil War, and he was one of the founders of the Abraham Lincoln Brigade Archives. He too provided thoughts on the exhibit.

Why is this exhibit significant to history?

Susman: These volunteers went over to fight, and they lost. But, many of the volunteers continued throughout their lives in a struggle for democracy, human rights, and social justice issues throughout the world. Many of the veterans saw the fight in Spain as an essential turning point in world history and as an important lesson for us to draw to upon and to think about as we continue in our political lives today. Also, it is something that is not studied in the United States very much, so most of us went through school not knowing this part of European history. Many of them were subjected to the ravages of the McCarthy period because they were considered to be communist sympathizers; they were hounded and even sent to jail. Many of the people who fought in Spain were referred to by the U.S. government as "premature anti-fascists" because they went against Hitler, Mussolini, and Franco before it was official policy to think that fascism was bad. As my father and others always said, "How could you be against fascism too soon? When is it alright to allow suppression of human rights? Up to what point are concentration camps alright?"

Why did you feel that this exhibit should be brought to the University?

Susman: The Abraham Lincoln Brigade Archives were not set up just for people to remember the past but to be aware of it as a living thing that we have to understand today. Civil liberties and democracy and issues that we think about today are fragile, and they're not assured. We have to keep that in mind. The issues that it raises are crucial issues for all of us and the particular exhibit of the posters is very important in the symbols and the message. The posters relayed the concerns and cries of the people of the time and so it's a way of having us think about the history, the politics, the art, the culture, and how all of these things come together as a way to understand that time and as a way to think about the present.

In addition to this artwork, two lectures will be held in the Gallery Theatre: the first lecture, "The Aura of the Last Great Cause: Art, Politics, and Culture of the Spanish Civil War" will be given at 8 p.m. on Nov. 9 by Cary Nelson, Jubilee Professor of Liberal Arts and Sciences at the University of Illinois, Champaign-Urbana; the second lecture, "Memory and Commitment: Two Generations Look at the Legacy of the Spanish Civil War," will be given by Professor Susman's father, William Susman, and Cary Nelson.

Along with the exhibit, "Shouts from the Wall," the Center Gallery is presenting Lisa Hoke's sculpture "Ricochet," a directionality active work comprised of four hanging screens in a loose T-formation, made with thousands of Day-Glo colored drinking straws encased in resin. These panels are suspended by thread which moves from the ceiling, across the room, through a constellation of drawer pulls on the wall, winding up around a cluster of cast iron food-forms just above the floor. It combines elements of the kitchen, bathroom and bedroom.

The exhibit is tentatively set to open on Oct. 30, but there is a possibility that it may be opened by Homecoming Weekend. It will run until Dec. 11. A reception will be held in the Center Gallery from 4-6 p.m. on Oct. 30, and there will be discussions of the exhibit; all are welcome to attend.

These works of art are open to the public and can be taken advantage of from 11 a.m. to 5 p.m. Monday through Friday and from 1-4 p.m. on Saturdays and Sundays.

African-Caribbean poet defines poetry in lecture at Bucknell Hall

By Christian Schuman

Not an empty seat remained in Bucknell Hall on Thursday night, Oct. 15 for the African-Caribbean poet Tato Laviera. CUMBRE, the Race and Gender Resource Center, Stadler Poetry Center, the University Lecture-Scholarship Committee, the Association for the Arts, the Multicultural Center, the Latin American Studies Program, and the Spanish Department teamed up to present Tato Laviera.

Tato Laviera, the poet who spoke for the African-Caribbean CUMBRE event, addressed a full house audience at the University's Bucknell Hall.

Laviera told the crowd that he wants "to be everything." The enthusiastic response of the audience to this 1981 Book Award recipient makes him appear that much closer to his goal. The Latino Press published Laviera's first book, *Enclave*, in 1979. Rarely does a Latin American work stay in print for very long, but *Enclave* broke the mold as it is in its sixth printing and passing the "500,000-sold" mark.

Laviera followed his 1979 effort with *América* and *Main Stream Ethics* in 1985 and proudly refers to all three collections of his work as "novels." To complement these three collections, Laviera had excerpts of his works featured in such publications as the *LA Times*, *The Houston Chronicle*, *The Chicago Tribune* and the *New York Times*.

He currently resides in New York, but visits at least 20 university campuses on four continents every year. The response to these deliveries is astounding, as

is the enthusiasm and involvement of his audiences. Laviera opened his delivery with his personal definition of poetry, emphatically commanding the crowd to mimic him. Upon direction, the group of students, faculty and administration called on poetry as "an outright love, affection, sentiment, feeling, an attitude, soul, inner-most gut, an expression of intimate thought upon a moment's experience... an incessant beauty called by a person by an action that takes form."

Tato's dramatic expression

and body language brought feeling into every word, every line, leaving the audience laughing, singing, and applauding for more. "He has this amazing way of bringing out sentiments you didn't know were there," said one intrigued onlooker. "I love how he reels you in with words and bombards you with feeling," said another.

Reel you in, he did. He had the audience repeating various phrases and single words at appropriate times. At one point, during his love poem, "Touch," Laviera told the audience they would be so into it that they'd "better get ready to make out."

At the conclusion of the reading, he attributed his passion to the sensitive words of his late mother: "the only way to be a poet is to find the sensuality of love."

Along with interjections from the entire audience during his readings, Tato called on various students throughout the program to take the podium and offer a "multicultural expression." Eleven such expressions were raised on everything from apathy and diversity issues to points on communication and education.

The first seven were students' own expressions and the four were part of Laviera's evening denouement. His parting words had the remainder of the audience on their feet, demonstrating the lasting effect he had on his audience.

The Boys' Club

By Kristen Jancuk

The halls of Wall Street represent the few remaining strongholds of straight, white male power. And a visit to the New York Stock Exchange will prove this true. Women, African-Americans and other minorities are virtually non-existent. In fact, out of the 1,366 members of the stock exchange, only 169 are women and of this number only 40 work actively on the trading floor.

Although

the media are adamant about portraying a modern Wall Street, by using female correspondents for stock reports and claiming that investment by 41 percent of American households represents a "diverse cross section of the country," the truth is that Wall Street today remains an almost exclusive "white boy's club." So how does such an organization deal with homosexuality? Joseph Daniel found out.

The first seven were students' own expressions and the four were part of Laviera's evening denouement. His parting words had the remainder of the audience on their feet, demonstrating the lasting effect he had on his audience.

ployer, you're never going to work in this business again."

According to Larson, financial adviser to gay men and lesbians, "There is tremendous pressure to keep homosexuality a secret in the business." However, "the closet" often allows for discrimination against homosexuals. He continues, "Being open and very out makes it harder [for them to discriminate]." When no official statement has been made, as in

Daniel's case, but sexual orientation is known, it is much easier to discriminate. Larson comments that employees who are "discovered" to be gay or lesbian often make employers and colleagues feel deceived and this perpetuates further discrimination based on anger. Though there is a New York law prohibiting job discrimination based on sexual orientation, few Wall Street homosexuals have ever dared to announce their sexual preference, let alone seek their right to equal treatment. The few that have were handled quietly by internal arbitrators. As the first to bring his case into the public eye, Daniel represents the beginnings of a "gay rights" movement on Wall Street. "Out of this carnage comes increased awareness."

MG 101 company updates

By Carli Snyder

Did you all receive the message about the tongue scraper? Maybe you have a pair of leisure pants in your drawer? Or a "Where is Good Luck John?" poster hanging on your wall? All of these ideas originated in the Introduction to Organization and Management course more popularly known as MG 101. If you have taken MG 101, then you have probably heard other creative ideas like these.

MG101 is one of the most popular courses on this campus. And we aren't the only ones who think so. Thirty universities have adopted the course that Professor John Miller began. While this course is a prerequisite for Management and Accounting majors, many people choose to take it because of its hands-on nature and applicability to the real world.

MG 101 isn't the typical course, but that is what makes it so interesting. Every Monday and Wednesday, the class of about 130 students meets in the Forum for an hour lecture led by either Professor John Miller or Professor Tammy Hiller. Then the class is broken down into four lab sections of around 32 students which meet every Tuesday and Thursday for an hour and a half.

It is during these lab sessions that the concepts from the lectures are actually put into practice. Each of the four sections forms a company in which they develop a business and service project, and at the end of the course present their "story" in the form of a presentation and a written

report. This is not just a simulation. It is real. All classes determine their own organizational structure and who they want in each position. They must approach a board and ask for a loan.

If the loan re-

ports. This is not just a simulation. It is real. All classes determine their own organizational structure and who they want in each position. They must approach a board and ask for a loan.

Company A: "All About Action" will conduct a regional book drive and will work with children and senior citizens in a reading and literacy program. They'll fund their projects with proceeds from the design and sale of lacrosse shorts.

Company B: "Beyond the ER" will provide cleanup and renovation services to the Heiter Community Center, using funds from the design and sale of hospital scrub pants.

Company C: "C B U" will provide cleanup, winterizing and other services for senior citizens in the Lewisburg area, using funds from the production and sale of aerial photo posters of the University campus.

Company D: "Doing It In The Hood" will provide services to residents of the Haven Ministry Shelter, as well as renovation and repairs to shelter facilities, using funds generated by the design and sale of Bucknell hooded sweatshirts.

MG 101 not only prepares students for the real world, but it fosters hands-on experience in the process.

Vienna Choir Boys preform for surrounding community

The Vienna Choir Boys performed at the Weis Center on Sat. Oct. 17 for the University and the surrounding community.

By Melissa Marzouka

The Vienna Choir Boys marked their historic semi-millennial anniversary by performing at the Weis Center on Sat. Oct. 17. Founded by Emperor Maximilian in 1498, this group of talented young boys was accompanied by the renowned Vienna Chamber Orchestra, as well as the Chorus Viennensis, a group of ex-choir boys. As part of their tour throughout the United States for their celebrated anniversary, the choir will perform at Symphony Hall in Boston, the Kennedy Center in Washington, D.C., and Carnegie Hall in New York.

Special thanks was given to Heather and Robert Caldwell and Mr. and Mrs. Henry A. Truslow who made generous contributions to make the performance by the Vienna Choir Boys, the Vienna Chamber Orchestra, and the Chorus Viennensis.

Included in their repertoire on Saturday was Mozart's remarkable Coronation Mass, other works written by Joseph and Michael Haydn, Slieri and Schubert (himself a choir boy), and Bruckner. Agnes Grossman was credited for her artistic directing and conducting.

The campus was also acts as the Conductor for the Vienna Boys Choir.

BAC sponsors open mike night at the Bison

By Krista McCabe

For most students the Bison is a place to eat and socialize. However, once a week the Bison gets a creative twist added to it. Bucknell Activities Council (BAC), sponsors a coffeehouse every Wednesday night from 9-11 p.m. Usually BAC schedules people to come and perform ahead of time. At the beginning of the year, students try out to perform comedy acts, musical pieces and other various talents. Last Wednesday, Oct. 15, BAC had its first open mic of the semester for the coffeehouse. The open mic ran from 9-11 p.m. and was for any student who wanted to perform.

"The purpose of tonight was to get people acquainted with performing at a coffeehouse to see if they are comfortable with the coffeehouse situation. If they are, they could sign up to do a full show for BAC," Molly Sagharian '01 said. She is the coffeehouse chair and schedules all of BAC's coffeehouse events. BAC's coffeehouse has performers every week, but it only has an open mic a few times throughout the year. This open mic al-

lows people to test their creative side. Sagharian said that many had signed up to come and play their guitars and sing. "Tonight was a chance for the Bucknell community to get to express themselves," Sagharian said.

The students that try out to perform at a regular coffeehouse have to perform for either an hour or the full two hours. Performers receive ninety dollars for the entire two hours and forty-five for the first hour. The open mic gives students a chance to see how they feel performing and perhaps they will want to try out next semester for a scheduled performance at the coffeehouse. It also gives students a chance to express themselves in front of others and to test out their talents. Though BAC only runs the open mic a few times, Sagharian encourages students to contact her about performing at a regular coffeehouse. To reach her call x4388 or e-mail her sagharian@bucknell.edu. She also encourages everyone to participate and support the coffeehouse. It is a great opportunity to see the talent that lies hidden on campus. Coffee, cookies and an artistic atmosphere are included. The best part, though, is that all of it is free.

Campus goes mad for midnight celebration

By Elizabeth Fiedler

Nearly 1,400 students competed at various games to win cash and prizes, including an airline ticket and four \$10,000 prizes at the Midnight Mania celebration. Upon entering Davis Gym, students were greeted by the smell of hot wings and hot dogs, and by the sound of fans cheer-

Students also competed to win declining balance money and cash prizes including \$1,500 for successfully shooting a three-pointer. None of the participants in this activity were able to make the basket, though, so the prize money was left unclaimed.

According to Cindy Opalski, the Assistant Director of Recreation and Intramurals, the nu-

Panhellenic Council made Midnight Mania possible. The Deans were present at the event and once again, participated in creating a diversified social option for University students.

The most prosperous part of the night was the tennis ball roll. In this game, students who held winning tickets stood along the endline of the basketball court.

Each student then rolled a tennis ball, and the ball that ended the closest to the middle of the center circle won an airplane ticket to anywhere in the continental United States. A

number of contestants were close to the mark, but the clear winner was Anthony Grubb '02. If he could choose to travel to anywhere in the United States, Grubb would select the beaches of California.

Although the idea of beginning Midnight Mania on campus originated to "kick-off Alcohol Awareness Week," stated Opalski, it is hopeful that another similar program will occur in the

spring. According to Opalski, as a result of the success of Midnight Mania, this future event will possibly not be focused on athletics, but on another area of student life.

Beetna Kim—The Bucknellian

Above and upper right: Delta Delta Delta challenges members of the University's Women's Softball Team in the finals of the Midnight Mania three-on-three basketball tournament.

ing on the game contestants.

Each student received a numbered ticket. The participants for each game were determined by who held the ticket with the announced number.

The games included a competition between blind-folded students who searched the gym floor for a stuffed bison and a race to see who could pop a series of balloons the fastest with their nose or elbows. While students supported their sports, their Greek affiliations, or simply themselves, many of the participants had a great time competing.

merous groups across campus collaborated to make Midnight Mania a success. "It transcended all of the different constituencies on campus." "It was really wonderful to see everyone there," Opalski said. She said that a number of campus groups were key in helping organize the event, which ran from 11 p.m. until 1 a.m. Two of these are Dining Services, which provided the refreshments, and the Bookstore, which offered the prize of a gift certificate to pay for books.

Opalski also emphasized how the support of Deans Commerford, Conrad, and Baker, and the

Beetna Kim—The Bucknellian

Davis Gymnasium was packed with University students, faculty, and community members on Saturday, Oct. 17 for Midnight Mania. The event gave out numerous prizes and was the first event in kicking off Alcohol Awareness Week.

Salvation Army announces another local service center

By Lisa Molinelli

A representative from the Salvation Army's new service center, located here in Lewisburg, said that the organization has been actively present in the Union County area for 100 years.

However, up until very recently, the closest Salvation Army service station was located in Milton, PA, covering upper Northumberland and Union Counties.

"So much need was presented, that a Salvation Army was opened in Union County, here in Lewisburg," said Captain Andrew Murray, a representative at the Salvation Army's Lewisburg office.

The new office, which is located in the building adjacent to Bechtel's restaurant on Route 15, was up and running by June 1, 1998.

It employs one part-time case worker, but relies mostly on the help of its volunteers.

"That is how we are able to stay so cost effective," said Murray.

The service programs run by the Salvation Army are numerous as well as diverse. Murray said the programs are all structured

with the goal of helping people to get back on their feet and educating them so they can become independent and provide for themselves in the future. For instance, the Salvation Army houses an emergency food pantry that will supply a needy family with a

and independence.

Some of the more seasonal programs are the ones for which the Salvation Army needs the most volunteers. For instance, the Salvation Army sponsored a food drive in conjunction with the recent Rusted Root concert.

With a great deal of student help, they were able to raise the equivalent of 2,090 pounds of food in both money donations and actual cans of food.

The Salvation Army is currently gearing up for their annual Christmas food-and-toy drive which provides for approximately 150 families in the surrounding area. Murray stressed the great need for help with these programs and the invaluable service that volunteers provide.

If anyone is interested in volunteering for the Christmas drive, or any other Salvation Army programs, contact Cindy Fawess, the coordinator, at 524-7790. Ms. Fawess can be reached from 9 a.m. to 1 p.m., Monday through Friday. Both individual volunteers and group organizations are encouraged to offer their time. Please call, even if it is simply to inquire what events need extra volunteers.

"So much need was presented, that a Salvation Army was opened in Union County, here in Lewisburg."

—Captain Andrew Murray

five day supply of food until they can find their own source. Murray made it clear that this was not a supplementary food program, but only utilized for true food emergencies. The Salvation Army assists families or individuals with more serious income problems by offering budgeting classes.

The Salvation Army also sponsors social development programs for children who cannot find ample support in their home environment. Murray said the children who participate in this program have been kicked out of similar programs elsewhere, and have nowhere else to turn.

The Salvation Army designs weekly activities for these children which help to build their self esteem and foster creativity

Let's make a difference: Make volunteering a way of life

By Tracy Gaskin

Volunteer work is a way of life for many University students. In high school, many participated in service clubs, fundraisers and volunteer activities, and have continued to donate their time, despite the added responsibilities of college life.

This is the first of a series of monthly articles which will highlight community service activities at the University, such as Circle K, Alpha Phi Omega, Students Against Multiple Sclerosis (SAMS), Optimist International, PSEA, BISON Volunteers, Big Brothers/Big Sisters, fraternities, and sororities. Our focus this month is on "Make a Difference" Month.

In an attempt to promote service, the University's Community Service Team designated October as a community service focus month. The official title is "Make a Difference Month" in honor of National "Make a Difference Day," which is a day when individuals across the nation unite and volunteer in their communities.

Over the course of the month, many new volunteer opportunities have been included in What's Happening. In addition, the first Bucknell Volunteer Newsletter was published, and a table promoting community involvement was set up in the LC Mall. On National "Make a Difference Day," Saturday, October 24, a table staffed by students will be in the LC Mall soliciting donations for Susquehanna Valley Women in Transition, the Donald Heiter Community Center, the Public Library, and the American Red Cross. We are challenging University students to com-

plete one hour of community service during October, for a campus total of approximately 3,300 hours. New projects will continue to be included in What's Happening for the remainder of the semester, including events such as a river clean-up and the Giving Tree.

"Make a Difference Month" encompasses one-time volunteer activities. If you are interested in on-going volunteer opportunities, BISON Volunteers, a division of the Community Service Team, can help you establish a connection with various organizations in the immediate community. BISON Volunteers, the University's student-run service organization, is composed of program, or section, leaders for numerous community organizations. These program leaders are liaisons between the University and local agencies who coordinate volunteers by setting up and tracking volunteer hours. Some organizations that are in need of leaders are the American Red Cross, Evangelical Community Hospital, Family Planning Services, and the Ronald McDonald House. New programs are always welcome. Contact BISON Volunteers at x3573, or stop by during office hours, Monday 3-5 p.m., Tuesday 11 a.m.-1 p.m., Thursday 1-3 p.m., and Friday 11 a.m.-12 noon, if you are interested in volunteering.

Contribute your time and support to service activities throughout October and the remainder of the semester. Whether through one-time, long-term, or philanthropic projects, you have the power to make a difference in someone's life.

Lydia Hagstoz—The Bucknellian

The Clothesline Project has been on display in the Bostwick Cafeteria and also in the display case on the first floor of the Langone Center. The display represents different types of abuse against women.

Clothesline Project promotes awareness

By Anne Monoky

As interns in the Women Resource Center, students Krystal Buhr '01 and Kumba Baryoh '01 were required to conduct a major project throughout the campus. They chose to participate in the nationally organized Clothesline Project.

The Clothesline project allows victims or those close to the victim to visually speak out about violence by decorating t-shirts. Each t-shirt's color indicates a different type of abuse that occurred including rape and domestic violence.

Buhr said, "This is a form of expression for the victims. It allows women across the nation to say 'We're not going to take it anymore!'"

The shirts, hung in the Bostwick Cafeteria and outside the Cafeteria in the display case, have been accumulated throughout past years of doing the project. The Women's Resource Center organized a session when people were able to come in and decorate any new shirts.

This year the project collected approximately five new t-shirts.

Buhr and Baryoh stressed that the goal of this project was to promote awareness about violence and let people know that it can happen to them. They indicated that such incidents of violence can happen anywhere, even at this University.

October is National Domestic Violence month, and Oct. 22nd is Young Women's Day of Action, so the Center chose this time to allow people to express the emotions against those who have committed these crimes. Buhr and Baryoh indicated that the Women's Resource Center has a lot of literature on a large array of topics that provide support and guidance for both males and females on campus.

The Center sponsors different programs that brings different presentations to campus. The director of the Women's Resource Center, Janice Butler, traveled to Washington D.C. last spring to bring the University's collection of shirts from the Clothesline project for representation on the national level.

University hosts workshop and conference on Greek life

By Tracy Thiffault

Greek representatives from colleges throughout the state gathered at the University Monday for the second Pennsylvania Greek Life Drive-In Workshop; the workshop was followed by participation in a national teleconference on "Greek Life and Higher Education," sponsored by the University of Vermont. Despite the low turnout from students and fewer schools represented than last year, the event was considered a success by most.

The 35 attendants included students from schools such as Lock Haven, Villanova, Millersville and Carnegie Mellon. The students, who participated in workshops throughout the day, discussed Greek issues prevalent at most universities, including personal accountability, hazing, rush and alcohol use.

"The goal of the [morning workshop] was to bring Greek people from all over the state of Pennsylvania together to talk. The biggest thing for me is that we would give [other schools] something to help their own Greek programs," Baker said.

"The afternoon teleconference covered all those issues again," he said. "It was interesting how the topics discussed in the morning were viewed in the afternoon as important issues that would effect Greek life on all campuses."

The teleconference was led by four groups of panelists from all over the country, including administrators and two student representatives from Kansas University, the University of Idaho, Vermont and the University of Mississippi. Questions were faxed from host schools and answered via national satellite.

Christine Lellis—The Bucknellian

Dean Baker, administrators and student representatives participated in the Pennsylvania Greek Life Drive-in Workshop and teleconference.

One question from the University, "Should Greek students be held to a higher standard than students in a residence hall?" was discussed by the panelists. The panelists responded that absolutely they should be held to a higher standard.

While ground breaking, the teleconference was not thought to be a success by all. Pete Kadens '00 said, "There were a lot of solutions offered by the panelists, but they wouldn't work here because the panelists came from such larger schools. [The teleconference] was informative, but that's about it."

"Hearing the situations at other schools makes me very proud of our Greek system," said Panhellenic President Charlene Vai '99.

"It feels good to come and bring those people here and not be embar-

assed at what they see," Baker said. "I thought the day was successful."

Also in attendance at the conference were Richard Chapman and Gerald Commerford, associate deans of students', and other Greek representatives.

"While the solutions that work on one campus may not on another, hearing the way other campuses deal with situations was interesting," Vai said.

"Every time we bring people from other colleges and universities together, it is inevitable that they look at Bucknell and ask, 'how do you do that here?'" Baker said.

"We expected several hundred people to show up," Baker said. "But then other schools decided to host the conference on their campus to See GREEK, page 2.

University hosts minority visitation

By Greg Venbrux

Over 100 prospective students will be visiting the University this weekend for this year's Minority Fall Visitation Program. The prospectives will be arriving from a variety of metropolitan locations including New York City, Baltimore, Washington DC, Philadelphia, Pittsburgh and other areas. They will stay with students and enjoy a taste of what it's like to be at the University. Activities will begin at noon on Sunday and continue until 3 p.m. Monday afternoon.

In the past, only about 40 or 50 prospectives would sign up for the program. However, this year's program promises to be the biggest yet with more prospective students visiting than ever before. Gil Villanueva, associate director of admissions, said, "This is the biggest it's ever been. Typically in the past we would have maybe 50 people at most, sometimes as low as 28. Last year we had over 100, and this year we have 173 registered students. I believe Bucknell's growing national presence is responsible for the increase in interest."

The Minority Fall Visitation Program began in 1990 to acquaint prospective students from different backgrounds with the academic and social opportunities available at the University. Villanueva coordinates the recruitment of minority students at the University. "The purpose of the program is to generate minority student interest for Bucknell by raising awareness of the academic and social programs we offer. Minority students from nearby major urban areas were invited to stay overnight on campus. These areas lie within a three-hour radius, including Harrisburg, New York City, Philadelphia, Baltimore, Pittsburgh, Washington DC and from the Newark area," he said.

The prospectives will be hosted by a multitude of students who will show the visitors what it's like to be a student at the University. "The point is to give the student a sense of what it's like to be on a college campus," Villanueva said.

In addition to acquainting the prospectives with the University community, numerous other events are scheduled to

Rutherford survived a landmine explosion in Somalia.

Landmine survivor shares experiences

By Aimee Nicklaus

Ken Rutherford, a landmine survivor and cofounder of the Landmine Survivors Network spoke on Thursday, Oct. 22 in the LC Gallery Theatre.

The landmine accident occurred when Rutherford was a training officer for the International Rescue Committee in Somalia in 1993. He was injured by a landmine and after 11 surgeries, lost both of his legs. Since his accident, Rutherford has traveled extensively, visiting and organizing victims in pursuit of an official ban on landmines.

Landmines are designed to maim, not to kill. A disturbing fact that is finally touching more Americans is that "our troops (US) are increasingly going to landmine-infested places." Furthermore, the number-one threat to forces in Bosnia is landmines, not snipers. "What would happen

if video coverage was released of five US soldiers falling victim to a landmine?" Rutherford asked.

Though the U.S. is currently spending \$80 million from the Pentagon budget and \$20 million from the State Department on de-mining efforts, Rutherford is working to achieve total ban on landmines.

Rutherford talks about the first moments of his landmine disaster: "After the explosion, I first remember seeing a foot lying on the floorboard of the car. I remember thinking: 'Is it mine?' It was. It was my right foot. I remember that I kept trying to put it back on, but it kept falling off. Then I looked at my left foot. The top part was ripped off and I could see bones going to my toes, one of which was missing."

"I dragged myself out of the car and called for help on my radio. It seemed like a lifetime before help arrived. While I was waiting, I prayed to God. I was also spitting up blood, so I thought that I might have internal injuries that could be fatal. I asked God that if I lived, I would like to marry Kim, my fiancé of two months, and raise a family. In the evacuation plane from Somalia to Nairobi, a Belgian doctor and an American nurse gave me blood from their bodies to mine."

Since its inception in 1995, Rutherford's cause, the Landmine Survivors Network, has been building a worldwide network to link landmine survivors with the resources they need to recover, heal, and resume their role as participating and contributing members of their society. "While we can't give victims their hands, feet, or eyes back, we can ease their suffering, and help them once again become productive members of their communities," Rutherford said.

One of the most rewarding of Rutherford's experiences since the accident was the week he hosted Lady Diana's visit to the landmine sites in Bosnia. During their stay in Bosnia, Princess Diana and Rutherford traveled rural roads and visited landmine survivors. Princess Diana told Rutherford that she "never felt so comfortable on an international trip." In these areas, the military has made great attempts to keep refugees out of homes.

Rutherford describes how "landmines have been found in front of refrigerators and under shade trees, all intended to

Are humans influencing extinction?

By Adam Parris

Niles Eldridge, paleontologist and curator of the Hall of Biodiversity at the American Museum of Natural History, maintains that the human race is witnessing and significantly influencing the sixth mass extinction in the history of the Earth.

Eldridge spoke at the Culminating Conferences of the "World Religions and Ecology" conference series on Oct. 20, introducing a scientific perspective into the debate that the conferences have begun. More specifically, Eldridge addressed the issue of biodiversity, the concept referring to all the species living in all of the world's ecosystems.

According to Eldridge, the mass extinction is the result of the lack of concern for biodiversity in the human race.

"Why is it so difficult for us to convince the world that we [are] losing 30,000 species a year... by trashing the world's ecosystems. Why should we care?" Eldridge said.

Eldridge explained that extinction is a natural part of life, and that the Earth can rebound from a loss of species. However, he also pointed out that the Earth cannot withstand the current rate of species loss which is a result of human impact.

MANAGING YOUR MONEY:

Unexpected Rate Cut Drives Market Rally

By George Jenkins

Alan Greenspan and the Federal Reserve showed their willingness to protect our global financial system two weeks ago when the Fed made a surprising move in their timing to cut interest rates. As a result, investors have gotten a boost of confidence, sparking a much-needed market rally. The October 15th interest-rate cut was the second rate cut in just over two weeks, sending investors an indication that more interest-rate reductions may be on the way. The first rate cut came on September 29 at the usual Tuesday meeting by Fed officials. The Fed lowered the federal funds rate, the rate banks charged one another for overnight loans, by 25 basis points, or .25%, to 5.25%. It was the Fed's first pre-emptive strike to combat a spreading world financial crisis.

The second rate cut came unexpected as Federal Reserve Chairman Alan Greenspan announced in between meetings that he was cutting interest rates even further. The Fed reduced the federal funds rate by another 25 basis points, to 5%. The Fed also lowered the discount rate, the interest rate it charges banks for loans, by 25 basis points, to 4.75%. Investors reacted favorably to the good news, sending the Dow Jones Industrial Average up 330 points the following day, after being disappointed that the Fed only shed a quarter of a percent off the first time.

With the Fed's recent rate cuts, investors have finally had something to cheer about. Investor's renewed confidence in our financial markets has been evident with rallies in both the Nasdaq and the Russell 2000 small-cap index. The Dow Jones Industrial Average has taken back some of its summer losses since the rate cuts, but it has not rallied back quite as fast as the Nasdaq and the Russell 2000.

Many analysts see money shifting from more expensive blue chips to cheaper small-caps. The reason: small growth companies look incredibly cheap right now, after being battered this summer. Small-caps are down almost 50% from their year-highs. Investors are taking advantage of these undervalued small-cap companies, giving way to the recent rallies in the tech-heavy Nasdaq and the Russell 2000 small-stock index.

The Nasdaq has battled back from its October lows and is currently up a little over 20% since then. The Russell 2000 has also rebounded 19% since early October. The main reason for these rallies has been the Fed's incremental cuts in the federal funds rate. By lowering interest rates, technology companies, which often require large capital investments, can begin making those investments again at lowered rates, making it cheaper to invest. With increased investment in capital goods, along with the hope for a recovery in economic demand for computers, technology stocks are off to a snappy rally. Thanks to the Fed, the rallies in both the Nasdaq and the Russell 2000 have pushed these indexes out of bearish territory.

Unfortunately, it is hard to tell whether these recent rate cuts will be enough to drive the stock market back to new highs. In fact, it is unlikely. What drives stock prices up is simple. It is corporate earnings. Investors should still be concerned over lackluster U.S. corporate earnings, especially in the financial and technology sectors. Technology stocks have been off to a sharp rally after the interest-rate cuts, but look at this sector's bottom line.

According to the Wall Street Journal, in the third quarter, the 74 companies making up the technology sector reported a net gain of \$10 billion, down 1%. Seven of these technology companies fell 49%. The financials took even worse. As a whole, the 78 companies that make up the financial services sector of the economy reported a net gain of \$13 billion, down 12% for the third quarter. Individually, five banks fell 77%. Nine securities firms declined 71%. There is certainly nothing to cheer about here.

So where do we go from here? We still have to worry about ailing U.S. profits, Asian turmoil and a beating-down Latin American economy. The Fed's commitment to protect our world financial system by cutting interest rates has sparked a small rally in the stock market, but it is certainly nothing to get overconfident about with weak U.S. earnings. I think we have probably seen the bottom of this market, but I am not expecting the market to rally back to its 20%+ gains we have seen in the past three years. With volatility still lurking, I feel the market is going to rise moderately over next year. I am not convinced that the recent rate reductions will generate the kind of growth in earnings that is needed for the 20%+ returns we have grown accustomed to. Nonetheless, we are not out of the blue yet.

A Quaker Voice -

In Judaic tradition the day set aside for the Sabbath was the seventh day. (Theoretically, at least, there was also a sabbatical year of rest and a semi-centenary jubilee year in which all relationships and things were restored to an original equity.) In Christian tradition, the first day was chosen to continue this time of rest and celebration....

Among earliest Quakers, the particular day did not matter very much. Meetings for Worship were apt to be held on any day of the week when people happened to come together or were drawn together. What counted was the set-aside-ness: the "time of retirement" from "the world," a time given over to solely to God. Early Friends sometimes met in worship for hours.

Excerpt from Patricia Loring, *Listening Spiritually*.
BX 7748 .M92 1997

The Lewisburg Friends (Quaker) Meeting gathers at 11 A.M. on Sundays in the Smith Library, Vaughan Literature Building. We would be pleased to have you with us. GREEK From page 1.

show it to their Greek system, which cut down on our attendance."

Baker also noted the time of the conference, from 2-4 p.m. on Monday, as another reason for the low turnout.

Each fraternity and sorority at the University was given 10 seats at the conference, however, Theta Chi was the only fraternity that had members attend. "I was disappointed," Baker said. "It's unfortunate that our Greek system didn't take advantage of [the opportunity]."

As the Central Pennsylvania Coordinator of the Association of Fraternity Advisors (AFA), Baker

SURVIVOR From page 1.

for civilian victims." Following Princess Diana's visit, she made attempts to coordinate forces to find prosthetics, amputation possibilities, and better treatment for victims who do not have the necessary resources to survive landmine accidents.

Some of the disturbing statistics Rutherford shared were appalling. "Landmines have harmed or maimed more civilians than have all of chemical, biological, and nuclear weapons combined." Landmines exist today in the Ukraine, areas of the former Soviet Union, Poland, and Bosnia, primarily, which remain leftover from World War II.

Also, there are over 23 million landmines active in Egypt in rural areas; this is not well-known information since if an unknown nomad loses body parts and dies in the wasteland, no one ever hears of it. Rutherford asks today, "Does military utility outweigh humanitarian cost?"

Ken Rutherford has turned his personal tragedy into a global campaign to prevent future landmine accidents. He also finds great satisfaction in working with disabled kids and their families. He said, "in such a privileged country and privileged times, one cannot imagine entertaining a more fulfilling task than working with disabled persons in disadvantaged countries."

Rutherford speaks to students and people of our generation because, "they generally cannot relate; these things don't happen to us. We live a sweet life." Rutherford concluded his talk with the notion that "(he's) always believed that one person can make a difference."

University offers reward for vandalism information

By Chris Ellis

The destruction of a prominent piece of University artwork has been deemed so important that a sizable reward has been offered for information leading to its vandals.

A reward of \$1000 has been posted in exchange for information leading to the capture of those responsible for destroying the Carol Hepper sculpture that was located near the Old Science Building. The sculpture, which had an estimated value of \$15,000 before its destruction, was vandalized two weekends ago by an unknown vandal. The sculpture will have to be removed from campus next week.

"I think that it [the reward] shows that the administration is profoundly disappointed in what happened," said Stuart Horndor, director of the Center

Gallery. "They are treating it as an assault on Bucknell University property."

In the opinions of many, the size of the reward serves as a symbol of the University's commitment to freedom of art and freedom of expression.

"In my opinion, the University administration is trying to emphasize that this was a crime and that such actions won't be tolerated," said Janice Mann, professor of art history. "I believe we should move on from this ugly incident and keep exhibiting public sculpture on campus until people understand that it can make an important difference in our lives."

(For reaction from the University departments of art and art history to the sculpture destruction, please see Letters to the editor, page 4).

Jonah Hall—The Bucknellian

The University Interfraternity and Panhellenic Councils, in conjunction with the Career Development Center, sponsored a campus-wide dinner and lecture in business etiquette last Thursday in the Terrace Room. The lecture, hosted by Kappa Sigma alumni adviser Dr. William Lenker and conducted by communications consultant Regina Clark, educated students as to proper business etiquette in interview and meal situations.

Public Safety Log

October 21, 1998

FIRE—Public Safety responded to Gateway Viddinghoff for a fire alarm activation due to a small fire that had been extinguished by the student.

INFORMATION/SUSPICIOUS PERSON—A University employee reported to Public Safety that a suspicious male was seen in the area of Hunt Hall. The incident is under investigation.

HARASSMENT BY COMMUNICATION OR ADDRESS—A University employee reported to Public Safety that a student had received inappropriate email messages. East Buffalo Township Police Department was notified. The incident is under investigation.

FIRE—Public Safety responded to Gateway Rorer for a fire alarm activation caused by an oven fire which was extinguished when the officers arrived.

October 22, 1998

THEFT/BIKE—A University student reported to Public Safety that a bicycle was taken from the bike rack at Larson Hall. Lewisburg Police Department and East Buffalo Township Police Department were notified. The incident is under investigation.

INFORMATION/HAZARDOUS MATERIALS—A University student reported to Public Safety having broken a thermometer in a Swartz Hall sink. A hazardous material handler was dispatched to clean up the mercury.

October 23, 1998

THEFT BY UNLAWFUL TAKING—Public Safety responded to Harris Hall for the report of a television missing from the lounge. Lewisburg Police Department was notified. The incident is under investigation.

INFORMATION—A student reported to Public Safety having received a harassing phone call at a Smith Hall room. The incident is under investigation.

October 24, 1998

MEDICAL ASSIST—Public Safety responded to Silberman for the report of an ill student who declined

any treatment and was left with friends for monitoring.

INFORMATION/ASSIST PSP—Public Safety responded to Lewisburg police station to assist in identifying an individual associated with the University. Positive identification was determined through University records check.

FAILURE TO COMPLY/UNDERAGE CONSUMPTION—Public Safety responded to Delta Upsilon Fraternity to close a party that had extended beyond closing time. A University student was issued a University citation for underage consumption.

FAILURE TO COMPLY/MOTOR VEHICLE—A motorist, who failed to comply with the direction of Public Safety who was conducting traffic control for the Homecoming parade, will receive traffic citations from East Buffalo Township Police Department.

MEDICAL ASSIST—A visitor, who sustained a head injury at an off campus location, was transported by ambulance to Evangelical Community Hospital Emergency Room for treatment.

INFORMATION/POSSIBLE ACT 64 VIOLATION—Public Safety responded to Gateway Viddinghoff for a fire alarm activation caused by smoke which had the odor of marijuana. The incident is under investigation.

UNDERAGE CONSUMPTION/PUBLIC DRUNKENNESS/DISORDERLY CONDUCT—While on routine patrol, Public Safety observed a University student who was intoxicated. The individual made several attempts to flee from the officers. Lewisburg Police Department responded and the student was transported to Evangelical Community Hospital Emergency Room for treatment and later released. Police and University citations will be issued.

October 26, 1998

INFORMATION—Public Safety responded to Coleman Hall for the report of possible tampering with a computer. The incident is under investigation.

RECOVERY/FOUND PROPERTY—Public Safety responded to Christy Mathewson Stadium for the report of a purse found on the lawn. The owner of the property was notified.

October 25, 1998

DISORDERLY CONDUCT—Public Safety received the report that a University student and a University

alumnus were being disruptive in Swartz Hall. The incident is under investigation.

MEDICAL AIDED—Public Safety responded to ROTC Drive at the Soccer Field for the report of an injured University student who was transported by ambulance to Evangelical Community Hospital Emergency Room.

HARASSMENT BY COMMUNICATION—A University student reported to Public Safety of having received harassing phone calls in a Larson Hall room. Lewisburg Police Department was notified. The incident is under investigation.

October 27, 1998

UNIVERSITY PROPERTY DAMAGE—A University employee reported to Public Safety that the strike plate of a door in Dana Engineering was damaged. The incident is under investigation.

INFORMATION/MISSING PROPERTY—A University student reported to Public Safety that a telephone answering machine was missing from a Swartz Hall room. The incident is under investigation.

LARCENY/THEFT BY UNLAWFUL TAKING—A University student reported to Public Safety that a bicycle, locked to a Larson Hall bike rack, was taken. Lewisburg Police Department was notified. The incident is under investigation.

CRIMINAL MISCHIEF/INSTITUTIONAL VANDALISM—Public Safety responded to Gateway Viddinghoff for the report of graffiti on a door. The incident is under investigation.

BURGLARY—Public Safety responded to Gateway Rorer for the report of CDs and jewelry missing from a University student's room. Lewisburg Police Department was notified and the incident is under investigation.

MEDICAL ASSIST—Public Safety responded to Gateway Viddinghoff for the report of a University student who had fallen. The individual was transported by ambulance to Evangelical Community Hospital Emergency Room for treatment and

IN THE NEWS...**National****Two firefighters on racist parade float are fired**

NEW YORK—Two firefighters who wore blackface on a Labor Day parade float that depicted the dragging death of a black man have been fired. Fire Commissioner Thomas Von Essen, accepting an administrative judge's recommendation, said the off-duty behavior of Robert Steiner and Jonathan Walters deserved the most severe penalty.

Steiner and Walters said they used stereotypes, such as the blackface and Afro-style wigs, because that's the way the community perceived blacks.

Slain New York doctor mourned; police ask for information

AMHERST, New York—As family and friends mourned Dr. Barnett Slepian on the day of his funeral Monday, police and the FBI held a news conference to ask for help in finding his killer, offering a \$100,000 reward for information leading to an arrest.

Investigators speculate that the killer, who remains at large, is someone opposed to the abortions the 52-year-old obstetrician-gynecologist performed as part of his practice.

As launch nears, Glenn's role questioned again

CAPE CANAVERAL, Florida—All elements for John Glenn's historic return to space were in good shape Tuesday, but his scientific value in the shuttle Discovery mission remained controversial, with former astronaut Mike Mullane joining other critics who say Glenn's participation is not essential.

Discovery's nine-day mission will concentrate on science, with Glenn participating in 10 experiments on the effects of weightlessness on the human body and how those effects might relate to aging on earth. Despite his misgivings, Mullane said he wishes Glenn nothing but success.

**World****Serbian forces withdraw from Kosovo to meet NATO deadline**

BELGRADE, Yugoslavia—Yugoslav government forces appeared to make a last-minute effort to meet a NATO deadline Tuesday for pulling back in Kosovo, while hundreds of ethnic Albanian refugees began returning to their homes for the first time in months.

Hundreds of people died and nearly 300,000 have been driven from their homes in fighting since Milosevic launched a crackdown in late February against ethnic Albanian separatists in Kosovo. The NATO alliance has threatened to launch airstrikes unless Milosevic cuts his forces to levels in place before the conflict began.

Yelstin falls ill again

MOSCOW—Russian President Boris Yelstin checked into a sanatorium Tuesday, a day after doctors ordered him to cancel a trip to Austria because of high blood pressure and extreme fatigue. The Kremlin said the 67-year-old Russian leader entered the Barvikha sanatorium, a well-equipped medical center near Moscow where Yelstin has recovered from past medical problems, including multiple heart bypass surgery in 1996.

Yelstin's chief doctor Sergei Mironov was not immediately available for comment, but his office said the doctor would most likely be spending the entire day with Yelstin.

U.N. panel confirms nerve gas in Iraqi warheads

UNITED NATIONS—International arms experts validated U.S. tests indicating Iraq put the deadly nerve gas VX into warheads before the 1991 Gulf War, contrary to Baghdad's denials, according to a U.N. report.

The report, which was sent to the U.N. Security Council on Monday, also hinted that Iraq may have tried to decontaminate the samples between the first tests in the United States and those conducted later in French and Swiss government laboratories. The report was submitted by 17 scientists from 12 countries who analyzed findings from the U.S., France, and Switzerland on samples, or swabs, of Iraqi warhead fragments.

GREAT PLACE!

Zansitis adapting to University life

By Sarah Palmer

The University commenced its search for a new in-house attorney to replace retired General Counsel, Elias Abelson. After reviewing several resumes of well-qualified applicants, Richard A. Zansitis, previously of the University of Chicago, entered his new position on Aug. 1 of this year.

Zansitis obtained his undergraduate degree in American History from the University of Chicago and his law degree from Columbia University. While at Chicago, Zansitis worked on his Ph.D. in history, although he has not yet completed this endeavor.

When Zansitis first discovered that the University was seeking a new General Counsel, a position that oversees all aspects of the institution's legal environment, he realized this was the perfect opportunity to embark on a new level of his law career.

"I wanted to become a General Counsel, the chief legal officer," he said. "In addition, I knew that Bucknell had the reputation of being a very good liberal arts school and liked that fact, so I decided to put in my application."

Prior to his arrival at the University, Zansitis represented one of five attorneys at the University of Chicago, providing legal counsel from 1985 to 1998.

Zansitis reports to the President and assists faculty and administration with issues that bear legal tendencies. He assesses several legal and liability issues pertaining to personnel, patents, copyrights, research projects, contracts, policy issues and other issues that require legal advice.

The range of legal issues with which he deals is quite broad. "It's like having a small law office where

you're never quite sure what is going to walk in the door," Zansitis said.

In addition to counseling faculty, administrators and University officials, Zansitis acts as a liaison between the University and the outside legal counsel that it additionally seeks.

Zansitis feels strongly that maintaining an in-house lawyer is crucial for colleges and universities today. "Having an in-house lawyer is invaluable not just because of the attorney's role in litigation, but also for his role in counseling and advising [administration, faculty, etc.]," Zansitis said.

"Colleges and universities today are more regulated. Higher education is becoming increasingly more complex with regard to the legal environment," he said.

The University advertised nationally for the position and received approximately 90 applications. After intense review by the search committee, composed of five representatives from the University, five applicants were summoned for a series of interviews.

Interviews were first conducted by the search committee, followed by interviews by a group of faculty members and administrators. Selected applicants progressed to a final interview conducted by President William Adams and a number of trustees, all of whom made the ultimate decision, that of hiring Zansitis. Adams was unavailable for comment at press time.

Clearly, the search committee sought, among other criteria, attorneys with vast legal experience, as well as law degrees from reputable institutions.

"However, the prime determinant was for the applicants to have experience in legal matters pertaining to colleges and universities,"

Steve Stasson—The Bucknellian

Richard Zansitis, the new University general counsel, previously held a legal position at the University of Chicago.

said Barry Maxwell, chair of the search committee.

"Each of the five applicants to whom we granted interviews had extraordinary experience in college legal matters."

Maxwell believes that everyone involved in the selection viewed the appointment positively.

"This was an excellent appointment," Maxwell said. "I have no doubt that Richard Zansitis will make a significant contribution to the University. His past experience

as an attorney indicates that we made the right selection."

Although the move from Chicago to Lewisburg carried a bit of geographical adjustment, Zansitis feels that his decision to assume this position was the right one. "I am pleased to be here," he said.

"The University has exceeded my expectations ... I am greatly impressed with the quality of the faculty here and their commitment to students and am impressed with the students as well ... I feel right at home."

MINORITY From page 1.

than a better understanding of what the University has to offer. These events are designed to give prospective students a better understanding of what they will experience in college. This year, the perspectives will get a tour of campus, meet President Adams, learn about the academic opportunities available at the University, attend classes and hear other students' perspectives.

Despite the growing interest in the Minority Fall Visitation Program, recruiting minority students continues to be a major challenge of the admissions office. Apparently, it has been very difficult to attract students from certain socioeconomic backgrounds.

"I think it will always be a challenge to recruit minority students at any rural campus with a predominantly white/majority student body. We're trying to attract students from urban settings, but why would they want to give up the comforts of their environment to go to a place where they will be a 'minority'? We found that 65 to 70 percent of students who visit Bucknell end up applying so this told us that if we bring the students to campus, we've conquered half the battle," Villanueva said.

Because of programs such as the Minority Fall Visitation Program, the University is developing a greater diversity among the student body. "I feel the diversity at Bucknell is an important element that bonds the students together," Chris Beers '01 said.

"Bucknell can be proud of the increasing diversity on campus. More and more students and faculty from different backgrounds are present. As a community, diversity makes us richer and stronger," Villanueva said.

Counting Whales

By David Andescavage

Dr. Paul Roback, assistant professor of mathematics, has been using recent techniques in statistics to improve models of the bowhead whale population in the Arctic Ocean.

For centuries, bowhead whales in the Arctic Ocean have been hunted, unregulated by commercial whalers. By the mid 1800s, the bowhead was known as one of the larger, more enticing whales to hunt. Their well known migratory patterns and their large population size made them easy prey.

As whaling increased in the Arctic Ocean, inevitably, the bowhead population drastically decreased. In fact, so much damage had been done to the population by 1900 that it was no longer profitable for the Inuit whalers of the region to continue hunting the bowhead.

The International Whaling Commission (IWC), a voluntary group of representatives from countries who have interests in whaling concerns, announced by the 1950s that the bowhead population was near extinction. As a result, a scientific team was formed to establish reasonable limits on the numbers of whales which may be hunted annually in the Inuit region.

Yearly data on the bowhead population has been collected and categorized according to the number of male and female whales, their age, and the number of deaths which occur annually (either by natural causes or due to hunters). Models of bowhead population are then constructed from this data.

"The aim of these models is to give a best guess at the maximum number of whales which may be harvested without decreasing the current population," says Roback. This number of whales is called the replacement yield.

The lack of computing ability required earlier models to make many assumptions. With the advance of computing, power models are more realistic, fewer assumptions are necessary, and the complexity of the calculations are

Lydia Hagstos—The Bucknellian

Paul Roback, assistant professor of mathematics, has worked to simplify models of bowhead whale populations and to make them more efficient.

less daunting.

Recently, statisticians have used a Bayesian approach for developing new models of the replacement yield. The general strategy of this approach incorporates current data into the model and also utilizes various beliefs of experts in the field.

"This approach makes better use of the whale population models by systematically including uncertainty into the model while incorporating various sources of knowledge," says Roback. As a result, this new approach resolves various sets of beliefs into a single model.

With an eye on the future, Roback's contribution focused on simplifying models and making them more efficient. These efforts will result in a better understanding of the new models and provide insight making complicated models more efficient.

This Bayesian approach to developing models is versatile. It is currently being used to improve epidemiological models of AIDS transmission. Such models help determine the effects of various factors in the spread of the virus. These effects include the probability of infection, therapy intervention, and AIDS education. Other applications range from a better understanding of tree growth to creating more effective climate models.

Beyond the formula: Chemical engineering senior design projects

By Kathy Chevalier

What does this mean to you:
 $C_6H_6 + C_6H_6 \rightarrow C_{12}H_{10} + H_2$?

Yes, maybe to some this formula means that styrene monomer is produced from ethyl benzene by a reversible reaction. But, to those students who are taking their capstone in chemical engineering, this formula equals hard work. It is the basis of the senior engineering project for chemical engineers. The aim of this project is to make styrene monomer from ethyl benzene.

Michael Hanyak, chairman of the department of chemical engineering, explains that students taking the capstone must integrate their knowledge from previous courses

communications skills. Since it is a W2 course, the students acquire much practice on learning to write as a team.

There are three technical reports that are done as a team, but the students have to rotate the responsibility on the three reports. This means that each student performs each of the three jobs once during the semester. Each student will serve as a team leader, as the individual responsible for background information, and as the individual responsible for the discussion portion of the report.

"They rotate these responsibilities so they get to experience each one," Hanyak said. "Students have always been successful in the senior design project."

In the project, students work for a certain division in a fictitious company. "We try to simulate a real industrial environment," Hanyak said.

All eight design groups are working on the same project. However, there are different ways to approach the project. Therefore, the students go through a literary search to figure out all of the possible ways to achieve their goal, which is the process scope. Through the process scope, each group determines the best way to make the desired product.

The second report for the project is the process requirements report, in which the material and energy that is required for the conversion of ethyl benzene to styrene monomer is determined. A computer-aided design tool, HYSYS, helps calculate the energy and materials that are needed for the conversion. The third report is the process profitability report. Once the size and cost are resolved, the profit can be projected. The profit is equal to the sales of the product (styrene monomer) minus the cost of the raw material (ethyl benzene) and the operation cost.

Hanyak says that the senior design project is gratifying for him. He explains that it is always satisfying each year to see the students mature from the work they did in their first years of college to this open-ended final project. Overall, Hanyak says, "The course develops their professionalism."

into the design of a system through a chemical process. A collection of equipment connected by piping is used to transfer raw materials into desired projects for this chemical process.

Hanyak explains that there are three major goals of the senior design projects for chemical engineering majors. The first and most technical goal is to design a chemical way to obtain styrene monomer from ethyl benzene. The second major goal is to develop the students' abilities to work as a team. The manner in which the course is structured requires a team of three students to work together on getting the product. The third goal is for the students to learn to develop their

Students speak about valuable research experiences

By Melissa Pauley

There are a broad range of research opportunities for undergraduate students at the University. The purpose of the student panel that gathered Monday evening was to discuss the different types of research that students can pursue and the reasons why students choose such pursuits. As Carl Kirby, assistant professor of the geology, stated, one of the main reasons to take an active role in research during your undergraduate career is to "get more involved than in the classroom."

A research project is perhaps one of the most difficult and, as these students made clear, rewarding experiences that a student can undertake at the University. All of these student-run research projects are directed by a member of the faculty. Research topics can be proposed entirely by the student, but are often related to an area of the faculty member's research. The topics chosen for research are diverse and encompass many fields, as shown by the students who discussed their projects with members of the Environmental College.

Civil engineering students Julie Artabane '99 and Nina Landes '99 are currently involved in their Senior Design Project. For this engineering

project, a group of two to four students researches an area of their choice. The first semester is a feasibility study in which students consider every alternative for the project that they are proposing. The second semester focuses on the design of their project.

These students are working on an acid mine remediation project at a site near Shamokin. Their project will culminate in the design of a real site that will contribute to the clean-up of the polluted tributary Carbon Run. The students noted that this project is "very intense," because it requires acting as if you are a consultant for a real job.

During her presentation, Heather Thomas '99, an environmental geology major, stated, "Water quality in the Western Branch of the Susquehanna River is impacted negatively by industrial pollutants, and the ground water is also negatively impacted." By gaining a thorough understanding of the sediments in the region, Thomas worked to determine where ground water is flowing, and thus where contaminants are destined to go.

The research of Sonja Pieck '99, an environmental studies major and Latin American studies minor, has focused her senior thesis on indigenous tribes in Ecuador. Her thesis will explore the impact that challenges from the dominant society, especially in the form of economic development initiatives, have on the indigenous people as they adopt the environmental "discourse," or rhetoric, of First World nations in their struggle for both physical and cultural survival.

"The oppressed people use the language of the oppressors to get what they want," Pieck said. Pieck plans to determine if this "discourse reflects or causes a cultural transformation." She pointed out that research does not have to be focused within a single discipline. Her thesis is interdisciplinary, and she has more than one faculty advisor.

Several of the students pursued summer research projects as a part of the Katherine Mabis McKenna Summer Environmental Internship Program. This program is one of several programs that the University offers in support of undergraduate research. The program funds student environmental re-

search with a focus on the West Branch of the Susquehanna River Bioregion throughout the summer.

John Bennett '00, an environmental studies major and economics minor, spent his summer working on a project that had been going on since 1994. His research focused on contaminated soil and a particular method of soil remediation that volatilizes contaminants more effectively. "My work has given me a better perspective on the scientific end of my major," Bennett noted. He also feels that his summer experience has prepared him for research opportunities in the future.

Lauren Young '00, an environmental studies major, also worked through the McKenna Foundation this summer. Her research focused on agriculture and the environment. She worked under the premise that agriculture adversely affects the Susquehanna River, and put together a history of agriculture in Union County.

Young stated that a research project is a huge commitment, because the work requires so much time. "I worked eight hours a day and on the weekend. I was always pushing myself to work," Young said.

Focusing their study on the effects of acid mine drainage in Carbon Run, a tributary of the Shamokin watershed, Julie Eidem '99, a biology major, and Molly Moffe '00, a chemistry and environmental studies major, made an assessment of the watershed before a treatment system is installed. They collected current data on the chemistry and biology of the stream. Their report will be presented to the Department of Environmental Protection and the Environmental Protection Agency to aid in the development of a treatment proposal. The students recognized many positive results of their work, including making valuable contacts, dealing with problems independently, learning to be prepared and carrying out a project through completion.

The research opportunities students pursue at the University encompass every discipline and vary greatly in purpose and design. However, the students who discussed their projects echoed many common themes. Often pursuing an area of interest to them, the research project allowed the students to study an aspect of their major in great depth.

The students learned to work collaboratively with faculty members and, when in groups, with each other. Many students had the opportunity to work with the latest technologies. Computer skills, writing skills, and presentation skills were all improved. Student research, whether it be departmental research, work on a senior thesis, or a summer internship can prove to be one of the most valuable educational tools available to students at the University.

There are many opportunities for students to do graduate level work at the undergraduate level. If you would like to learn more information about undergraduate research, visit the Academic Highlights area of the University Home page and look under undergraduate research. You can read a program overview as well as guidelines and student expectations.

Thoughts from the editor: Something to believe in

By Adam Parris

What transpired at the United Nations and the American Museum of Natural History last week in the Culminating Conferences of the "World Religions and Ecology" series could be considered as nothing short of the birth of a miracle. This miracle is something that the human race drastically needs.

Over the past five decades, human consumption of energy resources has soared to uncontrollable amounts. Every day a portion of the Brazilian rain forest that is equal to half the size of Pennsylvania or more is cut down to serve our purpose. In this portion of rain forest that is raped for human consumption, many new species come closer to extinction, and many more become extinct. The Earth now loses three species every hour.

At the conferences in New York, experts from the top of their respective fields of education, policy, economics and science all spoke about their field's present impact on the environment. These experts included the president of Columbia University, as well as our University President William Adams, an economist from the World Bank, a member of the National Science Board, the National Research Council, the National Science Foundation and the United Nations Environment Program and a political advisor who is Senior Advisor to the United Nations.

Interestingly enough, they were all brought together by another field which has been out of touch with environmental issues for the entire time humans have begun their destruction. This field is religion. The religious intellect gathered at the conference was unsurpassable, even in Rome. However, one need not go further than the University campus for a glimpse of this religious intellect in Mary Evelyn Tucker and John Grim, associate professors of religion at the University, who organized the conference.

In any case, this group of intellectuals in New York spoke very informatively about the fact that humans are indeed causing environmental catastrophe on a daily basis.

So what? The United States learned that several years ago when the Nobel scientists released a report saying that humans are drastically changing the environment. Worldwide efforts were made with recycling, and everyone began to wait for scientists to figure out new and efficient ways for humans to live.

In the meantime, humans could live free of guilt, knowing that their impact would never become visible to them in their lifetime.

With the introduction of religion to this debate, in companionship with science, a new perspective of lifetime has been created.

Now, an environmental perspective of lifetime will include the time which occurs even after our presence on the Earth. With this perspective, a new spirituality and a new passion is introduced into the environmental debate.

The miracle of the conferences in New York was that all of the experts spoke with this newfound passion. They spoke vehemently, as never before, about the urgent need for people to change their lifestyle, and with the help of religion, lifestyle changes can be made.

Experts spoke of human detachment from the natural world. And they spoke of human detachment from something else, the power to believe, including the power to believe that changing one's lifestyle really can make a difference.

Of course, at the Bubble none of this influence seems to affect us. Life goes on as usual, and students believe in material wealth without noticing the power of what goes on around them.

Listen to the experts, because whether or not you believe in God, and whether or not you believe in miracles, it is time to believe in something. Otherwise, nothing and no one will be left to believe in!

The sixth mass extinction: a call for biodiversity

BIODIVERSITY From page 1

"Before evolution can kick in and sort of fix, rebuild ecosystems and new species and so forth, the factor, the cause of the mass extinction has got to die down. It's very obvious that it's the human transformation of the world, the over-exploitation of forest and fisheries, the basically cutting everything down to the farm, and particularly, the industrial revolution that is at the heart of the mass extinction that is going on around us right now," Eldridge said.

According to Eldridge, humans have existed on the Earth for approximately 200,000 years. Since about 10,000 years ago, Eldridge believes that humans have gradually separated themselves completely from the natural world. This separation started with one human invention.

"We were still living inside local ecosystems and small populations inside local ecosystems the way absolutely every other form of life for the last 3.8 billion years lives on the face of the earth and something happened to change that fundamental relationship that all life has with the natural world, and of course, I'm referring to the invention of agriculture," Eldridge said.

Agriculture is one example of the change in perspective, or lack of any perspective, that humans

began to have towards the environment and towards other species.

"Consider the fact that agriculture today as well as 11,000 thousand years ago is a matter of having one or at most three different kinds of crops that you're interested in growing. You're taking your life in your own hands here producing your own energy resource, but what that means is that the 50 or 60 other species, mostly plants that are living in that exact same territory as natives are now the enemy," Eldridge said.

It is this attitude and every progression the human race has developed since this change that has placed us in the sixth mass extinction. This sixth mass extinction is the first of its kind since the well known extinction of the dinosaurs 65 million years ago. The dinosaurs didn't die because they exploited

their resources. They died from one of several catastrophic possibilities such as the famous impact of an asteroid.

Humans are exploring their resources and therefore essentially speeding up their own demise. What can be done to keep this from happening?

"It is my contention that religion, actually concepts of God are ecological concepts," Eldridge said.

These types of ecologically religious concepts are the same that were discussed at the conferences, and the same concepts that may help save the environment.

From a scientific standpoint, Eldridge has entered readers into this series exploring ecology and religion in the same fashion that he entered a small conscience into the minds of all who attended the conference at the United Nations.

SCIENCE & TECHNOLOGY CALENDAR

Friday, October 30

Biology Seminar at 4 p.m. in the Rooke Chemistry Auditorium:

Dr. Clifford MacDonald, department of cell biology and biochemistry at Texas Tech University, will present a lecture entitled "Messenger RNA polyadenylation in somatic and reproductive cells."

Monday, November 2

Environmental College Common Hour Series at 7 p.m. in room 208 of the Carnegie Building:

Dr. R.P. Nickelson, professor of geology emeritus, and Dr. W. Abrahamson, department of biology, will present a talk about "Susquehanna Landscapes and Ecology."

We're The Perfect Antidote For Four Years Of College.

Calling All Grads!

If you want more than just a job, why not start your career at the world's leading independent software company? Right now, we're looking for programmers to develop, support and enhance systems and network management, database and application software. Computer Associates provides a dynamic training program, one that immerses you in key industry technologies and CA's technology strategy. Candidates should have both an educational and working knowledge of C++, UNIX, Windows 95/Windows NT, and networking technologies.

Why CA?

Just ask any of our 11,000 employees in more than 43 countries, and they'll tell you why. CA's the world leader in mission-critical business software, offering more than 500 software products from award-winning enterprise management software and cutting-edge object technology for the Internet to all kinds of business applications for manufacturing, financial management and human resources. In fact, CA makes more kinds of software for more kinds of computers than any other company. We offer a generous compensation package with a long list of benefits that nobody else can match, including 401(k) and profit sharing.

Equal Opportunity Employer M/F/D/V. All product names, registered names are trademarks of their respective companies. © 1998 Computer Associates International, Inc. One Computer Associates Plaza, Ithaca, NY 14850-7000.

plans, company-paid medical and dental coverage, tuition reimbursement and tremendous growth opportunity. Call us today and find out why Computerworld ranked CA as one of the best places to work in the entire computer industry!

We'll be on campus Friday, November 6. For more information, Please Write, Fax, or Call: Computer Associates One Computer Associates Plaza Ithaca, NY 14850-7000 Tel: 1-800-454-3788 Fax: 1-800-962-9224 Or Visit www.ca.com/careers/capoint.html

Chiropractic care may not be necessary for back pain

It is estimated that more than 10 million Americans visit a chiropractor or physical therapist to treat back problems. For several decades, ongoing debates have questioned whether chronic back pain is most effectively cured through chiropractic care.

A newly-released study by the New England Journal of Medicine reports that medical treatment for spinal problems does not yield the favorable results that many expect. The research shows that patients of chiropractic and physical therapy do not achieve considerably better results than those who have only read an instructional brochure on how to treat lower back pain. The study also revealed that medical costs can more than triple treatment expenses.

"I think probably both the chi-

ropractors and physical therapists will be disappointed in these results," University of Washington Dr. Richard Deyo told CNN. "They just suggest that there's some benefits to both types of treatment, but that it's not an enormous benefit."

Scott Friedman '01 has suffered from back ailments for over five years. "Before I went to physical therapy, I could barely sit down for more than five minutes," Friedman said. "After the therapy wasn't very

effective, I went to a chiropractor, which helped the pain. Now I do daily stretches to keep it in shape."

Advocates and critics of chiropractic care both concur that research must continue to improve treatments for back problems.

Research reveals calcium's many benefits

New studies have discovered that calcium serves numerous purposes in the body, not just to help build strong bones.

Called the "nutrient of the decade" by The New York Times, calcium is the most abundant nutrient in the body and helps every major organ system.

Long believed to stop its circulation in the skeletal system, new research has revealed that calcium is then distributed to the

rest of the body and may help regulate blood pressure, ease premenstrual syndrome and prevent colon cancer.

Recent reports from New York, Boston and England have revealed calcium's many benefits. Over the past few years, researchers have learned that calcium is instrumental in transmitting muscle contraction-causing nerve impulses, blood clotting, production of enzymes and hormones and chemical signal-

ing between cells. "It's not surprising that calcium plays so many roles," Dr. Hector F. DeLuca, a biochemist at the University of Wisconsin and an expert on vitamin D and calcium metabolism, told the Times. "Since all life originated in the sea in a bath containing calcium, we all developed systems that depend on it."

Men's soccer team struggles to find goal

By Justin Knox

The Bucknell men's soccer continued to struggle this week as they lost two more games. More importantly, they very well may have lost their chance for postseason play. The Bison are winless against their Patriot League foes so far this year with only two more league games remaining to finish out the season.

The Bison started off last Wednesday with a tough game against Penn State. Bucknell dropped that game 7-1. Penn State scored early and often, not giving Bucknell any chance to get in the game. By the time Bucknell was able to net their first goal, the score was already 5-1. Penn State tacked on two more goals, sending the Bison home with a six-goal loss.

Steve DeLuca '00 assisted Sam Chamovitz '01, who scored the lone goal for the Bison.

On Saturday, Bucknell attempted to rebound against Patriot League rival Lehigh, who had an 11-4 record going into the game. Looking for their first conference victory, the Bison came out fighting against the Mountain Hawks. The Bison continued to sputter on offense, but stayed in the game by holding Lehigh off the scoreboard for the entire first half. This included holding Lehigh star Andrew Mitendorf, the leader in points per game and goals per game in Division I soccer, scoreless.

Lehigh could not be held at bay the entire game, as they scored with under 20 minutes to play in the game. Bucknell picked up the pace with a couple of great scoring chances, only to be denied by the Lehigh goaltender. The Mountain Hawks squeaked out the 1-0 victory, leaving the Bison winless in league competition.

"We were just extremely unlucky to lose that game. We ran

Calder Cruikshank—The Bucknellian

The men's soccer team dropped a close game to conference rival Lehigh after losing to Penn State, 7-1.

into a hot goalie against Lehigh. He made a couple unbelievable saves," senior co-captain Ryan Cummings said. "There was one shot with under a minute that he stopped that was just phenomenal. We played well, I thought we just weren't as aggressive as we needed to be in the box," Cummings continued. "We just got unlucky running into him when he was playing like that. Most other games, those shots would have gone for us."

"Surprisingly, the attitude of the team is probably the best it's been all year. We've had a tough season so far, but we have a pretty young team with a good strong freshman and sophomore class," Nate Hopfinger '02 said. "The playoffs

are pretty much a long shot for us now, but I think things look good for us in the future."

"Generally, three league wins get you into the Patriot League tournament, but we only have two games left. It's not out of the question that we could go, but a combination of many things need to happen for that," Cummings said. "Either way, it is important for us to finish this season strong, so the younger players don't feel intimidated when the season starts next year."

The Bison will finish up the regular season as they host Navy on Sunday, Nov. 1 at 2:00 p.m.

This week in football

By Tim Scheu

#5 Florida @ #11 Georgia

I said it once and I will say it again. Florida is the most overrated team in Division I-A football. They turn the ball over, play inconsistent, and struggle on offense. This team has a long way to go to return to the glory that allowed them to win the 1996 national championship. On the other hand, Georgia is a team on the rise. With superstars like Quincy Carter and Champ Bailey, there are few teams who can contain the Bulldog offense. Georgia beat UF last year, and they will do it again. Bulldogs 38 Gators 24

#13 Oregon @ #15 Arizona

Oregon came within a field goal of defeating one of the top two teams in the country in UCLA. Akil Smith is a legitimate Heisman Trophy candidate and will lead the Ducks to a major bowl. Arizona is just the beneficiary of a soft schedule, and will fall in the rankings once they encounter the meat of their Pac-10 schedule. Ducks 42 Wildcats 17

Colgate @ Bucknell

As much as I want to predict that my school will win this football game, I don't think that will happen. The Red Raiders are just too good. I have the Colgate football team for what they did to us last year, and it is even more frustrating that they have gotten even better. If Bucknell wants to have any chance in this game, they will have to rely on emotion and school pride. All the breaks have to fall our way because Colgate is a better physical football team. I am hoping for the upset, but I don't think that will happen. Red Raiders 45 Bucknell 24

Buffalo @ Miami

This is the game of the week. Forget that other game going on somewhere in Wisconsin. The Bills are a team on their way back up, and are one of the most exciting teams in the league. Their offensive line has matured significantly, and Eric Moulds has established himself as one of the premier receivers in the AFC. Not only that, but with Flutie at quarterback, they have a scrambling threat in addition to an efficient passer. In his last game, the diminutive quarterback completed 18-22 throws for two touchdowns 282 yards. The streaking Bills go up against a Miami team who is all of a sudden known for its defense. Traditionally an offensive team, the Jimmy Johnson led Dolphins are leading the league in scoring defense, having allowed only 76 points for the season. Add future hall of famer Dan Marino to the mix and you can understand why Miami is leading the AFC East. This one will be a nail biter. Bills 20 Dolphins 16

N.Y. Jets @ Kansas City

The Jets have blossomed under the Parcells regime, but I don't think they are as good as everyone seems to be thinking. They are unsure who their best quarterback is, and they have been inconsistent throughout the season. Kansas City is another team that was picked to do well this season, and for the most part they have disappointed their boosters. Ever since their spanking in Foxboro, the Chiefs have struggled. However, they are a talented team, and at some point they will live up to their expectations. This week may be the Chiefs' turn to awaken from their slumber, and surprise an overrated Jets team. Chiefs 31 Jets 17

San Francisco @ Green Bay

Two years ago this game may have been the biggest of the year, but now these teams have been overshadowed by the success of the Vikings and Broncos. The Niners are a good team, but have slipped from the days of perennial NFC domination. The same goes for the Packers. Earlier this season, they were thrashed at home by the Vikings, and then responded by losing to a mediocre Lions team. Yawn. Packers 27 Niners 24

Tim's upset of the Week: Minnesota @ Tampa Bay

Ok, it has been established that the Vikings are one of the best teams in the NFL that has gone undefeated. While the Broncos may have a shot at that mark, the Vikings probably do not. They are just a very good team, who has not been challenged as of yet. This week's game is a dangerous one for Minnesota, due to the fact that the Bucs are a lot better than their record suggests. They can have a potent offense at times, and a strong defense that has the ability to shut down even the most powerful of offenses. At 7-0 the Vikings have had it too easy, and are about to be given a rude awakening. Bucs 27 Vikings 21

Senior captains have come a long way on road to NCAA's

By Brett Tomlinson

Entering the season, leadership and strategy were major concerns for the Bison. Career assist leader Amy Turnshuk '98 and career kills, blocks and hitting percentage leader Melissa Wharton '98 both graduated, leaving a huge void.

"Amy was an amazing leader on the team," Pomeroy said. "Tristen and I had to take on the enthusiasm that Amy put on the court."

Additionally, the focus has gone away from the inside hitters. "Our strategy is different, especially since Melissa is gone in the middle," Voget commented. "We're more focused on the outside hitting game."

Team unity and bench strength

Voget has been an integral part of volleyball's success this season.

Emily Pomeroy '99 looks to lead the volleyball team to the NCAA's.

have been the secrets of Bucknell's success, according to the captains. "Our non-starters are definitely ready to go in and make a contribution on the court," Voget said.

Despite a constantly changing starting lineup, the Bison have been a cohesive unit on the court, winning their first four league matches before falling to defending champion Lehigh last week. They won three matches to capture the Subway Invitational championship last weekend and currently have an overall record of 11-9.

In the preseason coaches' poll, Bucknell was picked third in the Patriot League, receiving no first place votes, but the team saw it as a blessing in disguise. "It was good for us because there was no pressure and nothing to lose," Voget said.

Bucknell has already clinched a

tournament berth for an unprecedented fourth consecutive year, and a win on Saturday would be a tremendous confidence builder. For Pomeroy and Voget, though, the ultimate goal has been the same since arriving on campus.

"[The NCAA Tournament] is the goal, and we've been right there for four years," Voget said. "This year, we can't say, 'Wait until next year.'"

Pomeroy echoed Voget's sentiments. "Achieving any goal is going to give you confidence," she said. "Each game, for us, is a step toward reaching the big goal, which is reaching the NCAA's."

Experience should also be a key factor for this year's Bison squad after a gut-wrenching loss in the league final last year. "We put every piece of our effort out on that court, and we lost. But I think that was a huge learning experience for us," Pomeroy said.

Win or lose, the two seniors will look back on their careers fondly. "Each year, your role changes and the team personality changes," Voget said. "It's always different and always fun."

In addition her enjoyment of the game, Pomeroy has learned to appreciate volleyball as a stress reliever. "Volleyball is a huge emotional release... it's pretty therapeutic to hit the hell out of the ball," she said.

Pomeroy, Voget and the rest of

Ultimate takes part in homecoming festivities

By Tim Scheu

For the Bucknell men's and women's Ultimate teams, home games are few and far between. The Mudsharks and Peace Frogs generally travel some two-and-a-half hours each Saturday after receiving a 5:30 a.m. wake-up call. Few complain but many feel the effects of the trip halfway through the first game and struggle to remain conscious mid-way through dinner. But this weekend was different because the Ultimate teams actually experienced a true Homecoming.

While most people were watching the football game or enjoying the brisk autumn afternoon, the Sharks and Frogs played an unnamed club team from Harrisburg. For the first time in more than a year the Sharks and Frogs hosted a match of their own.

The format of the game was that of a hat tournament, meaning captains pick random names out of a hat and create teams based on them. This system provides a fun alternative to the ordinary and somewhat repetitive style of team Ultimate.

As the four teams took the field there was a certain feeling in the air that can be found surrounding few other sporting events. There was a

Jason Aines—The Bucknellian

Various ultimate teams joined together last weekend for a hat tournament.

mutual feeling of respect for all those involved and a sense that everyone was playing purely for the enjoyment of the activity.

"That is why hat tournaments are so much fun," said Adam G. M. Feldman '01. "You truly get a sense that everyone is playing just for the spirit of the game."

When the games began, players disregarded traditional ties and relied on their new teammates for support. People laid out for the disc and congratulated their opponents for "hot D" or a great catch. They sprinted their hearts out and just when it was thought that no one could go on, another game began.

By the end of the day everyone felt exhausted but that tiredness was accompanied by an overall sense of well being.

The afternoon had been well spent and each individual could sit back knowing that they made a few new friends and had played their best.

The overall atmosphere was complemented only by the rare presence of friends and family who came out to cheer the teams. It truly was a wonderful homecoming for the frisbee teams because they spent the afternoon playing the game they love while still within the familiar confines of the Bucknell campus.

Crew takes on the Schuylkill

By Renee Lorian

The Bucknell crew team was met by another sunny day of racing as they traveled to Philadelphia last weekend to compete in the Head of the Schuylkill Regatta. This head race is 5000 meters long, with long being the key word. The race attracted many competitive crews, and Bucknell was there to do battle with all of them.

The day began with the men's freshman four event, in which the talented freshman rowers pulled Bucknell to a strong third place finish in a field of 12. Following their lead, the freshman women's four took to the course and hammered out Bucknell's only gold medal in the Regatta, finishing first in a field of 10.

The men's light and heavy varsity eights each raced in the club eight event. The heavy men pulled to a very respectable 10th place finish out of 35 boats. The light men challenged the field in the same event, finishing 22nd, after a nasty collision with New York University's heavy men. The NYU coxswain failed to yield to Bucknell as is the rule when a boat is being passed, and Bucknell coxswain Levi Chow '01 could do little to stop the inevitable crashing of oars. The incident resulted in a complete stop, but the light men still managed to come away with a strong time.

"Philly was full of excitement. The boat had much more power through the water and we were able to walk through other crews," commented Brian Goldsmith '02, the heavy eight coxswain. "The greatest feeling as a coxswain is seeing the new found strength in rowers after we have passed another boat."

The women's club eight event fielded both of the Orange and Blue's varsity women's eights. The open women had a better paced, much cleaner row than their previous race at the Charles, finishing 16th in a field of 34. Stroked by Amy Stewart '01, the open women had an excellent start and held a constant rating throughout the long race. The light women finished 22nd of 40 after rowing a strong course steered by coxswain and lightweight captain, Jen Clotta '00. The novice men, rowing in their first race, gave a great effort and landed a 14th place in a field of 30. "It was a good experience because we raced well for our first race and saw areas where we can get better," Michael Brett '02 said. "It was great to go and be around all the other crews, and see what good rowing and racing looks like." The novice women were also turned in an impressive performance, pulling in an eighth place finish in a field of 31.

In addition to great racing by the varsity and great promise by the outstanding freshman, the team also enjoyed great support by the Philadelphia area parents, who came out in force to encourage the rowers. The next challenge for the crew team is the weekend of November 8 when they will compete in both the Frostbite and Braxton Memorial Regattas in Philadelphia.

Making the grade is harder than it seems

During my sophomore year, my junior-varsity basketball team traveled into Queens to take on New York City powerhouse Christ the King High School. A year earlier, the Royals had come to our gym and wiped the floor with us, stomping us by over 50 points. We were determined to get some payback, but realized our chances were rather slim. After another 40 point blowout, our team, the mighty Flyers of Chaminade High School, stuck around to watch our varsity team do battle with Christ the King, who was ranked third in the country at the time. Their roster included three all-state players, but the one who stole the show was a lanky sophomore forward who was starting in place of an injured senior.

Lamar Odom lit up our team for 38 points and blocked so many shots that we stopped counting after the first quarter. Needless to say, the Royals annihilated our team and all the newspapers were raving about this new-found superstar. He went on to close out his high school career garnering every award possible, including Parade Magazine's 1997 National Player of the Year.

But this isn't wonderland, and Lamar Odom's career has been anything but magical since. In the past two years, he has logged more miles than he has scored points.

After speculation that he was not getting adequate grades to stay eligible during his senior year, Odom left Queens for Christian Redemption Academy in upstate New York. After a short stint there, he transferred to St. Thomas Aquinas prep school in Connecticut where he closed out the season. Despite the constant change of environment, Odom managed to average 25 points and 15 rebounds per game.

While all the big-name coaches and the NBA came after him, so did more pressure. After all the predictions and hype, Odom surprisingly signed a letter of intent to play for the University of Nevada-Las Vegas, known in the college basketball world as a haven for ex-cons, dropouts and gamblers.

He never put on a Runnin' Rebel jersey though, and was released from his commitment before he even stepped in a classroom. Sport Illustrated reported that Odom's ACT scores had been fixed so that he would be eligible to play. When he refused to cooperate with NCAA investigators in July, UNLV gave him his walking papers. "All my life, people have been putting my life under a microscope," Odom told CNN.

Odom still maintained that he wanted to go to college, and NCAA regulations did not force him to sit out if he enrolled at a new school.

Soon after, Odom announced he would register at Rhode Island and play for coach Jim Harrick, who himself was no stranger to controversy. After leading UCLA to the national championship in 1995, Harrick was fired for expense account fraud.

Initially, the administration did not believe Odom was fit to take classes at Rhode Island but agreed to let him enroll. The deans told Odom he would be eligible before Christmas if he passed his four fall semester classes. Odom was satisfied, but apparently not enough. He went AWOL at the end of the semester, missing the last four days of classes and all of finals week. Although he offered no explanation to his whereabouts, many say Odom was seen hanging out with some unsavory characters in Las Vegas.

It seemed that this bump in Odom's seemingly endless road to college basketball might be his last, as he declared himself eligible for the 1998 NBA Draft. Scouts and analysts projected the 6'11" swingman as a lottery pick, but no team was lucky enough to cash in.

Odom rebounded to pass his spring classes and gain his eligibility for the next season.

The next step remains to be seen. Rhode Island will be looking to reload coming off an impressive year where they floated around the top 20 for most of the season. Can Harrick and the Rams count on Odom to keep his head in the game? Can Odom commit himself to playing without distraction?

With the various questions surrounding Odom's future, one thing is for sure—He'll be ready to show everyone why all the hype started in the first place. His remarkable skill has been kept on the shelf for over a year, but game like his doesn't collect dust. With his large frame and jumping ability, Odom has the ability to play all three frontcourt positions with ease. His outstanding quickness, shooting and ball-handling skills give him the potential to be a threat at both point and shooting guards.

College basketball analysts have no doubt that Odom's skills are second to none. Commonly called a "lefty Scottie Pippen," Odom brings a scoring ability that will haunt Atlantic 10 defenses for years to come.

That is, if he decides to stay. With the possibility that NBA rookie contracts may be extended, Rhode Island may have a difficult time keeping their prize player around all four years, or two for that matter.

Lamar Odom clearly has been a loose cannon but he needs to be given another chance. He simply hasn't found a home; but that may have all changed. Odom appears content at Rhode Island, and with the instruction he'll receive from Harrick, he should step right into the spotlight.

Watch for this underdog to come out on top this season.

Bison trample Leopards

Palko '00 and Marrow '01 lead Bucknell's offensive attack in 33-22 victory

By Tim Scheu

Entering its Homecoming contest against Lafayette, the Bucknell football team had established quite a defensive reputation. It was known for its hard-nosed, run-stopping play that forced frustrated opponents to put the ball in the air. The Bison had only allowed 100 yards rushing a few times this season, and they held Duquesne and Cornell to 18 and 50 yards, respectively.

For most teams, these statistics would suggest a winning record, but not for the Bison. While they were limiting foes rushing yardage, they were getting torched through the air. Game in and game out, the Bison gave up well over 200 passing yards. In order to compete with the Lafayette, the Bison would have to shut down both offensive threats.

In Bucknell's 33-22 victory over the Lafayette Leopards, the Bison challenged themselves to stop the Leopards' passing game, and they delivered. Ironically, this success was a result of the strength of a run defense that the Bison had possessed all season. In shutting down much of Lafayette's running game, Bucknell forced the Leopards to throw the ball in third-and-long situations. As a result the Bison could set a more effective pass defense that prevented them from advancing the ball through the air. The Leopards gained only 187 yards on the day, mostly because their quarterback's combined statistics were 7-22 for a total of 47 yards through the air.

"Lafayette had not had a lot of success throwing the ball anyway," head coach Tom Gadd said. "By taking away their running game, we put them in a situation where they had to pass to beat us, and obviously our

Calder Cruikshank—The Bucknellian

Corey Hurley '00 and the Bison ran up 425 yards of total offense compared to Lafayette's 187

defense performed well in those situations."

The Bison opened with the game lethargically as they allowed the Leopards to jump out to a 9-6 half-time lead before a homecoming crowd of 8,472. Throughout the first two quarters Bucknell's play was marred with turnovers, missed opportunities and a lack of discipline on special teams. Most notably, for the second time this year a Bucknell kick was returned for a touchdown.

Following a Bison punt, Lafayette special teamer Barrett Hammons scrambled 43 yards and found his way into the Bucknell endzone for the Leopards' first score.

When Bucknell scored a touchdown on their first possession of the second half it appeared things were starting to bounce the Bison's way. In one of the most dramatic plays of the season, the Bison quarterback Don McDowell '00 received a flea-flicker and proceeded to throw a 61-

yard touchdown bomb to wide receiver Ron Rockett '99 less than a minute into the third quarter. The play began when McDowell handed the ball off to tailback Dan Palko '00 on an apparent running attempt. In a surprising move, Palko pitched the ball back to McDowell before he hooked up with Rockett for the score. The play exhibited the offensive coordinators' ability to keep op-

See FOOTBALL page 13.

Polo defeats two nationally-ranked teams

By Brian Watson

Head coach Mike Wooster and the men's water polo team were getting tired of losing to the same teams over and over again.

The Midshipmen of Navy had defeated the Bison in six straight games, including three matches earlier this season, while the Knights of Queens College topped the Bison in their last six contests. Going into the weekend, Queens was ranked eleventh nationally with Navy close behind at fourteenth.

The Orange and Blue put an end to these streaks by beating both teams at last weekend's Eastern Collegiate Athletic Conference (ECAC) Championship, upping their overall record to 15-9.

The Bison took on Queens on Saturday morning and left with a 10-9 victory. Bucknell played a hard-fought game and held a one-goal lead in the fourth quarter.

Queens had a man-up advantage but was unable to convert. James Miente '01 blocked the Knights' last

shot from the field in the closing seconds.

Tate Greditzer '01 and Ryan Mueller '02 led the Bison with three goals each. The consistent Zach Blixt '99 continued his fine play in goal, saving seven shots in the game.

Next up for the Bison was Navy, the Southern Division's top-ranked squad as well as Wooster's alma mater. Looking to avenge their previous losses, the Orange and Blue jumped out in front early and never looked back.

Led by co-captain Kevin Permisohn's '01 four goals, the Bison went away with a 9-6 win. Leading scorer Josh Watts '00 put in three goals while Miente chipped in two.

Perhaps the most impressive performance was turned in by Blixt, who chalked up a phenomenal 12 saves while allowing only six goals.

"Even though the games don't mean anything for the league, they're big for building confidence for this weekend," Miente said.

Wooster was ecstatic about the team's performance at the tourna-

ment. "As much as Navy was a moral and emotional victory, Queens was just as important because they were ranked first in the East," he said.

The Bison will look to continue their streak of clutch performances at this weekend's Southern Divisional Championships. Their first

competitor will be Johns Hopkins, and a victory in that game will earn the Bison an automatic bid in the Eastern Championships.

"It's another chance for us to keep the momentum going," Miente said. "We're going into Easterns this week and then hopefully to the NCAA's."

Watts puts up key numbers

By Brian Watson

Coming into the season, water polo head coach Mike Wooster did not expect to have a dominant scorer. With the graduation of All-American two-meter man Alex Lunding '98, the Bison were left with a huge scoring hole. Wooster had impressed into the team that to win, they had to rely on a balanced attack.

Josh Watts '00 knew that he could be a key member of the team, but doubted his physical prepared-

ness. At the season-opening Navy Invitational, Watts came off the bench, platooning with Justin McCarty '01.

"I had a good rhythm coming off the bench. It takes a lot of the pressure off," Watts said. "I knew I could have a bigger impact with more playing time though."

Watts quickly earned more time, and after impressive early-season performances, Wooster decided to

BSG proposes nighttime shuttle

By Aimee Nicklaus

The Social Service Committee of Bucknell Student Government (BSG) is working to bring a nighttime student shuttle to campus in order to heighten security and eliminate students walking home alone in the dark.

The proposed shuttle would run free-of-charge on Wednesday, Friday and Saturday nights. Stops would include Bucknell West (the Mods), a collective stop for Sigma Alpha Epsilon, Hunt Hall and Smith, Phi Gamma Delta and Kappa Sigma, the library, Sigma Chi and Swartz, Delta Upsilon, Kappa Delta Rho and Lambda Chi Alpha and Sigma Phi Epsilon, Chi Phi and Theta Chi.

The shuttle will not make a stop at the Bull Run Inn, although many students do return to campus after daylight hours from the bar. This decision aims to avoid overcrowding the shuttle and traveling too far making the round trip longer than predicted 20 minutes. Christianne Schuman '01 of the Social Service Committee, said that the shuttle is a "campus shuttle," so off-campus stops will not be made.

A test run on the shuttle showed that the average time for the 2.3-mile round trip was approximately 18 minutes.

BSG plans to find the most well-lit areas to serve as shuttle stops. Shuttle stops will not be marked, but students will be made aware of the locations. Schuman estimates that each shuttle round would take about twenty minutes.

The shuttle will probably run from 9 p.m. until 3 a.m. In addition to the shuttle service, Public Safety's "SafeRides" program will continue to be offered seven days a week.

University vans would serve as the "shuttles," and the same drivers who work for SafeRides will be used. All drivers will be subject to

Residents and students join forces

The CBLR promotes communication between students and community

Jonah Half—The Bucknellian

A picnic was held last weekend in efforts to improve student and community relations.

By Greg Venbrux

Local residents from Lewisburg and the surrounding area attended a pre-game picnic last Saturday in an attempt to improve relations between students and the community. The picnic, which was sponsored by the Coalition of Bucknellians and Lewisburg Residents (CBLR), attracted an estimated 30-45 residents before last weekend's game against Colgate.

Kelly Creech '99, vice president for administration of Bucknell Student Government, is the chair of CBLR and was in charge of organizing the picnic. She said, "This is the first time we've ever tried to put the picnic in conjunction with

something. The residents received free football tickets and could go to the picnic before the game. We had a lot of residents come out which was really nice ... they liked to see the University involved."

The picnic was one of several activities that CBLR sponsors in order to promote communication between students and the community. Joyce Johnson, a local resident who has lived in Lewisburg for 55 years, was one of several who attended Saturday's picnic. "I think [the picnic] is a very good idea. I think it's good that there's more communication between townspeople and students ... communication is key," she said.

Martha Zeller, a local resident since 1954 and

a member of CBLR, believes that the increased communication between students and residents is improving their relationship. She said, "I think it's great to have communication. CBLR is trying to provide more communication ... if there are problems they are discussed. It helps the students as well as the town."

CBLR was founded four and a half years ago by a student, Joseph LaFalce, to ease the rising tensions between students and residents. The organization consisted of both administration and local residents who would discuss various problems with town-gown relationships. Today, the organization consists of three administrative representatives, three off-campus students, one on-campus student, four residents and the chair. With a wide variety of representatives, CBLR allows for active communication between the University and the community.

CBLR was created during a time when the relationship between students and residents was in turmoil. Zeller said, "I was appointed as a town member when [CBLR] was first initiated. Four or five years ago was a really low point for [town-gown] relations." Dave Arndt, a retired fireman and resident of Lewisburg, agreed, "I've lived here all of my life ... there used to be a time when students just weren't welcome downtown."

Many problems still exist between students and residents. Stacy Walter, assistant manager of Perkins, said, "We have a lot of Bucknell students come and study ... we think that's a good thing and we appreciate their business. On the other hand, we also have those who are slightly 'under the weather' come in. When they come in they're intoxicated and often make things difficult."

Gerald Commerford, associate dean of students and member of CBLR, said, "I think the major complaints are about the conduct of students, who sponsor functions off campus ... a lot of parties ... things of that nature. If you're a resident of Lewisburg, you expect your neighbors to be

Irish leader defines conflict

Oliver relates experience as member of the YES campaign

By Anne Monoky

In 1532 Machiavelli said that changing a state or changing a Constitution was a very difficult task. Quintin Oliver, an influential leader in the Northern Ireland peace negotiations, can relate the current situation in Ireland with political events of the past.

On Tuesday, as a part of the University Lecture Series, Oliver spoke to a group of students about his experience in Northern Ireland. He was a part of the YES campaign that encouraged the citizens of Ireland to vote "yes" in the referendum of agreement in the negotiations.

His lecture outlined the details of the conflict and the issues that his campaign represented.

"History was made with the negotiation, as two years of debating finally ended and gave hope to the people of Northern Ireland." His YES Campaign had a lot to do with the appeasement in Ireland. The campaign tried to bridge the gap between the common citizens of Ireland and the political elitists to have both groups vote in agreement of the referendum. Oliver stressed the idea through propaganda such as videos and signs declaring, "We want peace. We want progress."

Oliver said that for historical reasons many years ago the territory of Northern Ireland was partitioned to the neighboring country of England. However, the people of Ireland have had conflicts for the past 800 years over their identity as part of England or the Irish Republic. Unlike most traditional situations of decolonization around the world, the majority of the citizens of Northern Ireland favored to stay part of the Imperialist power of England. Sixty percent of the Protestant citizens supported the idea of the Unionist's platform to remain a part of England. In contrast, 40 percent of the Catholic group known as the Nationalists wanted to become a united Ireland.

After two years of attempting a negotiation contract between the two sides, a deadline was finally imposed forcing the negotiations to come to an end. The product was a 65 page document that, according to Oliver, could have been interpreted beneficial to either side.

A referendum was then to be voted on by the entire Irish Republic, a vote that had not been conducted for several centuries of history. When the referendum was announced, a poll was conducted that said the 85 percent of the people believed that an agreement would not be reached by the referendum.

At this point in time, Oliver and his YES campaign was formulated. The campaign was introduced as a group that supported the voting for agreement in the referendum;

University cracks down on hazing

By Tracy Thiffault

"Any fraternity or sorority that is involved in any hazing will be closed immediately," Roy Baker, assistant dean of students, said at a mandatory meeting for all Greek Organization presidents, rush chairs and pledge educators before rush this fall. This statement is a direct result of Baker's commitment to a stricter approach to hazing at the University.

Baker discovered "clear evidence" of

Christine Lellis—The Bucknellian

Roy Baker, assistant dean of students.

hazing that had been going on at several fraternities and a couple sororities last year, which prompted the meeting at the beginning of the school year. "Once I realized it

was happening, my approach changed," he said, "I didn't think it was going on in the first place."

According to the Antihazing Law of Pennsylvania, hazing is defined as, "Any action or situation which recklessly or intentionally endangers the mental or physical health or safety of a student or which willfully destroys or removes public or private property for the purpose of initiation or admission into or affiliation with ... any organization operating under the sanction of or recognized as an organization by an institution of higher education ..."

"We will not tolerate hazing at Bucknell. It has no place in the Greek system," Baker said.

In addition to the meeting, Baker also planned the "Hazing on Trial" presentation by David Westol, a Theta Chi national representative, to which all Greeks were required to attend. "This was the perfect follow up to my new approach towards hazing ... Every fraternity and every sorority had 75 percent attendance, with the exception of SAE and DU."

Over 1000 people attended "Hazing on Trial," including approximately 100 members of Bloomsburg University.

With the recent incidents of alcohol related deaths at familiar schools such as Louisiana State University, Massachusetts Institute of Technology and the University of Iowa, the subject of hazing has only increased at colleges and universities nationwide. The same fraternities at which these incidents occurred are also present at the University.

"This whole concept of alcohol being involved in any form of pledge education is just a black eye to the Greek system on a national basis," Baker said. "People keep saying 'it

will never happen here,' but the thing is, it will happen here."

Baker monitors possible hazing leads by following up parent phone calls, questioning pledges and evaluating each fraternity's pledge education agendas. As a result of the new hazing approach, many chapters have redone their pledge education programs. Baker has approved every program submitted by each fraternity and sorority.

"We specifically have a meeting the day of Bid Day explaining the 'no Hazing' policy and what is considered hazing," said Lorene Johnson '99, president of Phi Mu.

"We were told to go to the pledge educators if we felt uncomfortable with what a sister told us to do," said Beth Campbell '01.

See HAZING, page 3.

Phi Gamma Delta responds to alcohol ban

By Chris Ellis

The national governing body of the Phi Gamma Delta Fraternity (Fiji), in effort to respond to concerns voiced by its individual chapters, has developed a plan that will allow some Fiji chapters to apply for a deferral of its ultimate ban of alcohol in chapter houses.

Last year, Phi Gamma Delta approved a plan that would ban alcohol from all chapters by the year 2000. Under the new plan designed at this year's Ekklesia—Fiji's biennial national conclave, the strongest of Fiji's chapters—as determined by a set of stringent nationwide criteria—chapters will be allowed to apply for a two-year extension of the current policy and not be forced to phase out alcohol until the year 2002. The plan was developed as a settlement between those

Beena Kim—The Bucknellian

The University South Asian Students Association held its annual dinner Friday night in the Larison dining room. The dinner featured catered Indian food from the Prince of India Restaurant, cultural performances and a dance party following the meal.

SHUTTLE

From page 1.

screening, background checks and fulfilling University license requirements.

BSG has already determined that the costs to pay the drivers will total approximately \$4500 per year. They propose, however, that the University should fund gas and insurance costs, at a cost not yet established.

BSG has planned to meet with a University review committee to present their plan and receive feedback. It also will meet with the President William D. Adams, Director of Public Safety, Vince DeCercio and a number of deans. The latter group will ultimately decide whether or not the program will be set into action. With the aforementioned approval, BSG would like to begin operations within a few weeks.

An e-mail was sent out to the student body requesting feedback on the idea. Nearly 700 responses were received, only three of which were negative. The negative responses protested that a service like this would increase drinking and partying and eventually adopt a "booze-cruise" or "drunk bus" kind of reputation. "The shuttle service would no more promote party

nights than does the safe—ride program and its primary goal is safety," Schuman said. Schuman also said that students who go out at night have been doing so already and will continue to do so regardless of the shuttle service.

"Regardless of its cost, if this service prevents the assault on or physical harm of one Bucknell student, it is well worth the expense."

—Derek Leo '01
BSG vice president of internal affairs

dent, it is well worth the expense," said Derek Leo '00, BSG vice president of internal affairs.

Through research, BSG has found that a number of the University's frame of reference schools offer similar nighttime shuttle services which have been successful.

Unless problems arise, students will not be required to show identification to ride the shuttle. The shuttle will operate on a first come, first serve basis. To keep the traveling safe, a crowded shuttle may turn people away on occasion, but Schuman hopes that with students getting both on and off at each stop, the route should work at an equilibrium.

RESIDENTS

From page 1.

considerate. When they are not considerate, whether they are a Lewisburg resident or a student, you're going to have problems."

"A lot of neighbors are afraid to talk to students. It would be nice if students would introduce themselves to more people [because] I think Lewisburg is proud of Bucknell," Arndt said.

Despite the poor relationships that once existed between the students and local residents, many people feel that the increased communication in recent years has had a positive effect for everyone.

Apparently, the tensions between the University and the surrounding community have eased. I don't think there's a strain in the relationship. There's not the resentment like there used to be. I think the relationship is improving... there haven't been as many problems with students lately," Johnson said.

Walter said, "I think things have improved. We've definitely come a distance."

CBLR sponsors a variety of programs that involve both students and local residents. Some of these activities include block picnics, Easter egg hunts, weekend cleanups, open forums, guest speakers and several other events.

"We have a speaker on [Nov. 17th] that's mostly for students, and we're looking into setting up some recycling bins off-campus," Creech said.

Apparently, CBLR is a growing organization that has encouraged improved relations between the student community and local residents. Many members of CBLR are trying to promote more activities and get more representatives involved with the organization to provide better communication between students and residents.

"[CBLR] has great potential to bring the student off-campus community together with the Lewisburg community in which they live," Commerford said.

"The committee has really taken off in five years. It's really made a difference," Creech said.

IRISH

From page 1.

however, many obstacles stood in the way of success.

The campaign formed a message development and through public imagery projected this message of the importance of the agreement. They had events with profiles and thematic press conferences with famous poets and athletes who upheld the beliefs of a peaceful agreement in Ireland.

However, the campaign also had to deal with the consequences of such an agreement. Conse-

quences include prison release, arms decommissioning and paramilitaries in the government and policing. The campaign combated such issues with the concern of the immediacy of the peace that needed to be agreed upon by the opposite sides.

The YES campaign was effective and Oliver's efforts were recognized. Recently the head negotiators of the Protestant and Catholic sides of the conflict were nominated for the Nobel Peace Prize.

Public Safety Log

October 29, 1998

MISSING PROPERTY REPORT—A University student reported to Public Safety having misplaced a wallet in the Bertrand Library.

October 30, 1998

ASSIST LEWISBURG POLICE DEPARTMENT—Public Safety responded to South Seventh Street to assist the Lewisburg Police Department and the East Buffalo Township Police Department in closing a party. A University student was cited by Lewisburg Police Department for disorderly conduct.

THEFT—A University student reported to Public Safety that a bicycle was taken from the Larison Hall bike rack. The incident is under investigation.

THEFT—A University student reported to Public Safety that a bicycle was taken from the Vedder Hall bike rack. The incident is under investigation.

INDECENT ASSAULT—A University student reported to Public Safety having been the victim of an indecent assault in a Roberts Hall room. The incident is under investigation.

October 31, 1998

UNDERAGE CONSUMPTION/PUBLIC DRUNKENNESS—Public Safety responded to Vedder Circle to assist Lewisburg Police Department with an underage University student who admitted to having consumed alcohol. Police and University citations were issued for underage consumption and public drunkenness.

MEDICAL ASSIST/TWO COUNTS UNDERAGE CONSUMPTION—Public Safety responded to Swartz Hall for an ill student who was transported by ambulance to Evangelical Community Hospital Emergency Room for treatment and later released. While in the building, Public Safety located a second ill student who was assigned to the RA for monitoring. East Buffalo Township Police Department was present and Police and University citations were issued for underage consumption.

INFORMATION/SAFETY HAZARD—Public Safety responded to the front of Roberts Hall for the report of University students juggling flaming sticks. The individuals cooperated with a request to stop.

TRESPASS/UNDERAGE DRINKING/PUBLIC DRUNKENNESS—Public Safety responded to the rear of Lowry House for the report of two intoxicated visitors. Lewisburg Police Department issued the individ-

als citations for public drunkenness. During the investigation an underage University student was located in a Roser Hall room and issued University citations for underage drinking and trespass. Sigma Phi Epsilon was issued a citation for providing alcohol to a minor.

INFORMATION—A University student reported to Public Safety having received an obscene phone call in a Trax Hall room. The incident is under investigation.

November 1, 1998

UNDERAGE POSSESSION/CONSUMPTION—While on routine patrol, Public Safety observed a University student carrying an open container of malt liquor on Loomis Street. University citations were issued for underage possession and consumption.

UNDERAGE CONSUMPTION—While on a routine party check at Kappa Delta Rho Fraternity, Public Safety observed an underage University student with alcohol. A University citation for underage consumption will be issued to the student and one to the fraternity for allowing minors to consume alcohol.

UNDERAGE CONSUMPTION/DUI—Public Safety assisted East Buffalo Township Police Department on a Dent Drive vehicle stop involving an underage University student driver who was intoxicated. Police and University citations were issued for underage consumption and DUI.

UNDERAGE CONSUMPTION/3 COUNTS—Public Safety issued citations for underage consumption to three University students who were passengers in the Dent Drive vehicle stop.

UNDERAGE CONSUMPTION—While on routine patrol, Public Safety stopped a University student for a traffic violation at the Davis Gym. The individual admitted to consuming alcohol and was issued a University citation for underage consumption.

OPEN CONTAINER—While on routine patrol, Public Safety observed a visitor with an open container of beer in Seventh St. Lot. Lewisburg Police Department responded and issued a citation for an open container ordinance violation.

DISORDERLY CONDUCT—While on routine patrol, Public Safety observed a University student urinating in the bushes in front of Davis Gym. A University citation was issued for disorderly conduct.

CRIMINAL MISCHIEF/TRESPASS—A University student reported

to Public Safety that unknown person(s) had entered an unlocked Delta Upsilon Fraternity kitchen and emptied containers of spices and cleaning materials onto the kitchen floor. The incident is under investigation. East Buffalo Township Police Department was notified.

INFORMATION/RECOVERED PROPERTY—Public Safety responded to the Freshman Quad to recover a banner that was left there. The property was returned to the owner and the incident is under investigation.

CRIMINAL MISCHIEF—A University student reported to Public Safety that unknown person(s) smashed eight pumpkins on the sidewalk in front of the Kappa Sigma Fraternity. The incident is under investigation. Lewisburg Police Department was notified.

PROPERTY DAMAGE—Public Safety responded to Swartz Hall for the report of a broken window. The incident is under investigation.

INFORMATION/MICROWAVE FIRE—Public Safety responded to Vidinghoff for the report of a microwave fire extinguished by a University student.

November 2, 1998

INFORMATION/DOMESTIC DISPUTE—Public Safety responded to Larison Hall for the report of a domestic dispute. Neither of the involved parties wanted to press charges at this time.

UNDERAGE CONSUMPTION—Public Safety responded to Kress Hall for the report of an intoxicated person. A University citation was issued for underage consumption.

INFORMATION/PROPERTY DAMAGE—Public Safety responded to Dana Engineering Building for the report of a missing storm window. The incident is under investigation.

INFORMATION/PROPERTY DAMAGE—A University employee reported to Public Safety that a stop sign was missing from the intersection of Coleman and Fraternity Roads. The incident is under investigation.

INFORMATION/SUSPICIOUS INCIDENT—Public Safety responded to Smith Hall for the report of an unknown person climbing into the building through a window. The investigation determined that the student was crawling into his own room.

Brown, Goldman families agree to split proceeds from Simpson auction

SANTA MONICA, California—The families of Nicole Brown Simpson and Ronald Goldman have agreed to split the proceeds from an auction of O.J. Simpson's personal belongings, a lawyer said Monday.

Simpson was not found guilty in 1995 in the killings of Nicole Brown Simpson and Goldman, who were found murdered outside of Nicole Brown Simpson's Brentwood condominium in June 1994.

But in 1997, a civil jury, found the former football star responsible for the deaths, and ordered Simpson to pay the two families \$33.5 million. So far, neither family has received any money.

U.S. government spent \$82.5 million on OKC bombing investigation

OKLAHOMA CITY—The federal government spent \$82.5 million to investigate the Oklahoma City bombing and prosecute its case, the most expensive in U.S. history, officials said.

Convicted bomber Timothy McVeigh and Nichols, convicted on conspiracy and involuntary manslaughter charges, were found within two days of the April 19, 1995, bombing that killed 168 people.

The FBI spent millions more looking for other suspects, especially John Doe No. 2. Agents later concluded that suspect likely never existed.

Seventh murder charge filed against ex-nurse

BRAZIL, Indiana—Authorities have filed a seventh murder charge against a former nurse suspected of killing patients under his care at a rural western Indiana hospital.

The charge against Orville Lynn Majors in the November 1994 death of Derek Maxwell Sr. was filed Monday, just before the deadline to bring additional charges expired.

Majors, 37, worked as a licensed practice nurse at the former Vermillion County Hospital between 1993 and 1995, a period when the death rate was three times normal in the intensive care ward where he worked. He allegedly killed the patients with injections.

World

South Koreans separated from family by war rush to visit North

SEOUL, South Korea—When the Korean War broke out in 1950, then-20-year-old Shin Hyun-man enlisted in the South Korean army despite his family's opposition. His home, Kaesong, which had been in South Korea before the war, became part of North Korea and Shin, like millions of others, was separated from his family.

When South Korea's Hyundai group began taking applications for unprecedented tours to scenic Diamond Mountain on North Korea's east coast Monday, Shin was one of the thousands who rushed to register. For about 7.7 million Koreans like Shin, it may be their last chance to get a step closer to their families.

Red Cross says 90 dead in Colombia rebel onslaught

BOGOTA, Colombia—In one of the bloodiest attacks on security forces this year, some 90 policemen were killed and 45 were taken prisoner when 1,000 Marxist rebels pounced a police base with home-made missiles in a remote Colombian town, Red Cross officials said on Monday.

The raid came a week before the government was due to withdraw troops from a large swathe of the southeast—an area the size of Switzerland—to jump-start talks with FARC captains aimed at ending Colombia's long-running civil conflict.

Prosecution accuses Anwar of abuse of power

KUALA LUMPUR, Malaysia—The first prosecution witness in the trial of Anwar Ibrahim said on Tuesday that the former deputy prime minister had tried to quash sworn testimony about his alleged sexual misconduct.

Mohamed Said Awang, former chief of Special Branch police, testified that his unit launched operation Solid Grip, an investigation into sexual misconduct by Anwar, in 1992. That was the year before Anwar was named deputy prime minister and finance minister. He faces five counts of corruption and five counts of illegal sexual acts. He denies the charges and says they were politically motivated.

France seeks arrest of Chile's Pinochet

PARIS—A French judge on Monday issued an international warrant for the arrest of Chile's former dictator Augusto Pinochet, who is under police guard in a London hospital awaiting a ruling on an arrest warrant from Spain.

The French warrant was issued by investigating Judge Roger Leleire in connection with his investigation into the disappearance of Frenchman Marcel Amiel—Baquet, Rene Chanfreau and Etienne Pesle during Pinochet's rule in the 1970s.

Martin Luther King Jr. Commemoration Committee begins planning celebrations

By Sarah Palmer

The Martin Luther King, Jr. Commemoration Committee is embarking upon a new year of organizing events in celebration of the efforts and accomplishments of the late Martin Luther King, Jr.

Plans for this year's celebration include a full week's worth of events. "Some events include showing movies honoring King and hope-fully holding a candlelight vigil in his memory," Krystal Buhr '01, committee chair, said.

"The goal of the committee is to encourage the University community to commemorate Dr. Martin Luther King, Jr., and to remind everyone of the importance of peace, harmony and service," Lorene Johnson '99, former committee chair, said.

Initiated by the Office of Campus Activities and Programs (OCAAP) eight years ago, the committee is now under the direction of the Multicultural Center. It is traditionally represented by six or seven members of the student body and faculty who strive to aid faculty and staff in brainstorming ideas for the commemoration of Martin Luther King, Jr.

"I think that this committee creates awareness on campus," Buhr said.

"Martin Luther King, Jr. is the

perfect example for students here. He serves as a model of a person who believed in himself and in his dreams and, although he faced several hardships, went out of his way to fulfill those beliefs."

"We must not forget Dr. King's dreams and we must continue to have [our own] dreams and make them into reality," Buhr said.

The committee has evolved over the years. During its early stages, it solely organized a luncheon with a speaker. "Now we have turned it into a dinner with student, faculty and community involvement," Johnson said.

In the past, the committee has furnished those attending the dinner with various forms of entertainment. Speakers, singers and student actors are among several people who have performed.

Each year the commemorative dinner aims to reflect on the life of King by focusing on a specific theme. The theme of last year's dinner was "Breaking the Silence: The Unfulfilled Dream."

Those in attendance debated over whether or not Americans have fulfilled King's dream. The resulting consensus was that the dream has not yet been satisfied and that, in order to carry it out, more community service must be demonstrated by the campus community and others.

Funds collected at the dinner were donated to a local food bank.

Over the years, the committee has been endorsed by several University organizations and offices, such as the Inter-Fraternity Council (IFC), the Multicultural Center, OCAAP, the Office of the Deans of Students, the President's Office, the Bucknell Student Government (BSG), as well as students, faculty, staff and members of the Lewisburg community.

Johnson reflects positively on her relationship with the committee. "It has been exciting to see the growth of enthusiasm for this event in my four years at Bucknell," Johnson said.

"When I started with this committee my freshman year we had about 75 students and faculty attend. Last year our numbers grew to over 150. It makes me happy to see how the committee has grown over the years from just a group of five students and faculty to over ten."

"It is wonderful to see people trying to make Martin Luther King's dream a reality by making people aware of cultural differences... and by serving the community and understanding the importance of service."

FIJI

From page 1.

who wished to eliminate alcohol and those who saw it as a detriment to the future of Fiji chapters.

"It was a compromise between different factions," said Chris Arcuri '98 said, a past FIJI president and a delegate to last summer's Ekklesia. "It allows us to be leaders in a sense, but it doesn't put us out of line with what other fraternities will be doing. [Alcohol abuse] is certainly a problem that needs to be addressed, but it's not fair for us to be forced to step ahead, because in terms of rush, it means we're no longer on a level playing ground."

To apply for the two-year extension, FIJI chapters must have a grade point average equal to the all-fraternity average and above 3.0 on a four-point scale, have mandatory alcohol-

awareness programs presented to brothers and have no risk-management violations imposed by either the University or the national headquarters. The criteria must be met by spring of 1999 to allow an individual chapter to apply.

The 127 chapters of Phi Gamma Delta had mixed feelings on the banning of alcohol and its effect on rush and social events, so the plan was developed as a way to appease those who felt FIJI was moving too quickly to ban alcohol. The extension may be reviewed or extended at the next convocation, but Arcuri feels that talk of another extension likely will be a non-issue.

"There's always the chance that it will come up again, but I don't think it will be an issue," Arcuri said. "I think that by that time, most if not all fraternities will be moving in the same direction."

FIJI is just one of several national fraternities to take measures that may eventually phase out the use of alcohol in fraternity chapter houses. Last month, the National Panhellenic Council passed a motion that prohibits sorority women from attending a social function at a fraternity house when there is alcohol present. This motion, like the first part of FIJI's motion, will take effect in the year 2000.

"With alcohol the type of issue that it is now, I think most fraternities have no choice but to move in the same direction," Arcuri said.

A World of OPPORTUNITIES

NORTHWESTERN COLLEGE OF CHIROPRACTIC can provide you with an education uniquely focused on the 21st century. Just ask our 3,000 alumni. They are practicing from America to Zimbabwe, as solo practitioners and in interdisciplinary settings. They know that our FOCUS ON EXCELLENCE has earned us an international reputation as a pioneer in chiropractic education, patient care and scientific research. Northwestern is a single-purpose, limited enrollment, private institution featuring a well-rounded, RIGOROUS EDUCATIONAL PROGRAM integrating the basic and clinical sciences, diagnosis, X-ray, chiropractic therapeutics, wellness care and practice management. Our pioneering clinical internship programs, interdisciplinary study opportunities and a state-of-the-art student clinic provide our graduates with an UNPARALLELED CLINICAL FOUNDATION. Add our Career Services Center, where we assist our graduates in job placement, and you can understand why our graduates have such a high satisfaction level with their careers. For a personal visit or more detailed information, call a Northwestern admissions counselor at 1-800-888-4777. Or go virtual at www.nwchiro.edu

Why we need a campus shuttle

Events on campus this year, particularly that of the rape on Seventh Street and the subsequent reaction to the tragedy, has brought to light the inherent dangers of any college campus. Although the University, compared with other institutions, is relatively secure, no environment can be a totally safe haven. Nonetheless, amid the uproar and the calls for safety, University students have had little other recourse than to travel in large and often cumbersome groups, or to use Safe Rides.

Until now, Bucknell Student Government has recently presented a proposal that would institute a campus shuttle, designed to run Wednesday, Friday and Saturday nights to all areas of the campus. Furthermore, this shuttle would have set stops and would not require a student to call for their services. The importance of such a plan should not be overlooked.

Many women have complained that it is difficult to find a phone during a party or event to call for Safe Rides. The shuttle would solve this problem by providing an accessible and reliable form of travel. This is not to undercut the importance of Safe Rides, but to reinforce the need for a mode of travel that can hold more people and that students can depend on to be at a certain place at a certain time.

As of now, the alternative to Safe Rides is to travel in large groups. However, this rarely occurs on campus. People tend to struggle out of parties, etc. at different intervals and, not wanting to bother with Safe Rides, walk home alone or with one other person. Knowing there is a shuttle arriving soon may dissuade people from walking home alone as often as they do now. The institution of the shuttle will also hopefully cut down on drunk driving on campus. Most incidents of drunk driving do not involve students who are heavily intoxicated, but those that have had a few drinks and do not want to walk. These are the students, particularly males, who would not ordinarily call Safe Rides, but that may be more apt to get a ride if one is provided.

However, with the benefits of the shuttle system come potential abuses. With a larger van and a continuous run, there is potential for large groups of people to hop on, not wanting to walk up-hill. The van should still be reserved for predominantly women traveling in small groups and other people who may be at risk, such as those walking alone or those highly inebriated. It should not be for the lazy or those who do not want to walk in the cold. This is not a taxi, it is a service to make the campus safer. The drivers of the shuttle must use their discretion in driving people, a situation which puts a great deal of responsibility on the driver.

With all the heretofore mentioned in mind, here are a few ideas to keep in mind to ensure safe travel and limit the abuses of the proposed shuttle. First, have all the drivers undergo TIPS training. TIPS training is a three-hour session offered by the University that alerts students to potential dangers of drinking and how to spot drunk individuals. Also in regards to the drivers, they will need to be smart about who they drive, maintaining the shuttle for those in possible risk.

It is also important for the University to determine set stops at which the shuttle will arrive, as well as set times that the shuttle will arrive—such as every twenty minutes, etc. Having well-lit and marked zones for pick-up is crucial. These steps will maximize safety, as well as expectancy, making the shuttles reliable and accessible, and thus making the students safer.

The University has already suffered one attack on its campus; it does not need another. Safety should be of the utmost concern, particularly as the campus is fairly spread out, and the shuttle is a drive in the right direction.

Do you know more about politics than the average ex-pro wrestler? Prove it!

OPINIONS

Bucknell bashing overlooks positive aspects

By Courtenay Mastain

Week after week, I read *The Bucknellian* and come across an article so full of loathe for Bucknell, I cannot help but wonder what is wrong with me for being perfectly happy and thrilled to be a student here. Up front, I am an optimist by nature and generally a happy person. Some may perceive this positive attitude I project about life as false and I am sorry to disappoint those of you skeptics, but what I have to say is genuine.

One of the most wonderful aspects of college is that you possess the power to decide where you want to go. If the admissions officers at your first choice college fail to regard you as highly as you do their institution, you still have the chance to decide if another college might suit you. It was fortunate enough to be accepted by my first choice and therefore, I can understand how my opinion may be biased.

Choosing the place where you will spend the next stage of your life is not a decision to be taken lightly, much thought and exploration should be invested into finding the place that is right for you. While there are many circumstances surrounding this, such as financing and your high school performance, the possibilities are truly endless. Not everyone finds their perfect place, but for the majority of those who have realized the importance of their decision and acted accordingly, the outcome has been rewarding.

For those people who did not do their homework, as was expected, your complaints have no validity. By applying to a school, you are expected to be familiar with it. For those discontented students who did visit Bucknell and, taking all factors into consideration, made a conscious decision that this was the place that they wanted to be, my question to you is, why are you here? No one is forcing you to be here.

For all of the complaints about diversity, cost, and isolation, a true argument has yet to be introduced by anyone expressing his or her opinion. It should not surprise anyone that Bucknell is not regarded as an ethnically diverse campus; rather it is notoriously homogeneous. However, as one of my friends said, "I challenge anyone to find ten people whose life experience have been the same." I encourage you to accept her challenge. I did with my friends here.

As far as I know, I am the only person here from Utah. I have a friend from South Africa whose experiences top the diversity charts, and one from New Jersey who took a year off to work and travel in Spain and Italy. One of my friends is from California and volunteers for the fire department in hopes of becoming a

firefighter, and another spends every summer working as a camp counselor and has traveled to Israel as a part of this group. Another is also from New Jersey, and spends his summers at the Jersey shore, and he is a unique person despite the fact that half the people here have had the same experience. Yet another is studying abroad from England and is pledging a fraternity. My roommates are from Massachusetts and Connecticut and they have lived in the same houses their entire life. While we may lack intensely diverse backgrounds, we are all individuals who have had completely different life experiences.

Diversity is not limited to culture and ethnicity. Life experiences are what make us individuals and separate me from you. Moreover, if cultural and ethnic diversity were such a priority on your college list, why didn't you attend a school like Berkeley?

This draws me to the issue of finance. I can imagine the immense frustration of relying on financial aid as a determinant of where you can and cannot go to school. A truly unfortunate factor in picking a school, it would be ideal if everyone could afford the institution of their choice without worry. For those students who did not get the aid they hoped for, my heart goes out to you and your families who are working incredibly hard to finance your education. Yet, in this case as well, you have a choice. While the limitations are greatly increased, there are schools all across the country that demand far less in tuition, housing, activity and book fees. You could have chosen to attend your state school or a community college, but instead you chose Bucknell.

While the price tag of a Bucknell education is hefty, the money is going somewhere. It is going into the construction of new buildings and the repair of old ones. It pays the salary of the professors whose knowledge is what we, as students, are here to learn from. It is the reason that the campus is so beautiful and well kept. If you appreciate nothing else about Bucknell, at least acknowledge the gorgeous aesthetics of the campus. The Bucknell experience is not cheap, but as the saying goes, "you pay for what you get."

As for the lack of extracurricular activities and the isolated location: your experience here, as in life, is what you make of it. It does not take more than a glance at a map to realize that Bucknell is in the middle of nowhere. It is not near any city overflowing with clubs, bars, sports teams, malls, theaters, museums, amusement parks, and all of the conveniences of a major city. If you had hoped your college experience would include these things, what in the world are you doing in Lewisburg, Pennsylvania?

It is no secret to anyone that the Greek system is the major source of weekend entertainment for the majority of students. If going to them is not your idea of a good time, no one is forcing you to indulge in them, but still you are not reserved the right to complain that everyone else is out at a frat party. That, my friend, is a choice. If the activities that the various organizations host do not stimulate your interests, you have every opportunity to organize your own activity. It is a matter of whether or not you truly have the courage and the interest in doing so.

The power of choice is a remarkable thing that every individual possesses. It extends to the right to decide what you want to wear. If J. Crew does not suit your tastes, you are more than welcome to wear what fits your own individual style. I may be delusional, but I think that many of the students actually like to wear J. Crew, Abercrombie & Fitch, Gap, Banana Republic, and Polo. There is no dress code here; so, the only logical explanation that I can come up with is that people make a choice to wear clothes that they feel comfortable in. No one is going to take these people who enjoy wearing something different into the bathroom at recess and beat them up. If you don't want to dress in the styles that others do, have the courage to do so instead of criticizing them.

The lack of cultural diversity and extracurricular events, difficulty in receiving financial aid, isolated campus, Greek dominated weekend

scene, and homogeneous style of dress are a part of Bucknell. Whether they are positive or negative characteristics, is your own opinion, which everyone is entitled to.

More importantly, everyone is entitled the right of choice. If there are things about the University that frustrate or infuriate you, realize that you have the ability to change them. While this idealistic attitude is not for everyone, it surpasses the rhetoric expressed weekly in this very newspaper.

However, it is most crucial for you to recognize that everyday you spend here, you spend out of choice to be here. When filling out the application and sending the check, you made an unspoken agreement that you knew what you were getting into.

For people who came here with no idea of what Bucknell is all about, you can only blame yourself for not taking the decision as seriously as you should have. For the rest of the unhappy, complaining people, I am sincerely sorry that you are not appreciating your time here. If this isn't where you belong, you deserve to find where you do.

There is no perfect place, but Bucknell isn't so awful; in fact, it is pretty amazing. Whether or not you appreciate it, every student here must be something special to be given the opportunity to have the Bucknell experience. But, it ultimately comes down to the simple fact that what you put into it is what you get out of it.

LETTERS TO THE EDITOR

The woes of parking

TO THE EDITOR:

Can Public Safety count? It seems pretty easy to assign as many parking passes as there are spaces on campus. I cannot comprehend the fact that I can never find a place to park in a red area when I have a red ticket!

Public Safety and Dining Services must be controlled by the same person. I think Public Safety has to re-evaluate their parking guidelines and perhaps create a situation that is smart, efficient and capable. There is no excuse for the way parking has been handled at this university. Obviously, Public Safety is more concerned about the "tree" on campus, then bothering to fix an old and extremely out-of-date system.

Living in Kress, I understand the shortage of parking in the area. I have no problem parking out in a cornfield and walking 1/2 mile to my dorm everyday. I do have a problem when all of the parking lots on campus are full and wherever I park, I live in the ugly shadow of "the ticket." Today, I drove around every parking lot on campus at 9:30 a.m. and could not find one empty space.

ANDREW KOHN '01

Have we lost touch with the environment?

By Adam Parris

Despite a growing concern for the environment and a call to change lifestyle, a significant portion of the University community, as well as the world community, is only sluggishly doing its part to help save the environment. Beneficial changes to the environment cannot happen overnight, and one might say that some change is better than none. However, the reasons for which people work at such a pace towards a healthy environment is fearfully ineffective of selfish qualities.

In this week's *Science and Technology*, Father Thomas Berry, author of *The Universe*, speaks about the fundamental establishments of society losing their purpose and their connection to the earth. He also speaks about the intentions of these establishments as they are meant to be. He speaks about people who have intentions of doing what they are told is right, but what may be

wrong. Until now, the preservation of the environment has been an idea which has encompassed the human ability to sustain one thing, themselves. When people are told to make efforts to be environmentally sound, they are told to do so because the planet is not otherwise able to support life on earth. However, Father Berry's comments include certain lives that are typically negated from this support, the "other than human."

As the world community becomes involved with saving the environment, it does so only slowly because people have some undeniable urge to solve things quickly. People are not satisfied when their efforts are not rewarded overnight. Therefore, their involvement is passive, especially as they realize that the devastating effects to the environment which occur do not necessarily have an impact on their daily lives.

What about the lives of the three species that die out every day because of human destruction of ecosystems?

Humans fail to recognize that lifestyle change does make a difference on the environment. But lifestyle change makes a difference when thinking on a scale of time which is more congruent with earth's history and on a population of ecosystems and species other than those of humans.

It is for these reasons, as well as others like them, that humans are entering the environmental movement with the wrong idea of what is right.

The University community contains students who are striving to enter the world in prominent positions. The desire to enter such a position is indicative of the same quality which hinders our ability to see the reasons for saving the environment—selfishness and greed.

In their talk about landscapes

and ecology this past Monday in the Geology building, Dr. Nick Nickelsen and Dr. Warren Abrahamson spoke of the effects that landscapes have on ecosystems and the effect humans have on these ecosystems.

A large portion of their lifetimes have been spent studying this area to understand the dynamics of its environment. The speech that they delivered to students reflected both knowledge, and wisdom. The understanding that both Dr. Abrahamson and Dr. Nickelsen showed for the local environment was the result of their ability to listen to the environment and to each other.

Even in efforts to save the environment, the human race has lost the one quality which provides the ability to maintain local ecosystems: patience. Without this patience and without a dedication to cultivate this quality, the crucial ability to listen is lost—the ability to listen not just to oneself and other people, but the environment.

Not voting only serves to perpetuate problems

By Emily Novick

The futile effort of voting. What is the point? This past Tuesday thousands flocked to the poles to cast their vote. For what? It seems as if more and more people are demonstrating their right not to vote. Frustrated with the system, the American public has acquired a new attitude toward voting. This is the popular belief that voting is almost entirely fruitless. These people are armed with an array of factors,

which they suggest work against the average voter.

Lets figure, two of the biggest groups voting today are the senior citizens and the "soccer mom" types along with their husbands. Both of these groups are active in the politics of America. They care about getting medical aid and attention, and they care about the world in which their children have to grow up. It is because of their attentiveness to these policies that they vote. Usually, each parent and each grandpar-

ent votes. Unfortunately, they usually have opposite views; they simply cancel out one another's vote. As do most married couples in America.

Lets say you're single at any age. You're an individual, strong, independent and assertive with your ideas and views. You vote, if you have time. But no matter which way you look at it, your vote is just one in millions. So you might as well not waste your lunch hour to wait in traffic and then stand in line in order

to cast a vote that does not count anyway.

About the candidates and their ideas. Let's face it, they're all lying so it does not matter who gets caught and who doesn't. It's a fact of life. No matter who throws sludge at who first, they were all dirty before the games began. A "good" politician fails to exist. Well, he's considered good if he doesn't get caught.

From an overall perspective, the election is probably rigged—isn't everything in America? Politicians work hand in hand with the largest corporations in America. I bet the corporate owner's vote counts, in more ways than one. It is pretty impossible to successfully run through a wall of money, who say's you'll even make a dent.

With the changing times come changing attitudes. It seems as if America has hit a slump on the patriotic scale. We've taken these cynical attitudes about voting because we are frustrated with our political representation. We've abandoned our right to vote, which many of us have fought hard for in the past. The amount of people who come out to the poles each year diminishes significantly with each election.

So what can we do about it? Do we join the masses, forfeit our individual representation and protest the act of voting? Will that method level the skyscrapers of frustration? Highly unlikely. The opposite approach must be taken. There isn't going to be a revolution any time soon to change the face and structure of the American government. So, in the absence of revolution, American people must move towards a stronger individual representation, instead of running away from what we, as American citizens, must pride ourselves. We must use the only audible voice that we have.

Debating your future plans: choosing freedom or security

By Laran Brindle

With the future approaching at a warp speed, the talk of "after Bucknell plans" begins. What am I going to do after graduation, with the rest of my life? Perhaps the answer is an internship, a job in "the city," med school, law school, travel or maybe nothing at all!

Basically, this decision of future life plans is about whether you will choose freedom or security. There is the secure road of internship, job, money, etc. or there is the freedom road of travel, waitressing, who knows, etc.

It's enticing to think about the merits and the downsides of these two options, and, more importantly, to figure out if it's possible to achieve both freedom and security within a happy life.

The freedom enables you to call the shots, make your hours and ultimately do what you want when you want. Part of me wants to live and work at the beach as long as I possibly can, if not forever.

Who says you must get an internship junior year, so you can be offered a job senior year, so you can begin to climb the proverbial corporate ladder, until you retire at a relatively young age. Yes, you are successful and financially comfortable, but what has happened to

your 20's and 30's? You have spent them in an office working god knows how many hours a week.

But, then again, in a cry for security, the resume may suffer along with your bank account. Of course with security, there is not the "what am I going to do with my life" question looming over your bed at night. Parents and possibly the IRS won't be on your back about money and overall you could be very happy.

Freedom does not have these perks, but instead, it screams out with wanderlust and adventure. Freedom enables you to actively live your life on a day to day basis. You are so young and the office will wait a couple years for you to grace it with your presence. I am not trying to be cynical or simplistic because I myself will pick my way down the road of security someday. But, isn't it exciting to think about the options, even if they are not for you?

I don't think that it is possible to have both freedom and security at the same time with most things you experience in life. I do think there are distinct times for freedom and there are times for security. An appropriate mixture can be the key to personal enjoyment. Right now, at 20 years old, nothing is more appealing than freedom ... security will just have to wait a couple of years.

Aspiring to be governor of Minnesota! Gotta start somewhere. Write Ops

"Yes, I voted in the election. From what I can tell, a lot of people don't care about voting because you don't see a lot of voting taking place among the students at Bucknell."

James Braun '00

"No, I am not registered to vote. I think most students don't feel their vote is important, so why go out and vote? Some feel it's a hassle to get the absentee ballot. For the most part, people our age are still finding their place in life and expressing their individuality, not thinking about voting."

Julia Lehman '01

SURVEY

DO YOU VOTE IN TUESDAY'S ELECTION? ARE YOU EVEN REGISTERED TO VOTE? WHAT DO YOU THINK IS THE GENERAL ATTITUDE ABOUT VOTING AMONG BUCKNELL STUDENTS?

"Yes, I voted. I think politics is very complicated and people don't want to take the time and effort to understand and learn current political issues in order to make an educated vote. They're just not interested."

Christina Jenckes '01

"Let's colonize the Moon" and other crazy notions from the federally-employed lunar-tics at NASA

By Maren Johnson

So, we all watched the Jetsons when we were little, right? And wasn't it just so cool when they took vacations to other planets and flew around in little space cars?

Well an "underground" group of sorts at NASA thought it was pretty cool too. Just when we started to worry that Bill Gates was going to take over the world, the people from NASA look like they might give him some competition.

The group is called Artemis. They are a clan of NASA employees and space fanatics who spend their free time imaging life on the moon. That's right, they want to move us to the moon.

The head dreamer is a man named Greg Bennett. He has visions of turning the moon into a place of pleasure. Of course, he wouldn't mind using it as an industrial site as well, but as he put it in *DISCOVER* magazine, "Look at it this way, Disney is bigger than NASA."

Bennett is bent on "rediscovering" the moon and feels the best way to approach it is to appeal to the people. According to Bennett, people want trips to the moon. A lunar wonderland is not so impossible as it may seem. Bennett is sure that people will want to cough up about \$100,000 per person to take a vaca-

tion to the moon. He figures that for hard core adventurers this cost would seem reasonable, as it is comparable to the amount of money it takes to climb Mount Everest.

Bennett's elaboration on the topic include gondola type rides to various tourist sights, plexiglass tunnels on stilts to traipse through on one's own and (because one of the Artemis members happens to be an avid skater) an ice skating rink. Imagine double axes with only one-sixth the gravity!

Reading the article about this group of lunar groupies did make me a bit skeptical, however. And of course I am not alone. I was surprised that this idea was coming from NASA staff and not just some group of astronomy junkies. Although I found the concept to be thought provoking, I am not sure that this would be the wisest of investments; and it would be a large investment.

It seems that we have enough going on right here on Earth to not have to start thinking about moving elsewhere. Although I would not discourage the Artemis folks from pursuing their dream, I also feel that attempts at populating the moon might need some more thought. After all, if we can't even find order in the world down here, should we really consider going up there?

"Yes I'm registered, but I didn't vote in the election. I do not know what the general attitude about voting is at Bucknell, but I don't think voting here is non-existent. I just can't say, because I don't know."

Melissa Biglete '99

"Yes I'm registered, but I did not vote. I think the general attitude about voting at Bucknell is apathetic. I just don't think people care. They're too lazy to vote."

Jessica Friedman '02

"I am registered to vote, but I didn't vote. Politics are not my favorite topic of discussion."

FEATURES

Great food and entertainment offered by cultural association

Students who attended the South Asian Students' Association's annual dinner. All participants added to the diversity of the group's broad representations from over seven different South Asian countries.

By Marie Martinez

Do you like to sample cuisine of different cultures and watch traditional Indian dancing? If this sounds appealing, the South Asian Students' Association's annual dinner was the place to be on Friday, October 30. SASA is a campus group of over forty students who represent seven different South Asian countries: Nepal, India, Pakistan, Bhutan, Bangladesh, Maldives, and Sri Lanka. The dinner, intended to increase awareness and appreciation for South Asian cultures, is SASA's largest and most well-attended event of the year. Tickets were sold out and the 240 guests filled Larison Dining Hall to capacity.

According to co-president, Sweetie Pandhi '99, "everyone in the organiza-

tion was involved in the event. All of the members participated and dressed in ethnic costumes. The event was even more comprehensive than in past years because so many South Asian cultures were represented." Added co-president Pallavi Rayan '99, "The main purpose of SASA is to provide support for those individuals on campus who are South Asian and also to promote awareness to people who may have never encountered anyone from South Asian cultures. Our goal is to spread this awareness throughout the community. The dinner is successful and there is always a lot of interest in the event and demand for tickets."

The dinner was traditional Indian cuisine, catered by Passage to India. Some of the evening's highlights included readings from the Koran, a Moslem

religious text, the reading of a Buddhist short story, and a classical South Indian dance performed by Sofia Abraham '02. Balwant Singh, retired professor of management and former adviser of SASA, gave an address about the accomplishments of Amartya Sen, Indian economist and recent Nobel prize winner. The final event of the evening was a dance party featuring both American and Indian music. The diversity of the cultures represented as well as the quality of the speakers and performers resulted in an evening that was not merely entertaining, but also successful in promoting diversity on campus.

Sofia Abraham '02 performs a native dance during the SASA dinner last week.

Clubs and organizations get active

By Kristen Jancuk

With first semester in full swing, clubs and organizations around campus are busy as well. Programs on and off-campus are pepping the fall season with activities that not only benefit students but, in some cases, off-campus communities as well.

weekly Bingo Nights at the local nursing home and dinners at the Ronald McDonald House. In addition, they sponsored the recent blood drive that took place in Larison Hall and collected 255 pints of blood.

President Amy Vandembroucke '00 states "This is the most we've ever collected on campus." In December, Al-

ivities, has several upcoming events. This weekend they have a caving trip and a mountain climbing adventure scheduled. The Outing Club is popular around campus and with good reason.

Member C.J. Sloan states "The Outing Club is great because it lets us escape the stress on campus and enjoy beautiful central

remembered at daily mass throughout this month of remembrance marked by the celebration of All Saints' Day and the Feast of All Souls.

These clubs represent only a fraction of the various organizations on campus. Judging from the constant stream of student e-mails, however, that permeate everyone's inboxes ad-

Film club offers experience in making and directing films

By Megan Coup

Are you interested in film-making, but you're not sure how to get involved on campus? Do you enjoy theater and other aspects of cinema? Hoodwink and Hooley, the University's first film-making company, may be the answer you are looking for. Located in the Swartz Club Room, Hoodwink and Hooley was established recently in 1996. With about 45 members from various majors and interests, students are able to gather from all aspects of film-making. Directing, acting, casting, writing, editing and technical operations are some of the areas taught to all students with any interest in cinema.

Recently, Hoodwink and Hooley has made great advancements. The film company has multiplied its number of members, filming equipment, and support since its establishment two years ago. The strong student response has opened up the University's first interdepartmental Film Studies major.

Its advancements in student film-making have even begun a film council. This group of dedicated film members, related professors and interested students work with film's different aspects, and also promote interest in the film field.

President and co-founder, Theo Avgerinos '00, has played a large part in the promotion and success of the film company. Avgerinos has produced or directed 10 student films, ranging from comedies

to documentaries to Surrealist productions. Avgerinos is currently directing Hoodwink and Hooley's semester feature film. He also hopes to establish a possible film studies minor next year.

In addition to producing, editing and acting in films, the members of Hoodwink and Hooley also participate in a Spring Film Festival. The May festival showcases the students' work and provides an opportunity to support the company.

Funding for Hoodwink and Hooley is partially provided for by our student government and the developing film department. If you are interested in becoming involved on campus, contact Avgerinos at 577-8180. H&H are always open to new faces and ideas.

Stephanie Metz—The Bucknellian
Theo Avgerinos '00 is the president and co-founder of Hoodwink and Hooley, the University's first film-making company.

Bucknell tailgating, Lewisburg-style

By Christi Schuman

We're all guilty of making the occasional "townie" joke. Well even though our school is located in a rural neighborhood, that does not mean the University should not develop a good rapport with its fellow residents. This was the intention of the first annual Resident-Student barbecue on Saturday, October 31. Hosted by Coalition of Bucknellian and Lewisburg Residents, this rendezvous was intended especially to get to know the residents of Lewisburg. The barbecue was held on the field adjacent to the stadium before the Colgate Game on Saturday. John Morocco '99 was manning the barbecue while Linda Ha '99 served the guests and Kelly Creech '99 played hostess. Said Creech of the afternoon's success, "We had a pretty good turnout and we accomplished our goal. The residents are getting to meet their student neighbors. My own next door neighbors that I've never met were here!"

The day was perfect for a backyard-style barbecue with the football game in the background, neighbors were socializing with students as well as each other, while kids of all ages anxiously anticipated the events of the night ahead, running around in full costume with premature sugar highs. Residents loyally sported their Bucknell gear and pom-poms, while students remained typically loyal to their Abercrombie and J.Crew. Nevertheless, their intentions for the day were the same. Hey, free admission to "game of the year," free hot dogs and hamburgers... who could top that? The first annual barbecue is the materialization of an idea that has been a long time in the works for COBLR. The effort was intended to establish and build on amiability between the downtown residents and their student neighbors. "This was a really nice thing they did for us," one resident said, crediting

those on COBLR. And this was before the residents found out that admission was included in the free ride!

Creech estimated an attendance of about 30, right on the mark of what COBLR had anticipated and planned for. "It was nice to meet that goal," she said. "And this is only the first annual barbecue we've tried."

To continue their effort to unite the Lewisburg community with student downtown residents, COBLR is looking to host a "town hall" forum, as well as many other unifying events which are still on the drawing board.

For more information on COBLR and how to get involved in activities like the first annual student barbecue, keep an eye on the Weekender and What's Happening. COBLR loves to see new faces involved in the various activities they sponsor on campus.

FEATURES

Hunt Hall or Haunt Hall?

The infamous Hunt Hall houses the University's eight sororities. Recent media attention has raised the issue of whether or not it is haunted by a ghost.

By Miriam Sand

Halloween is over. The costumes are put away and the candy is long gone. Hunt Hall, however, may still boast some Halloween ambiance. If we believe the stories of a ghost residing in the dormitory amongst the sorority sisters, then perhaps, although the holiday has passed, the campus remains spooky. There are conflicting rumors about the existence of the ghost of Hunt Hall, about her identity and her behavior. Some of the residents of Hunt have simply become accustomed to odd occurrences, while others are a bit uneasy with the thought of having a phantom Bucknellian in their midst.

The Hunt Hall residents with whom I spoke did not wish to be identified, but did share some sentiments regarding the ghost who allegedly lives in their building. Many of the girls spoke of the belief that if one hangs her dress on the back of the door to her room, the dress will fill with air and look as if it is being worn by someone or something. Music turns on and off, lights flicker, sheets and towels float without being touched, and telephones ring while remaining unplugged. Are these phenomena the actions of a ghost or just strange happenings explainable by power surges and gusts of wind?

Whatever the explanations are for the eerie things that have been happening in Hunt Hall for the past several decades, the alleged ghost has drawn the attention of the campus community and the Associated Press.

The *Intelligence/Record*, a newspaper that circulates throughout the suburbs of Philadelphia featured an article on the ghost just a few days ago. The current resident of the room that is most closely connected to the ghost had not, at the point of the article in the *Intelligence*, seen anything unusual that she attributed to the ghost; this was still the case when I spoke with her several days ago. Other residents of Hunt, however, did offer some spooky stories.

One Hunt Hall resident said "The power goes out in our room only and we did see a shadow on the ceiling once." Some people say that there are other obvious explanations, but when you live in the building that is supposed to be haunted, it is a different story. "We never say that we don't believe in her when we're in the dorm," commented another resident of Hunt Hall. It is the consensus, regardless of the actions of the ghost, that the ghost is a woman. Sometimes said to have been seen wearing a raincoat and wandering through the dorm, the ghost, named Marlene, is not discounted by those with whom she supposedly lives.

Who exactly Marlene was and why she haunts Hunt Hall has been explained by various stories. It is commonly believed that she was a student and sister of Beta Gamma, a sorority no longer in existence on campus. Some people claim that Marlene left school after hearing of her brother's death and the site of her mother's grave. In returning to school after a leave of absence, some say that Marlene fell asleep at the wheel or lost control of her car and died in an accident just a mile from campus. Others claim that Marlene raced away from campus after receiving a phone call (later believed to be a prank) informing her that her parents had been in an accident. Just after leaving campus, it is said, Marlene died in a car accident.

Regardless of the circumstances of her death, Marlene has no enemies in Hunt Hall. Flickering lights, ringing telephones, and other mysterious happenings have all become a part of the atmosphere of Hunt. While it draws the attention of the University community and newspapers, the residents of Hunt Hall, whether they really believe in her or not, do not seem to mind their ghost remaining while everyone else packs away their Halloween goodies for next year.

Holocaust survivor talks about the "Night of Broken Glass"

By Eric Charles

It is important on a campus as isolated as the University's to keep in touch with events that change history. We often take for granted the benefits of living in the United States, and lose focus of the importance of understanding world issues.

The "Bucknell Bubble" has trapped and isolated us not only from the present, but also the past. This is where the true essence of the problem arises.

November 9 and 10 mark Kristallnacht, "The Night of Broken Glass." On this night in 1938, Nazi youths went rampant through Jewish neighborhoods throughout Germany. Ninety-one Jews died, 26,000 were arrested and sent to concentration camps.

Over 7,500 Jewish businesses were destroyed along with over 100 synagogues. This event marked the onset of the most devastating part of the Holocaust, as the Jews were blamed for these events. With this blaming and regret, a new and brutal wave of anti-

Semitic legislation was passed. Fred Voss, a Lewisburg resident, was present in Germany during Kristallnacht. On Tuesday, Nov. 10, at 7 p.m., he will be sharing his experiences with the campus in Bucknell Hall. There will be a one hour slide presentation, a question and answer period, and a short non-denominational service.

Help us to remember the six million Jews and two million Christians that died during the Holocaust. Please come to share the experience of someone who endured such a terrible event, and learned firsthand what it was like to be discriminated against for superficial reasons.

The risk of losing perspective is growing more dangerous all of the time. While the people who experienced the Holocaust and other such dominant pastimes are still present, it is important that we (as the "next" generation) are educated on historical events. Thus, we can continue to concentrate on devastating events, so as to ensure that such atrocities will never happen again.

Come hear Fred Voss speak about his experience living through the Holocaust. You can hear Voss's talk Tuesday, Nov. 10, at 7 p.m. in Bucknell Hall.

A different way to swing into the night

Jonah Hall—The Bucknellian
Nat Arlander, RHA's National Communicator sponsored "Swing Night."

By Victoria Plasse

Swing dancing and Swing music are quickly becoming standards for pop culture today. "Swing" is an expression that refers to an American era, 1935 to 1945, to a style of dancing and to a style of band arrangement. Swing is a dense rhythm sound, almost always using a hard "riff." A "riff" is a musical characteristic of Swing. The style emerged out of World War I, peaked in the 1940's, and is emerging as a popular movement today. Swing, however, has not al-

ways had a happy track record and has withstood many hardships over time. Fifty years later the music and the dancing remain upbeat and all inclusive.

Last Friday, Resident Hall Association's National Communicator, Nat Arlander, sponsored the first "Swing Night" in the Terrace Room. The idea originated with Nat this summer. He learned to swing in Salem, Mass. He and friends would attend "Swing Night" at Faneuil Hall in Boston every Wednesday. He jokingly thought of bringing it back to Lewisburg this Fall, but there was a great deal of support for the new activity. Nat said the turnout was impressive, at least 114 students.

The first 45 minutes of the program were dedicated to basic instruction. The rest of the time was open floor for dancing.

RHA is especially excited for the program taking off with such enthusiasm, because it provides more options for students on the weekends. Not to mention that the class will help improve one's dancing moves. The program will continue every Friday for the rest of the semester in Larison Dining Hall. There's an open invitation to whomever is interested. And, you don't have to show up with a partner.

Do you have a favorite recipe that you want to share? If so, email Dana (rofey@bucknell.edu)

Movie Reviews

The Odd Couple & The Mummy

By Aaron Spak

The Odd Couple

As far as great comedy teams go, there are many outstanding names that come to mind: Martin and Lewis; The Three Stooges; Abbot and Costello. May I suggest adding another pair to the list? Matthau and Lemmon.

These two have been slinging some of the best sarcastic, biting humor that has ever been on the big screen. Most recently they are known for the pair of *Grumpy Old Men* films, and then the not-so-successful *Out to Sea*. Their most recent film is a sequel to the classic *The Odd Couple*.

The pair are reunited when they are en route to their children's wedding. A simple drive from the airport is plagued with rather predictable comedic disaster, but the fun of it is watching the two drive each other crazy.

Matthau and Lemmon reprise their roles as Oscar Madison and Felix Unger without missing a beat. Sure they play the same two people in almost every movie. But that is fine, it is what people want to see.

The Mummy

It's just past Halloween now, so that would mean some horror movies would be in order. I didn't have time to see such current features as *Urban Legend* or *Bride of Chucky*, so I decided to go old-school.

Remember a few weeks ago when I made the claim that some of the best suspense films were made in the '30s, '40s and '50s because the filmmakers were just defining their art? Well, the same holds true for horror: Bela Lugosi as *Dracula*, Lon Chaney as *The Wolfman* and Boris Karloff as *The Mummy*. Any one of these is a really neat movie to watch, but *The Mummy* is surely unique. Released in 1932, it touches on some pretty heavy issues while still holding the viewer captive.

Karloff plays Im-ho-tep, who was a high priest some 3,700 years ago. He was buried alive by his father after stealing the scrolls of Osiris and trying to revive the vestal virgin whom he loved. When a British archaeology team accidentally revives Im-ho-tep, he searches for his lost love. He finds her reincarnated in the form of Helen Grosvenor (Zita Johann). Meanwhile, he terrorizes anyone who gets in his way. It is performed slowly and deliberately, defining a "brooding, and dreamlike film," according to the back of the box.

Old movies like this rely on their actors to create the mood and the suspense (they couldn't rely on digitized blood and gore to scare people). Karloff gives Im-ho-tep his frightening demeanor as well as his downright creepy countenance.

If you have the chance, definitely try to see some of these original horror pictures. I know it sounds like something from the American Movie Classics channel, but hey, I try to get stuff that everybody and their sister didn't see last weekend already.

A Quaker Voice -

So much of our busyness amounts to a factory built of time rather than a temple. Our time is often ordered by the Protestant work ethic in which our value is defined by what we produce. It is a discipline, albeit a joyful one, to turn instead to celebrating what has already been made and given to us, celebrating who is already here, where we are now.

Sabbath-time is not just Sunday or the time of worship. It's truly time-out for God: an X drawn through the appointment book, phone off the hook, time for rest, for recreation, quiet presence to what is, time for the unexpected to arise, for meditative reflection, for encounter with the divine, outside the hour formally scheduled.

Excerpt from Patricia Loring, *Listening Spiritually*.

Dance classes showcase their skills

By Laura Jane Cardinal

The University's dance classes are given an opportunity that other departments may not provide their students: a chance to showcase what they've learned for their peers. This Friday afternoon, approximately 50 students, representing a variety of dance classes offered here at the University, are putting on this performance.

Each dance class offered is given a choice as to whether or not they want to participate in this event. This year, the dance composition class, the modern dance class levels I and II, jazz level II, and the Chinese interpretation class have all chosen to participate. This is an informal show used mainly to get the students ready for their first main stage production of the fall which will be performed Dec. 4 and 5.

The Studio Concert will display a variety of talents. Every dance level, from first-time dance students to the extremely experienced, will be involved in this show. They will be doing many experimental pieces and will be working on their contact improvisational skills. Many of the dances will include such entertaining moves as lifting, throwing and rolling.

The performance will include several solo dance pieces in addition to an

individual number by each class. The Chinese interpretation class has chosen to do a very difficult piece involving water sleeves. These are long silk jackets with extra long sleeves. The dancers have worked hard to learn how to dance while simultaneously manipulating their sleeves. This is a traditional and beautiful form of Chinese dancing. This piece will be done to traditional Chinese music.

The jazz II class will be dancing to a collection of music, including a piece from pop-artist Brandy. The modern dance classes will also be dancing to a variety of music that ranges from world music to swing. The dance composition class will be choosing from popular music including artists like Sarah McLachlan.

The dances are all choreographed and directed by the students, with the help of the dance teachers and directors. The three teachers working with the students on this production include Er-dong Hu, assistant professor of theater and director of the Chinese interpretation class, Danna Frangione, associate professor of dance and director of the jazz and composition classes, and Allison Green, lecturer in theater and dance and director of the modern dance classes. Green is a professional choreographer from New York who works part time at the University for the fall semester.

Often times students are unsure whether they should sign up for a dance class. The dance department hopes that students will see, through this show, how much fun these classes can be.

It is also a good time to see friends and classmates as you have never seen them before. Football player Matt Summers '02 is taking modern dance level I. This is Summers' first ever dance class and he's enjoying it immensely. His advice to those of us who are unsure as to whether we want to take a dance class is, "Definitely do it; it's a lot of fun and easy to learn. It's a good break from your traditional classroom experience."

Admission to this performance is free, but a \$2 donation will be asked for at the door. All proceeds will go to the Stephanie Sayre Memorial fund. Sayre was a dance student at the University who died tragically in a car accident a few years ago. After her death, a scholarship was set up in her name and given to the theatre department to give out to a promising dance student each year. The performance will take place at 5 p.m. this Friday in Tustin Dance Theatre.

CD Reviews

Atomic Babies & Olive

By Andy Burge

Atomic Babies: Breuklen Heightz
© 1998 Dominion Entertainment

Atomic Babies are considered to be more than just veterans to electronica, they are considered to be one of the pioneer electronic groups in the underground rave scene. The duo has been producing, performing and mixing since 1992. What makes them unique is that their live show does not include DATS or CDs; they do everything completely live.

From the very beginning, Breuklen Heightz throws pulsating beats with an array of background to complement their sound. To keep from becoming monotonous and stale, the beats are mixed.

One of the better songs on *Atomic Babies* is "Get Up." No matter what you are doing, within seconds, you will find yourself moving to the groove. The tempo is fast-paced with a hard-hitting base line that draws you in. It almost becomes mesmerizing. The same goes for "Android Rhythm" and "Reversed To Brooklyn." Different from most of their counterparts, Atomic Babies find different ways to make each track individual, in order to prevent the album from becoming one big blur.

Another track that has great style and rhythm is "Zanzibar." It provides a more subdued base that is not quite as pulsating as most, but the tempo is stronger enough to keep the listener involved.

Atomic Babies has found the right balance between bass and synthesizing; you are not overcome by bass that makes your body vibrate or synthesizers that become downright obnoxious.

Olive: Extra Virgin
©1997 RCA Records

Olive is a trio from the northern UK that recently collaborated for their first album. At the time the band met up with lead singer Ruth-Ann, Olive was struggling and was almost over before it even started. The band members found her voice to be pure and built their style around it. During sessions, she would sing a cappella and then they would add the rest later. Once the trio was complete, it went straight to the top of the British charts.

Olive takes the traditional trip-hop style and adds a little flavor which makes them stand out from the pack. The group creates a sultry and cosmic atmosphere with the use of lazy rap beats and soothing vocals supplied by Ruth-Ann, but at the same time maintaining a techno edge. What makes Olive different from, say, Portishead is that their sound is "poppier" and more uplifting.

Each song creates a calm ambience producing a seductive vibe that quickly relaxes the listener. While most trip-hop artists are portrayed as being detached, Olive adds in a little R&B with lyrics that have more meaning and that draw from personal experience. Keyboardist and lyricist Tim Kellett says, "The subject matter is something anyone can relate to... and unlike many bands who we've been compared to, we don't shy away from writing songs with a beginning, a middle and an end. Every song on our album tells a story... it's not just an abstract smattering of lyrics that don't mean anything."

The direction in which Olive wants to lead you becomes apparent from the first song "Miracle." The lyrics are sung almost heavenly while the bass and the sound effects quickly put you in a trance, taking you to their world.

Olive contemplates a wide range of subjects. In "Curious," they discuss the lures of adultery, and in "Blood Red Tears," they take a look at domestic violence.

For their debut album, Olive seems very mature with their style and lyrics. From here the only place they can go is up.

Poetry festival draws variety of talent

Beetna Kim—The Bucknellian

Guest poet at the festival Steven Reese published his first book of poetry entitled *Enough Light to Steer By* in 1997.

By Christina Jenckes

While many students were participating in Mischief Night and preparing their Halloween costumes at Wal Mart last weekend, the University was celebrating its 21st Annual Poetry Festival. This event clearly presents an opportunity for a wide variety of talents to both present their work and interact with other talents in the field.

The festival was founded in 1977, the same year University English professors Karl Patten and Robert Love Taylor founded *West Branch*, which publishes poetry and fiction by writers throughout the United States. Sponsored by the Pennsylvania Council on the Arts and coordinated by the editors of *West Branch*, the festival was held at the Stadler Center for Poetry at Bucknell Hall.

The festival began with several well-known, invited poets reading their latest works. Guest poets included Julianna Baggott and Deborah Burnham. Baggott's works have been published in many journals including *Black Warrior Review*, *The Chattahoochee Review*, *Chelsea and Antietam Review*. Burnham is an academic advisor at the University of Pennsylvania and teaches in the Governor's School for the Arts. She is best known for her work *Anna and the Steel Mill* which won the 1995 First Book Prize from Texas Tech University Press.

Jim Daniels, a teacher at Carnegie Mellon University and author of such works as *Plagues/Everyone*, *Punching Out*, *M-80* and *Blessing House*, appeared for the first time with his wife, Kristin Kovacic, to read poetry. Kovacic is a writer and editor in Pittsburgh. Some of her works have appeared in the *Carolina Quarterly*, *Kansas Quarterly*, *Cimarron Review*

and the *Gulf Stream*. Daniels' and Kovacic's poetry agenda included several humorous poems about life and experiences with their children.

Other invited poets included Grace Butcher, the author of *Child House*, *World*, which won the Ohio Poet of the year award, and David Cinto, professor of English and creative writing workshops at Ohio State, who recently published his book of poetry *The Book of Appassionata: The Collected Poems*.

Professors Patricia Farewell and Steven Reese also made appearances. Farewell is a creative English Professor in New York, whose poems were recently published in *The Formalist*.

Partisan Review and *The New York Quarterly*. Reese, an English professor at Youngstown State University, has had several pieces of work printed in *River Styx*, *The Plum Review* and *Poetry Northwest*. Most recently, in 1997, his book *Enough Light to Steer By* was published.

A well known Washington D.C. poet, Jean Nordhaus, read as well. Nordhaus is best known for her several published books including *My Life In Hiding*, *A Bracelet of Lies* and *The Porcelain Apes of Moses Mendelssohn*. Nordhaus won the 1996 Edward Stanley Award from *Prairie Schooner*.

Of course, University talent was not excluded from the bill. Cynthia Hogue, associate professor of English and the director of the Stadler Center for Poetry, read several of her works. Hogue has published two books of poetry and a critical book on American women's poetry. The *West Branch* authors concluded the Poetry Festival Saturday night with readings of their own.

Several other events were opened to the public on Saturday afternoon. Students and the community were encouraged to bring several of their poems to open workshops where guest poets crit-

iqued and reviewed their work. After the workshops concluded, there was an open reading to give the public a chance to read their poetry.

Many of the poets read poems about Halloween, life experiences, or humorous works about politics and the upcoming elections.

"The Bucknell Poetry Festival brings in well-known poets to read with unpublished poets, and it's a great mix."

—Cynthia Hogue
director of the Stadler Center for Poetry

In retrospect, Hogue said, "The Bucknell Poetry Festival brings in well known poets to read with unpublished poets, and it's a great mix."

"What's really distinct about the Festival is how it brings the Bucknell community together with the Lewisburg and surrounding communities. It's the only Bucknell event that I've ever seen that brings these very different communities together," Hogue said.

Even if it was Halloween and the community was excitedly preparing for trick or treaters, many found time to escape from the holiday chaos for a while and hear talented poetry by a wide variety of artists.

Beetna Kim—The Bucknellian

Jean Nordhaus read this weekend during the poetry festival.

What is there to do on campus? Write about it in A&E.

SCIENCE & TECHNOLOGY

Ecology addresses the establishments

By Adam Parris

Father Thomas Berry said, at the culminating conferences of "World Religions and Ecology," that, in all of the foundations of civilization, humans have lost their connection to the one thing which supports their life—the earth.

"We live in a civilization where all the major establishments are in the destructive phase. Particularly the four establishments which govern our lives the political, the economic, the religious, and the educational," Berry said.

Berry outlined these four establishments with regard to their current placement or perspective on the natural world. He addressed the audiences at the American Museum of Natural History with the basic idea that the fundamental establishments are defeating themselves in purpose. According to Berry, if these establishments aren't congruent with the earth, then humans aren't congruent with the earth either.

"We can do everything under the sun, but if we don't have that rapport, that intimacy, it won't work," Berry said.

Berry provided examples of the mistaken approach each of the establishments makes. For an example of the political establishment's approach,

Berry spoke about the Constitution.

"I sometimes say that the greatest single obstacle to the environmental movement is the Constitution. The Constitution is a wonderful constitution for humans, but just think how could you banish any rights to the nonhuman. If you have all the rights to people in this country given to the humans, it is defective because we cannot think of a community that includes something more than humans," Berry said.

Berry also spoke about the economic establishment and its approach to the world. He said that the first law of economy is to preserve the integral economy of the planet. According to Berry, humans defeat this purpose with their economic approach.

"The local economy is obviously a subsystem of the earth economy and how we can continue trying to prosper from a derivative economy by destroying the base economy doesn't make sense," Berry said.

Berry even spoke of the religious approach to the environment. Berry spoke of his own original discipline as losing its track as well. Somewhere along its history, the course of religion was diverted away from where it started.

"It lost its reference to where religion comes from. If you destroy that, we lose our sense of the divine, or we end up with a distorted sense of the divine," Berry said.

Berry spoke of the educational approach to the environment. Education, according to Berry, is currently only vaguely attending to the environmental movement. In comparison to the current amount of courses on a whole, education really fails to significantly address the problems with environmental perspective. Berry used the example of a *New York Times* spring edition that displayed the course load of some universities for the following semester.

"Hundreds and literally thousands of courses, and you couldn't find, except for one or two or three courses in a science department or biology, nothing of ecology," Berry said.

Berry spoke about the fact that it is not necessarily the intentions of the people within these establishments which are wrong. Instead, it is the fundamental understanding of their purpose, or once again perspective. These perspectives are only "derivatives" of the right concept on which these establishments should be based.

"I sometimes say I'm afraid of good people because good people with an inadequate idea of what's good are changing things."

Adam Parris—The Bucknellian

Warren Abrahamson (Left), professor of biology, and Dick Nickelson, professor emeritus of geology, discussed Susquehanna landscapes and ecology in the last Environmental College common hour.

Connecting Susquehanna landscape to its ecology

By Melissa Pauley

Many people do not consider the connection between the landscape and the ecology of an area. This lack of consideration is true not only for the general public, but also for many scientists who are often too focused on their particular discipline or on one aspect of their discipline to see and understand the natural world as a whole. The natural world is an interconnectedness of systems. The underlying geology that creates a landscape greatly affects the kinds of ecosystems that exist there.

Warren Abrahamson, professor of biology and Dick Nickelson, professor emeritus of geology, discussed this connection on Monday with students of the Environmental College as well as other professors.

"They know more about landscapes and ecology than anyone I know," Craig Koche, professor of geology said as he introduced the speakers.

Nickelson started the evening with a discussion of the geology of Central Pennsylvania, particularly Union County. He stated the difficulty of trying to include millions of years of geologic history into half an hour.

His presentation focused on the ridge and valley system of this area. "There are not many places in the world where you can find such relationships," Nickelson said.

Sediments were deposited in Pennsylvania by water some 190-600 million years ago. These thick layers of sediment, mostly sand, clay, and lime, became sandstone, shale, and limestone. The sandstone ridges we see today are a result of the folding and erosion of these great masses of rock. The softer layers of

rock, mostly the shales and limestones, form the many valleys of this region. The ridges are 1800-2000 feet, and the difference from valley to ridge is usually around 1500 feet.

Nickelson also discussed the impact the glacial period had on this region. The glaciers left behind sand and gravel deposits as they pushed their way into the ridges. Likewise, rivers had an important role in forming the fertile soils so important to

Humans have influenced the Lake Wales Ridge significantly. By altering the landscape through drainage, fires, and ranching, ecosystems are also affected.

Alien species often replace native species when an ecosystem is disturbed by humans.

To fully appreciate and understand the world, it is important to consider the connection between the landscape, ecology and the impact humans have on both.

agriculture.

"There is a relationship between the quality of soil and the past geology," Nickelson stated.

Quarries are the result of many significant limestone deposits. Much of the limestone in the valleys is changed to lime. Nickelson stated that lime is often used to "ameliorate acid rain."

The presentation of Abrahamson included two areas which he has studied significantly: Florida's Lake Wales Ridge and the Montandon Marsh Wetlands Complex across the Susquehanna River from the University.

The boundaries between ecosystems are very distinct lines in Florida and at Montandon Marsh. We often think of vegetation changing from the bottom to the top of a mountain. However, in Florida and the Montandon Wetlands, vegetation changes occur within centimeters, not kilometers.

"The pattern of vegetation reflects geology," Abrahamson pointed out.

The surficial geology of Lake Wales Ridge includes "residual sand-

stone." Abrahamson said. In other words, no one plant is dominant here. The wetter an area is, the more organic matter is often found there.

Humans also have an impact on the health of the marsh. Agricultural chemicals, trash, and all-terrain vehicles negatively impact the landscape and the ecosystem of the marsh. The "fragmentation of habitats" also results in a loss of species.

These presentations were a way to make students more aware of the connection between the landscapes which surround them and the ecosystems that function in certain places as a result of the landscape.

Both Nickelson and Abrahamson have expertise in their respective disciplines as well as the ability to take in the "whole" of the environment.

Perhaps the most important point of these discussions is the realization of the impact that humans have on the world as they change the natural landscape for agricultural, industrial, and residential development. By changing the land, ecosystems are also changed. The devastating results include a loss of species diversity and often a loss of entire ecosystems. To fully appreciate and understand the world, it is important to consider the connection between the landscape, ecology, and the impact humans have on both.

Breakthrough EMDR therapy saves lives

By Kate Nowak

The powerful methods of Eye Movement Desensitization and Reprocessing (EMDR), were introduced at a recent University lecture by Rosaria Gabriele, the associate director of Psychological Services. Over 22,000 clinicians have been trained internationally in the procedure of EMDR, their successes ranging in treatment of victims of natural disaster, Vietnam combat, rape, and sexual molestation.

"People criticize things they do not understand. EMDR is an incredible therapy, a lifesaving process for battered women, for those suffering from memories of domestic violence, crime, depression, addiction, and phobia," Gabriele said.

Gabriele, trained in hypnotherapy and EMDR, disclosed the story and complexity behind the EMDR process and revealed the account of its remarkable founder, Francine Shapiro, whose 21-year journey led her to the discovery in 1987.

Today, Shapiro is a senior research fellow at the Mental Research Institute in Palo Alto, CA, and the recipient of the 1994 Distinguished Scientific Achievement in Psychology Award presented by the California Psychological Association.

In the year 1979, Shapiro was diagnosed with cancer. "Having cancer, especially in the late 1970s when it was more frequently fatal—changes one's life on many different levels," Shapiro wrote in her recently published work *EMDR: The Breakthrough Therapy for Overcoming Anxiety, Stress, and Trauma*.

Following her recovery, Shapiro put herself to work, reading all she could find about illness, and uncovered that stress was repeatedly cited as the instigator of disease, especially cancer. Soon, she learned that the type of colitis her younger sister died from at the age of nine was now considered stress-related. She channeled her shock into determination, dedicated to know more about mind-body interaction.

This determination is what stirred Shapiro to embark on the journey that led her to a doctorate degree in clinical psychology

and her work as senior research fellow at the Mental Research Institute in Palo Alto. The discovery of EMDR occurred one afternoon in 1987 on Francine's work break. The doctor had been walking along, a nagging negative thought burrowing in her mind, when she noticed the disturbing notions suddenly gone. When it returned to her mind, the thought carried a less negative load.

Wondering what the remedy could be, she noticed her eyes spontaneously moving back and forth, at the same time shifting her thoughts from consciousness. When brought back, the distress was no longer as bothersome.

Hence, the process began. Shapiro began to use eye movements in therapy with additional direction, such as having clients concentrate on the most upsetting components of a problem, then leading their eyes with her finger. Her work was first conducted with victims of small "T" traumas, referring to those disturbances which occur in daily life.

Soon, those suffering from big "T" traumas, which are comprised of life-threatening instances including combat and crimes such as rape, kidnapping and assault, exposure to natural disasters such as fires, earthquakes, tornadoes and floods, were remedied as well.

Traumas are the causes of Post-traumatic Stress Disorder (PTSD), on which Shapiro conducted her first controlled experiment in effort to generate results of the efficacy of EMDR. She employed the SUD levels scale (Subjective Units of Disturbance), which requires the client to rate his disturbance before and after a therapy on a scale of 1 to 10.

Twenty-two subjects, ages 11 to 53, were

Bucknellian File Photo

Rosaria Gabriele, associate director of Psychological Services, spoke about the powerful methods of EMDR therapy at a recent lecture sponsored by the Women's Resource Center.

treated. The results were excellent and proof of successful resolutions of traumatic memories in only one session was shown.

There is no conclusive explanation for the workings of EMDR. Shapiro's theory is a model of accelerated information-processing. She believes that the physiological, bilateral stimulation activates an individual's innate information processing system which reconnects a disturbing stored event with new data and "digests" the trauma in a rapid fashion. The process is more than a ridding of nightmares and flashbacks—it is a shift of cognitive assessment

identified in 1953 by Eugene Aserinsky and Nathaniel Kleitman, whose research indicated that when awakened during REM sleep, 80% of people (involved in their study) reported vivid dreaming. "Perhaps during the rapid eye movements in a conscious state allows people to progress further in their recovery than they can during sleep," Shapiro writes.

Jonathan Winson, a sleep theorist, believes that mammals process survival information during the REM state. The basis of his research is animal studies, which show that a particular activity of the brain (a theta

which leads to insight and the incorporation of ecological emotions and the body's reactions, as well as the adoption of more adaptive behaviors.

The approach contains eight phases which integrate the salient elements of leading modalities, including psychodynamic, behavioral, cognitive, physiological and interactional. The integration of these successful approaches in combination with eye movements or other forms of rhythmic stimulation all contribute to EMDR's effectiveness.

The eight phases of EMDR are comprised of client history and treatment planning, preparation, assessment, desensitization, installation, body scan, closure and reevaluation. The clinician does not speak during the eye movement sessions but allows for the free flow of memories and recollections.

The distinguishing feature of the back-and-forth eye movement of EMDR appears to have a connection to REM sleep. Disrupted REM sleep is a mark of PTSD. The REM state of dreaming is characterized by rapid side-to-side eye movements.

This phenomenon was first identified in 1953 by Eugene Aserinsky and Nathaniel Kleitman, whose research indicated that when awakened during REM sleep, 80% of people (involved in their study) reported vivid dreaming. "Perhaps during the rapid eye movements in a conscious state allows people to progress further in their recovery than they can during sleep," Shapiro writes.

Jonathan Winson, a sleep theorist, believes that mammals process survival information during the REM state. The basis of his research is animal studies, which show that a particular activity of the brain (a theta

rhythm in the hippocampus) is generated when an animal has experiences related to its well-being or survival (i.e. foraging or predator-monitoring) and during REM sleep.

Winson's theory suggests that what the animal has experienced within a day is synthesized during REM sleep and stored in memory to aid in future survival. Eye movements used in EMDR stimulate processes parallel to the rhythmic theta waves identified in other mammals.

There is no doubt that emotional and cognitive processing occur during EMDR, as well as the integration of vital information processing which leads to more appropriate and healthy assertions in an individual's judgments (i.e. "I am in danger" to "It's over. I am safe now.").

EMDR Humanitarian Assistance Programs (EMDR-HAP), Inc., is a network of clinicians trained in EMDR. EMDR-HAP volunteers travel anywhere and everywhere in the world where large-scale, emotional suffering caused by cases of human violence to natural disaster is occurring. Services have been provided in Oklahoma City, on an Indian reservation, in Croatia, Bosnia, Rwanda, Colombia, Kiev, Hungary, Israel, and Northern Ireland.

Domestic projects, including the use of EMDR on child victims of inner-city violence and crime, are also an endeavor of EMDR-HAP. The volunteers each donate at least one week per year of therapy to those who cannot afford treatment. Funding is of necessity, though. The Oklahoma City extension alone cost close to \$50,000.

The EMDR International Association is the organization devoted to research and further development of already existing data, theory, and application of EMDR. Future studies which Shapiro hopes for involve the exploration of the implications of various EMDR protocols.

Additional work must be conducted concerning brain organization of memory and experience, as well as the storage of events and physical sensations. Yet another potential area for research is the investigation of a person's associations to a particular memory before and after EMDR treatment.

Home drug testing stirs controversy

By Kathy Chevalier

Sunny Cloud gazed at the students and faculty that waited for her presentation on the controversial topic of drug testing in the Vaughan Literature Auditorium on Oct. 27. Sunny is the founder of Parents' Alert Home Drug Testing, an organization dedicated to preventing drug abuse. Cloud is no psychologist or doctor, but a mother who had her life changed by drugs.

Five years ago, Sunny was a single mother with two teenage sons. One day she walked into her home and discovered her oldest teenage son smoking pot.

Cloud related to her audience that she had no idea her son was using drugs. She found herself shocked that her son was one of many teenagers taking drugs that she, as a teacher, came in contact with daily.

She thought her son would never be one of the teenagers that she saw everyday doing drugs. "Didn't I raise him better?" Cloud asked in her mind.

Cloud told the audience that her first reaction, the denial to her son doing drugs, is also experienced by many other parents. She called this reaction the "not my child syndrome."

After a very expensive and embarrassing visit for both her and her son to the emergency room for drug testing, Cloud realized that there must be a better way to administer drug testing. She recognized that in both the work place and in the military, there was drug testing.

This realization made Cloud invent the idea of home drug testing as a combatant to teenage drug use. Soon Sunny was working out of her home with homemade, drug testing kits. These kits marked the early stages of development of Parents' Alert Home Drug Testing.

It was not long before her local newspaper published an article about her home drug testing. After many negative encounters with the FDA, including jail threats, Cloud contacted her Congressman, Newt Gingrich.

After attending a Congressional hearing with her oldest son, the national media became aware of her story. Recently interviewed by the *New York Times* and Bryant Gumbel, the issue of Cloud's home drug testing has become more widely known and extremely controversial.

Parents' Alert Home Drug Testing is a non-profit organization. Cloud explains that drug use can occur in any family, even with individuals who attend very good schools. She emphasizes that the greatest years of risk are from ages 11 to 13, the transition from elementary to junior high because, as Cloud puts it, "Kids want to fit in."

She also asserts that experimental drug use today is more dangerous than the '60s because the marijuana used in the '90s is 20 times stronger than the marijuana used in the '60s.

According to Cloud, the biggest problem parents face in reference to drugs is denial. Parents need to pay attention to the signs and symptoms of drug use. Because parents often feel inadequate and do not know what to do, Cloud declares that Parents' Alert Home Drug Testing can step in and help.

Early detection is the key to stopping drug abuse, explains Cloud. Another step is for parents to talk to their children about drug use after they are educated about the pressures their children face. Studies indicate that only 21% of parents talk to their children about drugs.

According to Cloud, drug testing can be used as an excuse to say "no" to drugs.

SCIENCE & TECHNOLOGY CALENDAR

Thursday, November 5
The Outing Club will present Clyde Peeling of Reptiland at 6 p.m. at the B.O.C. Basecamp in the Tustin Building.

Monday, November 9
Environmental College Common Hour: Jim Brett of the Ned Smith Center for Nature and Art will present a talk about "Global Conservation" at 7 p.m. in the Rooke Auditorium.

Tuesday, November 10
Student Environmental Action Coalition (SEAC) will sponsor *Delta Force*. This documentary film about Shell's irresponsible activities in Nigeria will be shown at 6 and 7 p.m. in the Gallery Theatre.

Wednesday, November 11
Well Women Series Lecture: Colleen Flaherty, Student Health Services, will present a lecture entitled, "Smoking: What You Don't Know Can Hurt You," at noon in Walls Lounge of the Langone Center.

Social Science Colloquium Lecture: Charles Tully, Columbia University, will speak about "Structure and Agency" at 7:30 p.m. in the Langone Center Forum.

Ultimate frisbee gets on up for Rochester

By E.J. Crawford

The Mudsharks, Bucknell men's Ultimate Frisbee team, entered their final tournament of the year, RIT's Danse de Macabre, with three main goals: win the costume award, win the party and win their first-ever tournament.

Mission accomplished. The Mudsharks scored an undefeated weekend, going 6-0 and defeating longtime nemesis University of Rochester to win their first tournament in over four years. The Mudsharks had lost in the finals of three tournaments this fall.

The tournament victory capped off a successful fall season, marred only by a bitter loss to Penn State that denied the squad a bid to Regionals, and sets the Mudsharks up as the favorite to win their section in the all-important Spring season.

"The goal for the fall season was to go to Regionals and to win a tournament," Sanatan Golden '99 said. "Our disappointing season's performance caused us to miss the first goal, which was a huge disappointment for our team. This tournament win was the redemption that we needed to salvage our season and give us confidence going into the spring."

To add to their tournament win, the Mudsharks won the costume award and the party for the second straight year with the team's ode to birth control. This triumph was for many as important as taking the tournament, as it dealt with the spirit of the game—the guiding principle imbedded at the heart of Ultimate Frisbee.

"Winning the costume award and the Frog's (the women's Ultimate squad) winning the spirit award makes me so proud of Bucknell Ultimate. We have always prided ourselves on having fun and keeping true to the spirit of the game," Gregg Lithgow '99 said. "This weekend we showed that it is possible to hold these values while being successful competitively."

The Mudsharks started the tournament strong and dominated throughout, sweeping through Saturday's games with a 3-0 record to win their pool, piling up 45 points to just 20 for their three opponents. With the wins, Bucknell claimed the second seed in Sunday's eight-team, single elimination bracket play. There were 14 teams entered in the tournament.

In the first round of bracket play, the Mudsharks met a young but athletic Boston College squad. The Mudsharks rebounded from a sloppy start to dominate the inexperienced Boston College team, busting out to a 12-1 lead en route to a 15-3 victory.

The win should have set up a game with third-seeded Aftershock, a Buffalo club team. However, due to a quirk in scheduling and some suspicious tactics by the tournament organizer, a member of Aftershock, the Mudsharks found themselves up against first-seeded Rochester in the semifinals. The Mudsharks had dropped their last three meetings to Rochester, though by a mere four points.

The game patterned the other three contests early on, as the Mudsharks built a 4-2 lead only to see it

Courtesy of Mark Poston

The Sharks and Frogs demonstrated their creativity in their costumes.

disappear, as Rochester scored three straight to take a brief lead. The game saw-sawed back and forth from there, as the Mudsharks never trailed by more than one but were unable to break the game open.

The tide turned with the score knotted at 9-9. The Mudsharks scored a quick down-wind point and then orchestrated a brilliant, short-pass offensive play against a pesky Rochester zone. The Mudsharks worked the frisbee up the field patiently and methodically, eventually punching it in for an 11-9 lead. Bucknell eventually extended its lead to 12-9 and cruised to a 15-12 win.

"I felt that we had control of the game from start to finish even when we were down 8-9. Our team just played more aggressively than they did, which resulted with us coming up with the big plays," Golden said.

The win placed the Mudsharks in the final against Aftershock,

This week in football

By Tim Scheu

Penn State @ Michigan

Three weeks ago, I would have not really cared about this game. Both teams had been having mediocre seasons, and were not all that impressive. Times change. After starting the season 0-2 the Wolverines have gone undefeated and now are back in the top 25. The Nittany Lions have also rebounded nicely from their loss at the hands of Ohio State and are now in the top 10. I think Michigan is a lot better than it has been showing all season. They won the national championship for a season last year, and for the most part the cast is back. A win over Penn State will give the Maize and Blue the momentum they need going into their late season games against undefeated Wisconsin and Ohio State.

Wolverines 27 Nittany Lions 14

Colorado @ Missouri

I have been preaching about the Tigers and Corbi Jones all season. They have been one of the few challenges to Ohio State this season, and just came short of an upset in Lincoln, Missouri is one of the best 6-2 teams in the nation, and they will roll over the Buffaloes.

Tigers 38 Buffaloes 23

Bucknell @ Holy Cross

Bucknell is a talented team that has been ravaged by turnovers and sloppy play. The Bison are just a few breaks away from being one of the best teams in the Patriot League. They will take out their frustration on a weaker Holy Cross squad that has gone 2-6 thus far. They still have something to play for.

Bison 45 Holy Cross 13

Buffalo @ N.Y. Jets

The days of Flutie being too short are history. The Bills have all of a sudden become one of the top teams in the AFC. They have a strong defense, a great kicker, and an offense that has suddenly jelled. They are winners of five straight games, against teams like San Francisco, Jacksonville and Miami. The Jets are a team that have been somewhat inconsistent, but have proved to be a force of as in. In their last three games, they have spanked the likes of Atlanta, New England, and Kansas City. Vinny Testaverde is really playing well, and Parcells has rejuvenated a suspect defense. What we have here, ladies and gentlemen, is the marquee matchup of the week. Both teams are in a four way tie for first place in the division, and are rated within the top eight in ESPN's NFL power rankings. It will be very close, but it will come down to a battle between Kickers. Because of Steve Christie, I have to give the Bills the advantage.

Bills 27 Jets 24

Kansas City @ Seattle

The Seahawks have more potential than most teams in the league. They have an explosive offense, and a defense that can shut down even the best teams. They came within five points of beating Denver, and Kansas City is a program on the way down. Once a perennial Super Bowl contender, the Chiefs have struggled all season, and stand at a mediocre 4-4. But can I pick them to lose three straight? Yes.

Seahawks 30 Chiefs 24

Atlanta @ New England

After the Pats beat K.C., they seemed like they were the best team in the AFC, outside Colorado. But ever since then the Pats have been decent at best. They lost two consecutive games to the Jets and Dolphins, in which they showed none of the offensive firepower that many had expected. The next week, they barely escaped an embarrassing defeat at the hands of the Colts. On the other hand, the Falcons have been the beneficiary of an easy schedule, and are in no way as good as their 6-2 record suggests. Two weeks ago they were pummeled by the Jets 28-3. I really don't think that the Pats are that great, but the NFC is so watered down that I have to go with the AFC team.

Pats 31 Falcons 27

Tim's upset of the week: N.Y. Giants @ Dallas

I am picking the Giants to win for four, but not all that rational reasons. Number one: I hate Dallas. Number two: The Giants have sort of a Jekyll and Hyde mentality. Last week they lost to Washington, but the week before the crushed Arizona. This week they are due. Number Three: The Giants actually have a decent offense, they just have to find a running game. If they can establish this, then they will definitely win. Number Four: I HATE DALLAS.

Giants 24 Cowboys 16

p.s. I hate Dallas.

Rookie coach brings new intensity to men's swimming

By Brian Watson

The men's swimming and diving teams enter the 1998-1999 season with a new coach and a new attitude. Looking to capitalize on their third place finishes in the Patriot League Championships last April, the Bison return numerous talented athletes and look to challenge defending league champion and preseason favorite Army.

Head coach Jerry Foley arrives in Lewisburg following three years as an assistant at Army. Foley brings 13 years of coaching expertise to Bucknell, his first Division I head coaching job. He replaces Lynn Kachmarik, who moves up to become assistant to the Athletic Director as well as head coach to the women's water polo team she spent four years as head coach of both the swimming and diving squads.

"The swimmers here are great, motivated individuals very similar to the ones I worked with at Army," Foley said. The team has been very receptive to the new coach. "Having a new coach is definitely an adjustment," tri-captain Doug Hill '01 said, "but he's increased the intensity level already."

"Coach is very organized and sets high expectations," tri-captain Alex Johnson '99 said. "He has challenging goals for the season and should take the swimmers a long way."

On the men's side, Foley will be counting on tri-captains Hill, Johnson and Kevin Oles '00 to provide leadership and consistency throughout the year. Despite the loss of standout Scott Woodworth '98, the Bison return an able contingent of experienced sprinters and long-distance swimmers.

Coach Jerry Foley has the men's team off to a 2-0 start.

Johnson and Hill will lead the sprint freestylers while sophomores Bill Orendorf and Justin Schwarz will handle the distance responsibilities. Johnson captured two silver medals and two bronzes at last year's Patriot League Championships in addition to earning all-league honors for the third consecutive year. Hill will look to improve on last year's performance as he moves to the top tier of sprinters.

"Alex has the right tools and potential to be a three-event winner at Patriots," Foley said.

Breaststroker and individual medley competitor Ben Lim '01 returns after an impressive freshman campaign where he captured a silver medal and two bronzes at the league championships. Bill Trabosh '01 will

look to contribute in both backstroke and the individual medley.

"Our depth is much better than last year even though we lost a bunch of great swimmers," Hill said. "We have great diversity. We can move people around and still stay competitive."

"If we can pull together individually and maintain our depth, we'll be a power to be reckoned with," Johnson said.

The Bison will look to a talented crop of freshmen to make an immediate impact. Butterflyer Tyler Codi, freestyler and backstroker Ian Doeber, the versatile Chris Neary and backstroker Tyler Wynn should help the team and compensate for the talented class of 1998 graduates.

"The recruiting class takes the place of the seniors from last year," Oles said. "We're only graduating one senior this year, so the freshmen will have the chance to step up early."

"We're loaded in the freshman class, especially on the men's side," Foley said. "They should have a great impact on the team right from the start."

Another advantage of this year's team is the addition of two divers, Ethan Lew '01 and Andy Mastison '02. "Having the divers will help us a great deal," Oles said. "We suffered a lot because we didn't have the divers."

The overall attitude of the team appears to be optimistic as it enters the new season.

"The team is really close-knit so far," Hill said. "We've been pushing each other hard and it seems to be paying off."

"There's a lot of excitement within the team and everyone has high hopes for the season," Oles said.

Monthly luncheon recognizes female athletic excellence

By Tim Scheu

The atmosphere of this month's women's sports luncheon was one of celebration. The faculty, coaches, and athletes that attended cheered the successes of fall sports teams, and those of the individuals who have made their mark on Bucknell athletics.

The event commenced with a run down of all that had gone on over the month of October, and updated the progress of all the teams involved. Among other notable performances, the men's and women's cross country teams captured Patriot League titles, volleyball clinched its third league title in the past four years, and women's soccer capped their season with a 2-1 overtime victory over St. Mary's.

Following the team updates, women's golf coach, Brad Tufts took the podium. He would be the first of a long line of coaches to recognize their women's athletes of the month. Tufts' selection was one of impressive credentials. As vice president of the senior class, chair of the senior giving project, and team leader, Chris Boschen had her hands full. Not only that, but golf was a fairly new sport to her, and practice demanded her full attention. All in all, she was very deserving of the title. However, Boschen was not so quick to accept the credit. "I am honored, and would like to thank everyone for this award," Boschen said. "But more thanks goes to Coach Tufts. Without him, none of this would be possible."

The next winner was Carly Graystock '00. The decorated women's cross country runner has had a very successful season thus far, and has demonstrated the leadership abilities that any upperclassman should have. Most of all, she has exhibited a love for her fellow runners that few can match.

"She is great teammate," Annie Hamlin '99 said. "Whenever someone needs a hug, she is there."

Volleyball coach Cindy Opalski was next to take the podium. In an emotional speech she praised her team for its success, and thanked her seniors for the dedication they had thrown throughout their careers. She then turned the focus of her discussion to senior co-captain Emily Pomeroy '99. The list of complements went on and on, as Opalski described Pomeroy as possessing "a lot of heart" among other admirable qualities. Opalski also described the senior middle hitter as having "never lost confidence" in her team despite tough losses in key games during a match. Their match against Navy roves to be a good example. The Bison won, despite getting crushed in the first two sets.

"We just wanted to make it exciting for the fans," Pomeroy said jokingly.

The next coach to speak was Chrissy Findlay. She spoke of her pride in the women's soccer team's play. "We were playing to win all season, but we did not peak until the end," she said. "Despite this, it was

Meredith Barnes '02 accepts the month award.

great to see the self-confidence and maturity that the team displayed throughout."

Findlay's selection was Meredith Barnes '02. As one of the many freshmen, who have had an impact on this team, Barnes "was a tremendous leader on and off the field." Findlay also described her as having "handled the pressure with grace," and made the bold prediction that "if she continues to play hard she will be an All-American."

As expected, Barnes was already looking forward to the '99 campaign, when the freshman dominated team will have a bit more maturity under its belt. "This season was fun, but it is great that we will have everyone back for next year," she said.

The final and most entertaining individual to speak was Heather Lewis, the women's field hockey coach. Amidst tears and chuckles she praised her team, and explained their significance to her. "We are the third seed in the league tournament, and we had our first winning record in 14 years," she said. "I love this group, and the best thing about us going to the tournament is that I get to be with my players for another week. I am happier than a hog in slop."

Lewis' nomination was reserved for Katie Twombly '00. "She is a physical force, and has proved to be innovative with the ball and stick," Lewis said. As opposed to relishing in her own success, the junior forward mimicked her fellow award-winners, and acknowledged everyone but herself. Twombly ended the luncheon with words that reflect the spirit and teamwork surrounding women's athletics. "I want to thank my team," she said. "If it weren't for them I would not be standing up here right now."

The next women's sports luncheon will be held on Dec. 7 at 11:45 a.m. in the Scullery.

Beetha Kim-The Bucknellian

The women's swimming and diving team will count on both experienced swimmers and newcomers to pace them this season.

Bison women look to cruise past competition

By Brian Watson

The women's swimming and diving team lost the cornerstone of their team with the graduation of Jen Myers '98, but return several talented athletes for the 1998-1999 season.

Myers, the best backstroker in school history, left Bucknell with a league-record eight individual titles, including three gold medals at last year's Patriot League Championships.

The team will look to Ellie Baker '01 to help fill the gap left by Myers. Baker finished an impressive freshman campaign with two gold medals and one bronze.

"It's not easy to fill Jen's shoes, but we're really looking for Ellie to step up," first-year head coach Jerry Foley said.

Junior captains Joanne Crompton, Nicole Brandemanti and Kelly Wilson will provide the leadership for the Bison. Brandemanti, a butterfly specialist, will look to repeat

last year's performance, which culminated in two gold relay medals, as well as a silver and a bronze. Wilson captured third place in the 100-yard breaststroke with her time of 1:08.03 rating second-fastest in Bucknell history.

Other swimmers Foley expects to have an impact include sophomores Megan Jones, Melanie Kasper and Molly Lowe. "I'll be asking Megan to help fill the holes and so far she has a great team mentality and has responded well," Foley said. "Melanie is a talented butterflyer and Molly brings great versatility to the team."

Foley will look to three freshmen to make an immediate difference on the team. Breaststroker Debbie Rocchetti, freestyler Becca Bell and the versatile Abby Weaver, who has already posted top ten times, are expected to perform for the Bison.

Seven divers add to the team's overall potential. "The divers should be a positive for the squad this year," Foley said.

"We're a little lacking in backstroke, but other than that we're pretty loaded," Brandemanti said.

The team awaits the return of Kate Wood '00, who placed fourth in both the 400-meter IM and the 200-yard butterfly at last year's league championships. She is currently studying abroad.

"We'll be a better team second semester," Foley said. "Kate will give us much more flexibility and a lot of the younger swimmers will have learned to compete in numerous events."

Swim teams stroke way to victories

By Brian Watson

Capturing first place in 11 of 14 events, the men's swimming and diving team cruised past Bloomsburg, 152-98, to open the dual meet season. The Bison swept the top three places in four events in their way to earning first-year head coach Jerry Foley his first Division I victory.

On the women's side, an impressive debut performance by Abby Weaver '02 was not enough to push the Bison to victory over Bloomsburg in their season opening meet. Despite the loss, the women rebounded as they defeated both Towson and St. Joseph's of the week at 2-1.

Co-captain Doug Hill '00 (50-yard and 100-yard freestyle) and Tyler Wynn '02 (100- and 200-yard backstroke) took home two victories each for the Orange and Blue.

Six other Bucknell swimmers won their events, including co-captain Alex Johnson '99 (200-yard free), Kevin Takarada '02 (500-yard free), Bill Trabosh '01 (1,000-yard free), Justin Schwarz '01 (200-yard breaststroke), Ben Lim '01 (100-yard breast) and Tyler Codi '02 (200-yard butterfly).

The Bison maintained their early-season momentum by defeating Towson, 133-107. Lim captured first place in both the 200-IM and the 100-yard breast-

stroke. Johnson took home the 50-yard free with a time of 22:00, while Bill Orendorf '01 won the 500-yard free at 5:01.07.

The women's squad was able to capture six first-places against Bloomsburg but was defeated 139-121. Weaver captured both the 100-yard freestyle (55:00) and the 50-yard free (25:53).

Other first-place finishes included co-captain Kelly Wilson '00 in the 100-yard breaststroke, Melanie Kasper '01 in the 200-yard butterfly and Molly Lowe '01 in the 200-yard individual medley.

Sophomores Ellie Baker, Molly Goeller and Megan Jones teamed with freshman Becca Bell to take the 400-yard freestyle relay.

The women fared much better as they took on Towson and St. Francis later that week. The Bison defeated Towson, 67-46 and St. Francis, 88-27.

The Bison took home first places in both 400-yard medley and freestyle relays in addition to six other individual wins.

Weaver once again captured the 100- and 200-yard free, Jones took the 500-yard free and Baker won the 50-yard free.

Kasper repeated to win the 200-yard fly as did Lowe in the 200-yard IM.

Both squads will head to Philadelphia to take on Drexel this Saturday at 2:00 p.m.

Hockey heads to league tournament

By Laura Hough

Traveling to Washington D.C. to battle the Eagles of American University, the field hockey team ended their season with their usual determination and high spirits.

Although they put in a strong effort to add one last win to their record, they were unable to defeat the Eagles and the game ended with a final score of 5-0.

The Bison managed to hold off American during the first half as goalie Maureen Breslin '99 allowed two goals. The first Eagle goal was scored unassisted by Ana Pinyero with 23:48 left in the first half.

About ten minutes later Johanna Savino, who tallied the Eagles' first hat trick of the season, scored off an assist from Jonnie Lees and Sage Astek.

Savino's second goal was followed by Jess Reed, who netted her first goal of the season off a pass from Pinyero, making the score 4-0. Finally, with only 12:17 remaining in the game, Savino scored her third and final goal of the game.

"We played hard in the game and used it as preparation for the Patriot League Tournament," Lauren Campbell '02 said.

Breslin had a total of seven saves. Bucknell's Erin Plasteras '02 managed to break through American's tough de-

Caldor Cruikshank-The Bucknellian

fense for the Bison's only shot on goal.

"The team was focusing more on the upcoming tournament during the game rather than concentrating on playing against American," head coach

Heather Lewis said. "We did play well at times despite the 5-0 score."

The Bison play against Holy Cross at Fairfield this weekend for their first matchup of the tournament.

Sports

No Basketball Allowed

Dear David Stern, Patrick Ewing, et. al,
What are you guys doing? I realize a lot of players leave school long before graduation, and that many of you did not go to college at all, but even you have to realize what's going on. For the owners, you nitwits should have high degrees, so what's your excuse?

If you mouth-piece millionaires can pull yourselves away from the "negotiating table" long enough to listen to me, you'll realize that I'm talking about the NBA lockout. Or strike. Or whatever.

I actually find it ironic that players are claiming that this is a lockout and not a strike. They claim that they are the oppressed party. Honestly boys, no one cares. The players continue to claim that they're on the side of the everyman, part of the union. The owners claim that the players are getting greedy and are spoiled by their present riches. I got news for you guys—no everyman or union member, no matter what the vocation, can sympathize with your cause.

No one can sympathize with millionaires arguing with millionaires over billions of dollars. Michael Jordan makes 30 million dollars a year. Thirty million dollars a year! I'm spending \$28,000 to come to Bucknell and they're not paying me anything. And the owners want a hard cap. Cap this! Cap my education and then talk to me about oppressed parties.

It is important to stress that the owners are not the good guys in this scenario either. Owners, though their earnings are not fixed or as publicized as their seven-foot counterparts, the amount of money they make is ridiculous. In fact, David "don't I look tough with this stupid beard" Stern makes over eight million dollars a year without bonuses.

I have to admit that it is unfair to cite Jordan and Stern as my examples of greed in the big-money sport of basketball. There are many players that do not make astronomical dollar amounts and need a paycheck. The league minimum is still more than the average English major will ever sniff (no LT, I'm not talking about cocaine, you can stop reading now) in their lifetime. But one must remember that these guys do not have a long playing career (paging Danny Ferry, Bo Kimble). Heck, Gheorge Muresan's acting career can only carry him so far, the man has to play. And what about Chris Webber, the prince of marijuana is higher in Sacramento than in Washington, D.C., how is he supposed to cope without a paycheck?

Obviously, the fans are the real losers in this war among millionaires. It is bad enough that ticket prices have been driven up by outrageous salaries and luxury boxes, but now the NBA is robbing families of the opportunity to even watch them play. What the hell is Spike Lee going to do on Sundays—he doesn't even like football.

What I think the NBA lacks is an awareness of their imprint on the social conscious of sports fans. It took baseball Cal Ripken's amazing record-breaking streak—as well as the opening of brand new stadiums in Baltimore, Texas, Colorado, etc.—to even draw fans back into the game after having to cancel the 1994 season. In fact, baseball did not really recover until Steve Howe retired (which translates into the best season in major league history—the 1998 New York Spankees, McPipes and Sosa, Eric Davis and that wacky Philly fanatic which continues to thrill adults and children alike with his crazy antics and fun-loving shenanigans). Football also suffered immensely following the scab players and its two strikes in the '80s.

News flash to the NBA—you do not have the same clout and history as these two sports. Most people will say that they like watching college basketball better anyway. Moreover, if Michael Jordan does retire, the NBA is going to battle jai-alai and the annual firefighters grand prix for ratings. You cannot afford a strike at this point in your existence. More importantly, canceling the entire season may set you back for over a decade.

I understand that there are serious problems with the structure of the NBA cap system and current contractual arrangements. But it is time to suck it up, make compromises and move on. If need be, put a Shaquille O'Neal sized band-aid on the problems and then tackle them over the summer. This may not be the ideal solution, but canceling the season is committing professional sports suicide.

Part of the problem is that the owners and players did not even sit down and talk seriously until after exhibition games had been canceled. And now I constantly hear about phone conversations. If you want some advice, give me a call and tell you what you need to do—shut up and get back on the court.

Basketball constantly claims to be the sport of the new millennium—the "I love this game" slogan and all. Well, Mr. Ewing and Mr. Stern, you can't love this game if there is no game to be played. But I have to admit—you may just be the sport of the next millennium. It just may take you that long to play a single game again.

Bison trick themselves, fall to Colgate

By Tim Scheu

The scene: Hamilton, New York. The stakes: A Patriot League Title, an undefeated regular season, and a trip to the Division I-AA playoffs.

The result: A heartbreaking 48-14 defeat at the hands of Colgate.

A year later, the stage was set for a rematch, but this time it was on Bucknell's turf. Although the Bison had played inconsistently throughout their first seven games, they had shown signs of brilliance which were comparable to those of the '97 squad. Not only that, but the Orange and Blue was coming off an impressive homecoming victory over Lafayette.

On the other hand, Colgate has been playing its best football in years, and had established itself as a legitimate I-AA National Championship contender. In their game against Navy, the Red Raiders moved the ball at will, and impressed not only sportswriters covering the Patriot League, but media members around the nation. Though the Red Raiders were favored by many, one could not ignore the revenge factor, and the emotion that had consumed every Bison player.

Apparently, the Bison were too excited, for their lack of discipline and carelessness cost them the game. In the 38-21 loss to Colgate, the Bison committed six turnovers and were whistled for 76 yards in penalties.

"The turnovers killed us," said head coach Tom Gadd. "You can't turn the ball over that many times. It is like Christmas for the other team."

The Bison had come into the game with a plan to shut down Raider quarterback Ryan Vena. Unfortunately,

Vena displayed why he is the focus of so many defensive game plans on the second play from scrimmage. On an apparent broken pass play the Raider quarterback scrambled 76 yards for Colgate's first score.

The Bison answered right back though, as they marched 59 yards to the Raider 16. The drive was then capped with touchdown strike from Don McDowell '00 to Bison receiver Ron Rockett '99. The reception was part of an eight catch 149-yard day for the seasoned receiver.

At that point, the Raider offense got going and showed why they had steamrolled much of their previous competition. They scored 17 additional points in the first half with a balanced offensive attack that had the Bison defense reeling. The scores came in the form of a 12-yard Vena touchdown pass, a four-yard touchdown scamper by Colgate tailback Randall Joseph, and a 22-yard Adam Federico field goal that made the score 24-7 late in the second quarter.

The Bison then responded with a touchdown of their own. McDowell trimmed the Raider lead to 10 as he threw a 30-yard touchdown pass to Corey Hurley '00 with 1:12 remaining in the half.

Midway through the third quarter it appeared that the Bison were going to make a game of it, scoring once more to make the score 24-21. Bison fullback Jason Marrow '01 capped Bucknell's first possession of the second half with a three-yard touchdown dive that brought the Bison within three with nine minutes showing on the clock.

Bucknell would get no closer.

Two costly second half turnovers paved the way for Colgate's two fourth

Calder Cruikshank-The Bucknellian

Fullback Jeremy Myers '99 and the football team are currently 4-4.

quarter touchdowns, and a struggling Bison offense failed to convert in key situations. Vena continued to terrorize the Bucknell defense as he passed for one touchdown and ran for another to cap the scoring.

"They are a good football team," McDowell said. "But we gave them a game, and if we hadn't turned the ball over six times we may have had and take things one at a time."

McDowell mimicked Gadd's statement. "We love to play the game. That should be enough motivation for us," he said. "We just want to send the seniors off with the most wins of any team in Bucknell history. They deserve that much."

The Bison take to the road this week to face Holy Cross in Patriot League action.

Polo finishes second at Southern Division Championships

By Brian Watson

The men's water polo team was on a hot streak following the ECAC Championships. The Orange and Blue turned in perhaps their finest performance of the year, defeating nationally ranked Queens College and Navy.

The luck that has followed the Bison hit a major stumbling block last week with the suspension of leading goal scorer Josh Watts '00 for violating team policy.

The shorthanded Bison headed to Princeton for the Southern Divisional Championships last weekend. Seeded second for the tournament, Bucknell was ready to face another string of tough competitors.

In their first and most important match, the Bison took on Johns Hopkins. A first-round win would automatically qualify Bucknell for the upcoming Eastern Championships, and the Bison delivered. The Orange and Blue outscored the Blue Jays in each quarter on their way to a 10-3 victory.

The Bison jumped out to a 6-1 halftime lead and never let up. Justin McCarty '01, starting in place of Watts, led the way with three goals while Tate Greditzer '01 contributed two goals and two steals. Zach Blixt '99 played another impressive match, saving five shots while allowing only three.

"The Hopkins game was important because it assured us a spot in Easterns," co-captain Kevin Permisohn '01 said. "Once the pressure was off that, we looked to improve our seeding."

The Bison continued on against the Tigers of Princeton, who Bucknell had defeated earlier in the season. Although the Bison once again got off to a quick lead, they were outscored 4-1 in the second half. Bucknell was able to hold on for the win behind James Miente's '01 three scores. Freshmen Ryan McCarty, Ryan Mueller and Bill Ruth each added a goal apiece. On the defensive side, Matt Lutz '99 chipped in with a fine effort, tallying three steals while Blixt stopped 12 shots on goal.

"Princeton is a very fast team and we beat them at their own game," head coach Mike Wooster said. "Fast break water polo plus great games by Miente and Blixt."

The Bison advanced to the championship round where they faced the Midshipmen. Bucknell kept the match close during the first half, but could not stop Navy from closing out the game, 9-6. McCarty was majored for supposedly elbowing a Navy player during a fast break and was ejected

from the game.

"Our two primary wholesets were out, so that hurt our strategy," Permisohn said.

Mueller netted three goals and Greditzer added two goals, two steals and an assist.

"Overall, our performance was exceptional," Wooster said. "The team found a way to win one big one and played gutsy water polo in the game against Navy. We just didn't have the depth to stay with them."

Their second-place finish at Southern earned the Bison the fourth seed for the Eastern Championships. The team will have a week

to prepare for Easterns on November 14. "The week off will be good for the team," Wooster said. "It gives us a chance to fine tune the little things and rest."

"We open with Brown, a team much like Princeton with no real two-meter game," Wooster said. "So we will sick Lutz on their two-meter man and press everywhere else."

"It's anyone's tournament," Permisohn said. "It all depends on who steps up when it's needed most."

"Easterns is pretty much an open tournament, Wooster continued. "UMass is probably favored but anyone, including BU, could win."

Paige Cull-The Bucknellian

Co-captain Kevin Permisohn '01 and the men's water polo team is preparing for the Eastern Championships, where they are seeded fourth.

University celebrates life of Charles Longley

By Brian Watson

Faculty, administration, friends and former students gathered in Bucknell Hall on Sat., Nov. 7 to celebrate the life of Charles Longley, University pre-law adviser and professor of political science.

Longley passed away on Fri., Oct. 23, following a long bout with cancer. He was 59.

"We tried to create a service that was faithful to who Professor Longley was, and I believe we were successful," said longtime friend and colleague John Peeler, faculty chair and professor of political science, said.

Affectionately known as "Chuck," Longley came to Bucknell in 1967 after serving as a Peace Corps volunteer in Liberia. He worked as the University's pre-law adviser during his entire tenure and was hailed as one of the most prominent in his field. His knowledge of and dedication to American politics was recognized in 1986 when he received the Lindback Distinguished Aching Award.

The service began with a jazz improvisation piece played by pianist David Cover and was followed by a greeting from University Chaplain, Ian B. Oliver.

Harry Blair, professor of political science, returned from his semester on sabbatical to eulogize Longley. "Political science requires a lot of explaining, and Chuck was an outstanding explainer," Blair said.

The service continued as Peeler arose to read Walt Whitman's "Song of Myself" in tribute to his close friend.

William Lasansky, professor of

Where have the candidates gone?

BSG leaders worried about lack of candidates as campus elections approach

By E.J. Crawford

Earlier this year Bucknell Student Government (BSG) considered adding an amendment that would require students to have at least one semester of BSG experience before they could run for president or one of the vice presidential positions. BSG chose, according to Vice President of Operations Emily Petersen '99, not to implement the amendment at the present time.

This decision proved to be a wise one. This year's BSG elections for president, vice president of administration, vice president of finance and vice president of operations have drawn startlingly few candidates. The dearth of candidates includes none, as of deadline on Wednesday night, for vice president of finance.

"It's surprising that people don't want to run for these positions. It's a lot of responsibility but a lot of benefits too," Petersen said. "I think that [the lack of candidates] is upsetting. We've done some great things this year and it's upsetting that nobody wants to fill our shoes. I don't really know what to say."

"It makes me sad and a little frustrated," BSG President Jessica Jackley '00 said. "The job is a lot of hard work, but it's so rewarding

and a lot of fun."

This year's field contains two candidates for president, three for vice president of administration and one candidate for vice president of operations. Only four of those six have prior BSG experience. To further add to BSG's woes, three candidates have pulled out since Monday, including both candidates for vice president of finance and one for vice president of administration.

Last year there were three can-

Jessica Jackley '00, BSG president said the BSG "will find a way to get the job done". Candidates have been withdrawing from the election and offering less experience.

outside of BSG or not really knowing what's going on ... These are positions for the whole school and they're very important," Petersen said.

As to dealing with the void at the vice president of finance position, Jackley said, "we're just going to recruit until next Thursday. We're hoping a few people will step up when they see that there is

a vacancy."

When asked what BSG will do if no students decide to run, Jackley replied that she was unsure. "We'll find a way to fill [the position]," she said. "We'll find a way to get the job done, but I don't really want to think about it. I'm hoping that someone will step up."

BSG elections will be held on Thurs., Nov. 19.

Bucknell Harvest serves community

Haven Ministries benefits from the University sponsored program

Christine Lellis—The Bucknellian

William R. Gruver, professor of management is one of the founders and active members of the Bucknell Harvest program.

By Sarah Palmer

In its two years as a service effort at the University, Bucknell Harvest has answered prayers for several people at the Haven Ministries shelter in Sunbury. The project, conceived in 1993 and enacted in 1997, organizes the preparation and distribution of food items to the shelter and its inhabitants three times per week.

Sponsored by the Bucknell Student Government (BSG) and implemented by several other members of the University community, Bucknell Harvest has been quite successful thus far.

"From our standpoint we're doing very well," Tim Tenon, director of Dining Services,

es, said.

Volunteer drivers, who use University vehicles paid for by BSG during the transportation of the food, give up an hour of their day on Monday, Wednesday, and Friday afternoons to make the trip to and from Haven Ministries.

"In addition to the regular three times a week donation, we continue to transport food over vacations," Tenon said. These additional

trips are made by Dining Services staff since student volunteers are not available during academic breaks.

"Our biggest frustration now is finding volunteers to deliver our food to its destination," said William R. Gruver, professor of management and one of the project's founders.

This semester, other organizations on campus, such as fraternities, have been asked to become involved in the transportation of the food. Adam Epstein '99 has headed the search for fraternities that are willing to support the program by assigning brothers to help transport food throughout the year. Epstein reported that all fraternities are now involved and that several sororities

have also expressed interest in aiding the project in the future.

At the beginning of this year, Epstein became active in the project. "With all of the fraternities working together they are bettering relations amongst themselves, with the administration and the community all at the same time," he said.

"[The Bucknell Harvest] was just an idea before," Epstein said. "It wasn't working up to its fullest potential due to a lack of publicity and structure."

Because of these factors, Epstein felt that incorporating fraternities would give structure and consistency to the volunteering aspect of the project.

Preventing hunger is not the only goal of the Harvest, however. The importance of providing people with meals that are nutritious is crucial as well. "A lot of people are not necessarily hungry, but they are malnourished," Gruver said. The Harvest aims to supply the needy with healthy meals that they otherwise may rarely receive.

Two volunteers are assigned to each delivery, and the food products delivered vary each trip.

Dining Services is very careful about maintaining proper food temperatures at departure time and that all food is kept in insulated containers. All food items are listed and labels are placed on their containers. The chef and executive chef are responsible for preparing and inspecting the food products. Upon arrival, a member from the shelter inspects the food.

When Gruver came to the University six years ago, he was interested in initiating a program that would supply the needy with food items. Prior to his arrival here, he was involved in a similar program called City

The recently concluded book drive collected over 150 books to benefit the SVWIT.

Junior Panhel council sponsors Book Drive

By Jared Silliker

Members of this fall's Junior Panhellenic Council are using books a little bit differently this semester. The group of 16 new sorority members, two from each chapter, is also learning about Greek leadership and community service quickly and with significant success.

The 1998 edition of Junior Panhellenic recently concluded its Book Drive, which will benefit Susquehanna Valley Women in Transition (SVWIT). Headed by Nicole Sampson '01, the all-sophomore council raised over \$800 and 150 books through the drive. SVWIT is a program that provides a safe-haven for battered women and their

children. Besides shelter and food, SVWIT gives support to women who are making changes to escape violent domestic lives.

"I'm really proud of the Bucknell student body and faculty members for contributing," Sampson said. "It was neat seeing students go right into the bookstore and buy new books for a great cause."

The books collected were mostly children's books as well as women's self-help books. The monetary donations raised were primarily the result of soliciting campus Greek organizations as well as students and faculty. All eight sororities contributed to the drive as did the Interfraternity Council (IFC) and Panhellenic Council.

MANAGING YOUR MONEY:

Third Quarter Rattles Investors,
Leaving an Important Lesson

By George Jenckes

For investors, the third quarter of 1998 will be remembered for a long time. The third quarter marked the first time in eight years that our never-ending bull market came to a halt. The S&P 500 declined 10% in the third quarter, ruining its streak of 14 consecutive quarterly advances. The decline in small capitalization companies was even worse. The Russell 2000 small stock index fell 20 percent in the third quarter. Within the S&P 500, the sector that got hit the hardest was the financial sector. With exposure to Asia, financial-services firms declined 21 percent in the quarter, forcing firms, such as Merrill Lynch, to layoff thousands of employees.

Most investors will not only remember the third quarter by its falling indexes, but by the array of disappointing news, which rounded the globe. The world financial crisis spreading from Asia to Latin America overshadowed the third quarter. The Monica Lewinsky sex scandal surrounding the White House added fuel to the global economic meltdown, sending negative repercussions from Washington to Wall Street. Russia's debt default and lackluster U.S. corporate earnings also increased investor uncertainty. Just when things couldn't get any worse, the Fed announced a \$3.5 billion bailout of Long Term Capital Management. Consequently, the market was left vulnerable to any kind of bad news.

Some investors saw the bad news as the end of the world, quickly dumping stocks and rushing into Treasuries. Others saw it as a buying opportunity, picking up bargains in stocks that had been trashed.

Nonetheless, the third quarter was a time for all investors to stop and reevaluate their investment strategies. In a quarter that contained extreme volatility, investors were left with little choice but to reconsider their stances on risk/reward investing. For those who had well-balanced portfolios, little adjusting had to be done. However, investors who had made large bets in emerging markets, or those who had invested in Long Term Capital, clearly had to reevaluate their investment strategies after being punished for their risky investments.

When looking at the third quarter alone, it looks pretty bad, but when looking at the greater picture, it's nothing to be overly concerned about if you're a long-term investor. The third quarter was definitely rattling, but we only really lost a few months of gains.

The quarter's 14 percent decline in the Dow set us back only to February's level. And now, with Greenspan claiming that the credit crunch has eased, the Dow is close to approaching the 9000 level once again. So, when investors look back at the third quarter of 1998, they should think of it as a learning experience. Investors should remind themselves that next time they better plan for things to go wrong as well as they had planned for things to go right. Stocks are still the best long-term investment.

Buying and holding stocks for the long term is much smarter than frantically jumping in and out of them when the market's environment changes. Investors have grown so accustomed to the 20 percent plus gains we have experienced in the last three years that they have lost focus of the true nature of the market. The market does go down. When it does in the short term, as we have experienced in the third quarter, it tends to overreact; leaving an opportunity for those investors who can look beyond the moment and keep the future in perspective.

PANHEL

From page 1.

"This is the most successful community service project that we've had in a while," Charlene Vai '98, Panhellenic Council president, said. "It's good to see new members who are so dedicated to the idea of helping others and they take an active part in the Greek system."

The monetary donations will be used to purchase a SONY Playstation and games for children involved with SVWIT. The remainder of the contribution will be given directly to SVWIT to buy Christmas presents for kids.

Junior Panhel is an eight-week program wherein two sophomore delegates are selected by their respective chapters. The council meets

once a week, beginning soon after Bid Day. Sampson was elected Community Service chair and is aided by community service treasurer, Jen Mooney '01. Betsy Engler '01 serves as council secretary.

"This is a group of good Greek women," Casey Crowley '99, Panhellenic Council vice president of internal affairs and advisor to the junior council, said.

"When I look at these girls, it reassures me in knowing that girls like these are going take over and do a great job," Crowley said of the Jr. Panhel members becoming a part of the 'senior' Panhellenic Council in the future.

November 3, 1998
CRIMINAL MISCHIEF/PROPERTY DAMAGE—A University employee reported to Public Safety that unknown person(s) had thrown eggs at Cooley Hall breaking a window. The incident is under investigation.

VEHICLE DAMAGE—A University employee reported to Public Safety that her vehicle was damaged while parked on Moore Avenue. The incident is under investigation.

HARASSMENT BY COMMUNICATION—A University student reported to Public Safety of having received harassing phone calls in Swartz Hall. The incident is under investigation.

November 4, 1998
MEDICAL ASSIST—Public Safety responded to Vedder Hall for the report of an ill student who was transported by Student Health Service to Evangelical Community Hospital Emergency Room for treatment and was later released.

November 5, 1998
ASSIST LOCAL POLICE—Public Safety was requested to report to 7th and Market Streets to assist Lewisburg Police Department and EBTDP to end a party at a local residence. Lewisburg Police Department issued a citation to the party sponsor.

November 6, 1998
VEHICLE ACCIDENT—A University student reported to Public Safety that the Student Health Service vehicle struck a deer on Route 45, east of Lewisburg. The occupants of the vehicle were not injured and Pennsylvania State Police responded to the scene.

November 7, 1998
INFORMATION/RECOVERED PROPERTY—Public Safety responded to the intersection of Moore Ave and Rt.15 to provide traffic control for a motor vehicle accident, involving two University students who sustained no injuries and refused medical treatment. EBTDP was notified to investigate the accident.

November 8, 1998
MEDICAL ASSIST—Public Safety responded to Vedder Hall for an ill student. Upon arrival, Public Safety learned that the individual had been transported by friends to Evangelical Community Hospital.

November 9, 1998
MEDICAL ASSIST—Public Safety responded to Vedder Hall for an ill student. Upon arrival, Public Safety learned that the individual had been transported by friends to Evangelical Community Hospital.

November 10, 1998
INFORMATION/SUSPICIOUS INCIDENT—A University student reported to Public Safety that a suspicious male was in the building. Lewisburg Police Department was notified. No one was located in a search of the building. The incident is under investigation.

November 11, 1998
MEDICAL ASSIST—Public Safety responded to Vedder Hall for an ill student. Upon arrival, Public Safety learned that the individual had been transported by friends to Evangelical Community Hospital.

November 12, 1998
MEDICAL ASSIST—Public Safety responded to Vedder Hall for an ill student. Upon arrival, Public Safety learned that the individual had been transported by friends to Evangelical Community Hospital.

Bucknell Student Government Constitution

Article I: Name:	1.01	The name of this organization shall be Bucknell Student Government, hereafter referred to as BSG.
	2.01	The BSG shall serve as the official voice of Bucknell students.
	2.02	The BSG shall be guided by the preservation and promotion of the rights of the students.
	2.03	The BSG shall be concerned with all aspects of the lives students.
Article II: Purpose and Scope	2.04	The BSG shall be guided by a concern for the harmony of the University as a community of higher learning.
	3.01	The formal governance structure of BSG shall consist of three components:
	3.01.1	The Executive Council (hereafter referred to as EC) shall consist of the following:
	3.01.1.1	Four officers: a President, a Vice-President for Operations, a Vice-President for Administration, and a Vice-President for Finance.
Article III: Components	3.01.2	The Executive Committee shall consist of the following:
	3.01.2.1	Executive Council
	3.01.2.2	The Chairperson of each standing Congressional Committee.
	3.01.3	The Congress shall consist of the following:
Article IV: Membership	3.01.3.1	Three Class Officers from each Class year: a President, a Vice-President, and a Secretary/Treasurer.
	3.01.3.2	Eight voting Congressmen/women and two Congressmen/women functioning as non-voting alternates, for each Class.
	4.01	Any student enrolled at Bucknell University may attend a BSG Congressional meeting.
	4.02	The eligibility of a voting member of BSG shall be prescribed by duly ratified By-Laws to the Constitution.
Article V: Purpose and Basic Duties of Each Component	5.01	The Executive Council:
	5.01.1	General Purpose:
	5.01.2.1	To execute the daily operations of BSG.
	5.01.2.2	To execute the tasks and duties outlined by the By-Laws.
Article VI: Amendments, By-Laws, & Motions	5.01.2.3	To produce a set of goals, or an agenda, for BSG to accomplish each semester and/or year.
	5.01.2.4	To allocate funds and oversee their disbursement from the BSG treasury.
	5.02	The Executive Committee:
	5.02.1	General Purpose:
Article VII: Advisor	5.02.1.1	The Executive Committee shall act as a forum of discussion for the Standing Committee Chairpersons and the EC.
	5.02.1.2	The coordination of goals among the EC and the Standing Committee Chairpersons.
	5.03	The Congress:
	5.03.1	General Purpose:
Article VIII: Master Copies of the Constitution	5.03.1.1	To act as a forum for the expression of students' opinions.
	5.03.1.2	To create By-Laws of the BSG.
	5.03.1.3	To ratify By-Laws of the BSG.
	5.03.1.4	To repeal By-Laws of the BSG.
Article IX: Internal Affairs Committee Revisions	5.03.1.5	To create motions of the BSG.
	5.03.1.6	To ratify motions of the BSG.
	5.03.1	To repeal motions of the BSG.
	6.01	Definition of Amendments, By-Laws, & Motions:
Article X: Goals	6.01.1	An Amendment shall be any resolution proposing a change in the Constitution.
	6.01.2	A By-Law shall be a resolution establishing procedures for the implementation of this Constitution.
	6.01.3	A Motion shall be a resolution proposing an idea and/or concept to the BSG and/or its subsidiary components.
	6.02	Passage of Amendments, By-Laws, & Motions:
Article XI: Goals	6.02.1	Amendments
	6.02.1.1	Proposed amendments must be submitted in writing to Congress, or by means of a petition, addressed to the Congress, of which at least ten percent of the student body must have signed.
	6.02.1.2	At a subsequent meeting (within two weeks of introduction of the proposal) of the Congress, at which at least two-thirds of the voting membership must be present, a two-thirds vote in the affirmative of the total membership is required to present the amendment to an all-campus vote.
	6.02.1.3	The proposed amendment shall be presented to an all-campus vote only if it passes the congressional vote. The proposed amendment must pass the campus vote by at least a majority of sixty (60) percent.
Article XII: Goals	6.02.1.4	All ratified amendments shall become effective immediately.
	6.03	Bylaws:
	6.03.1	By-Laws shall be proposed in a regular meeting of Congress, and voted on the subsequent meeting, unless a motion to vote on the same day is moved and seconded.
	6.03.4	Motions:
Article XIII: Goals	6.03.4.1	Motions shall be proposed at a regular meeting of Congress and voted on at the subsequent meeting, unless a motion to vote on the same day is moved and seconded.
	6.03.5	By-Laws, Amendments, and Motions not affecting the structure of BSG or any of its subsidiary components will require a simple majority vote of quorum of the Congress to be ratified.
	6.03.6	By-Laws, Amendments, and Motions affecting the structure of BSG or any of its subsidiary components require a majority vote (2/3 vote) of the Congress to be ratified.
	7.01	The Advisor(s) to the BSG shall be one or more members of the administration, faculty, or staff of Bucknell University.
Article XIV: Goals	7.02	The Dean of Students shall appoint the advisor on an annual basis, pending ascent of the BSG.
	8.01	Upon ratification of this Constitution, three master copies shall be maintained: one by the Dean of Students, one by the Executive Council, and one of the BSG Website. All ratified amendments shall be recorded on these copies, within two weeks of ratification.

Internal Affairs Committee Revisions

The revised Constitution presented to the Student Body for vote includes many necessary changes and updates. The original BSG Constitution was written in the late 1960s and has since never been reviewed. Upon review of the document one year ago, the BSG and the Internal Affairs Committee realized that several major changes needed to be made.

Those changes include:

- Clarification and update of the Components (Article III) to match the current operational structure of the BSG.
- Eligibility of students to participate in BSG (Article IV).
- Incorporation of Purpose and Basic Duties of Each Component (Article V). This section was once part of the By-Laws. They were incorporated into the Constitution because of the importance of the basic duties to the procedural implementation of the Constitution.
- Definitions of Amendments, By-Laws, and Motions (Article VI) were included to remove any possibility for confusion.

1998-1999 BSG PRESIDENT

Derek Leo '01

Majors: Political Science/
Philosophy
Minor: Legal Studies
Hometown: Staten Island, NY

Leadership experience: Chair, BSG Internal Affairs Committee; Lead Team; Bucknell Business Leaders; Kappa Sigma Fraternity Rush Chairman

Goals: Leo believes that one of BSG's chief goals should be to become more pro-actively involved with the student body. Rather than

making decisions based solely on the input of BSG officers and cabinet members, he feels that Student's Government's primary responsibility should be to actively involve students in decision-making processes.

"As President, you need to open yourself up to students and get involved with students themselves," Leo said. "Instead of remaining behind the scenes, you need the student voice as a whole to be heard to a great effect."

Leo cited extending student government office hours, expanding BSG publicity to alternate forms of media and making it easier to accept and consider student suggestions

and concerns as ways to increase direct student involvement.

"We have a lot of events that are generally well-received, but aren't always well attended," Leo said. "By expanding publicity of BSG events, students will have a greater opportunity to experience the programs we offer."

Qualities: "My experience on the Internal Affairs committee gave me experience as to how BSG works and what it takes to be president. My experience as a leader is a result of my character, and I hope to bring that same character into office."

Yoshi Maisami '01

Majors: Management/Economics
Hometown: Baltimore, MD

Leadership experience: President, Class of 2001; Vice President, Vedder Hall (RHA); Building on Foundations; BSG Public Affairs Committee

Goals: Maisami wants to use the existing committees on BSG to achieve students' goals and assuage

their concerns. He especially would like to address issues including mixed-class housing, construction of new residence building, extending library hours, meal plans and club/intramural sport space. "I personally feel that through the different committees that we already have we'll be able to work with the administration." Currently, he is working on BSG to open a snack bar in Swartz for students in the library.

"We need to do a better job of letting students know what BSG's doing." By advertising on the mail room door, having class officers go

to congress meetings and issuing the BSG student gavel in The Bucknellian, Maisami feels he can accomplish this goal.

"It just takes a little care and effort to get everyone psyched about doing their jobs," he said.

Qualities: "Personally, I feel that I'm a very approachable person, and that I'm very organized. I like to get things done as soon as possible. I take the initiative whenever possible. As president of my class, I've worked together with other students and class officers."

All photos taken by Brett Tomlinson.

VOTE in the BSG elections which will be held in the Langone Center on Tuesday November 17.

ELECTION CANDIDATES VICE PRESIDENT OF OPERATIONS

Samantha Jackson '00

Majors: History/Political science
Minor: religion
Hometown: Pensacola, FL

Leadership experience: Congressman of BSG for 2 1/2 years; Vice-President, class of 2000; President, Circle K

Goals: Jackson feels that there is a lack of knowledge among BSG members of how BSG runs inter-

nally. She would like to change this by instituting orientation programs which used to be but are no longer in place. "[Orientation] is important because you have to know each other to work together."

"I think that BSG has really deteriorated since my freshman year," Jackson said. She acknowledges the growth of the Circle K organization from just one year ago and plans to use similar techniques with BSG if she is elected. Jackson would also like to extend the link between BSG and

other organizations such as the residence hall organization (RHA) and get representatives from those clubs to attend BSG meetings.

"We're talking about a lot of stuff, but we're not doing anything," she said.

Qualities: "I'm a natural leader. I've always been involved in high school and in college. I'm a very organized person, and I have enthusiasm for the organization."

Chris Bouchoux '01

Majors: History
Minors: Classics/legal studies
Hometown: Bloomfield, NJ

Leadership experience: Student Coalition Against Rape

Goals: To Bouchoux, BSG's greatest weaknesses lie in promoting the group's programs and leaders to the campus. He through use of more efficient meeting processes and more active methods of informing the campus, would like to reduce student apathy toward BSG operations by better informing students of the importance of their opinion.

"I think that when elections come, students are amazingly unaware of what their options are," Bouchoux said. "BSG needs to get more involved in promoting who the actual leaders are, and show students that their vote matters."

Bouchoux also believes making BSG's operation processes more efficient will encourage students to become more involved in government. By making student government less confusing and more accessible, Bouchoux hopes to raise student awareness of government.

"I think that a lot of students believe that it doesn't matter who the BSG leaders are—that will all end up the same," Bouchoux said. "I think students should be allowed to know right away what their options are."

Qualities: "This position is very much a communication position, both in terms of informing the campus and keeping BSG members informed. Communication is one of my main assets and a skill I feel I can draw on well."

VICE PRESIDENT OF ADMINISTRATION

Christiane Schuman '01

Major: International Relations
Minors: Environmental Studies/
Legal Studies
Hometown: Ivyland, PA

Leadership experience: Vice President, Class of 2001; Peer Educator; Bucknell-Burma Committee; Chair, Social Service Committee

Goals: Schuman feels that BSG needs to become more involved with other campus organizations, believing that miscommunication between student organizations and student government has created a situation in which groups cannot collaborate

on projects.

"Sometimes there seems to be a bit of hostility between student government and student organizations because BSG sometimes seems out of touch," Schuman said. "We're a representative of the student body. No, we're not just another club on campus, but we shouldn't feel or act like elitists, either."

Schuman also believes it necessary to follow through on proposals currently in the works in student government. She believes that the

current Vice-President of Administration is planning events that Schuman hopes to carry out.

"There are proposals and things to follow through with that I hope to facilitate," Schuman said.

Qualities: "Basically, I'm doing this not to put it on my resume, but to be a voice for the students. Students need a voice on this campus, especially now with all the things that are going on—safety issues, social issues, and I think student government should provide that voice."

FORUM

EDITORIAL

Lack of interest in BSG stings campus

In preparation for next week's Bucknell Student Government (BSG) elections, we interviewed candidates for our annual election preview. As usual, the candidates were enthusiastic and generally well prepared to be student leaders. Unfortunately, the quantity of students campaigning did not match the quality.

Due to a lack of interest, the requirement of one year of BSG experience was waived for candidates this year. At press time, a total of six students were actively running for office, but the lone candidate for Vice President of Finance had decided not to contend for the position. No one will be on the ballot for that office. Despite commendable attempts by BSG to publicize activities, students remain apathetic and uninvolved. Students cannot hide behind the "Bucknell Bubble" theory for their lack of student government involvement. If, in fact, we are isolated, then we should have a heightened interest in our local affairs. Instead, student interest remains minimal.

In order to have a legitimate voice in campus issues, more students need to voice their opinions. The new BSG officers can act as leaders in promoting campus issues and encouraging student involvement. With that in mind, our staff has chosen to endorse the following candidates:

President—Yoshi Maisami '01
Maisami is an active member of BSG with an awareness of what the job of President entails. He has clear goals of what he would like to accomplish, but he is also open to new ideas. His enthusiasm and approachability should make him an effective leader.

Vice President of Operations—Samantha Jackson '00
Both Jackson and opponent Chris Bouchoux have good leadership qualifications. Jackson, however, has a definite edge in BSG experience. Her work in other activities has shown admirable initiative, which should be an asset in the Operations position.

Vice President of Administration—Christiane Schuman '01
Schuman is a perfect example of a University student who likes to be involved. Her experience with a variety of clubs and organizations should enable her to bring fresh ideas to BSG. She is motivated and clearly interested in making a difference.

Overall, this year's candidates exemplify the right attitude for student involvement. They are interested in serving their fellow students, not building their resumes. Take the first step in making a difference by casting your ballot on Tuesday in the Langone Center.

LETTERS TO THE EDITOR

Letter from the BSG president

TO THE EDITOR:

As many may know already, the Bucknell Student Government (BSG) Executive Officer elections are coming up next week, on Thurs., Nov. 19. Although terms will begin after winter break, I wanted to write now before the transition of a new administration begins and the focus will (appropriately) be off of the past and onto the future of BSG.

First, I write to express my thanks to this community for allowing me the experience this past year of serving as BSG President. I have loved representing this campus and I have been proud to speak, write, plan and act on behalf of its students. I have learned incredible amounts from others serving on BSG, whose hard work towards unity, involvement and advocating the rights of students often goes unnoticed and underappreciated. I have seen all the levels of people who care about this place, from faculty to administration to trustees and I have been humbled as I watch their careers for this place in action, their sacrifices of time and energy for the good of Bucknell. I have learned much about my own strengths and weaknesses.

I also write to give readers an overview what we, as a Congress, have been most proud of since last December. My hope is that this list might inspire further involvement in BSG's projects, elected or not, or at the very least, I hope this produces some feedback as to what else we as a campus want to get done next spring and beyond. Accomplishments include:

- passage of new BSG Constitution through Congress, which now needs campus vote and more efficient elections (watch for next Thursday!)
- coordination with Dean of Students and Public Safety to address safety concerns
- Blue and Orange Day (a.k.a. Class Unity Day)
- second annual awareness week
- participation in organization of student group to advocate tradition
- involvement in new telephone system switch; and area code changes
- reviewed faculty tenure policy
- improved relations with Lewisburg residents through COBLR (credit to Kelly Creech!)
- student discount cards for use in the community
- hired Webmaster for more efficient student-to-government relations
- Works in progress include:
 - pushing for campus-wide shuttle
 - working to improve first floor library facilities
 - acquiring more field space for club sports
 - contributing student input for renovation of Swartz Hall space
 - creation of new policies for BSG-to-club/club sports relations

These are some of many things we have worked on in the past year; there are more. I am proud and grateful to have been part of this body as President and I'm confident that BSG will continue to improve and act as the voice of the students. I encourage everyone to speak up and get your voice heard in BSG. Make this place what you want it to be.

Thank you.

JESSICA JACKLEY '00
PRESIDENT, BSG

OPINIONS

Those annoying MG 101 students

By Beth Martin

Well, it's that time of the semester again. I will try to limit myself to one trip to the LC per week at an obscure hour so that I can avoid constantly being pestered, as well as the inevitable guilt that comes along with not buying the wares of Management '01 companies.

Of course, my plan is idealistic; after all, I do realize that I have to eat and check my mail more often than that. I just wish that the members of these companies would realize the same thing and leave me alone.

I am not criticizing the basic Management 101 program; from what I have heard, it is one of the most useful and enjoyable classes around. In addition, I respect that the money raised goes towards charitable causes. What I am criticizing is students who annoy us to death and/or try to make us feel guilty just because we don't want to buy the tee-shirt, mug, poster, shorts or whatever else they are selling.

I want to make it clear that most of those enrolled in management 101 seem to be very considerate and understanding towards potential customers; and most also realize that we will approach them, rather than vice versa, if we wish to purchase the items that they are selling. While many of them are probably never donated a penny to the particular cause, I avoid you like the plague during that time. But, if we do anyway, please understand why. After all, you have been in our shoes at the other side of the sales table every other semester!

In fact, be honest all around. Treat us as you normally would, even though we are potential customers. If we don't really know you, don't act like we do unless you are indeed interested in pursuing our friendship. And if you do know us, don't force us to avoid you like the plague during that time. But, if we do anyway, please understand why. After all, you have been in our shoes at the other side of the sales table every other semester!

What's even worse is when someone we don't even know calls us by our name and asks us to buy something. What, are "pig" books from each class year

required for management 101? But even if we know the salesperson relatively well, does not mean we want to buy their product.

First of all, maybe we don't have the money to buy this stuff. Just because we can charge it to our school I.D. card, doesn't mean that we (or for those more fortunate, our parents) don't have to pay for it at some point.

Secondly, if we do have the money, we'd probably rather spend it on something else. Personally, after more than three years here, I have enough stuff with the Bucknell logo on it to sink a ship.

Thirdly, despite what many company members seem to think, their products are usually not really all that unique or even desirable. Many act like their tee shirt or other type of merchandise is the best thing since sliced bread, when in reality it is similar to what I've seen from many other management 101 companies.

Finally, the thing that personally gets me the most: their hypocrisy. They attempt to make us feel like we're bad people for not supporting their charity of choice by buying these over-priced items. They take on the "holier than thou" guise of their organizations' most generous philanthropists when hawking their wares. Although many of them have probably never donated a penny to the particular cause, I avoid you like the plague during that time. But, if we do anyway, please understand why. After all, you have been in our shoes at the other side of the sales table every other semester!

In fact, be honest all around. Treat us as you normally would, even though we are potential customers. If we don't really know you, don't act like we do unless you are indeed interested in pursuing our friendship. And if you do know us, don't force us to avoid you like the plague during that time. But, if we do anyway, please understand why. After all, you have been in our shoes at the other side of the sales table every other semester!

Feel like breaking any trees lately? Vent your frustration some other way. Write for ops.

Pro-wrestling & politics: Can former professional wrestler Jesse "the Body" Ventura bring third-party politics back in the ring

By Brett Tomlinson

Jesse "The Governor" Ventura? It seems like a joke, a mockery of the American democratic system. After all, Ventura used to grapple with the likes of Hulk Hogan and Brutus "The Barber" Beefcake. How can he possibly be qualified to wrestle tax laws, welfare issues and other political topics?

The former pro-wrestler and Minnesota governor-elect may be under fire for his apparent lack of qualifications, but Americans should not view his victory as a complete surprise. A professional wrestler is just a combination of a second-rate actor and an athlete. We put an actor in the White House for two terms in the 1980s, and ex-athletes have held top cabinet positions and seats in Congress for years.

Ventura is also a military hero. He served in Vietnam and was selected to the prestigious Navy SEALs. War heroes have been politically active since our nation's inception. In fact, half of our Presidents have served in the military.

The most surprising part of Ventura's suc-

cess is his apparent lack of education (he graduated from high school, but never completed his work at North Henderson Community College). His victory was a result of hard work, common sense and popular appeal. As a Reform Party candidate, he inspired widespread voter participation throughout Minnesota. About 15 percent of the voters registered on the day of the election.

Ventura's opponents had some trouble fighting his agenda. He is promoting a revitalization of public schools and a leaner state government, and he has made the ever-popular promise to veto all new or increased taxes.

Experience and political savvy were Ventura's main handicaps, but apparently voters thought his message was more important than his resume. If anything, his victory should be a wake-up call to career politicians who have lost their credibility after years of broken promises and political maneuvering.

It is too early to tell what kind of governor Ventura will be, but his effect on political awareness is significant. In an age of declining voter

participation, Minnesota led the nation with a 60.4 percent turnout last Tuesday.

The turnout figures are somewhat disturbing because of Ventura's pro-wrestling past. Do we really want Saturday morning couch potatoes choosing our leaders? It is an elitist sentiment, but it holds some merit. Anyone who continues to watch a sport that is so clearly fixed and phony is lacking a certain amount of logic.

While Ventura's election is not a complete surprise, any prolonged political success will be. The man who was known as "The Body" in his wrestling days has taken to calling himself "The Mind" now that he is the governor-elect, but "The Hypo" seems more appropriate. His nicknames conjure up a popular Latin credo: *Mens sana in corpore sano* (a sound mind in a sound body).

When the dust settles from his election day shake-up, Ventura will either give new meaning to that motto or govern like a professional wrestler. Either way, he'll give political analysts something to talk about, which is great for those of us who don't live in Minnesota.

The sad, sorry state of the American political scene

By Chris Beatty

I have a short list of things in the news that I have a little something to say about:

1. Kudos to Newt Gingrich for taking responsibility for his party's poor performance in the recent Congressional elections. It is nice to see leaders taking responsibility for their actions, finally.

2. Does anyone feel like we did this Iraq thing a few years back? I mean did we really mess up so badly the last time that we need to go back again? I guess they figure that they can't recycle the yellow ribbons and the "Voices that Care" song and save some money on production, plus trust me, both sides have held one

Reasons why the Public Safety log is just so amusing

By Rebecca Rowland

Karl, this one's for you... Isn't the Public Safety log great? It's like the log of the police blotter in your hometown newspaper, except in this case the "criminals" are you and your friends.

This of course means that when you read the Public Safety log, there is a fairly large chance that you might recognize someone you personally did. For example:

"Dude, did you see the Public Safety log in the paper?"
"I know! 'UNDERAGE CONSUMPTION' second column over, third one down! That was me!"

It is always exciting to see yourself in print. The Public Safety log is the section that parents turn to first when they get the paper. They say it is because it reminds them of what they did when they were college.

But I know the truth; they scan it to see if they can recognize their kids. There are no names so it's up to your parents to figure out if it was really

you or not. Observe one sneaky method:

"So honey what did you do last Saturday night?"
"Not much, we went to a party. Why?"

"No reason. You didn't happen to be on Seventh St. unable to walk straight, with the odor of alcohol, were you?"

This tactic never works. I mean, come on, what are the chances you would say "Yes, you found me out" and burst out crying? More likely you would say, "No, I was on Sixth St."

I find it amusing that every incident is "under investigation." Who conducts these investigations? Are they ever solved? If so, why aren't we told about it? I don't know about you, but I would appreciate it very much if I was told who threw the water balloon out of the window in Roberts on Sept. 3.

But wait a minute, maybe these atrocious crimes are never solved. Gasps! This means that the water bal-

loon culprit is still at large and waiting to strike again at any time without warning!

Honestly, I think that the Public Safety department needs to pick which "crimes" to investigate a little more carefully. I don't think that the person who left the banner on the freshman quad 's going to be a threat to the University community's safety. The person who called in that bomb threat—he or she might be someone to check into, though.

Not that I am knocking the Public Safety department, they provide us with a valuable service. I have a friend that goes to school in downtown Philly and he says that it isn't a real day at USIP unless someone gets mugged. On the other hand, Bucknell is relatively safe as far as college campuses go, and this might lead to sort of a "incident inflation" on the part of Public Safety.

An example of this would be the water balloon incident. Maybe to prevent their overreaction to such inci-

dents,

5. Most of the seniors are now looking for jobs and one of the big firms that comes and recruits here is Price Waterhouse-Coopers. For those of you who have never heard of them, this company is the product of the merger of two of the big six accounting and consulting firms. Price Waterhouse and Coopers and Lybrand. I don't know if anyone has noticed, but Lybrand really got screwed. His name got dropped from the company charter and now everyone will be asking "Who the hell is Lybrand?"

6. One last thing: Beware everyone! Simpson is back in the courtroom and in the news. Be afraid. Be very afraid.

And remember, if you get written up, send the Public Safety log home to Mom with your offense circled; it will save her a lot of time and effort trying to weasel it out of you.

A time for decisions

By Allyson Demerath

What do you want to do with the rest of your life? Who do you want to work for after college? Where do you see yourself in 10 years? More importantly, what is the major you have chosen to get you there?

As we embark on the wonderful journey of choosing classes for the spring semester, many students find themselves wondering what major to select. We are programmed to obtain the most marketable major, while still choosing something related to our "passion." What constitutes your passion, though? As eighteen, nineteen or even twenty-year-olds, how are we to know what will drive us when we are fifty?

In addition to this existing pressure, the word "major" evokes images of an unchangeable decision. Although we are allowed to change it once or twice, at some point, a final decision has to be made. This decision holds potential for future responsibilities, consequences and gains. When seen in this light, picking a major becomes more of a task than a personal journey toward our passions.

For this very reason, we students are guaranteed a plethora of advice. These helpful suggestions can often lead to more stress and uncertainty. For example, your parents may want you to be a future doctor, while you are more impressed with the management department. Meanwhile, your older brother or sister thinks you should develop your talents in the English department. So where

does that leave you?

The same place you were before. Only now, you have to deal with all of this outside information, which is really not relevant to you. The best way to pick a major is to focus on what you want. This can be a difficult task however, especially when you are bombarded with people telling you what you should or should not do.

Let's take a look out into the "real world." How many people do you know who majored in English? What about history, or physics, or management, or psychology? Do you actually know the majors of that many people? If you don't, then what constitutes this being such an important decision? Simple. We like to have our lives planned out to a certain degree. We like to know we will still be able to support ourselves in the manner we have become accustomed to. Although an impressive major from Bucknell University will most likely open some doors for you, a piece of paper will not earn you a six figure salary.

I have to believe that companies, employers and the "important people" are more concerned with your abilities than your major. In today's world, people are looking for someone who can succeed in what they set out to accomplish. Judging from our status as Bucknell undergrads, I would say most of us know how to go after what we want. Thus, we already possess the talents needed to get us a great job: ambition, drive, determination and hopefully the ability to put things in perspective.

Do you like to complain about everything and none of your friends want to hear it anymore? Write us a letter.

We care.

TO THE EDITOR:

The members of Bucknell's first women's varsity golf team and I sincerely appreciate the early season coverage given to our program. However, we were disappointed that our final events went unreported.

Our next-to-last tournament, the Rutgers Invitational, apparently was not reported because *The Bucknellian* was not published on the Thursday following Fall Break. I thought that at least the scores might make the age page of the next issue. That did not happen, nor was there coverage of the team's performance at the ECAC Women's Open Championship. In fact, I think that the latter was the only varsity event on Oct. 17-18 not reported in the Oct. 22 issue.

For the record, we finished fifth

among the other schools at Rutgers and Hilary Mainka '02 shot 85-86-121 to finish tied for 15th individually among 52 players. Our other players were Bridget O'Mara '02, Heather Mann '01 and Christine Freda '01.

We were certainly not pleased with our play in the first round of the ECAC tournaments at Blue Fox Run G.C. in Avon, Connecticut when we stood 20th of 21 schools, but the comeback the second day was gratifying. The Bison players took 35 strokes off their first round score to finish tied for 17th. Our 370 score in among the 21 schools. Mainka (80), O'Mara (90) and Chris Boschen '99 (102) all had their best rounds of the year to that point in the second round and the performance gave us encouragement for even greater improvement in the spring.

In a late addition to the fall schedule, we concluded the fall season with a dual match at Maryland-Baltimore County on Oct. 27 and defeated the home team, 205-160, in a match in which modified Stableford scoring was used. Our final dual record was 3-1.

I appreciated the opportunity to be interviewed following our first competitive outing and if I'd had the opportunity at the end of the season I would have noted how pleased I was with the dedication of these student-athletes with the progress they made. We are no longer "inexperienced" and are looking forward to improvement and bigger and better things in the years to come.

Quintin Oliver brings hope of peace to Northern Ireland

By Jen LaBraccio

A year ago, if someone would have posed the question of the possibility for peace in Northern Ireland, it probably would have been as likely as passing a law for prohibition. Luckily, Quintin Oliver is not the kind of person who takes no for an answer.

Oliver, who addressed the campus last Tuesday as part of the University Lecture Series, is the head of the YES! Campaign, the organization responsible for aiding the strive for peace in Northern Ireland. Last spring, he and a small team of volunteers successfully encouraged Northern Ireland's residents to vote yes in support of a peace referendum. This was the first step in ending the bitter disputes between the Protestants and Catholics that have been raging within this tiny northern tip of Ireland for hundreds of years.

The goal of the YES! Campaign was twofold. Not only did Oliver and his team have to find a way to bring the residents of Northern Ireland with completely different ideologies together (60 percent who are Protestant Unionists favoring British rule and 40 percent Catholic Nationalists demanding independence), but they also had to decipher the peace referendum itself.

"We spent most of our time trying to bridge the gap between the ordinary voter and the politician," explained Oliver.

Unfortunately, the bridge over this gap was not exactly

the Golden Gate. Just ask Oliver, and watch as his face fills with lines and his voice takes on an edgy and sarcastic, almost humorous tone.

"Quintin, you're crazy," was the general response elicited by any person Oliver tried to persuade to support the YES! Campaign in its beginnings. Actually, they would not have been too far from the truth. Trying to get

the people of Northern Ireland to look past their 800-year feud was going to prove quite difficult indeed.

Oliver, however, knew how important the referendum was to the peace process. He needed to start somewhere, so he and his team chose a simple and effective way to reach the people of Northern Ireland: through images.

"People don't read news articles anymore. They look at images and watch television," says Oliver.

The prospect of an ad campaign seemed brilliant.

Then reality hit like a two-ton truck. Oliver and his volunteers had lots of great ideas for their campaign. What they did not have, however, was money.

With a smile on his face, Oliver recalled the phone conversation he had with a prominent London advertising firm when searching for someone to put an image to the campaign.

"We need an image that simplifies 25,000 words into something people will understand. And, we need it by Monday morning. And by the way, we have no money to pay you," he remembers, now able to laugh about it.

Luckily, the ad agency decided to lend their talents to a good cause. The rest, as they say, is history.

Appealing to the people with imagery, the campaign was launched in only a few weeks. Posters were printed and taped high upon lampposts. Videos were produced and distributed. Newspapers were filled with cartoonists' images, and a poet was even hired to spell out "YES" in rocks in a nearby river in Belfast.

"It was brilliant," remarked Oliver regarding the river advertisement. "The media absolutely loved it."

The final step in the peace referendum campaign came when Oliver and his team approached the Europa, a fa-

mous hotel in Northern Ireland, to support their cause. After much cajoling, Oliver persuaded the hotel to hang a three-story banner painted with the letters "YES" in bold red paint from the side of their building. It was then when Oliver knew the campaign was finally reaching the people of Northern Ireland.

"We knew that was the turning point," Oliver recalled. "For a week, the sun shone from morning 'til night in Ireland! It was an amazing and promising feeling."

Oliver was right; the success of the YES! Campaign was phenomenal. The peace referendum, the result of negotiations between the Unionists' leader David Trimble and the Nationalists' John Hume, was strongly supported by the 82 percent voter turnout, one of the largest in the history of Northern Ireland.

In a matter of a few short weeks, Oliver and his volunteers had managed to unite two sides of one of history's most infamous disputes in a vote for a common good, the first step towards peace in Northern Ireland.

There is a new spirit amongst the people of Northern Ireland today. The promise of peace in the air is almost palpable.

According to Oliver, it is evident everywhere. "You can see it in the way they talk, in the way they walk... even in the way they breathe," he said.

Finally, they have the spirit of hope.

Company!: No longer a band apart in theatre

By Joshua Smith and Ian McNaughton

The founding members of Company! in the fall of 1995, believe that college theater should be an enriching experience, as much about learning as actually doing. Since then, the past and present members of Company! have lived up to that ideal, working under the conviction that students can embrace the entire theatrical experience, from acting and direction to design and management. What developed as an ambitious goal some three years ago has led to 10 completely student-run productions, the most recent being Sam Shepard's *Red Cross*, which went up this October. In addition to producing plays by established playwrights such as Shepard and Christopher Durang, Company! has a history of producing student-written work. Three years ago, Company! produced the enticing play "Anecdotes About Expiration Dates" by Ken Urban '96, as well as the monologue "Who's Kamp?" by Elena Dodge '98 and the one-act "Gospels According to Miriam of Magdala" by Rich D'onne '96 two years ago.

As Company! faces a new semester and a new show, it must also accept new members. Auditions for Company! will be held on the evenings of November 15 at 9 p.m. and 16 at 10 p.m. Auditions are informal; members of Company! interview students about their interests in theater, ranging from technical theater and design to simply wanting the chance to act for the first time. Company! members stress that experience is not necessary to try-out.

The most important thing about theater, after all, is the commitment and effort it takes to see a script and realize it on stage. The rest is secondary.

Cooking with Doug

Shrimp and Sweet Potato Cakes

By Doug Didyoyung

Begin with heating about 1/2 inch of oil until hot but not smoking. Next, shell and devein the shrimp.

Combine the shrimp with the fish sauce, garlic, and black pepper in a bowl. Mix well and refrigerate for at least three hours. Cut the shrimp into fine pieces, leaving some of the bigger pieces to preserve the integrity of the shrimp. Pare down the sweet potato using a grater.

Next, make the batter. In a large mixing bowl, sift together the flour, sugar, salt, baking powder, turmeric and black pepper. Whisk until it has the consistency of thick cream. Add the smaller pieces of shrimp into the batter along with the thin slices of scallions and sweet potato.

Form the cakes on a large plate or saucer, using two heaping tablespoons of the mixture and putting the bigger pieces of shrimp in the middle for decoration. Place them in the oil and fry until bright red. Serve immediately with Nuoc Mam.

24 raw medium shrimp (about 1 pound).
1 TBS. Nuoc Mam (plain Vietnamese fish sauce).
2 large garlic cloves, minced
Freshly ground black pepper
2 cups cake flour
2 TBS. sugar
1 TBS. salt
1 TSP. baking powder
4 TSP. turmeric
1 large sweet potato
2 scallions, sliced thinly
Peanut oil for frying

"Dead Man on Campus"--Does this movie apply to our campus?

By Kristen Jancuk

We are all familiar with the unavoidable parental question of, "So, how's school going this semester?" And the typical response? "Yes Mom, school's going great. I'm having tons of fun. My grades? Oh, my grades are fabulous. Yes, A's and B's in every class..." Well, close. Mostly B's. Okay, one C. A couple of C's. The majority, Oh, and that low C in Bio.

It is November already, practically Thanksgiving vacation. It seems like the semester just started yesterday, but in less than a month, you will be taking finals. You have parried, you've skipped a few classes, you've bombed a few tests and by now, your grades aren't quite what you thought they'd be. In fact, C's are looking good. So what do you do? Study? It's a little late for that. Talk to your professors? Well, seeing as you haven't been to class often enough for them to know who you are, that's not a viable option. Whining to Mom and Dad will do no good. They certainly aren't going to be dishing out the sympathy, especially after that last phone bill. Suicide is looking better than dealing with your parents or your professors. Suicide? Now that's a little excessive, but...

Cue the "dead man's clause." Commonly viewed as a complete myth, it's the fabled loophole in your college contract. If your roommate kills him or herself, you get a

4.0. Though its origins are unclear, the clause has achieved urban legend status, circulating college campuses for years, while no one is really sure whether it's true or not.

freshmen at a prestigious university whose grades have taken a turn for the worst. Rather than look for a rational solution to their problem, the comedic duo resort to mischief.

Courtesy of Paramount Pictures

Dead Man on Campus, a movie that came out last August, dealt with the issue of roommate suicide. Is it true that the victim's roommate receives a 4.0?

Though "dead man's clause" has been mostly a college campus rumor, last August's film *Dead Man on Campus* brought it into the limelight. The movie, starring Thomas Scott Everett and Mark-Paul Gosselaar, tells the tale of two college

campuses today. Perhaps the find the most suicidal guy on campus, move in with him and wait for him to kill himself. Though the movie is a comedy, the issue at hand is not so humorous. Suicide is a serious issue on many college

"dead man's clause" began as a humorous way to cope with the death of a roommate. However, in a day and age where grades can garner desperation and despair from many students, reality must overcome myth. On our campus, the "dead man's clause" does not exist. In fact, many staff members and administrators have never even heard of it. Furthermore, it is not as well-known of an issue at this University as it is at most universities in the United States.

"Sounds like the realm of urban myth to me," commented Assistant Vice president of Academic Affairs. Though the University would offer some guidance and recompense to any student who experienced this sort of trauma, an automatic 4.0 would be irrelevant and inappropriate.

Students around campus offer their views as well. The popular sentiment was best expressed by Sara McPhillips '02 who said "Even though everyone would love a 4.0, I think that kind of policy would be a little far-fetched. And think, whenever you started stressing about grades, you'd start looking at your roommate a little funny and thinking, 'I wonder...'" Even though the dead man's clause does seem like an easy escape, unfortunately, it is not the solution we can turn to on campus. It seems as though studying, as much as we all don't want to admit it, is the only viable option.

ROTC offers numerous leadership opportunities

By Jen Cutler

As the semester winds down, and registration for next semester begins, students start to take a careful look at the classes offered. "Zacovic said, 'We start them out slow, so by senior year they are ready to enter the army education.'"

There is also a strong emphasis on using materials and instruments properly, as well as working well with others. The cadets learn maintenance and how to pay attention to detail. According to Russ Munson '01 who joined the program this year, team work is one of the most important things he is learning. "Teamwork is a big thing. We rely on one another and put trust in each other."

Sarah Endyke, '02, also stated her enthusiasm about the program. "You learn a lot of cool stuff that you will never learn anywhere else. It's a great way to learn survival skills and to experience leadership."

Leadership skills are very important to the program. But that is not all there is to the program. "To be a good leader, you have to be a good follower," Zacovic said. The purpose of the leadership labs is to have the opportunity to lead and to follow. The labs are used to apply the practical applications learned in the classroom to real life situations. Students run and execute the labs, the staff just supervises. "The staff is wonderful," Zacovic said. "They really want to help the cadets."

By the end of senior year the cadets will have many opportunities available to them. They can either join the army to be commissioned to be an officer, join the National Guard, or take a regular job and serve in the Reserves. The options are unlimited for this group of well trained, well disciplined students. Whatever they do, or wherever they go, they will have had the training that will last them a lifetime.

IV instructor of the ROTC program attributed the high scores to the training the cadets receive.

"Training occurs as a process of crawl-walk-run," Zacovic said. "We start them out slow, so by senior year they are ready to enter the army education."

There is also a strong emphasis on using materials and instruments properly, as well as working well with others. The cadets learn maintenance and how to pay attention to detail. An Abroad Perspective: Travelling with Bucknell en France

Courtesy of Lisa Forino

Seven University students pose outside of the Abbaye de Fronteaurand in France. Back Row (left to right): Levent Onar '99, Pearl Chao '99, Megan Whittman '99, and Sarah Dean '99; Front Row: Becky Welch '99, Lisa Forino '99, and Allison Gay '99.

By Liz McCarty

In just a few short months, students will start packing up their belongings and saying goodbye to their families and friends. No, these are not first-year stu-

dents coming to the University. These are juniors preparing to leave for the Université François Rabelais in Tours for the Bucknell en France program.

In 1987, Allan Grundstrom, professor of French and Bucknell en France director, and a few of his colleagues got together and

created this abroad experience. The program combines excellent courses and professors with a comfortable lifestyle and enriching overall experience.

One of the aspects that truly separates this program from other foreign studies is that all participants remain students at the

University, which means that all the classes that they take credits that apply toward their GPAs.

Also, the courses students take are taught by French professors at the Université François Rabelais who are selected and hired by the University. These professors teach extra classes to the Bucknell en France students and also to full time students of their own university.

Of course, there is more to a study abroad program than just courses and grades. One of the most compelling reasons for one to participate in foreign study is to experience a whole new culture and become immersed in a society that has totally unique customs and speaks a different language. The Bucknell en France program provides this and more to its adventurous participants.

To begin, the students stay with host families, many of whom have been with the program for several years. Many students are afraid that staying with families will be inhibiting and too much like living back with their parents; however, Grundstrom assures that the families are quite laid-back and the students have wonderful experiences with their hosts.

"This is the best part of the program because in your home environment is where you learn most of your French," Grundstrom

says. Interaction between students and host families plays a key role not only in the students' language ability but also in their overall experience in Tours.

The Bucknell en France program also provides "excursions" on a regular basis. These are trips to various monuments and attractions in and around Tours. This includes visits to the Chartres Cathedral, local businesses, and several of the major castles, or chateaux, in the area. Often, there will be a weekend stay in a different town, such as last year's trip to Normandy.

While the structure is basically the same, Bucknell en France has changed in the past 12 years. There are now three different categories for French study in Tours: the novice, the intermediate, and the advanced programs.

The program is not limited to French majors, and the recent development of the novice program makes Bucknell en France all the more accessible for those not as well versed, and even not fluent in French. This option is available in the fall, and its participants attend the Institut de Touraine in Tours.

Students take three French courses (focused mainly on language, grammar, and writing), and one course in English by the University professor-in-residence. Like the original pro-

gram, participants stay with a host family and participate in excursions.

The intermediate option is the basic Bucknell en France program. Students in this program take French courses offered by Université François Rabelais and range in subject from art to economics to management. For those who have a solid French-speaking background or have already done the intermediate study, there is the advanced option.

This includes enrollment in a specialized program outside of Tours, either in Paris or in different French-speaking countries. Students also may participate in internships in January, in which they work full-time in a business or government environment throughout the month.

While there are thousands of foreign study programs available to students today, Bucknell en France is one that certainly stands out. As Grundstrom says, "It is more successful than we had ever hoped. We consistently have good professors, wonderful families, and interesting excursions." With its meticulous structure and allowed flexibility, Bucknell en France is one of the most organized, well-rounded programs around.

Professor shows his passion for poetry

By Heather Napolitano

In his first semester at the University, Mark Svenvold, visiting assistant professor of English, is already taking his passion out of the classroom and into a larger forum. This weekend, Svenvold will present his poetry to the public in an open reading at Bucknell Hall.

Sponsored by the Stadler Center for Poetry, this reading will consist of a combination of both published and unpublished work. The former will come from his recent collection of poems, bound under the title *Soul Data*, and the latter from his current project entitled *Empire Burlesque*. Humorously, Svenvold says, "I'll try to stir up some trouble using poems from the first book and the first segment of *Empire Burlesque* ... then I'll let out the live animals."

In an attempt to describe the nature of his poetry, Svenvold quotes a 19th century French poet, Jules Laforgue, saying, "Clowns have achieved true wisdom. I should have been a clown. I missed my calling." This informs his poetry. "In a slightly more serious tone he continues to say that in his second book he uses historical figures, such as Lewis and Clark, as a means of expressing the personal. He concludes that "history is a roundabout way of talking about ourselves."

Svenvold notes that the foundation for his poetry began without his knowledge. He says, "I was writing poems before I knew what I was doing. I would have been mortified to call myself a poet; it was beyond my imagination. I was just writing things in a journal." His work progressed in such a manner until, at the age of 25, "someone else told me what I was doing ... I had no idea."

"I don't really mind reading, I kind of like it. I'd read to people at bus stops if they'd let me."

—Mark Svenvold
author of *Soul Data*

In reference to the more recent arrival of his presence in the world of poetry, Svenvold says, "comparing my story to my colleagues, I feel like I started rather late." Starting late, however, has suited him quite well as *Soul Data* has subsequently been the recipient of several honors. In 1996, this collection of poems was dubbed the winner of the Vassar Miller Prize in Poetry. The literary journal of Ohio State University has also noted his talents and will feature him in the Spring '99 issue, and will publish 12 of his poems alongside the article.

This will not be the poet's first appearance in such a journal. His poems have also been published in such journals as *AGNI*, *The Atlantic Monthly* and *The Vir-*

Mark Svenvold will give a poetry reading this Sunday.

gina Quarterly Review.

Much like those of other artists in his field, Svenvold's climb into this genre was a difficult one. He began his college career at a small state college, but transferred to the University of Washington after two years. His stay here was even shorter as he left after only one year. Returning to his hometown of Seattle, he began to frequent the Red Sky Poetry Theater. Here, on an open mike, he received his first exposure to performance poetry. "Those people have seen me grow in poetry," he says.

In the ensuing years, Svenvold decided to return to school and attended the University of Iowa Writers' Workshop where he received his MFA. He excelled in these years winning two consecutive Academy of American Poets prizes in addition to being given a Teaching-Writing Fellowship in his second year. Despite his reputable educational background, Svenvold says, "as an artist, I spent a lifetime learning how to make things that no one wants to buy. I've had to make my own way. I've had almost every job imaginable."

In his current work at the University, Svenvold is teaching three classes in the English department: Literature and Composition, Introduction to Creative Writing and British and American Modernist Poetry. He says that his goal is to "show students how the creative process can be applied to other areas of their lives—it's not just about learning how to write a poem or revise a story."

In the midst of this work, Svenvold's current focus seems to be the reading this weekend. "I don't really mind reading. I kind of like it," he says. "I'd read to people at bus stops if they'd let me." Fortunately, he will not have to search for any bus stops as the reading will take place at 8 p.m. this Sunday in Bucknell Hall. Everyone is welcome to attend. A reception will follow.

Empire Burlesque

By Mark Svenvold

**The president is pacing in his room—
order out, order in? Snowfall clobbers the capital.
There is no kingdom in our kingdom of the moon.**

**All things to all and everyone—
O, my fever dream, my translucent girl...
The president is pacing in his room.**

**Troubles mount and shift, of course, and soon
amid the drift we'll sound like keening spaniels—
"There's no kingdom in our kingdom of the moon."**

**Friends, Romans ... embrace the chain of command,
eternity ... whatever's left—a sky like mother-of-pearl,
a president pacing in his room.**

**The storm unleashed, the Pope on hold, an idea come—
"Quick, get a pencil!" ... "Sir?" ... He scribbles
all there is—no kingdom in our kingdom of the moon...**

**And the rest, that brilliant ferocious question
beneath a sky like hammered steel? No matter.
The president is pacing in his room.
There is no kingdom in our kingdom of the moon.**

—poem from *Soul Data*

Students direct cocktail theater

Alexander McCausland '02 and Hillary Depiano '02 star in "Home Free" directed by Renee Brody '01.

By Sarah Endyke

The cocktail theatre is a group of short plays that are directed by students at the University, so don't bother looking for any professors behind the scenes. These student directors had to enroll in a course in order to have the opportunity to direct their own play. Each director must learn to hold improv lessons, directing tactics and motivational techniques. For this reason, it seems like a difficult feat for one student alone to direct an entire play.

The cocktail play "Home Free" directed by Renee Brody '01 has a theme focusing on incest. The story centers around a brother and sister living together in a shabby apartment that they share with their two imaginary friends.

If the imaginary friend doesn't catch your attention, try this: The brother, Lawrence (played by Alex McCausland '02) has a slight mental problem. He's agoraphobic. In other words, he's scared to death of stepping outdoors. Still not twisted enough for you? Okay, try this: the sister, Joanna (played by

Hillary Depiano '02), is six months pregnant with Lawrence's baby. McCausland can best quote the play as "dark and twisted, with an unexpected ending that jumps at you." As the theatre saying goes, "It starts out as the monkey and finishes as the fox." There are a lot of twists and turns to baffle the mind, so follow closely.

Can women be two-faced? Do women seem to have all of the problems? "Laundry and Bourbon" is a play that all women can watch and sympathize with and that men can learn from.

The story starts out simply enough in a little backwoods town in Texas called Maynard. Two women, Hattie (played by Donna Brennan '02) and Elizabeth (played by Jen Buoncontre '00), are chatting together about their daily lives. Hattie tells Elizabeth of her children who are off shopping, breaking merchandise, throwing bricks at each other with the usual, "kids will be kids" attitude.

Meanwhile, Elizabeth worries about her husband, who has been missing for several days. Through their conversations, the audience

learns about their broken dreams, troubles and sorrows. It seems that problems couldn't get any worse. Enter Amy Lee (played by Molly Martin '02), who takes it upon herself to contradict this statement and add trouble to the situation.

"This play is a play that every woman should watch. We all go through the same situations. We share the same pain, we need the same companionship, and we all treat each other the same way," says Martin. Take for example Hattie, who despises Amy Lee. She speaks negatively of her when she is not around, but when they meet face to face, she tries to be cordial.

Was this an easy play to prepare for? Brennan says no. "It was a lot of hard work. Being my first show, I had to learn along the way. We had to learn Texan accents, and learn a lot of improv work because the play contains many flourishes of activities. But it was a lot of fun. I learned a lot, the director, Amy Gilday '00 is awesome, and my fellow actresses are great to work with. It's going to be one hell of a show."

Aquila Theatre Company performs and leads classes

The Aquila Theatre Company of London will perform (above) *The Odyssey* by Homer tonight and (right) *The Comedy of Errors* by Shakespeare on Friday in the Weis Center. The group preceded their performances with two open discussions on storytelling and drama.

By Heather Napolitano

In keeping with its commitment to bringing a variety of culture and entertainment to the community, the Weis Center for the Performing Arts will present the Aquila Theatre Company of London. While on campus, the company will perform two epic productions: Shakespeare's "The Comedy of Errors" and Homer's "The Odyssey." Leading up to these performances have been a series of discussions and lectures that the troupe has held in the past two days.

The production comes to the University as a part of the Weis Center Series 4: Preludes! which the director of cultural events Bill Boswell said is "new this year. It includes this performance and several talks and demonstrations by other performers featured in Weis Center events." According to Boswell, "the idea is to give our audience opportunities to interact

with the artists in ways other than just a single performance." With this goal in mind, the Company has been meeting with several classes while it is on campus as part of a residency that is being sponsored by the classics department.

The two day span over which the Company has been holding classes and discussions began yesterday morning with "The Oral Tradition: The Art of Storytelling." This talk focused on an examination of the ancient tradition of storytelling focusing on Homer and referencing the oral tradition in other cultures, including work on narrative, storytelling techniques, delivery, poetry, language and physical realization. Another discussion entitled "The Mask: Comedy and Tragedy" was held this morning in Coleman. The topic involved the use of the mask in drama with demonstrations and experimentation in some techniques associated with masked acting including move-

ment, portrayal of emotions, delivery of text and the use of masks in tragic or comic context.

This evening will be the Company's debut on the University's mainstage as it presents "The Odyssey." It will be followed by "The Comedy of Errors" tomorrow night. Boswell says, "this is a great chance to see one of Shakespeare's best comedies done in a fun and accessible way by a real British company."

The London-based troupe was formed less than a decade ago, in 1990, by its current producer Peter Meineck, and yet it has already firmly established itself in the world of theatre. It has toured in London, New York and Amsterdam, as well as throughout Europe, the United States and Canada. Regular appearances can be seen at the Shaw and Place theatres in London and Off-Broadway in New York.

In its travels, the Company has held workshops at numerous universities, colleges, museums and schools in the UK, US and Canada. This 25-week season will bring residencies for the Company at 42 North American theatres and universities.

The troupe has already received both high honors and extensive praise for its work. Known internationally as one of the foremost producers of touring classic theatre in the English-speaking world, the Compa-

ny has received a prize for dramatic excellence from the Greek government as well as two prestigious British Council Touring awards. In addition, the Hackett Press will soon be publishing the Company's original translations of Greek plays. Critics have also been quick to praise the troupe in a variety of journals such as the *Austin Chronicle* which wrote that "Given this troupe's reputation for inventive staging and fine acting, you may never see these plays done with more urgency and style."

Much of its success can be attributed to its highly trained members. The multi-talented group has been trained at Britain's foremost drama academies and have had experience in all facets of the contemporary British Theatre which has included The Royal Shakespeare Company, the Royal National Theatre, numerous world class British repertory companies and London's West End and Fringe.

The Company will perform "The Odyssey" at 7 p.m. this evening in the Weis Center. Admission is free of charge. "The Comedy of Errors" will be performed at 8 p.m. tomorrow evening in the Weis Center. Admission is \$5 for those with an University ID and \$15 for the general public.

Movie Reviews

The Spanish Prisoner & Deceiver

By Aaron Spak

The Spanish Prisoner

Nothing makes a movie better than unpredictability. Who wants to be able to see the ending while the opening credits are rolling? The problem is, too many movies do just that. Seek and ye shall find, however, for unpredictability you often have to look off the beaten path.

Everyone is used to seeing Steve Martin in his usual comedic roles (*Parent Hood*, *My Blue Heaven*, *Dirty Rotten Scoundrels*), and until now I haven't seen him in any other character. *The Spanish Prisoner* finds him as a very talented dramatic actor as he portrays Jimmy Bell, a complicated con man who is masterminding a convoluted scheme of industrial espionage. David Mamet penned the script, and Martin stars alongside Campbell Scott as Joe Ross and Rebecca Pidgeon as Susan.

Ross is a research scientist for a large company who has developed "the process" (that's all it is ever referred to as) which will be extremely profitable for his employers. He is presenting his research to potential investors in the Caribbean when he encounters Bell, who befriends him. However, is Bell all that he appears to be? It sounds like just another clichéd movie premise, but the story is constructed elegantly enough to make it worthwhile.

When Ross arrives back in New York, he finds himself locked into an elaborate mystery that leaves his research and his life in danger. Mamet has created a very interesting and satisfying complex tale that is sure to leave all viewers on the edge of their seats, even those who take delight in guessing the outcome before everyone else (don't you just hate that?). Each actor turns in a quality performance, and what makes this story so interesting is that there is nothing about it that jumps out at you as totally unbelievable. It's not an "in your face" type of suspense; it's much more subtle.

Other suspenseful movies, like *Ransom*, are great to watch, but are obviously far fetched. *The Spanish Prisoner*'s strength lies not in stunning visual effects and heroic stunts, but it's ability to play on the perceptions of the audience.

Deceiver

Okay, so this put me in the mood for suspense, intrigue and convoluted story lines. I went back to the trusty video store to search out another good find. Now, I've been impressed with Tim Roth ever since *Pulp Fiction* (you know, he's one of the two who rob the diner), so I decided on *Deceiver*. Braxton (Chris Penn) and Kennshaw (Michael Rooker) are two detectives who have Roth in custody for the grisly murder of Elizabeth Loftus (Renee Zellweger), a high class call girl.

Roth plays James Wayland, a Princeton educated psychologist who suffers from temporal lobe epilepsy which interferes with his ability to successfully pass a polygraph. But that shouldn't matter since he insists that he has been framed. Maybe I should mention that he's also a compulsive liar. This is another sophisticated, smart script. It will not let you think ahead since once you think you've gotten it, the plot takes another twist.

This film's strength is the dialogue and the manner in which the three main players relate to each other. Wayland, Braxton and Kennshaw are constantly engaged in a psychologically intense game of cat and mouse. Braxton and Kennshaw are driven to getting a confession while Wayland acts on a whole different level. The polygraph isn't admissible in court anyway, and Wayland is simply playing a dangerous game.

Deceiver relies heavily on flashbacks to educate the viewer as to what's going on. But the camera work and the transitions struck me as especially effective tools that greatly enhanced the story. The director experiments with various camera angles and sweeps that set the mood and increase intensity throughout the film. Roth, Penn and Rooker all come together to create one of the best mentally intense direct-to-video thrillers that I've seen in a while.

A & E Calendar

Thursday, November 12

*Weis Center Series 4:
Aquila Theatre in "The Odyssey"
Weis Center, 7 p.m.

Friday, November 13

*Hilltop Film: "The Crime of Monsier Lange"
Vaughan Lit Auditorium, 4:30 and 8 p.m.

COLGATE
UNIVERSITY
MASTER OF ARTS IN TEACHING

We invite you to explore a career in
TEACHING

Colgate University offers the Master of Arts in Teaching degree to liberal arts graduates interested in teaching high school science, mathematics, English, and social studies. Our highly personalized program includes close interaction with our faculty. Generous financial aid is available for qualified students.

For application materials, or to learn more about our unique M.A.T. program, please contact us. By mail: Colgate University, Department of Education, Joan Thompson, 13 Oak Drive, Hamilton, New York 12041-1398. By phone: (315) 228-7256. By e-mail: jthompson@mail.colgate.edu.

Explore the possibilities that await you.

Brett spreads passion for the natural world

Christine Lellis—The Bucknellian

Emmanuel Miti (Left), James Brett and Nickson Nyange are involved in teaching their methods of conservation across the world.

By Adam Parris

James J. Brett not only loves the world around him, but he loves the world around him so much that he has spent a long and arduous career providing opportunities for people around the world to learn about conservation.

"I'm really interested in global conservation and how to improve the lot of individuals and their habitats around the world. I got interested in this global issue because I was born with it," Brett said.

Brett's determination is fueled by his love for the natural world and his occupation of educating people about conservation. Even after 30 years of being an educator in the most desolate places, Brett offers his opinions with the free will and spirit of a man on the brink of life.

"If you can't have any fun in what you're doing, you might as well just pack it in," Brett said.

Brett is the founder of Naturecorp and the James J. Brett Global Conservation Fund. On Monday, he came to speak to students about the experience with himself, the natural world, and even the universe. Weiming compared this need with the ideas of his tradition, Confucianism, at the Culminating Conferences of the "World Religions and Ecology" conference series.

"They [religions] are not only satisfied with our living as ordinary human beings simply as economic beings, political beings and social beings. They want us to be more, and in fact, we want to be more," Weiming said.

Weiming has studied Confucianism and other religions at Harvard for at least the last decade. With his roots in Asia, Weiming has developed a profound understanding of a religious way of life, through Confucianism, that he says requires no initiation.

"It is a form of life. It is a way of learning to be human," Weiming said.

However, Weiming describes humans in a different light than they are today.

"To be human, in this case, assumes a responsibility which is not just social, it is even cosmological in the sense that what human beings eventually will be able to do will have powerful consequences for the ecosystem or cosmos as a whole," Weiming said.

Weiming believes that two powerful forces have emerged in the 20th century: a global consciousness and an emergence of a search for roots or ethnicity. The search for these two forces seems justifiable enough, but Weiming expresses concern for the way in which people go about achieving these contradictory "processes."

At the conferences in New York, Weiming addressed questions about the role of religion in ecology. Weiming's answers reflected his beliefs about these advancements which humans are attempting.

In response to a question about how the Confucian tradition could aid human earth relations, Weiming spoke about human attitudes toward the historical enlightenment mentality.

He said that this mentality created values such as liberty, equality, nationality, human rights and due process of law.

"But at the same time, the enlightenment mentality is also anthropocentric. From the perspective of the Confucian tradition, we need to go beyond anthropocentrism. We need to develop the kind of anthropo-

tion and ecology. Brett exposed his interns to every task associated with running a conservation center, from cleaning toilets to managing accounts. Through these and other tasks, Brett brought people from opposing countries together to eliminate the cross cultural boundaries and establish a common ground: the ecosystem.

"In the late 1980s, I brought together the first Palestinian and the first Jew to work under the same roof. They now run one of the most impressive environmental education programs in the Middle East," Brett said.

Brett exposed his interns, from all over the world, to the beauty of Hawk Mountain. He began especially to take notice of Africa, crossing more cultural, and now gender, boundaries.

"The first Tanzanian to come on board was this young woman from Roggi Tanzania near Kilimanjaro whose name was Jane Ungando. I believe I'm correct in stating that she was the first woman to graduate from WECCA and one of the first woman wardens in the National Parks in Africa," Brett said.

Brett turned his interest to other countries like northern Greece. While there, Brett provided efforts to save the sparrow hawk from merciless killing by the thousands. Brett said that some of the people there were killing these hawks to sell them for what would have amounted to \$1.50.

However, Brett could not escape his passion for Africa, returning continuously to aid conservation efforts there.

"Africa is my soul. I love it there," Brett said.

Brett told the story of William, an intern he met in South Africa. William was a member of the Gazulu tribe, and his mother was a witch doctor in their tribe. As an ordinary practice, William's mother would cut off the head of a certain species of vulture in South Africa which was endangered. She would place the head of the vulture under her pillow to gain the vision of the vulture in her sleep. Brett wanted to educate William in order to keep his mother from eliminating the vulture to the point of extinction.

"It was felt by the Endangered Wildlife Trust of South Africa that if a member of the Gazulu people came to the States to study birds of prey that when he got back home he might have some influence on his mother so that she wouldn't be killing these things and using them as medicine," Brett said.

Brett continued to work in Africa and he continued to expand his efforts to other countries, like Italy. He mentioned an intern that he worked with in Sicily, named Anna Giordanno.

"She stopped, single handedly, the poaching of about hundreds of thousands of birds of prey in Sicily," Brett said.

Brett described the opposition Giordanno faced in Italy. He described Mafia signs that were written on the wall, threatening people like himself and Giordanno.

"If you're going to fool around and be passionate about these birds, you're also going to be passionate about your own death," the signs said.

Soon after Giordanno began her efforts in Italy, Brett said her car was firebombed. Fortunately, she lived to be a heroine of conservation in Italy, and Brett continued to be a hero, all over the world.

After extending his efforts into the global community, Brett left the program at Hawk Mountain in 1996 to branch out on his own. Since his departure, he established Naturecorp, which is a corporate title for the same style of program at Hawk Mountain, but on a global scale. Brett currently works with the famous anthropologist Jane Goodall, who is well known for her work with chimpanzees in Africa. Brett brought his most recent interns with him, both of whom are from Africa.

Nickson Nyange is warden-in-charge of tourism for Ngorongoro Area Conservation District which has jurisdiction over Ngorongoro Crater, a Biosphere Reserve and World Heritage Site. Emmanuel Miti is senior staff officer at Gombe Stream National Park where he works for Goodall, and he is the first person from Goodall's staff to train in the United States.

Brett has spent five months with these men in America, primarily in Pennsylvania. Brett has trained them in conservation so that they can influence their respective parts

of Africa to be more environmentally sound.

All over the world, Brett influences and teaches people in the most remote and the most inhabited areas about conservation, but he began right here in Pennsylvania. His passion for the natural world opens more doors for him than any amount of money, as he gladly admitted to students at the University.

The role of motion in perception was presented by Gettysburg College's Dr. Martha Arterberry whose data, compiled over 20 years of work, entailed the perception of eight, 10, and 12-month-old infants.

When we observe, perceive, watch and glance, the pieces of the beheld object are not experienced separately; instead, we perceive the complete entity. This entity is viewed and interpreted on the basis of object quality and features, an ability developed late in the first year of life. Visual perception is always a matter of inference in that we infer characteristics and positions of objects from cues, such as motion.

Carl Djerassi, professor of chemistry at Stanford University, is credited with synthesizing the first oral contraceptive.

Estrogen vs. testosterone

By Anita Malhotra

A distinguished chemist visited the University this past weekend.

Carl Djerassi, professor of chemistry from Stanford University, gave a lecture entitled "Women in Science: Can Estrogen Compete With Testosterone?" Dr. Djerassi is credited with synthesizing the first oral contraceptive, for which he has received numerous awards. He has also received a total of 17 honorary degrees. The lecture was sponsored by the University's Phi Beta Kappa chapter and the Art Department.

His lecture focused on the role of women in science. He is a feminist and believes that all men should be because, otherwise, women will not achieve equality. In his lecture, he discussed four of his novels. The first novel, *Canors Dilemma*, has become a textbook in many American universities.

Djerassi describes his books as science-fiction; that is, the science and behavior of the scientists in his books is all true and entirely plausible. Djerassi said his novels are also didactic, or intended to teach, as was his lecture.

The recurring theme in his novels is women in science, especially the idea of women trying to break into male-dominated fields.

Then, "what happens to the women who make it in these fields? Do they turn into men?"

There is no answer because not enough women have made it yet. He also wonders about the place of motherhood in scientific careers, as these are fields which make it very difficult to maintain a family, especially in the beginning.

Djerassi ended his lecture by saying that women will gain equality slowly, the process can only be accelerated if men join in the struggle.

SCIENCE & TECHNOLOGY

Engineers must adapt to new demands

By Adam Parris

In the first of a series of science and technology colloquiums, Thomas Hughes addressed students and faculty of engineering with the task of adapting themselves to the new demands which are being asked of engineers.

"Organizing complexity will be one of your most troublesome headaches," Hughes said.

Hughes, author of *Rescuing Prometheus* and a professor of engineering at MIT, gave the audience on Wednesday, Nov. 4 a historical perspective of the tasks that engineers have faced over the latter portion of the 20th century. According to Hughes, this history has encountered difficult times.

"It is a story that involves success, then failure, then success again," Hughes said.

Beginning in the 1950s, Hughes pointed out certain important examples of engineering. The first was the task of building an Inter-Continental Ballistic Missile (ICBM). This task was brought about during the Cold War and accelerated when news of progress in the Soviet Union reached the United States government.

"Rumor had it that the Soviet Union was developing an intercontinental ballistic missile more rapidly than the United States," Hughes said.

Hughes said that the United States committed to building a missile in 1953 with funds from the Air Force, and a Military University Complex was established. However,

Adam Parris—The Bucknellian

Thomas Hughes, professor of engineering at MIT, spoke about the tasks that engineers have faced over the latter part of the 20th century.

according to Hughes, the military had little to do with the management of the project.

"The problem that the military faced along with management allies was one of organization," Hughes said.

It was argued by an academic committee that the airplane industry was incapable of organizing the project because they were notorious for treating the engineers like slaves, forbidding their use of toilets and phones in some cases. Consequently, 12 major contracts, consisting of

engineering firms and managerial firms, were drawn up to tackle the situation.

Hughes said that putting these companies on the same level, or the same contract, was a success. The nature of this project was such that one task depended on another, and eventually 10,000 or more tasks were created. Therefore, the separate contracts kept things organized.

According to Hughes, this success continued for a while into the 1980s, as Vice President Hubert Humphrey called for the same tech-

were primarily interested in considering two aspects, the technical and the economical," said Hughes.

However, later in the 1970s, Hughes said the engineers began to consider environmental regulations, public participation, and even ethnic background.

Entering into the late 1980s, Hughes provided the perfect example of the new highway being built in Boston, a \$12 billion project. The idea of the highway was to take the "Green Snake," Boston's current highway, and put it underground.

Hughes said that this acreage was of primary interest to cultural and environmental interest groups, all of whom were involved. The primary person who dealt with these concerns was Fred Salvucci, who was the head civil engineer hired for the project.

Hughes said that Salvucci handled the task with a combination of engineering knowledge and political savvy. Salvucci administered the help of the governor at that time, Michael Dukakis. With the help of

logical aspects, which put man on the moon, to clean up the cities.

However, Hughes said that the contracts that were made with engineering companies to clean up the cities in the 60s were not renewed. Hughes said that this failure was partly due to the association of the engineering management with the failure of the Vietnam War.

Hughes said that engineers underwent a time of harsh moral judgments and critical outlook. In the late 1960s and early 1970s, university riots on engineering buildings took place in the United States. Hughes said that the engineers developed a change in their previous attitude.

"The engineers were primarily interested in considering two aspects, the technical and the economical," said Hughes.

Swimmer Alex "Swonse" Johnson '99 took first place in the 100-yard freestyle and anchored the 400-free relay that sealed Bucknell's win over Drexel.

Bison fine tune game at Yale

By Kevin Abt

With less than two weeks remaining before Bucknell begins its quest for the 1998 Patriot League title, the Bison looked to iron out any wrinkles in their attack at the Yale Women's Volleyball Classic.

"This tournament allowed us to experiment with different lineups," coach Cindy Opalski said. "I wanted to see which players off the bench can be depended upon come tournament time." Bucknell battled Columbia, the University of Pennsylvania and Yale during the two-day tournament. The Bison easily cruised past Columbia and Pennsylvania before hitting a bump in the road against the Yale Bulldogs.

"Yale was a good test for us," Opalski said. "Instead of getting caught up in how many points we scored, the team used this match to work on different facets of their game."

The Bison approached the Yale Classic with a different mindset than usual this past weekend. "The team has now moved into a post-season state of mind where strategic planning and execution will be key for success," Opalski said.

Bucknell first took on Columbia on Friday. The Bison disposed of the Lions with ease 15-3, 15-11, and 15-12. Co-captains Emily Pomeroy '99 and Tristen Vogel '99 paced Bucknell with 16 and 10 kills, respectively. Pomeroy showed her versatility as she recorded five aces and 10 digs for the Bison. Molly Brown '01 and Whitney Williams '02 helped out the captains' attack, combining for 41 assists.

Bucknell then faced off against the University of Pennsylvania. The Orange and Blue stormed to a quick 2-0 lead by winning the first two games, 15-11 and 15-13. The Bison dropped the third game 15-9, but proceeded to finish off the Quakers in the fourth game, 15-12, giving them their sixth consecutive win.

Brown paced again in the fourth game, backed the BU attack with 41 assists. Vogel tallied a team-high 25 kills while Pomeroy contributed 18. Shannon Walker '02 was influential for the Bison off the bench as she recorded 10 kills and only one error.

Bucknell's final match of the tournament was one to forget. Yale provided its fans with something to cheer about as they swept the Patriot League's regular-season champs, 15-2, 15-6 and 15-6.

The Bison struggled offensively, chalking up

only one service ace with no one player recording more than eight kills.

"The match against Yale gave us the opportunity to play a team that attacks quickly," Opalski said.

Overall, the weekend proved to be a positive one as Bucknell emerged with two wins and only one loss, improving its overall record to 14-10.

The Yale Classic and the final game against William and Mary will serve as preparation for the Patriot League Tournament.

"I came into this tournament wanting to work on the finer points in our game such as our block and defense," Opalski said.

This weekend the Bison will travel to the University of Delaware to take on William and Mary. "William and Mary plays a quicker game than most opponents we have faced this season," Opalski said. "Look for us to concentrate on our serving and passing game."

The men's and women's swim teams downed Drexel last week and will host Army on Sat.

Swimmers pick up third win

By Brian Watson

In his four years of competition, co-captain Alex Johnson '99 learned not to underestimate Drexel. Although the Bison were annually favored to beat the Dragons, the meets always seemed to come down to the wire.

This year was no exception.

As it has for the last few years, the meet came down to the final relay, and Johnson was ready. He and co-captain Doug Hill '00 teamed up with John Ferriter '01 and Chris Neary '02 to take the 400-yard freestyle relay and propel the men's swimming and diving team to a 126.5-116.5 victory over Drexel.

"I expected both teams to come down to the last relay, but the women swam well early and ran away with it," head coach Jerry Foley said. "I was confident that our men would pull it out."

"It's a great meet for us because both teams always manage to come out hard," Johnson said. "They are excellent swimmers, but we managed to pull it together in the end."

Other key victories for the Bison included Bill Orendorf '01 in the 1,000-yard free

(10:16.37), Tyler Codi '02 in the 200-yard butterfly (2:03.98), Johnson in the 100-yard free (48.34) and Tyler Wynn in the 200-yard backstroke (1:57.59). Ben Lim '01 tied for first in the 200-yard breaststroke, clocking in at 2:14.36.

The women cruised to victory, defeating Drexel 145-98 for their third consecutive win. Molly Lowe '01 took home first place in both the 200-yard individual medley (2:14.34) and the 200-yard breaststroke (2:32.37). Abby Weaver '02 also captured two firsts, winning the 100- (54.77) and 200-yard free (1:57.60). Megan Jones '01 finished first in the 1,000-yard free (10:56.97) while Ellie Baker '01 took the 50-yard free (25.16).

Both teams once again relied on their depth to lead them to the win. "Everyone was flexible and willing to swim extra events to help us pull it out," Johnson said.

The Orange and Blue will host league powerhouse Army, Foley's former team, on Saturday afternoon. "Drexel was a good meet for us to prepare for Army," Foley said. "We rise to the competition, so we'll see what we can do this weekend."

Bison wrestling looks to improve

By Tim Scheu

A year ago, rookie-wrestling coach John Hangey had a clear objective: create a foundation for a new era of Bucknell wrestling. Mission accomplished. Looking just to compete in the bulk of the matches in which they wrestled, Hangey motivated his team to the point where they actually won the many those key meets. The result of his work was a rather respectable 8-9 season for the Bison, in which Solomon Webb '98 participated in the NCAA Tournament, and Brian Pitzer '00 was ranked as high as eighth in the nation.

"Last year was a good learning experience," Hangey said. "We accomplished everything that we wanted too."

This season Hangey and the Bison wrestlers look to not only match their successes '97, but to surpass them. The '98 squad returns eight of last year's starters, and is complemented by an impressive recruiting class. The 31 members of this year's team are quick to acknowledge that they are wrestling in one of the hardest conferences in all of collegiate wrestling, but are not worried. They responded to this knowledge by working even harder than they did a year ago.

"We had a great showing at West Point," Pitzer said. "We have the talent to challenge any team in this league, but we just have to take it one match at a time."

Hangey is impressed with their dedication. "They did a great job over the summer staying fit, and their work ethic is ten times better than it was a year ago," he said. "Everybody is pushing each other, and we have the ability to challenge any team in our conference. I expect us to finish in the top three."

As in any other year, there are still 10 weight classes, but there have been some key changes in their structure. In response to the bad publicity wrestling has been getting, the NCAA decided to add seven pounds to each weight class. This is most likely an attempt to curb the wrestling related cases of malnutrition and various eating disorders.

With the help of John Hangey, here is a run down of what to expect at each weight class, and who will lead the Bison to glory:

125 pounds: Todd Boerner '99 has made strong con-

See WRESTLING page T8

Ohio St. Gives '1' Away: Well, most of us have spent the last eight weeks waiting to see whether UCLA, Tennessee or Kansas St. would earn the right to face Ohio St. in the Fiesta Bowl this January. Having already disposed of Penn St. in early October, the only obstacle the mighty Buckeyes had left was Michigan in their final regular-season game, right? No. Last week the Michigan St. Spartans rolled into Columbus hoping not to get spanked too badly. Fortunately for them, the real Ohio St. squad decided not to play the second half. Trailing 24-9 in the third quarter, the Spartans rolled off 19 unanswered points to grab a 28-24 lead midway through the fourth quarter. Ohio St. put together an impressive drive in the final minutes, but Michigan St.'s Renaldo Hill picked off Buckeye quarterback Joe Germaine at the goal line to secure the upset.

Said Spartan coach Nick Saban, "We came in here with the attitude we were the squirts in the neighborhood who had to pick a fight with the bully." Quarterback Bill Burke added, "It was the kind of thing you'll never forget. It was a game you like to play in, that you dream about as a kid."

The loss dropped Ohio St. (8-1) all the way to number seven in the rankings and all but assured that they will not be participating in this year's national championship game. The Tennessee Volunteers (8-0) took over the top spot in the BCS rankings, followed by UCLA (8-0) then Kansas St. (9-0).

Throw me the ball, Grandpa! This season has been particularly rough on NFL quarterbacks. It seems like every Sunday another bunch of big-name passers are getting injured. Just this past weekend, Randall Cunningham, Steve Young and John Elway topped the list of quarterbacks to go down. Why do you suppose this is? Maybe it's because half of the starters in the league are old enough to collect Social Security. Look at who is out there: Warren Moon, Elway, Young, Vinny Testaverde, Doug Flutie, Dan Marino, Cunningham, Neil O'Donnell, Jim Harbaugh and Steve Beuerlein to name a few. All of them have been professionals for at least 10 years now, some of them significantly longer than that. Not that these guys aren't still great assets for any team. Most of them are still rated as some of the best quarterbacks in football. However, the fact is that they are getting old and their overall physical capabilities are starting to decline. They just aren't as mobile in the pocket anymore, which means they're easier for bloodthirsty linebackers to pummel. Now it's put this together: Old guy plus repeated beatings equals injury! The NFL needs an increase in young, talented quarterbacks. Sure, there are a few out there. Brett Favre, Drew Bledsoe, Mark Brunell and Kordell Stewart are tops in the league. But that's about it. Peyton Manning sure hasn't impressed anyone lately. Neither has Kerry Collins, Danny Kanell, Rick Mirer, Glenn Foley or Ryan Leaf. For whatever the reasons, the NFL draft has been giving us top quality prospects every year, most of whom end up being back-ups if they're lucky. Guys like Dan Marino aren't going to be around too much longer. And when he's gone, who's going to take over? Craig Erickson? Looks to me like a certain team from Miami, as well as a bunch of others, could be in a whole lot of trouble pretty soon.

I Think I Cam: Talk about not knowing when to call it quits. Cam Neely is actually trying to make a comeback with the Boston Bruins. Neely was playing for Boston back in the 1991 conference finals when he was smacked by Pittsburgh Penguins' defenseman Ulf Samuelsson. He developed a condition known as myositis ossificans in which a portion of his thigh muscle turned to bone. Neely was forced to miss all but 22 games of the next two seasons. The 1993-94 season was simply spectacular for Cam as he recorded 50 goals in just 49 games, but his chronic thigh problems forced him to retire in '96.

Now he wants to play for the Bruins again. Well here's a news flash for ya, Cammie: They don't need you or even want you back! Boston has the best record in the Eastern Conference right now and their offense has scored the third most goals in the conference. They have built up their organization recently with young, fresh talent and the last thing they need right now is to have someone in his late thirties step in and screw everything up. Face it, Neely, NHL players today are too big, too fast, and too talented for you to handle in your condition. You're not going to be able to play every day, and eventually you're gonna get hurt real bad again. Furthermore, you're going to be taking valuable ice time away from guys who have earned it this year. You want to help this team to stay at the top? Be a coach, or a manager, or a motivational speaker, or just sit and heckle the guys in the penalty box. Do whatever, just don't try to be a star again because it won't happen.

The Usual Suspects? The ESPN/USA Today pre-season college basketball poll was released this week. NCAA hoops has a new look this year with many annual powerhouses dropping in the polls and others making revivals. Several top programs, namely North Carolina, Kansas and Arizona will suffer this season after losing several key players to the NBA Draft. Squads like Michigan State, Tennessee, Temple and Washington have rebounded from a tough string of seasons to re-enter the national spotlight.

Duke topped the poll, followed by Stanford, Connecticut, Michigan State and Maryland. Defending national champion Kentucky came in sixth, Temple, Kansas, Tennessee and Xavier round out the top 10.

Compiled by Matt Fraser

Quote of the Week:

"Let's get something straight. I want all the odds against me. Then I'm going to fill Jordan's shoes"

Allen Iverson in his less than eloquent piece in this week's ESPN Magazine

Swimmer Alex "Swonse" Johnson '99 took first place in the 100-yard freestyle and anchored the 400-free relay that sealed Bucknell's win over Drexel.

Bison fine tune game at Yale

By Kevin Abt

With less than two weeks remaining before Bucknell begins its quest for the 1998 Patriot League title, the Bison looked to iron out any wrinkles in their attack at the Yale Women's Volleyball Classic.

"This tournament allowed us to experiment with different lineups," coach Cindy Opalski said. "I wanted to see which players off the bench can be depended upon come tournament time." Bucknell battled Columbia, the University of Pennsylvania and Yale during the two-day tournament. The Bison easily cruised past Columbia and Pennsylvania before hitting a bump in the road against the Yale Bulldogs.

"Yale was a good test for us," Opalski said. "Instead of getting caught up in how many points we scored, the team used this match to work on different facets of their game."

The Bison approached the Yale Classic with a different mindset than usual this past weekend. "The team has now moved into a post-season state of mind where strategic planning and execution will be key for success," Opalski said.

Bucknell first took on Columbia on Friday. The Bison disposed of the Lions with ease 15-3, 15-11, and 15-12. Co-captains Emily Pomeroy '99 and Tristen Vogt '99 paced Bucknell with 16 and 10 kills, respectively. Pomeroy showed her versatility as she recorded five aces and 10 digs for the Bison. Molly Brown '01 and Whitney Williams '02 helped out the captains' attack, combining for 41 assists.

Bucknell then faced off against the University of Pennsylvania. The Orange and Blue stormed out to a quick 2-0 lead by winning the first two games, 15-11 and 15-13. The Bison dropped the third game 15-9, but proceeded to finish off the Quakers in the fourth game, 15-12, giving them their sixth consecutive win.

Brown once again successfully quarterbacked the BU attack with 41 assists. Vogt tallied a team-high 25 kills while Pomeroy contributed 18. Shannon Walker '02 was influential for the Bison off the bench as she recorded 10 kills and only one error.

Bucknell's final match of the tournament was one to forget. Yale provided its fans with something to cheer about as they swept the Patriot League's regular-season champs, 15-2, 15-6 and 15-6.

The Bison struggled offensively, chalking up

Bucknellian File Photo

only one service ace with no one player recording more than eight kills.

"The match against Yale gave us the opportunity to play a team that attacks quickly," Opalski said.

Overall, the weekend proved to be a positive one as Bucknell emerged with two wins and only one loss, improving its overall record to 14-10. The Yale Classic and the final game against William and Mary will serve as preparation for serving and passing game."

Bison wrestling looks to improve

By Tim Scheu

A year ago, rookie-wrestling coach John Hangey had a clear objective: create a foundation for a new era of Bucknell wrestling. Mission accomplished. Looking just to compete in the bulk of the matches in which they wrestled, Hangey motivated his team to the point where they actually won the many those key meets. The result of this year was a rather respectable 8-9 season for the Bison, in which Solomon Webb '98 participated in the NCAA Tournament, and Brian Pitzer '00 was ranked as high as eighth in the nation.

"Last year was a good learning experience," Hangey said. "We accomplished everything that we wanted too." This season Hangey and the Bison wrestlers look to not only match their successes '97, but to surpass them. The '98 squad returns eight of last year's starters, and is complimented by an impressive recruiting class. The 31 members of this year's team are quick to acknowledge that they are wrestling in one of the hardest conferences in all of collegiate wrestling, but are not worried. They responded to this knowledge by working even harder than they did a year ago.

"We had a great showing at West Point," Pitzer said. "We have the talent to challenge any team in this league, but we just have to take it one match at a time."

Hangey is impressed with their dedication. "They did a great job over the summer staying fit, and their work ethic is 100 times better than it was a year ago," he said. "Everybody is pushing each other, and we have the ability to challenge any team in our conference. I expect us to finish in the top three."

As in any other year, there are still 10 weight classes, but there have been some key changes in their structure. In response to the bad publicity wrestling has been getting, the NCAA decided to add seven pounds to each weight class. This is most likely an attempt to curb the wrestling-related cases of malnutrition and various eating disorders.

With the help of John Hangey, here is a run down of what to expect at each weight class, and who will lead the Bison to glory:

125 pounds: Todd Boerner '99 has made strong con-

The men's and women's swim teams downed Drexel last week and will host Army on Sat.

Swimmers pick up third win

By Brian Watson

In his four years of competition, co-captain Alex Johnson '99 learned not to underestimate Drexel. Although the Bison were annually favored to beat the Dragons, the meets always seemed to come down to the wire.

This year was no exception.

As it has for the last few years, the meet came down to the final relay, and Johnson was ready. He and co-captain Doug Hill '00 teamed up with John Ferriter '01 and Chris Neary '02 to take the 400-yard freestyle relay and propel the men's swimming and diving team to a 126.5-116.5 victory over Drexel. "I expected both meets to come down to the last relay, but the women swam well early and ran away with it," head coach Jerry Foley said. "I was confident that our men would pull it out."

"It's a great meet for us because both teams always manage to come out hard," Johnson said. "They are excellent swimmers, but we managed to pull it together in the end."

Other key victories for the Bison included Bill Orendorf '01 in the 1,000-yard free

(10:16.37), Tyler Codi '02 in the 200-yard butterfly (2:03.98), Johnson in the 100-yard free (48.34) and Tyler Wynn in the 200-yard backstroke (1:57.59). Ben Lim '01 tied for first in the 200-yard breaststroke, clocking in at 2:14.36.

The women cruised to victory, defeating Drexel 145-98 for their third consecutive win. Molly Lowe '01 took home first place in both the 200-yard individual medley (2:14.34) and the 200-yard breaststroke (2:32.37). Abby Weaver '02 also captured two firsts, winning the 100- (54.77) and 200-yard free (1:57.60). Megan Jones '01 finished first in the 1,000-yard free (10:56.97) while Ellie Baker '01 took the 50-yard free (25.16).

Both teams once again relied on their depth to lead them to the win. "Everyone was flexible and willing to swim extra events to help us pull it out," Johnson said.

"The Orange and Blue will host league powerhouse Army, Foley's former team, on Saturday afternoon. "Drexel was a good meet for us to prepare for Army," Foley said.

"We rise to the competition, so we'll see what we can do this weekend."

BEYOND THE BUBBLE

Ohio St. Gives '1' Away: Well, most of us have spent the last eight weeks waiting to see whether UCLA, Tennessee or Kansas St. would earn the right to face Ohio St. in the Fiesta Bowl this January. Having already disposed of Penn St. in early October, the only obstacle the mighty Buckeyes had left was Michigan in their final regular season game, right? No. Last week the Michigan St. Spartans rolled into Columbus hoping not to get spanked too badly. Fortunately for them, the real Ohio St. squad decided not to play the second half. Trailing 24-9 in the third quarter, the Spartans rolled off 19 unanswered points to grab a 28-24 lead midway through the fourth quarter. Ohio St. put together an impressive drive in the final minutes, but Michigan St.'s Renaldo Hill picked off Buckeye quarterback Joe Germaine at the goal line to secure the upset.

Said Spartan coach Nick Saban, "We came in here with the attitude we were the squirts in the neighborhood who had to pick a fight with the bully." Quarterback Bill Burke added, "It was the kind of thing you'll never forget. It was a game you like to play in, that you dream about as a kid."

The loss dropped Ohio St. (8-1) all the way to number seven in the rankings and all but assured that they will not be participating in this year's national championship game. The Tennessee Volunteers (8-0) took over the top spot in the BCS rankings, followed by UCLA (8-0) then Kansas St. (9-0).

Throw me the ball, Grandpa! This season has been particularly rough on NFL quarterbacks. It seems like every Sunday another bunch of big-name passers are getting injured. Just this past weekend, Randall Cunningham, Steve Young and John Elway topped the list of quarterbacks to go down. Why do you suppose this is? Maybe it's because half of the starters in the league are old enough to collect Social Security. Look at who is out there: Warren Moon, Elway, Young, Vinny Testaverde, Doug Flutie, Dan Marino, Cunningham, Neil O'Donnell, Jim Harbaugh and Steve Buehler to name a few. All of them have been professionals for at least 10 years now, some of them significantly longer than that. Not that these guys aren't still great assets for any team. Most of them are still rated as some of the best quarterbacks in football. However, the fact is that they are getting old and their overall physical capabilities are starting to decline. They just aren't as mobile in the pocket anymore, which means they're easier for bloodthirsty linebackers to push. Now let's put this together: Old guys plus repeated beatings equals injury! The NFL needs an increase in young, talented quarterbacks. Sure, there are a few out there, Brett Favre, Drew Bledsoe, Mark Brunell and Kordell Stewart are tops in the league. But that's about it. Peyton Manning sure hasn't impressed anyone lately. Neither has Kerry Collins, Danny Kanell, Rick Mirer, Glenn Foley or Ryan Leaf. For whatever the reasons, the NFL draft has been giving us big-time prospects every year, most of whom end up being back-ups if they're lucky. Guys like Dan Marino aren't going to be around too much longer. And when he's gone, who's going to take over? Craig Erickson? Looks to me like a certain team from Miami, as well as a bunch of others, could be in a whole lot of trouble pretty soon.

I Think I Cam: Talk about not knowing when to call it quits. Cam Neely is actually trying to make a comeback with the Boston Bruins. Neely was playing for Boston back in the 1991 conference finals when he was smacked by Pittsburgh Penguins' defenseman Ulf Samuelsson. He developed a condition known as myositis ossificans in which a portion of his thigh muscle turned to bone. Neely was forced to miss all but 22 games of the next two seasons. The 1993-94 season was simply spectacular for Cam as he recorded 50 goals in just 49 games, but his chronic thigh problems forced him to retire in '96.

Now he wants to play for the Bruins again. Well here's a news flash for ya, Cammie. They don't need you or even want you back! Boston has the best record in the Eastern Conference right now and their offense has scored the third-most goals in the conference. They have built up their organization recently with young, fresh talent and the last thing they need right now is to have someone in his late thirties step in and screw everything up. Face it, Neely, NHL players today are too big, too fast, and too talented for you to handle in your condition. You're not going to be able to play every day, and eventually you're gonna get hurt real bad again. Furthermore, you're going to be taking valuable ice time away from guys who have earned it this year. You want to help this team to stay at the top? Be a coach, or a manager, or a motivational speaker, or just sit and heckle the guys in the penalty box. Do whatever, just don't try to be a star again because it won't happen.

The Usual Suspects? The ESPN/USA Today pre-season college basketball poll was released this week. NCAA hoops has a new look this year with many annual powerhouses dropping in the polls and others making revivals. Several top programs, namely North Carolina, Kansas and Arizona will suffer this season after losing several key players to the NBA Draft. Squads like Michigan State, Tennessee, Temple and Washington have rebounded from a tough string of seasons to re-enter the national spotlight.

Duke topped the poll, followed by Stanford, Connecticut, Michigan State and Maryland. Defending national champion Kentucky came in sixth, Temple, Kansas, Tennessee and Xavier round out the top 10.

Quote of the Week:

"Let's get something straight. I want all the odds against me. Then I'm going to fill Jordan's shoes"

Allen Iverson in his less than eloquent piece in this week's ESPN Magazine

Sports

Bison reload for upcoming season

By Chris Ellis

The Bison return basically intact. Four of the five starters and 12 of the 13 letterwinners from last year's squad return, and only one freshman recruit figures to play any type of role in the rotation. Bucknell is the most experienced team in the Patriot League.

Then why are things so different? "We didn't just lose 'a senior,'" Bison head coach Pat Flannery said. Bucknell loses just one player, but that loss changes Bucknell's entire philosophy. J.R. Holden '98, a two-time All-Patriot League selection and arguably the best Bison player ever, is gone, lost to one of the most competitive professional basketball leagues in Europe. The Bison are experienced nearly everywhere on the floor but need to find away to replace the 36 minutes—not to mention the 18 points and six assists—per game that Holden gave as point guard.

For the Bison, replacing Holden means not only finding a point guard, but altering an entire system. "Last year, you knew who would have the ball," Flannery said. "Sometimes the rest of us just stood

around and watched a great player play. This year, we can't rely on one guy. We need all of the rest of the kids to step up and become players."

"This (season) can be either a negative or positive," said Martin Gilliard '99, the team's leading returning scorer with 12.0 points per game. "It's a negative because we lost a real good player, but it gives us a chance to raise our game and play as more of a team than we did last year. That's what we need, and that's what's happening."

Add a solid core of returning players and a new strength and conditioning program to the redefined team concept, and Flannery has every reason to be optimistic about betting last year's third-place league finish and 13-15 record—even without the services of Holden.

Pivotal to Bucknell's success this year is the play of Willie Callahan '99, who earned the starting point guard spot with solid performances in Bucknell's two exhibition games. Callahan saw considerable playing time as the off-guard last season, but was rarely asked to spare Holden at the point—his longest stint as point guard came in the final 16 minutes of Bucknell's season finale against Navy, after Holden was ejected. Cal-

Beetne Kim—The Bucknellian

ahan scored sixteen points and turned the ball over just three times in Bucknell's two exhibition wins.

"Willie is a player whose maturi-

See HOOPS page 17

Muckle may be Bison's X-factor

By Jared Silliker

Call him a point guard, call him a shooting guard or even a small forward, but please call him versatile. Brian Muckle '00 is all of these things, which may just make him a key piece to head basketball coach Pat Flannery's 1998-99 success puzzle.

The 6-6, 215 lb. guard will see time at all three positions, including at point guard, where he has experience from freshman year. There he will share duties with senior co-captain Willie Callahan in filling the void left by J.R. Holden '98.

Muckle started the team's final 10 games, averaging 6.2 points per game and 4.8 rebounds per game. He also finished second on the team in assists with 43 to go along with 46 percent shooting.

But Muckle's flexibility and size give Flannery many options on a very balanced team. This year's squad has many interchangeable parts as Martin Gilliard '99 and Jake Ramage '01 will also see time at the two and three spots. But Muckle is the definition of compatible.

"Brian's so versatile in that he can play so many spots, and was

definitely one of our most consistent players last year," Flannery said.

In addition to Muckle's size, the West Farmington, Ohio native is also blessed with incredible leaping ability.

"My size is certainly an advantage. I can out-rebound most of the point guards in the league, but being taller also means that I need to be a little more careful with the ball," Muckle said. "I'm definitely more prepared to run the point now than as a freshman, though."

Muckle's flexibility will enable him to play all three spots, but will this switching hurt his overall effectiveness? Muckle admitted that the differences in the positions are a little tricky to switch between, but was positive in his ability to handle the task.

"I need to concentrate on being more of a threat when I'm playing the two or three," Muckle said. "I tend to be a little more passive after having played the point, in making sure everyone is involved."

In the Bison's first exhibition game this year, Muckle collected 12 points in 28 minutes against the Supreme Court Basketball Club.

By Peter Van Emburgh

"We're on a mission."

This year's women's basketball season is set to start Saturday afternoon against Kent State as the Bison look to establish themselves among the league's powerhouses.

The Orange and the Blue are clearly optimistic, confident and excited about the upcoming season. In her second season at the helm, head coach Kathy Fedorjaka is ready to battle the league and lead the team to a successful season. The team is composed of three returning starters, a transfer student and seven freshmen. Fedorjaka and the team are determined to give the Patriot League some intense competition.

The Bison made a name for themselves last season after finishing with a 12-14 overall record, 6-6 in the Patriot League, and a dominating 8-1 record on their home court. Fedorjaka brought the Bucknell program to a new level of respect among the conference coaches and was voted the Patriot League Coach-of-the-Year.

The 1997-1998 season was had its share of big wins and big losses. The team handed the Patriot League juggernaut Holy Cross its first defeat after a 16-game regular season dominance over Patriot League competitors. On the other hand, the Bison are also credited with Army's single win of the season.

"This year's team is committed to defending the success we had on home court this year, as well as

themselves last season after finishing with a 12-14 overall record, 6-6 in the Patriot League, and a dominating 8-1 record on their home court. Fedorjaka brought the Bucknell program to a new level of respect among the conference coaches and was voted the Patriot League Coach-of-the-Year.

The 1997-1998 season was had its share of big wins and big losses. The team handed the Patriot League juggernaut Holy Cross its first defeat after a 16-game regular season dominance over Patriot League competitors. On the other hand, the Bison are also credited with Army's single win of the season.

"This year's team is committed to defending the success we had on home court this year, as well as

erasing difficulties we suffered while on the road," Fedorjaka said.

The players and the coaches share similar outlooks on the upcoming season. "The difference between last year and this year is that we know more about Fedorjaka's coaching style and we have much more confidence in ourselves. There is more emphasis on team; we all want to win big," co-captain Kim Delfs '99 said.

Delfs and fellow co-captain Leslie Blue '99 are leading the team towards victory this season. Small forward Delfs returns to the team, giving the Bison added depth and versatility in the frontcourt. She was an all-league selection in 1996-97 and has the skills to play either the small forward or low post positions.

Blue returns as one of the top defensive specialists at the guard position. The two captains have been instrumental pieces of the success of the program with their solid leadership. "Delfs and Blue both have a lot of confidence in themselves and in the team," Fedorjaka said.

In addition to the captains, two other players are expected to be major contributors to the team. Lori Houck '00 is considered one of the most dangerous guards in the conference. She was second on the team in scoring last season, averaging 12.1 points in 37 minutes per game. Houck earned several honors last season including Patriot League Player-of-the-Week honors twice and was named the ECAC Player-of-the-Week after her tremendous efforts in the overtime victory over Holy Cross on Jan. 24. She was also second in the league in free-throw percentage, sinking in 78.0 percent of her attempts from the line. The pre-season Coaches' Poll of the Patriot League has placed Houck on the all-league team.

"Lori has taken it to the next level," Fedorjaka said. "She is an amazing athlete and a talented basketball player with tremendous weapons. She is also extremely receptive and a great team player."

6'0 center Jen Winhofer '00 returns to the team after a break-through season. She led the team in rebounds last season, averaging 6.5 boards per game. She is expected to be a dominant force on the frontcourt again this season with her experience and improved skills.

"Jen has a lot of intensity but is also very coachable. She is always working hard and developing her game," Fedorjaka said.

There are eight newcomers this year, including seven freshmen and Carolyn Bull, a junior transfer student from St. Francis. There are three key freshmen that are expected to make the most impact on the team's success.

Rebecca May '02 will be filling in for Blue at the guard position, Monique LeBlanc '02 will see action as guard or forward and Vicki Quimby '02 will log significant minutes at forward.

"These three girls have immense athleticism that matches that of the older players, which allows a smoother transition and more competitiveness," Fedorjaka said. "The three, along with the freshman core of athletes, will contribute vastly to the program over the years."

The addition of Bull will create an immediate impact on the court at both guard and forward. "She will provide depth, experience and a different perspective on the game," Fedorjaka said.

"The addition of the eight new players will definitely help the team. They will keep us full of energy which should keep us going," Houck '00 said.

Fedorjaka and her players have very high expectations for the team. Her personal goal for the season is a single-digit loss record. Fedorjaka hopes the team will stay focused and competitive.

"At the end of last year, we established our position in the league. We know we can win," Delfs said. "The team is prepared to work out the weaknesses and head towards its goals. Fedorjaka believes that the team needs to step up on rebounding, individual offensive improvements and work on more defensive weapons. The practices

are more intense and competitive, as more of the players are truly committed to reaching their goals.

One of the goals of the team is to improve on their road record. Last season, the Bison were 8-1 at home and 4-13 on the road. The team believes that the confidence that the team has gathered from last season will propel them to succeed on the road.

"We also want to prove that we are good and the victory over Holy Cross last season was not a fluke," Houck said.

The team is still optimistic after Bucknell's victory over The Legacy in the exhibition game on November 8th. Fedorjaka was most impressed by the efforts of Quimby. "I knew she was good and would make an impact, but she

was really impressive," Fedorjaka said. "We did things extremely well. The game showed us what we need to work on and it gave us more confidence."

Bucknell's key games this season will be against Patriot League powerhouses Holy Cross and Navy, Kent State and Davidson. Kent State is the opening game of the season, and if the Bison pull off a win, it will be an "eye-opener." A win against Davidson in North Carolina will put Bucknell's name out in the region as a quality program.

Bucknell was placed fourth in the Patriot League preseason Coaches' Poll, but the Bison are determined to prove the conference wrong. "I believe in this team," Fedorjaka said.

Beetne Kim—The Bucknellian

Sizing up the Patriot League

Bucknell figures in the mix along with Lafayette and Navy

By Brian Watson

1. Lafayette

The Leopards will look to improve upon last year's 19-9 finish despite the loss of Patriot League Player of the Year Stefan Ciosici. The 6'11" Ciosici tore his ACL over the summer and hopes to return in 1999. Lafayette return four starters (Brian Ehlers, Ted Cole, Ross Harms and Tim Bieg) in addition to last year's Rookie of the Year Tyson Whitfield. The loss of Ciosici's inside presence will put more pressure on the perimeter players, but the Leopards will be ready. Ehlers and Whitfield alone connected for 80 three-pointers last season and will look for support from several reserves. The lack of an inside presence may leave Lafayette vulnerable to its competitors, but their backcourt should compensate. Look for the Leopards to capture their first league championship in Patriot League Coach of the Year Fran O'Hanlon's tenure.

2. Navy

The Midshipmen will play second fiddle to the Leopards, but don't be surprised if Don Devove's squad has a few tricks up its sleeve. Navy has lost the services of all-conference performers Michael Heary and Hassan Booker, but returns several talented players from last year's team. Conference tournament MVP Skip Victor, who averaged 10.4 points per game in 97-98, will lead the Midshipmen's attack. Devove will look for center Sitapha Savane and

Chris Williams to step into the spotlight while Reggie Skipworth takes over the point guard responsibilities. The Midshipmen will pose a threat to Lafayette but must watch out for teams like Bucknell or Colgate, who will be nipping at their heels all season. "They lost a few guys but they have so many players," Bucknell head coach Pat Flannery said. "They're always physical and strong and they come to play."

assist leaders with 121. "Eppenhimer will get his shots, but we've had great success countering him with bigger players," Flannery said.

The Hawks' lack of size will be the determining factor in league play. Fido Willyboro, Sah-U-Ra Brown, Pete DeLea and Jared Hess will lead the frontcourt, with bench help coming from recruits Bobby Mbom and Marshall Rumney. Head coach Sal Montesana has made great strides in his first two seasons, but the Mountain Hawks have a ways to go before they challenge for the league title.

3. Bucknell

4. Colgate

The Red Raiders overcame tragedy last season after their head coach Jack Bruen passed away only a month into the season. The team continued on under assistant Paul Aiello and welcomed former Navy assistant Emmett Davis as their new head coach. The Raiders will look to four returning starters to pick up the scoring load left by graduate Seth Schaefer. The backcourt of Chester Fels and Mike Tilley will look inside to standouts Pat Diamond, Ben Wandtke and Chad Wiswall. Davis hopes that freshman Pat Campolietta will step up following an impressive high school career. "They have good size and athleticism," Flannery said. "You never know what to expect with a new coach and a new style."

5. Lehigh

The talented backcourt tandem of Brett Eppenhimer and Tiwaun Hawkins returns to lead the Mountain Hawks into the 1998-99 season. Eppenhimer, the league's Preseason Player of the Year, averaged 24.7 ppg to finish fourth in the country while Hawkins topped the Patriot League's

Crusader head coach Bill Raynor cashed in when the Patriot League installed its "permissive aid" clause, picking up several skilled recruits. Ryan Serravalle, who averaged 30ppg in Canada, ranks among the top newcomers in the conference. Serravalle joins team leader John Hightower and James Stowers to lead the perimeter corps. Other talented freshmen include 6-8 Dekker McKeever and 6-9 Patrick Whearty.

First-year head coach Pat Harris and the Cadets have a tough task ahead of them. Army lost starting forward Dax Pearson to a Mormon mission but compensates with the return Jamie Ugraff, back from a year of military service. Swingman George Tatam will handle the bulk of the offensive load with help from guard Babe Kwasniak, Joe Clark and Jonathan Westfield. Harris reeled in 11 recruits as he looks to start rebuilding.

Bison look to make impact in ECWA

from page 15

tributions to the team in the past, earning three varsity letters, and racking up 40 career victories. He was 17-17 a year ago and placed first at the West Point Invitational.

Hangery: "The additional seven pounds helps Boerner more than anyone else. He always had a hard time making weight, but now he can lift harder, he can eat more, and wrestle harder. He is in a tough weight class, but he will be more successful this year than he was last year."

133 pounds: Filling the void at the next class is Adam Webb '00. He steps in to replace team leader and older brother Solomon Webb. Though he is a junior, he maintains sophomore eligibility and will look to be a key contributor in the future.

Hangery: "He is a good competitor, and a big kid, and should do some good things for us."

141 pounds: Rocky Miller '01 will be the starter here, and he should make a name for himself. The only thing that may limit his success is an injury. Should this become an issue, Tim O'Hara '02 should be able to step right in, as many have been impressed with his progress thus far. Hangery: "Tim O'Hara goes into the room and takes down everybody. As a freshman I did not think he would be able to do that."

149 pounds: This will be the team's most competitive weight class. Dan Weaver '99 was one of the three wrestlers to place in last year's East Coast Wrestling Association (ECWA) championship. In spite of this, Weaver will face a significant threat in sophomore Ben Chunko, who also saw a lot of action last year.

Hangery: "We have a senior who is a three year returning starter in Weaver, but he will be pushed strongly by Chunko. Everybody is talking about this matchup as far as the wrestle-offs are concerned."

157 pounds: Ryan Fasnacht '01 has the edge in this weight class, as he started all last year. He is fresh off an 11-22 freshman campaign, and is respected by many of his teammates because of his determination and toughness. Should he falter, he will be challenged by Rashaan Williams '02.

Hangery: "Fasnacht is a scrapper,

Bucknellian file photo

Brian Pitzer '00 is one of the returning leaders for the Bison, and he will try and improve on his 30-win pin season of a year ago. Following the wrestle off, Bucknell's next match is on Fri., Nov. 20 at Lehigh.

Heavyweight: Jeremiah Albright '02 is the only projected freshman starter for the Bison this season. He was originally a football recruit for Syracuse, but he got injured and the Orangemen dropped their interest. Coincidentally, he was also a wrestling state champion for Maryland, and as a result he fit right into the Bison program. He replaces last year's co-captain Jeff Fisher '98.

Hangery: "He is really explosive, and as soon as he learns the college wrestling style, he will be a force to be reckoned with."

164 pounds: Chuck Reiter '01 is the returning starter in this class, and will most likely stay that way all season. The only thing that would change this would be if Kyle Cooper '99 drops enough weight to compete.

Cooper, a three year starter, has been hardest hit by the weight class change, as he finds himself in limbo, between 164 and 197.

Hangery: "No question about who is going to wrestle here, Brian Pitzer. He is difficult to coach, but he is a great wrestler. He will put you on your back in a heartbeat."

174 pounds: This will also be a highly competitive weight class. Senior captain Jason Bellis is the projected starter after his 18-17 campaign in '97, but he will be challenged all season by Nate Wallentin '01 and Andy Hanzlik '02.

Hangery: "Bellis is a great kid and always does what is expected of him."

Calder Cruikshank-The Bucknellian

Don McDowell '00 and the Bison to take on undefeated Lehigh this Saturday.

FOOTBALL

From page 20

than passing, as they had effectively done all day, they turned their attention towards the ground game to run down the clock. The plan worked, as Bucknell ate up 7:08 on a 15-play 56-yard drive that was capped by a four-yard Don McDowell scoring pass to Palko. The score was the tailback's team-leading seventh touchdown of the year, and it finished off the scoring.

"Our offensive line was just doing a great job blocking," Marow said. "Because of that we were able to keep the ball on the ground and run down the clock."

As much as the offensive performance has been discussed, one cannot emphasize the defensive performance enough. The swarming "D" was led by linebacker Vince Ficca '00, and free safety Erich Muzi '99. Ficca racked up six tackles, of which two were for a loss, one sack, and a pass break up for good measure. Muzi headed a secondary that held a pass happy offense to under 250 yards, had three tackles and two interceptions.

Next week the Bison travel to Bethlehem where they will face Lehigh, a team which just spanked Colgate 41-22 and remain undefeated on the year.

This week in football

By Tim Scheu

Since OSU lost I am no longer leading off This Week with college football.

Seattle @ Oakland

The Seahawks are fresh off a win against K.C. and Oakland just lost to the Ravens. These are two teams going two different ways, my friends. Despite the Raiders 6-3 record, they are not the team many people think they are. Jeff George is questionable for just about every game he plays due to a groin pull, and the Raiders play Buffalo, Denver, Miami, and Kansas City in four of their next six games. Motivated by the uncertainty head Coach Dennis Erickson's job, the Seahawks have stepped it up a notch, and with the likes of Joey Galloway, Ricky Watters, and Chad Brown they can make a run at the playoffs.

Seahawks 27 Raiders 17

New England @ Buffalo

While this game may not be the best of the week, it is still an good one. Both teams are coming off tough losses and it will be interesting to see how both of them react. The Pats have been on a downward spiral as of late. It seems so long ago that they killed Kansas City. With all the injuries to their star players, they have effectively turned from the sponker into the spankee. Their loss at home to Atlanta, showed just how much the Pats had fallen from week three. The Bills on the other hand have won five of six, and hope there is still a little magic left in Doug Flutie. The game is in Buffalo, so I give the Bills the advantage.

Bills 33 Patriots 24

Tim's Upset of the Week:

San Francisco @ Atlanta

Last week the Falcons proved they were legit. San Francisco has yet to do so, and they barely beat the Panthers. I don't even know why this would be considered an upset. In my mind Atlanta should be the favorite. Steve Young can only do so much.

Falcons 38 Niners 21

Ok... here is college stuff too.

Wisconsin @ Michigan

This is where we see just how good the Badgers are. They have been impressive all year, but have really not played any good teams. Michigan has struggled at times, but regained championship form as they crushed Penn State last weekend. If the Badgers can get past this game, they will win the Big Ten, but I don't think that is going to happen.

Wolverines 24 Badgers 13

Nebraska @ KSU

When was the last time Kansas State was a 10-point favorite entering this game? I have been preaching about KSU all season. I was talking about how they were potentially the best team in the country during week two. They are leading the nation in offensive and defensive scoring, and they are a championship contender. What does this mean? Nothing.

Huskers 38 Wildcats 24

UCLA @ Washington

Lets be honest, Washington is always supposed to be good, but they never perform. UCLA has tripped a little over the past few weeks, but they are still undefeated and a national championship contender. This will not be close. The Bruins need to make a statement.

Bruins 45 Huskies 17

Arkansas @ Tennessee

This is a showdown between two undefeated teams. It is dangerous for Tennessee in that they really do not know how good this Razorback team is. This game is also odd in that this will be the first of two consecutive games between the two SEC rivals. I really don't have that much confidence in the Vol offense, but Arkansas really hasn't beaten any team to prove they are for real.

Vols 27 Razorbacks 13

Bucknell @ Lehigh

Although the Bison did win last week, they did so playing a perfect game. They blocked a punt and returned it for a touchdown, they had no turnovers and recovered two, and still the Holy Cross game was close until the fourth quarter. On the other hand, Lehigh has impressed even the most skeptical among us, as they thrashed Colgate a week ago, and remain undefeated on the year. If I had any sense of what I was doing I would pick Lehigh in a blowout, but I dig poetic justice. Bucknell was undefeated going into their last game in '97, and they lost to Colgate. How appropriate would it be to go out on a limb and pick Bucknell to do the same to Lehigh?

Bison 20 Lehigh 16

Since Ohio State lost, records don't matter. Nothing matters. We are all going to die anyway.

Bison hockey team getting used to life on the road

By Brett Tomlinson

The Bucknell club hockey team fought off an early two goal deficit and scored five unanswered goals to defeat Georgetown on Saturday. The Bison are off to a 3-0 start with two wins in Mason-Dixon League play.

The Hoyas struck quickly in the first period jumping to an early 2-0 lead, but Loren Bayley '99 and Brian Huetinka '01 responded for the Bison, scoring one goal each to even the tally before the first intermission.

Jeff Werring '00 scored the first of his two goals to put the Bison ahead in the second period. Josh Russo '01 added another goal and goalie Chris Ellis '00 stopped the remaining Hoya shots en route to a 5-2 win.

The Bison have been a team without a home this season due to renovations at the Sunbury Municipal Ice Rink. All of the team's seven games before winter break are on the road. Bucknell will begin play in Sunbury during January.

"Playing on the road is tough because you constantly are seeing new rinks and ice surfaces and dealing with 'bus-legs'," captain Chris Rannels '99 said. "That can take a lot of enthusiasm out of a team."

Despite long drives to practice and games, the road warriors have dominated their competition. Werring led the Bison with two goals in the team's 6-0 opening victory at Shippensburg. Freshman goalie Tim Sather combined with Ellis for the shutout.

The Bison also pummeled Johns Hopkins, 7-0. Bayley led Bucknell with two goals against the Blue Jays while Sather recorded the complete game shutout in goal.

"We expected to have a strong opening, but it's still early and we haven't faced the bulk of a difficult schedule," Rannels said.

Bucknell will take to the road again on Saturday for a league contest against Dickinson. The contest will be played in the relatively familiar confines of Twin Ponds West in Harrisburg, one of the Bison's temporary practice facilities.

Sports Briefs:

By Brian Watson

WATER POLO:

Bison head coach Mike Wooster was named Coach of the Year in the Southern Division and four players received all-conference honors. Co-captain and leading point scorer Kevin Perminson '01, leading goal scorer Josh Watts '00 and goalie Zach Blixt '99 were named to the Division's first team. Matt Latz '99 was selected to the second team. The Bison captured second place in the South with a 6-1 record. They head to the Eastern Championships on Saturday.

WOMEN'S SOCCER:

Kate McElligott '00 and Lindsay Slomer '02, the leading scorers for the Bison, garnered second-team all-conference honors in the Patriot League. McElligott, who tallied seven goals this season, played well despite missing the team's final six games due to an injury. Slomer (six goals, two assists) started every game in her freshman campaign and emerged as one of the league's top newcomers.

MEN'S SOCCER:

Bill Epley '01 earned first-team all-league honors. The sophomore was part of a team that went 4-14 on the year.

Crew teams brave Frostbite

By Renee Lorian

The Bucknell Crew team was out in full force for some tough racing this weekend on the Schuylkill River in Philadelphia. The team is larger than it has ever been, and 107 dedicated rowers and coxswains traveled to compete. The Frostbite Regatta, a 2000 meter sprint, took place Saturday, followed by the 1500-meter Braxton Memorial Regatta on Sunday.

The strong novice crews began the racing both days. The novice women raced two eights, both of which easily made their respective finals after morning heats on Saturday. The novice women's first boat finished fifth in their final on Saturday, and third in their final on Sunday. The novice women's second eight finished sixth in their final Saturday, and second in their final on Sunday. Katie Richardson '02, Jane Scott '02 and Marcia Lewis '02, had this to say about the two days of racing, "Our races went well, we seemed to finally click as a team. It felt so good to look over and see the other boats next to us. We know where we want to be when spring racing comes, and we have the team spirit to get us there."

The novice men had an equally impressive showing. Three novice men's eights took to the course to

Bucknellian file photo

The Bucknell crew team ended its season last weekend when they rowed on the Schuylkill river in Philly.

row against powers such as Penn and Temple. In the final on Saturday, Bucknell's first two boats finished third and sixth, and the third eight missed their final by only one second. Sunday, the first boat finished third in their final, the second boat finished second in their divi-

sion, and the third boat finished sixth. The novice men's depth lend- ed a hand to their awesome finishes. The varsity lightweight women showed their stuff on Saturday, pulling in a second place and defeating a strong Ithaca crew. They finished fourth on Sunday, rowing in the

openweight category. The varsity open women rowed to a fifth place finish on Saturday, and after some major equipment problems 1,000 meters into the race on Sunday, finished sixth. Several women from the open eight rowed in a varsity women's four both days, finishing fifth on Saturday and an impressive third on Sunday.

The men's JV four rowed to a fourth place finish on Saturday and a fifth place finish on Sunday. The men's JV eight finished fourth on Saturday, and decided not to settle. Sunday they pulled it together and finished third in their final.

"We lost to Marietta by four seconds on Saturday and went out to beat them on Sunday. We hung with them through the start and the thousand meter mark, pulled out a great sprint and got them by 0.6 seconds," Jeremy Urban '02 said.

The varsity men's eight faced a tough race on Saturday, finishing fifth in a race with Penn, Columbia, and Temple. Sunday they came back prepared, and brought home Bucknell's only medals of the weekend, which of course, were gold.

"This win was an unbelievable end to the season," Bryan Foster '01 said. "The race was the most intense I have ever experienced. We crossed the finish line physically and emotionally drained."

Both the men's and women's novice and varsity crew teams will start up again during the spring semester.

Captains give x-country team foundation

Jason Aines-The Bucknellian

Matt Kodak '99 and "Wally" Dietrich '99 lead the Bison to the championship.

Rose Sedo

to a higher degree, namely those who chose to compete at the collegiate level.

Those who choose to run for a Division I school must be dedicated and committed. Above all, they

must be willing to sacrifice extra spare time and forego what most people would consider the "typical" college experience.

Two examples of average high school cross-country runners turned successful college stars are Jonathan "Wally" Dietrich '99 and Matthew Kodak '99.

Being a captain of one of the most successful teams in the history of Bucknell athletics is not an easy task, but these two make it look easy.

Both Dietrich and Kodak started running in elementary and high school for similar reasons.

"I began running because I always was playing sports," Kodak said. "I would not have known what to do with myself if I did not have a sport to do every season."

Dietrich told a similar story.

"Quite honestly, I barely have the coordination to walk, so running was one of the few athletic options out there for me," Dietrich said. "When I realized I was good, I became committed."

Dietrich and Kodak have had a long history together at Bucknell. They've lived together for four years and have captained the team for two years.

Initially, the hardest part for the senior runners was deciding how they wanted to lead the team. This decision came about due to Coach Art Gulden's reliance on his captains.

"Essentially, we try to deal with things the way Coach Gulden does. He's been doing this for over 25

years and he knows how to make a team work and perform," Kodak said.

"They are the best male captains that we've had in a while," Gulden said. "One doesn't say a whole lot, and leads by example, while the other is more outward and expressive. I think they balance each other out in a good way."

Along with motivating the team to reach greater heights, the two captains continue to push themselves. The intense commitment and pressure to take a team is enough to make anyone lose their mind. So why do they continue to pursue such a draining activity?

"Running with 35 other guys that have the same desire gives you even more motivation to keep improving," Kodak said.

Dealing with the lack of free time is also an issue of concern. But when they consider the lifelong friendships they have made along the way, the sacrifice seems trivial.

"The friendships we have on the team run deep and have been tested again and again through training and competition," Dietrich said. "The team is our social sphere, just like a fraternity or club would be for your average Bucknell student. There's just a lot more discipline here."

The men's and women's cross country teams will compete in regionals this weekend at Navy.

Bison hockey team getting used to life on the road

By Brett Tomlinson

The Bucknell club hockey team fought off an early two goal deficit and scored five unanswered goals to defeat Georgetown on Saturday. The Bison are off to a 3-0 start with two wins in Mason-Dixon League play.

The Hoyas struck quickly in the first period jumping to an early 2-0 lead, but Loren Bayley '99 and Brian Hnetinka '01 responded for the Bison, scoring one goal each to even the tally before the first intermission.

Jeff Werring '00 scored the first of his two goals to put the Bison ahead in the second period. Josh Russo '01 added another goal and goalie Chris Ellis '00 stopped the remaining Hoya shots en route to a 5-2 win.

The Bison have been a team without a home this season due to renovations at the Sunbury Municipal Ice Rink. All of the team's seven games before winter break are on the road. Bucknell will begin play in Sunbury during January.

"Playing on the road is tough because you constantly are seeing new rinks and ice surfaces and dealing with 'bus-legs,'" captain Chris Runnells '99 said. "That can take a lot of enthusiasm out of a team."

Despite long drives to practice and games, the road warriors have dominated their competition. Werring led the Bison with two goals in the team's 6-0 opening victory at Shippensburg. Freshman goalie Tim Sather combined with Ellis for the shutout.

The Bison also pummeled Johns Hopkins, 7-0. Bayley led Bucknell with two goals against the Blue Jays while Sather recorded the complete game shutout in goal.

"We expected to have a strong opening, but it's still early and we haven't faced the bulk of a difficult schedule," Runnells said.

Bucknell will take to the road again on Saturday for a league contest against Dickinson. The contest will be played in the relatively familiar confines of Twin Ponds West in Harrisburg, one of the Bison's temporary practice facilities.

Sports Briefs:

By Brian Watson

WATER POLO:

Bison head coach Mike Wooster was named Coach of the Year in the Southern Division and four players received all-conference honors. Captain and leading point scorer Kevin Permisohn '01, leading goal scorer Josh Watts '00 and goalie Zach Blixt '99 were named to the Division's first team. Matt Lutz '99 was selected to the second team. The Bison captured second place in the South with a 6-1 record. They head to the Eastern Championships on Saturday.

WOMEN'S SOCCER:

Kate McElligott '00 and Lindsay Slomer '02, the leading scorers for the Bison, garnered second-team all-conference honors in the Patriot League. McElligott, who tallied seven goals this season, played well despite missing the team's final six games due to an injury. Slomer (six goals, two assists) started every game in her freshman campaign and emerged as one of the league's top newcomers.

MEN'S SOCCER:

Bill Epley '01 earned first-team all-league honors. The sophomore was part of a team that went 4-14 on the year.

Sports

Crew teams brave Frostbite

By Renee Lorion

The Bucknell Crew team was out in full force for some tough racing this weekend on the Schuylkill River in Philadelphia. The team is larger than it has ever been, and 107 dedicated rowers and coxswains traveled to compete. The Frostbite Regatta, a 2000 meter sprint, took place Saturday, followed by the 1500-meter Braxton Memorial Regatta on Sunday.

The strong novice crews began the racing both days. The novice women raced two eights, both of which easily made their respective finals after morning heats on Saturday. The novice women's first boat finished fifth in their final on Saturday, and third in their final on Sunday.

The novice women's second eight finished sixth in their final Saturday, and second in their final on Sunday. Katie Richardson '02, Jane Scott '02 and Marcia Lewis '02, had this to say about the two days of racing. "Our races went well, we seemed to finally click as a team. It felt so good to look over and see the other boats next to us. We know where we want to be when spring racing comes, and we have the team spirit to get us there."

The novice men had an equally impressive showing. Three novice men's eights took to the course to

Bucknellian File Photo

The Bucknell crew team ended its season last weekend when they rowed on the Schuylkill river in Philly.

row against powers such as Penn and Temple. In the final on Saturday, Bucknell's first two boats finished third and sixth, and the third eight missed their final by only one second. Sunday, the first boat finished third in their final, the second boat finished second in their division, and the third boat finished sixth. The novice men's depth lent a hand to their awesome finishes.

The varsity lightweight women showed their stuff on Saturday, pulling in a second place and defeating a strong Ithaca crew. They finished fourth on Sunday, rowing in the

openweight category. The varsity open women rowed to a fifth place finish on Saturday, and after some major equipment problems 1,000 meters into the race on Sunday, finished sixth. Several women from the open eight rowed in a varsity women's four both days, finishing fifth on Saturday and an impressive third on Sunday.

The men's JV four rowed to a fourth place finish on Saturday and a fifth place finish on Sunday. The men's JV eight finished fourth on Saturday, and decided not to settle. Sunday they pulled it together and finished third in their final.

"We lost to Marietta by four seconds on Saturday and went out to beat them on Sunday. We hung with them through the start and the thousand meter mark, pulled out a great sprint and got them by 0.6 seconds," Jeremy Urban '02 said.

The varsity men's eight faced a tough race on Saturday, finishing fifth in a race with Penn, Columbia, and Temple. Sunday they came back prepared, and brought home Bucknell's only medals of the weekend, which of course, were gold.

"This win was an unbelievable end to the season," Bryan Foster '01 said. "The race was the most intense I have ever experienced. We crossed the finish line physically and emotionally drained."

Bucknellian File Photo

Both the men's and women's novice and varsity crew teams will start up again during the spring semester.

Captains give x-country team foundation

Jason Aines-The Bucknellian

Matt Kodak '99 and "Wally" Dietrich '99 lead the Bison to the championship.

Rose Sedo

to a higher degree, namely those who chose to compete at the collegiate level.

Those who choose to run for a Division I school must be dedicated and committed. Above all, they

must be willing to sacrifice extra spare time and forego what most people would consider the "typical" college experience.

Two examples of average high school cross-country runners turned successful college stars are Jonathan "Wally" Dietrich '99 and Matthew Kodak '99.

Being a captain of one of the most successful teams in the history of Bucknell Athletics is not an easy task, but these two make it look easy.

Both Dietrich and Kodak started running in elementary and high school for similar reasons.

"I began running because I always was playing sports," Kodak said. "I would not have known what to do with myself if I did not have a sport to do every season."

Dietrich told a similar story. "Quite honestly, I barely have the coordination to walk, so running was one of the few athletic options out there for me," Dietrich said. "When I realized I was good, I became committed."

Dietrich and Kodak have had a long history together at Bucknell. They've lived together for four years and have captained the team for two years.

Initially, the hardest part for the senior runners was deciding how they wanted to lead the team. This decision came about due to Coach Art Gulden's reliance on his captains.

Essentially, we try to deal with things the way Coach Gulden does. He's been doing this for over 25

years and he knows how to make a team work and perform," Kodak said.

"They are the best male captains that we've had in a while," Gulden said. "One doesn't say a whole lot, and leads by example, while the other is more outward and expressive. I think they balance each other out in a good way."

Along with motivating the team to reach greater heights, the two captains continue to push themselves. The intense commitment and pressure it takes to lead a team is enough to make anyone lose their mind. So why do they continue to pursue such a draining activity?

"Running with 35 other guys that have the same desire gives you even more motivation to keep improving," Kodak said.

Time is also an issue of concern. But when they consider the lifelong friendships they have made along the way, the sacrifice seems trivial.

"The friendships we have on the team run deep and have been tested again and again through training and competition," Dietrich said. "The team is our social sphere, just like a fraternity or club would be for your average Bucknell student. There's just a lot more discipline here."

The men's and women's cross country teams will compete in regionals this weekend at Navy.

How to cope with your average upset

Let me tell you a little thing about upsets. Everyone loves them except those who like the team that lost. I don't know whether it is fate, misfortune, or just bad karma, but it seems that it is always my team that gets upset.

Case in point: the Ohio State Buckeyes. It seems that every year the Bucks are predicted to be one of the best teams in the country. Despite having an impossible preseason schedule and having lost gobs of its players to the NFL, they roll through their first seven or eight games, usually undefeated. All my friends and I celebrate the notion that the Bucks could theoretically end up National Champs. Then it hits us. We have to play Michigan. And as much as every OSU fan pretends to not care about their losing record against the Wolverines over the past ten years, we secretly dread the day the Maize and Blue make their big entrance into Ohio Stadium.

Year after year Michigan outplays a more talented Buckeye team, and for each year they lose, my friends and I find a scapegoat to blame it on. One year, it was one of my acquaintances who we all knew was not an OSU fan. Despite this, he watched the entire game while wearing a Buckeyes jacket, thereby cursing any chances the Bucks had of winning. Needless to say, we jumped him after the game, but that did not change the fact that the Buckeyes had choked once more.

In the past, I have felt an uncontrolled anger and an urge to deck any obnoxious friend who might mention their loss. I ranted and raved for weeks, criticising anyone or anything that could have influenced the outcome of the game. I isolated myself in my room and try to take comfort in the fact that at least they were preseason number one. I put pictures of Brent Musburger on my dartboard, and speared him every time I envisioned him saying, "Jake the Snake lives on," and "If I were John Cooper I would just want to roll over and die."

But I did not think I would have to go through that in 1998. I thought this year would be different. OSU seemed flawless in their first eight games. They thoroughly dominated Penn State and left rival Big Ten schools in the dust. They have a Heisman candidate in Joe Germaine and a defense that was anchored by all-world linebacker Andy Katzenmover. There have been features on the strength of their secondary and the scary ability of their receivers to produce in big games. All the pollsters were picking them as consensus number one, because they had not demonstrated the weaknesses possessed by teams like UCLA and Tennessee. They were supposed to be the best OSU team since the days of Rex Kern, and the undefeated teams of Woody Hayes' era.

As it turns out, this year I did not even have to wait for the annual Michigan game. OSU lost to that other Michigan school in the biggest upset of the year. The Spartans could not have been a bigger underdog. They could have tried, but they would not have been successful. Lets take a look why.

They are coached by Nick Saban, former defensive coordinator for the Browns, an underdog in their own right. They are traditionally one of those teams that are underachieving and lose to schools like Southwestern Missouri State. And even their mascot, the Spartan was the traditional doormat of the fighting circuit. I heard the Spartans got killed in the Trojan War and never won a battle. Not only were they weak, but they were stupid too. They were tricked into letting a giant wooden horse enter their city because they thought it was a gift. I even heard that they preferred knitting to sports. (Okay, so none of what I said there was true, and happened exactly the opposite way I described, but wouldn't it be neat if it did take place that way? It would support my idea about how the Spartans were underdogs, and it would make history a lot cooler.)

I digress. The point is that OSU lost ... again. But this year I am ready to deal with the pain. When I feel that it is getting to the point where I am actually considering giving up sports fanaticism, I follow my eight easy steps towards sanity. How can any fan rebound from such heartbreaking losses year after year?

- Here are the do's and don'ts of dealing with upsets.
1. Do try and get some sleep.
 2. Don't sleep through all your classes and responsibilities.
 3. Do try and talk about the game with someone who cares.
 4. Don't commit any violent act in order to shut that person up, when they mock your team. It does not pay, believe me. Usually you end up with the brunt of the injuries.
 5. Do continue to observe your regular diet.
 6. Don't eat exclusively Haagen-Das and Cheetos. It will make you really sick.
 7. Do keep the faith in your team.
 8. Don't tell anyone about it (the faith) until the next year.
- Hopefully if all you of you observe those rules, you will be able to cope with almost any loss. I know I have. Good luck, and Godspeed.

Bison stampede past Holy Cross

Muzi '99 and Bucknell defense hold Crusaders to -27 yards on the ground

By Tim Scheu

Entering this week's contest against Holy Cross, the major issue of concern amongst the Bucknell coaching staff was one of turnovers. In their games against Lafayette and Colgate the Bison turned the ball over a whopping 11 times, which led to 24 opponent points and a 1-1 record. In order to defeat a talented Crusader team, the Bucknell would have to protect the football.

That is exactly what they did. In their 30-14 victory over Holy Cross, the Bison rolled up well over 300 yards of offense and never gave the ball away. The defense also played a huge role, as they limited the Holy Cross offense to -27 yards rushing and intercepted the Crusader quarterback twice.

"Turnovers give the other team better field position," head coach Tom Gadd said. "Against Colgate, the Red Raiders gained at least 200 yards off of our turnovers. This game against Holy Cross we gained 200 yards, because we played good special teams, and had two interceptions. That makes the game a whole lot easier to win."

The game began on an auspicious note for the Bison. Rather than giving up a big special teams play as they have throughout the year, the Bison had one of their own. Following a Bucknell defensive stop on third down deep in Holy Cross territory, the coverage unit came up big. Mike Thompson '00 blocked the Crusader punt, and Eric Slaughter '00 picked up the football and ran 20 yards for the touchdown.

After exchanging a few punts, the Bison regained possession, and proceeded to score the first offensive points of the game late in the first quarter. Ross Coleman '99 capped off an eight-play, 33-yard drive with a 43-yard field goal that pushed the Bison lead to ten.

Following a long period of defensive dominance, the Bucknell offense finally ended the scoring drought. With 39 seconds left in the second quarter, Jason Marrow '01 busted through the middle for a one-yard touchdown, and upped the count to 16-0. The score was one of two on the day for the

Don McDowell '00 and the Bison did not turn the ball over once, and they intercepted two passes.

Bison fullback, who has made quite a name for himself in the Bucknell backfield.

"Marrow is a very strong, physical kid, and is a lot more athletic than the fullbacks we have had in the past," said running backs coach Chris Tucker. "He was the voted most improved player in our spring game, so I am not that surprised that he has had this sort of impact thus far."

Due to the Crusaders' frustration with their running game, Holy Cross decided to air it out in the second half. Twice in the third quarter, Holy Cross scored on pass plays of fifty yards or more and torched the Bison defense. The first was the third play of a 73-yard drive, in which Crusader quarterback Ryan Collar handed the ball off to Dan Visalli in an apparent running play. But in a surprising turn of events, Visalli rolled back and threw to a wide open Steve Green for a 54 yard touchdown connection. The trickery paid off as Holy Cross had cut the Bison lead to nine before 8,125 screaming fans.

The next time Holy Cross got the ball back, its

offense was even more efficient. After getting stuffed on a first-and-ten running play, Collar called for a pass. The result was a 73-yard touchdown reception that was caught by the very man who fooled the Bison "D" the previous drive, Dan Visalli. All of a sudden the game was close.

The teams entered the fourth quarter knowing that they each had a dogfight on their hands. The Crusaders had shown their resilience and the Bison were dreading another heartbreaking loss. It was all a question of who would step it up to the next level.

Apparently the Bison wanted it more, for they responded with two fourth quarter touchdowns to put the game out of reach. On their first possession of the quarter, Bucknell marched 65 yards on eight plays to score. The touchdown came in the form of Marrow's second scoring run of the day, and put the Bison ahead by nine.

At that point the Bison strategy changed. Rather

Field Hockey falls in Patriot League tourney, but collects postseason awards

By Laura Hough

Calder Cruikshank - The Bucknellian

The season ended for the field hockey team last weekend.

Following tournament play, five Bison field hockey players were selected to All-Patriot League teams, and Jen Zimmerman '00 and Katey Twombly '00 were awarded first team All-League.

After losing to Holy Cross earlier in their season 5-0, the field hockey team met up with them again hoping to even the score. Their match was part of the first round of Patriot League tournament play last weekend.

The Bison were ceded third in the tournament and Holy Cross was ceded second, so the game was guaranteed to be close from the beginning. With the lead switching back and forth between the two teams throughout the first half, the Bison entered the second period with a score of 0-0. Initially, the game continued as it had in the throughout the first half. But that all changed with a little under 11 minutes left in the game. Sarah Cox of Holy Cross passed the ball into the circle and teammate Colleen Schmitt scored the decisive goal, putting Holy Cross up by one. Bucknell attempted in vain to come back, but the game

ended with a score of 1-0.

"It was probably the best game we played all season", Dena Ebert '01 said. "We gave everything we had into the game so we can't really be regretful."

Although the Bison were disappointed about the defeat, they were satisfied with their play and definitely made an improvement since they last played Holy Cross. "The team played outstanding and I wouldn't have changed anything except adding a goal for us" Coach Heather Lewis said.

Lewis also has other reasons to be proud of her team, not just because of their great effort in their last game. The Bison had more individuals on the All-Patriot League team than any other school. Zimmerman also received the honor of Patriot League defensive player of the year. Malina Anderson '00, Maureen Breslin '99, and Ebert were all awarded second team All-Patriot League and Ebert was also named rookie of the year. Members of the Bison were also given two of three major awards that were handed out in the Patriot League. "I couldn't have been any prouder of the team," Lewis said.

Beetna Kim—The Bucknellian

A fresh start...

Senior guard and co-captain Willie Callahan hopes to lead the Bucknell men's basketball team's drive toward a berth in the NCAA tournament. Bucknell, ranked third in most preseason Patriot League polls, has opened the season with two losses, including a 79-64 setback against Rider last night. Callahan himself will have big shoes to fill, as he replaces J.R. Holden '98—one of Bucknell's best players ever—as the starting point guard. For details on the team's opening games, see page 13.

717 exchange shortages prompt area code change

By Greg Venbrux

The northeastern region of Pennsylvania will be making the transition to a new 570 area code next month. The existing 717 area code will be allocated exclusively to the capital area region. Due to a shortage in the number of new telephone exchanges in the existing 717 area code, the Pennsylvania Public Utility Commission has required that the northern portion of the region be separated into the new area code. On Dec. 5, the University and the surrounding area will be within the new 570 area code, with the final changeover coming next April.

The transition to the new area code is part of the area code relief plan implemented by the Pennsylvania Public Utility Com-

mission. By dividing the existing 717 area code into two separate regions, the shortage in new telephone exchanges will be alleviated. Nevertheless, both the 570 and 717 area codes are forecasted to be exhausted in five to six years due to an increasing demand for new phone numbers.

In addition to the new area code, students will be experiencing an additional change, as the University makes its own transition to the 577 exchange number. Apparently, the University is experiencing a shortage in the existing exchange numbers and needs to implement a relief plan to create more numbers for students and faculty.

Eugene Spencer, the associate director for Computing and Information Services, is involved with the University's upcoming

Groundbreaking held for the Siegfried Weis Music Building

By Chris Ellis

One of the crown jewels of the University's "Capital Campaign" for campus improvement has moved a step closer to reality. On Saturday, groundbreaking ceremonies for the \$7 million Siegfried Weis Music Building were held on the Swartz Field parking lot.

The building, which will be completed by the spring of 2000 and will host classes in the fall of the same year, will allow the music department to vacate its current residence, the 100-year-old Music and Art building. The groundbreaking marks a period of change for the University music department as it prepares to move from its old, cramped quarters.

"Our first focus and our real priority in this construction is the musical offerings that we are able to provide students," said Jackson Hill, chair of the music department. "It will allow us to do kinds of things in terms of curriculum that we are not presently able to do. I envision that all of our courses will be changed somewhat [as a result of the new building]."

The groundbreaking of the new building

Groundbreaking was held for the new Music Building last Saturday. The building which will be located on the Swartz parking lot should be completed by Spring 2000.

caps a 30-year effort by the department and administration to move the music department to a more suitable location. The Music and Art Building, which originally served as the home of the Chemistry department, has

little soundproofing and is very susceptible to flooding and humidity-related damages to instruments.

"Some spaces are okay and there are certainly some places with worse facilities, but we don't have access to some technological advances, which makes it very hard for us to come up to where we need to be as a department," Hill said. "We were just imprisoned by an old, inadequate building."

The new building, which will be located adjacent to the Weis Center on a portion of the Swartz Field parking lot, will feature a 176-seat recital hall, two medium-sized classrooms, several faculty studios, a percussion studio, a computerized keyboard lab and an expanded score library and listening room. The music department currently conducts most of its recitals in Bucknell Hall.

Funding for the building was made possible through grants from the Weis and Rooke families, two families who have already made significant contributions to the University. Projects funded by the families include: the Sigmund and Claire Weis

Center for the performing Arts, the Rooke Chemistry Building, Rooke Chapel and the Rooke Faculty Chair in Engineering. Both Robert C. Rooke and the late Siegfried Weis had served as members of the University Board of Trustees.

"Funding for the new music building is yet another manifestation of the magnificent generosity of the Weis and Rooke families to Bucknell," President William Adams said. "Without the generosity of the Weis and Rooke families, Bucknell would be a much different and lesser University."

"My family and I are delighted to be able to support Bucknell by contributing to this lovely music building, which will be named for my husband," Janet Weis said in a University press release. "This new building continues a long tradition of supporting the construction of needed facilities at Bucknell by the Weis and Rooke families. The end result will be first-class music instruction in a beautiful new building on the Bucknell campus."

Hill sat on a planning committee with four administrators and three other faculty members to assist in developing the design and location of the building. Architecture was designed by the Schmidt Associates/Mathes Group of Indianapolis. The project was organized at the University level by Margaret Plympton, vice president for finance and administration.

"The building is very much part of the University's commitment to liberal learning and we trust and assume that such an important new structure, with state of the art facilities available for undergraduate use, will encourage music students, both majors and those with a general interest, to pursue their studies at Bucknell," Plympton said.

After the music department moves into

See WEIS, page 2.

Grants from the Weis, above, family have enabled the University to begin constructing the new Music Building which is to be named for Siegfried Weis.

Management majors experience registration problems

By Tracy Thiffault

The majority of students responded positively to registration for the spring semester, held during the past two weeks. That majority does not include management and accounting majors, who once again found difficulty registering for upper level classes.

While this problem is resolvable in the near future, it raises much concern within the University over the continually growing number of students preparing for a bachelor of science in business administration (BSBA) degree.

"[The Management department] tries to provide the best courses we can, and part of delivering good courses, is having manageable groups of students where you can have active participation," said Chris Zappe, associate professor of management.

"There was some conflict be-

tween the times of some accounting classes," Nicole Collins '99 said. "Some students were [also] worried about fulfilling W2 requirements."

Lydia Hagstoz—The Bucknellian

Senior Management majors have been placed on wait lists for many classes.

Each department works with the registrar to establish course guidelines which they feel will adequately fulfill demand for certain classes.

This material is based on past history, which doesn't always relate to the current situation. "Course maximum sizes are set by the department," Associate Registrar Robert Dunkerly said. "In some cases it is difficult to predict which of several alternate choices majors will make in course selection, so departments make their best estimate. The period immediately following registration, when departments are able to look at registration and waitlist figures, usually produces some increase in class sizes and movement of students off of waitlists."

As for the management department, "there are cer-

tainly seniors on waitlists," Dunkerly said. "We have been providing information to them as they request it. When departments view rosters of waitlisted students and see their class year and major, such problems tend to be resolved."

"I was waitlisted for two classes that I need to graduate, and there are 24 other people on the waitlist, too," accounting major Jennifer Burleigh '99 said. "[The Management department] needs to offer another section because so many people need [the class]." Adding another section will require the University to pay the professor overtime.

Dunkerly suggests students plan their schedules in advance and select alternative courses in order to make the registration process more efficient. "We encourage students to see if they can take a currently closed course in another semester."

From page 1.

its new headquarters in the fall of 2000, the art department is likely to assume the total capacity of the Music and Art Building, until the construction of the new art building is complete. Long-range plans for the building are unknown, but Plympton believes that only in an "extreme" case would the building be torn down.

The construction of the music

Donations from the Robert C. Rooke, above, family helped to fund the new Music Building.

building is a key component in the "Bucknell Campaign," a fundraising project that hopes to raise \$150 million for University projects by the end of the year 2000. Goals of the capital campaign include: construction of new buildings for the music, art, psychology and geology departments, renovations of Davis Gym, \$12 million for endowed department chair positions, \$4 million for improvements of Bertrand Library, and \$60 million for improvement of University financial aid. The music building will be the first of the major structures to be created.

"A strong profile in the arts is one of Bucknell's key goals, and [the construction] reinforces our commitment to liberal learning," Adams said. "From many points of view, this is an exciting and badly needed addition to our facilities infrastructure."

REGISTRATION

From page 1.

"Students are, understandably, frustrated when their first choice is closed. Having an alternate approved by the adviser and on their schedule form makes it easier for students to complete registration and have a full schedule, even if their first choice is now waitlisted," Dunkley said.

"This is the only time I've had a problem," Burleigh said. "It's also the second time I've registered last." Burleigh said that with the introduction of the BANNER system, the registration alphabet was rearranged.

In order to improve student attitudes during registration, this semester dining services provided 'treats' for people waiting in line such as cookies and muffins.

"The process seemed more efficient this year," Rebecca Morrissey '00 said. "It was easy for me because I'm going abroad," Lauren Dahlman '00 said.

The large number of BSBA majors makes it difficult for students of other disciplines to take various business courses to enhance their degree program. "Our department has been concerned about our majors who are having difficulty getting into management courses which are filling up quickly," said Teresa Amott, associate professor of economics.

The increase in the number of management majors can be attributed to several factors and recent educational trends.

William Gruver, professor of management is "flattered that students think so highly of our program ... in the six years that I have been here, the administration has significantly upgraded the quality of the Management department faculty ... That is one cause, but probably not

the biggest reason for the increase. Another reason could be the mistaken impression on the part of some students, and many parents, that one must be a 'business' major in order to be successful in a business career," he said.

"I think that students should be true to their own particular interests and values when it comes time to select a major. Students tend to pick a major that seems most practical, but in turn, forgo opportunities that are truly exciting to them," Zappe said.

There are various proposals to reduce the number of business majors. "Admissions ought to try to recruit students who have an interest outside the management and accounting department," Zappe said.

Some people have suggested implementing a 'cap' on the number of BSBA students. While this technique would ease the numbers in the department, it would not give some students the opportunity to study a desired subject.

Ernest Keen, professor of psychology, said, "I have the impression that many people who would major in liberal arts departments get caught up in a trendy flow without thinking about it. If there were a cap in Management, and they had to make a decision apart from just going with the flow, at least some of those students would take the whole issue of their future lives more seriously."

"One thing we could do is work with other majors, especially those who's enrollment has fallen off ... also educate people about the rich opportunities one has graduating from a place like Bucknell without a degree in engineering, education or management," Zappe said.

To study at the School of International and Public Affairs is to arrive where the world's pathways of learning, policy, and action converge.

At SIPA, Columbia University connects in countless ways with New York City, and with economic and political networks that span the globe.

Here, guided by distinguished scholars and policy professionals, tomorrow's leaders train for responsible action.

Shaynak named director of Health Promotion Programs

By Anne Monoky

"The issue of health is a continual process. It is not just the absence of disease," said Tracy Shaynak, the new director of Health Promotion Programs at the University. For Shaynak, these issues of health have become more than just an interest; they are a way of life.

Through her position, Shaynak hopes to use broad-based health programs to inform students, faculty and administration about topics such as eating, sleeping, relieving stress and exercising.

"I just want to get the word out about health," she said. Within the next few weeks, Shaynak will team up with Residential Life to produce a stress management program for exam time."

Shaynak chose to return to the University level, after she realized that the amount of information that students were coming to college with but not using properly. She hopes to educate these stu-

dents about the benefits of taking advantage of such information. She believes that the issue of health is important to everyone and college campuses are a place to promote awareness about this issue.

"I hope to help students to make permanent lifestyle patterns," she said. By utilizing new information and advanced studies, Shaynak plans to provide students with the facts about the safe and unsafe methods of health. "I want to provide accurate information to the public on a professional level."

As for the University, Shaynak feels that all university campuses need to be aware of the issues of good health, but the degree of this needed awareness varies.

Her interest in health awareness began in college as a Resident Advisor and carried on to her graduate studies at Ball State. While in her two year program at Ball State she was responsible for conducting the health programs for a campus of 20,000.

Shaynak replaced Jan Baylor as the director of health programs for the University.

NOTICE FROM THE OFFICE OF HOUSING AND RESIDENTIAL LIFE

THANKSGIVING RECESS

All residence halls will be closed from 10 a.m. Wed., Nov. 25 through Sun., Nov. 29, at 10 a.m. If you are required to remain on campus, you must register with the Office of Housing and Residential Life by no later than Fri., Nov. 20. Registration forms will be available through Friday. Registered students will be permitted to stay in their assigned residence hall room. During the recess, the exterior door locks of all residence halls and University-owned fraternity houses, except Faculty Court and Bucknell West, will be changed.

Registered students will be issued an outside door key that will give them access to their facility during the recess period. Keys will be available for pick up at the Office of Housing and Residential Life on Thurs., Nov. 19 and Fri., Nov. 20. Residents of Faculty Court and Bucknell West must register to stay even though locks in those areas will not be changed. If you are a student-athlete who is required to be on campus during Thanksgiving recess, you will be registered by your coach, but you must pick up an outside door key to your residence hall as noted above. If you return to campus at any time during Thanksgiving recess and have not previously registered, a fee of \$100.00 per day will be assessed to your student account.

WINTER INTERIM

All residence halls will officially close at noon on Fri., Dec. 18, 1998. All exterior door locks including University-owned fraternities, Bucknell West, Faculty Court and Gateways will be changed so your room key will not open the door. All residence halls will reopen for second semester at noon on Sat., Jan. 9, 1999. Students who must be present on campus between January 2-9 because of explicit University commitments or learning opportunities must complete the Authorization Form for Access to Room and return it to the office of Housing and Residential Life by Dec. 4, 1998. Forms are available in the Office of Housing and Residential Life, 219 L.C.

Public Safety Log

November 11, 1998

INFORMATION/VEHICLE DAMAGE—Public Safety responded to Taylor parking lot for the report of minor damage to a parked vehicle.

November 12, 1998

MEDICAL AID—Public Safety responded to the LC for the report of an ill employee. The individual was treated by ambulance personnel on the scene but refused transportation to the hospital.

November 15, 1998

INFORMATION—Public Safety responded to Vedder Hall for the report, from a resident, of a disturbance outside a room door. A University student did admit to causing the disturbance. The victim did not wish to press charges at this time.

POLICE ASSIST—Public Safety responded to Kappa Sigma Fraternity to assist Lewisburg Police Department on a noise complaint. A second noise complaint was later received and the party was ended. The fraternity was cited by Lewisburg Police Department.

VANDALISM/CRIMINAL MISCHIEF—While on routine patrol, Public Safety observed a vehicle with a broken window parked on Walker Avenue. The owner was notified.

INFORMATION—A University student reported to Public Safety that a window was broken in her off campus residence. The incident was reported to Lewisburg Police Department.

November 13, 1998

MEDICAL AID—Public Safety responded to Roberts Hall for the report of an ill student who was transported by ambulance to Geisinger Medical Center for treatment and later released.

MEDICAL ASSIST/UNDERAGE CONSUMPTION (TWO COUNTS)—Public Safety responded to Vedder Hall for the report of an intoxicated person who was transported to Evangelical Community Hospital Emergency Room for treatment. Another student admitted to having consumed alcohol while under the legal age. Lewisburg Police Department was on the scene. Police and university citations for underage consumption were issued.

VEHICLE STOP/UNDERAGE CONSUMPTION (TWO COUNTS)—While on routine patrol in the University West Mod area, Public Safety observed a motorist operating a vehicle with two individuals sitting in the trunk. The vehicle was stopped, occupants were identified. East Buffalo Township Police Department was notified and police citations are pending.

November 14, 1998

INFORMATION/FOLLOW-UP INVESTIGATION—Public Safety is investigating the report of four male University students vandalizing a restroom in Vedder Hall. The students were gone when the officers arrived.

NON-EMERGENCY MEDICAL

November 16, 1998

BICYCLE THEFT—A University student reported to Public Safety that an unsecured bicycle was taken from the LC bike rack. East Buffalo Township Police Department was notified. The incident is under investigation.

November 17, 1998

CRIMINAL MISCHIEF—Public Safety responded to Alumni House

Tripp tapes finally released

WASHINGTON—The House Judiciary Committee has finally released the infamous Linda Tripp audio tapes. Since the transcripts of the tapes were released in October, Tuesday's release doesn't contain any new information. However, the public airing is the first time the nation will hear Lewinsky describing the details of her sexual relationship with President Bill Clinton.

The tapes have proved to be the crucial turning point in the Lewinsky saga, after Tripp turned them over to Ken Starr last January and he used them to expand his Whitewater investigation of President Clinton.

Government witness testifies: Microsoft defends bundle

NEW YORK—Microsoft lawyers continued Tuesday to dispute government witness Glenn Weadock's claims that by bundling its Internet browser into its operating system, Microsoft stifled competition in the browser market.

In his written pretrial deposition, Weadock—president of consulting firm Independent Software Inc., said he had found that many companies received little benefit from the integration or "bundling" of the programs, and in fact they did not even understand why they had been marketed together.

Students planned blood bath at Wisconsin high school

BURLINGTON, Wisconsin—People in this community were stunned to learn that five teenage boys had been arrested for allegedly plotting to kill students and staff at the local high school. Authorities say the boys intended to carry out the attack Monday and had planned a classroom-to-classroom blood bath. Each of them had picked out some students. A total of 15 to 20 students had been selected.

Authorities say the motive was revenge against students who had taunted them and "treated them like trash." Prosecutor Richard Barta also said the boys described their plot as a suicide mission.

A rate three-peat for the Fed?

NEW YORK—The Federal Reserve's policymakers are expected to cut borrowing costs for the third time this year when they meet Tuesday, despite signs that the credit crunch that prompted the previous cuts is subsiding in a more stable global economy.

Though markets have so far managed to dodge a doomsday scenario, analysts say the Fed is inclined to trim rates further in a bid to stay ahead of the monetary curve.

World

U.S. forces ready as U.N. weapon inspectors return to Iraq

BAGHDAD, Iraq—The first group of U.N. weapons inspectors arrived Tuesday following resolution of the latest crisis with Iraq. President Clinton warned that U.S. forces remain "strong and ready" to strike without warning if Saddam Hussein fails to make good on his last-minute promise to comply with U.N. resolutions.

Iraq avoided a U.S. attack by less than an hour Saturday, after Hussein made an unconditional pledge to allow U.N. inspectors unfettered access to Iraqi sites, effectively ending a two-week standoff.

The best meteor shower in 32 years

On Nov. 17 and 18, the world witnessed the Leonid Meteor Shower — so named because the meteor streaks, when traced backwards, appear to radiate from the constellation Leo. It occurs every November, usually with little fanfare, when the Earth passes through the debris left by comet Tempel-Tuttle.

Every 32 or 33 years, the comet speeds through the inner solar system, replenishing the debris trail by shedding swarms of particles as it nears the sun. The shower of "falling stars" is actually the glowing trails of comet dust, or meteoroids, sizzling through the sky.

Israel accepts Arafat's clarification of comments

JERUSALEM—Palestinian Authority President Yasser Arafat has met Israel's demands for a retraction of statements alluding to a possible resumption of an armed struggle between the two sides, a spokesman for Israeli Prime Minister Benjamin Netanyahu said Tuesday.

However, Netanyahu adviser David Ban-Ilan said this did not mean that Israel would automatically begin withdrawing its troops from another 13 percent of West Bank land, as agreed to in the land-for-security accord signed by Netanyahu and Arafat last month in Maryland.

APEC summit formally opens in Malaysia

KUALA LUMPUR, Malaysia—The sixth APEC summit of Pacific Rim nations formally got under way Tuesday, with leaders desperately seeking remedies for the region's worst economic crisis in decades. But the meeting was overshadowed by a row with the United States over pro-democracy reforms.

On Monday night, Gore enraged the Malaysian political and business community by praising the "brave people of Malaysia" for their political-reform movement—one of whose goals is to end Mahathir's 17-year leadership. Other summit participants also slammed Gore for his comments, saying they were un diplomatic and rude.

RHA members attend regional conference

Students attended workshops and are planning programs geared to the University

By Aimee Nicklaus

Four University representatives recently traveled to Philadelphia to participate in a regional conference of Residence Hall Associations. The group took home valuable RHA experience—and some accolades—for their presentation efforts.

Three students, Ryan Williams '02, Gabrielle Thiry '02, and Nat Arlander '00 and RHA advisor Kim Young attended the 1998 regional RHA conference at LaSalle University in Philadelphia on Nov. 6-8, 1998. The conference was titled CAA-CURH, standing for Central Atlantic Affiliation of College and University Residence Halls. The '98 theme was "Champions in Training."

The conference involved representatives of RHA affiliates from colleges around the area, and a series of programs were presented by each school which dealt with issues pertinent to college life. At the conference, these three students presented a program called "Sex, drugs, and alcohol for everyone" dealing with the dangers of date rape drugs.

The program was recognized as one of the top 10 out of approximately 57 programs evaluated. The evaluation was based on the amount of audience participation and other students' perceptions of each program.

One of the reasons that the Bucknell program was so effective, according to Thiry, the secretary and treasurer of Larson and Harris halls, is that "some programs were ran by adults, but others, like ours, were done by students who related to other students much more effectively."

The group wanted to communicate that date rape drugs, like "roofies" or rohypnol, are a common problem affecting college campuses nationwide. The program outlined the effects of date rape drugs and some prevention techniques.

These drugs are slipped into someone's drink and result in about a half-hour to 45 minutes in loss of memory, unconsciousness and possible respiratory failure. Worse, there is no trace of the drug left in one's system the next day. The drug is also used by teenagers taking diluted doses to increase their "buzz."

The program began with Arlander and Thiry handing out sodas to audience members as they entered, who were then stimulated to think about why they subconsciously trusted that the two students did not put anything dangerous into their drinks. Williams stayed in the audience acting like just another spectator. Arlander and Thiry reviewed statistics and hard facts about such drugs, and later in the program Williams stood up and

began protesting the program claiming that there was nothing wrong with "roofies" and that he used them on girls all the time.

Audience members reacted with shock, disgust and anger. The effect was achieved, however, and people began to realize that these types of problems really do exist. The students felt that, overall, the participants were very responsive to the topic.

The program will be followed up by RHA programs on campus. Next semester, RHA will be sponsoring "sex week" to help educate students on potential dangers. This event, like the RHA conference, will be hosted by students.

Arlander, appointed by RHA to the position of national communications coordinator for executive board, hopes to use what he learned at the conference by holding the same position next year.

Nat says, "It was a good time, and we met a lot of new people, but we really got a lot done." Nat says that after elections in December, RHA will begin planning several new programs to introduce to Bucknell this spring.

Many people are unaware of exactly what RHA does. RHA is a national organization split up into different regions. Thiry says, "Some people think that we don't really do anything on RHA, but we are here for the betterment of students' living environments."

The primary goal of RHA is to improve living experiences for students at Bucknell. Many RHA projects, like adding new televisions and ping pong tables, lie in improvement of dorms. The organization also develops activities during siblings weekend, homecoming, and campus-wide bands and barbecues in the spring. Williams reminds students, however, that "RHA is not a catering service, as some students tend to see it."

Shown from left, Ryan Williams '02, Kim Young, RHA advisor, Gabrielle Thiry '02 and Nat Arlander '00 attended the regional RHA conference which was held at LaSalle University in Philadelphia.

Ryan Williams, current vice president of campus RHA for Roberts, Trax, and Kress halls, said, "whether it is having a once a month meeting with a school official to let the student body voice their concerns or through a summer retreat to plan out our yearly activities and programs, I feel that with what I learned at the '98 RHA conference and determination, motivation, and desire, I can now successfully make Bucknell's RHA recognized as one of the major organizations on campus." Williams expressed his desire to apply what he learned at the conference to RHA in a larger role in the future.

The conference serves to enhance the role of RHA. Arlander added, "At every conference, one can learn something new and bring that to Bucknell, where we can make something better." All three students say that they learned a lot at the conference to apply to their offices here on campus.

Williams added, "If anyone feels that they can make a difference, RHA is for them, and they should contact one of us to get involved."

TELEPHONE

From page 1.

transition.

"Right now we have two different exchanges on campus. All students and residence halls are 523 with numbers that start with four or five. All the offices are 524 with numbers that start with a one or a three. We are very limited in the phone numbers that are available.

Right now there are 4,000 numbers available," Spencer said.

"We've used all 4,000 of those numbers. We need to be able to assign more numbers. The 523 and 524 exchanges are fully subscribed."

With an increasing demand for new phone numbers, the University has requested that the Buffalo Valley Telephone Company switch the

exchanges to 577 to fulfill the need. Nearly all numbers within the 577 exchange will be available to the University, increasing the amount of phone numbers available to students and faculty by 50 percent.

In addition, the 577 prefix will be available for off-campus students and organizations as well. "All people who live downtown who are associated with Bucknell will be put into the 577 [e x - change]," Spencer said.

The new exchange is also being implemented to simplify communications in the University. "It seems foolish to us to add numbers in yet another exchange on campus. To have 524, 523 and 577 numbers all coming to Bucknell is

really confusing to everybody. This will solve a lot of problems with people misdialing numbers. The 577 number will solve a lot of problems," Spencer said.

The University is taking advantage of the area code switch to make its own changes on campus. Both the new area code and the new 577 exchange will be implemented simultaneously to make the transition smoother.

Nonetheless, Spencer suspects the transition will bring about some problems. "There's going to be some short-term confusion. Whenever you change phone numbers, people will be confused by the change," Spencer said. "A couple things are happening to mitigate that problem.

We're going through an extensive campaign to warn people. We're sending out postcards to everybody associated with the University, telling them the telephone numbers have changed. Another thing that mitigates this is that there will be a period of time when both phone numbers will work. Between Dec. 5 and early April, either number will work."

Students are urged to tell family and friends about the upcoming change. "Everybody who's working to communicate this change helps this overall process," Spencer said.

Area codes and exchange numbers are scheduled to change at 12:01 a.m. Eastern Standard time on Sat., Dec. 5.

A Quaker Voice -

[The expression of joy] almost invariably goes over into gratitude and praise for the Source of Love, the Occasion of Joy, the Author of our Being that includes such possibilities in the midst of the limitation and pain of human life.

The emotional effect may fade. The limitations and pain of human life may go on; but the memory of the occasion and the experience of Love it imparted remain part of the fiber of our being. They add formative touches to our lives and draw us onward to fuller and fuller embodiment of Listening and Love.

A Quaker Query: What is the strongest test of your commitment to the spiritual life that you experience? What has helped you to return to it again and again? What gets in your way?

The Lewisburg Friends (Quaker) Meeting gathers at 11 a.m. on Sundays in the Smith Library, Vaughan Literature Building. We would be pleased to have you with us. For information call Geri Cooke at 523-6628.

Our regional website is "Upper Susquehanna Quakers," at <http://www.epix.net/~wadow>.

Horodner promotes the underused Art Gallery

Christine Lellis—The Bucknellian
Stuart Horodner surrounds himself with art as the director and curator of the Art Gallery.

By Heather Napolitano

Among the beneficial academic resources available to both students and professors at the University, one of the most unique is also the one least taken advantage of. The Bucknell Art Gallery sits on the third floor of the most trafficked building on campus and yet Director Stuart Horodner says it remains "often underused by people who could be using it for teaching and pleasure."

Horodner, director and curator of the Gallery, views his role as a means of "contributing to the benefit of education." With this end result in mind, he both conceives of and organizes an exhibition schedule that is geared to the academic and cultural needs of the University.

As opposed to simply renting pre-packaged shows,

Horodner aims to develop a wide variety of novel projects. He says that he has recently been "more interested in bringing the artists here to generate the work on campus." In doing so, he is able to "have the artwork deal with the University." In this way, the community is able to view not only the products, but the process as well.

Horodner also strives to bring in exhibits and work that can be integrated into University curriculum. He says, "We talk to faculty and encourage them to find ways to tap their classes into things here." One of the present exhibits in the Gallery serves as an illustration of his efforts: "Shouts from the Wall: Posters and Photographs Brought Back from the Spanish Civil War by American Volunteers." According to Horodner, this exhibit can be tied into geography, history, art, Spanish and humanities classes.

Exhibits conceived of in this small Gallery on the top floor of the Langone Center are also being discussed outside the University and across the country. From Dec. 25, 1997 to Feb. 25, 1998 an artist Kay Rosen presented a work entitled "HI" which appeared on two commercial billboards—one on Route 15 in Lewisburg and the other on Route 144 in Centre Hall, Pennsylvania. In conjunction with this, the Art Gallery produced representations of this artwork on buttons in an attempt to publicize it. The billboard appeared in this month's issue of *The New Art Examiner* as well as in *Art and America* magazine. The Museum of Contemporary Art in Los Angeles was distributing the buttons. Horodner says, "In L.A. people were telling me that they are hearing about art projects at Bucknell (our billboard and residency projects)... I hope people here on campus are as aware of these things."

Horodner states that he is pleased with the coverage that arts, on the whole, receive on campus. "Arts receive as much if not more attention than other events on campus," he says. "Art seems to get a lot of discussion." However, despite this feeling, he does not believe that the Art Gallery is used to its potential.

Horodner says that "the Gallery is visited by approximately 20% of the campus community consistently, but I guess I'll always feel that it's underattended." He estimates that 700 to 800 people visit the Gallery per month. This number includes students, faculty and people in the community. He further estimates that 500 of these visitors are students. Note that this is a campus of 3,500

students. Horodner continues, "I don't find that faculty attend it either... whether you can ever teach with it or not, it is still here for you."

Horodner spent a large portion of his life in New York City where students "live and breathe" the arts. He received his bachelor's degree there as an art student at Cooper Union followed by his MFA and BFA at Rutgers. He then became the owner of an art gallery in the center of New York City. Coming from this background where vast numbers of people had a passion for the arts, Horodner doesn't understand why more students here do not frequent the Gallery. He says "there is a student response that's more general and less vital regarding art and culture... I don't understand it and I'm not used to it." He continues to say that "it's amazing to see that people don't pop in to see what's here."

Since the intent of the Gallery is to target students, Horodner is very interested in hearing student feedback. "If we're not doing things that speak to them, we would like to hear what would speak to them."

The Gallery presents five or six diverse projects a year. January will not only bring the start of the spring semester, but also an exhibit entitled "Relay Drawings: Eye, Hand, Other." This exhibition will show the nature of drawings through various aspects of drawing in sculpture and video. "Most of the work will be done here," Horodner says.

The future will also bring the Gallery's continued attempts to "reinvent different ways for the gallery to function and bring in more diverse ways of doing that." Horodner says, "I would like to make art here as important as sports or sex or drinking coffee. That's a long process, but not so unreasonable."

This photo will be part of the *Relay Drawings: Eye, Hand, Other* exhibition beginning in January.

Le Temps Des Assassins: Show your writing and art talent

By Jamie Troxell

The email earlier this semester read: "Submit your BRIGHT IDEAS by Friday, Nov. 13. We accept poetry, fiction, drama, music, photography, paintings and criticism." However, the call fell on deaf ears; only 10 people out of a university of about 3,500 students submitted material. Is there no talent out there or are people just afraid to have their talent publicly acknowledged?

Le Temps des Assassins is an art magazine of both literary tradition and new individual talent. It was born in January of last semester, at which time two magazines were published. Said editor-in-chief Christopher Evans '99, *Le Temps* took over the *Catalyst* because the *Catalyst* was a "much-maligned magazine and was having troubles even printing. We came in and took over the show."

The magazine currently has a large organizational staff of both men and women including fiction editor Doug Didyouing '99, poetry editors Minal Singh '99 and Andrew Ciotola GR, and the arts editors and magazine designers Mike Nicoletta '99 and Christopher Bauer '99. They have 1,000 copies of each issue printed, and they go very fast because the covers are sensational.

Le Temps des Assassins is about "a group of students who, being here for three to four years, decided to do something really artistic that had nothing to do with academics," Evans said.

"They wanted to do something else with themselves that they truly loved and had an enthusiasm for making themselves anew. The purpose is to embark upon a project that we hope will spark an aesthetic sensibility," Evans said.

The title of the magazine is translated as "The Time of the Assassins," from the poem by Arthur Rimbaud entitled "The Morning of Drunkenness." A good metaphor for the magazine would be "going to a black, stagnant pond, sticking a big stick in it, and stirring it like a stew," Evans said.

"Since we started, we have developed a bad reputation for being rash and very undisciplined and untamed and these were not aspersions. They were not completely true, and they were not completely false. We just have a lot of energy because we are young. We have a lot of energy, a lot of vigor and charisma," Evans explained.

There is no political or religious connotation to the magazine's title. This presents an irony, because the first magazine had burning crosses on it and people thought it was racial and religious. However, the photograph came from a parade in County Sussex, England, celebrating the Guy Fawkes' Parade. Guy Fawkes led the Gunpowder Plot to blow up Parliament on Nov. 5, 1605. The magazine's first arts editor, Nicoletta, went to the parade, and witnessed the burning of crosses. He took a photograph of this with a building with "Bright Ideas" written on it in the background. "It was a beautiful photograph, but people don't get that because they are so biased, and they're so unneatly. They see that, and they can't see through the lines," Evans said.

"I demand to people at this school to use the brains that they have. They are at a school of higher education that is top 30 in liberal arts and engineering. They are here to use the brains that they were admitted into this school for. And, they look at it, and they pass it off. They judge the magazine by its cover, and that's not good enough. We

work very hard, and people should be supporting the arts community here. People should be supporting Bucknell Hall. Professor Pat. Professor Hogue, Professor Cooley. We should know them and talk to them. A lot of people make fun of us. People rip down our posters and defile them. I don't know why people do that kind of stuff. It's not fair. Sometimes it's bothersome. I don't go around ripping other people's posters down," Evans said.

Harsh judgment is not the only thing to plague the fairly new magazine. Evans said, "The poetry and the prose, for the most part, isn't that intelligent, but we're getting better because we have been working with one another. It is really untamed and undisciplined and we're trying to work on that to have a delicate balance, though precarious, between sensation and intelligence. It can't just be sensation, because it boils down to shock value. Shock does not belong in art, not completely. There should be some intelligence in it as well. I really think that, in the beginning, it was too sensational, more so sensational than intelligent. Now, we're working on the intelligence aspect."

This is why Evans asked two students this semester to join the organization. One is a second-year grad student Ciotola, who is now working with Evans as the poetry editor. (Incidentally, Evans is also the founder, president and the editor-in-chief of the magazine). The second person is Didyouing is, as proclaimed by Evans, "a great prose writer; the best prose writer at this school."

Evans, Ciotola and Didyouing are disciplining the magazine. Evans said, "We're

putting more intelligence in it than just shock value. The young don't write marvelous poems or take marvelous pictures, with few exceptions. The only experiential knowledge we have was of our journeys in London and Paris and other countries. When we came back to Bucknell, we were discontent and unhappy that, at a school of 3,500 people, the interest is lacking. For example, two weeks ago there was what should have been a big poetry reading. The students came in and put their art on the wall and no one shows up. Why? If only one student out of ten at this school showed up, there would be 350 people, but there were not even 30 people there."

Oscar Wilde once wrote, "We can forgive a man for making a useful thing as long as he doesn't admire it. The only excuse for making a useless thing is that it admires it intensely. All art is quite useless."

Evans said, I understand that art is useless, but we do admire art and we want other people to admire it. There are a lot of people at this school who probably write, who probably take photographs, who have a passion for art, who don't just want to be engineers but editors of papers, too. They can do it. All they have to do is call me, and I will help them. The Bucknell Arts community will embrace you. People shouldn't be so afraid. When we get poems, we do our job on it as critics. Even if it is good or bad, we call them on the phone and have them come over to work with them like it's a class. We want to work with people, because no one wants to work with anyone anymore. It has become a very selfish world, very selfish, and we're not like that; we want to help everybody."

Not only do they help others with their

writing, but they help each other. Evans said, "We all help each other with poetry; sometimes we get more help than we do from professors. We support each other, and we all give each other wings. We are a flock of birds flying together, and we don't shoot one another down and we don't compare ourselves because comparisons are odious. We help one another until we can craft our art. We are just trying to have a good time to prepare ourselves to go on the path of art when we leave the University."

"Bucknell is not the ideal environment for the artist. There are wonderful writers here, both professors and students, but we were in London and Paris and we saw what goes on outside here, and we have to prepare ourselves for when we leave here," Evans said.

What could they possibly get out of this?

"It has nothing to do with fame. Fame in an academic forum means nothing. Sometimes it wears us out. It's not like we get paid. We get to produce something. We're not pretentious; we're just ambitious to do the world some good. The word ambitious means making the world go 'round. I think art makes the world go 'round. Poetry moves the deepest recesses of the human heart; if it doesn't, it just doesn't. If you read one of Keats' odes, you think, 'my god, there is something really beautiful about the world.' We want everybody to use literature and a stereo as a spring-board in the salvation because some people have devoted every atom of themselves to a life of art," Evans said.

"Art is not an escape from life. That is what some people think. Art is life. I don't know if someone wants to have their life based on their art or their art based on their life. That's the artist's decision to make for him or her self. Maybe, people frown upon us because we take ourselves very seriously. We do, but we don't admire ourselves. We don't admire our art."

The staff members of *Le Temps des Assassins* work very hard for their magazine and the community, and they are all willing to help others who share their interest in the arts. For the past two years, Evans was the winner of the University Prize for Men English Literature Award. The four people who won honorable mentions for the Smithsonian Prize last year are all editors of the magazine. Singh won the Smithsonian Prize two years ago.

If you would like to submit to the magazine or you just need help, you can contact any one of *Le Temps* editors. The next issue of the magazine will be given out on Dec. 1. At 7:30 p.m. that evening there will be a general reading in Bucknell Hall. At 8 p.m. there will be a presentation of *Le Temps des Assassins*. All interested parties are welcome to attend.

Music for your Thanksgiving dinner: Alanis Morissette, U2 & more

By Matt Albert

This week's article is going to be a little different. In a salute to Thanksgiving, I am reviewing three different compact discs that I feel compliment each stage of Thanksgiving dinner. I feel listening to these CDs throughout the meal will not only evoke the right mood around the table, but will aid in digestion as well.

Preparing to Eat/Appetizer
Alanis Morissette: Supposed Former Infatuation Junkie
• Warner Brothers

I chose this album as a precursor to dining for two reasons. First, this newest release from Alanis is surprisingly upbeat and will give you energy necessary to make the long walk from the couch to the dinner table (a shorter walk if you are still at the kids table like me). Of course, there are the obligatory sad songs from Alanis, but after previewing all 17 tracks, I think the listener will sit at the table with a smile on his/her face. This leads to my second reason. The fact that most of Alanis' songs are very emotional and thought-provoking will provide good conversation topics and will hopefully instill confidence when discussing those controversial issues, as she does so well in song.

I would say half of the songs on the 72-minute-long *Supposed Former Infatuation Junkie* are in the same category as "Head Over Feet," while again Alanis puts together two or three tracks that are in the same league as "Ironic." To start off the album, "Front Row" offers an upbeat and almost cheery brand of Alanis that is rarely seen but should be appreciated. Of course, most every listener will recognize track three, "Thank u," since it is played on the radio at least 30 times on any given day. As hard as stations may try to kill this song by way of over-playing it, the simple beat and profound lyrics still attract the listener now and again. "Are You Still Mad," which follows "Thank u" in the batting order, is another solid offering that features the high-pitched wailing fans around the world are familiar with and have come to love.

Overall, each song on the album brings its own unique character to the table. Even track 11 entitled "One," where she says the word "one" over 10 times in a row during the refrain can be looked upon in a positive light. But this compact disc, like any good appetizer, does not take center stage and saves room for the main course. A main course in the form of U2.

Main Course
U2: The Best of 1980-1990
• Island Records Inc.

The newest release from this age-old band is a double CD featuring a collection of the group's best from 1980 to 1990 on the first CD, along with a full compilation of their B-side songs on the second CD. This one-two punch is the turkey, stuffing and mashed potatoes all in one tiny plastic case.

Most normal U2 CDs have only a few, if any, mediocre songs included. It is therefore not surprising that the 14 songs on disc one, songs from an entire decade of music, are all fan favorites and can be played without pushing the fast forward button. A mere glimpse at the CD back cover reveals famous songs like "Pride (In the Name of Love)," "With or Without You," "Where the Streets Have No Name" and "Sunday, Bloody Sunday." Even the less famous songs hold their own. Track nine, "The Unforgettable Fire," for instance, is the title song from one of their early '80s albums that can be appreciated by any U2 diehard. Side one also features the newly released single "Sweetest Thing." The song, originally intended to be a part of *The Joshua Tree*, is unique from any other U2 song I have heard. A very light piano jingle takes the spotlight away from the guitars, an unusual change of pace. "Sweetest Thing" is one of the most upbeat songs from U2 that subconsciously coaxes the listener into bouncing along with the lyrics for the entire three minutes.

As if one CD was not enough, U2's collection of B-side songs is the gravy on the mashed potatoes. Fifteen of the band's best B-sides are found on disc two. B-side songs are those that are not found on any particular album, but usually accompany single releases. In other words, these are freebie songs usually found on the flipside of singles, side B. Though usually not the reason the single was bought, these songs are formidable and when put together on a compact disc rival any other U2 album.

The CD begins as strong as disc one ended with "The Three Sunrises," a walling Bono led, electronic arrangement. Track two "Spanish Eyes" is more of an intense guitar mix right before another version of "Sweetest Thing." Songs four through six are good at best and can make the listener appreciate why there were B-sides in their former life. A word of advice: do not look for any words with track five, "Bass Trap."

Tracks seven and eight are where the album becomes interesting. U2 dives into the world of remakes and performs two famous songs, "Everlasting Love" and "Unchained Melody." "Everlasting Love," U2-style, is more upbeat than the original and utilizes the guitar to a greater extent. "Unchained Melody," the main song from the movie *Ghost* is butchered by Bono, who does not quite have a voice robust enough to do the song justice like the Righteous Brothers. As for the remaining tracks, there are a few winners, but I would say all of them take some getting used to. Look out for track 10, "Luminous Times," track 11, "Hallelujah Here She Comes," and track 12, "Silver and Gold," to earn their time in the sun.

At a time when old standards in music are being forgotten, U2's *The Best of 1980-1990* shows no signs of weakness and should last easily through a long sitting at the dinner table. Both inspirational and emotional background music will make this Thanksgiving dinner a comfortable and memorable one. It is understandable how two great artists back to back could leave one stuffed, but hopefully there is still room for dessert.

Dessert
Multiple Artists

Thanksgiving dessert is one of the hardest decisions of the year because there are always too many worthy dishes from which to choose. Instead of making the choice for you, here are a couple CDs due out within a month that would end a perfect meal.

November 17 saw new releases from three big named artists *Garth Brooks Live* is a two CD set of Garth Brooks' best live performances, while *No. 1's* is Mariah Carey's collection of number one hits since her entering the musical world. Also on the 17th, Jewel got back into the game with her release of *Spirit*. In late November, Pearl Jam plans to board the live album bandwagon with *Pearl Jam Live on Two Legs*, though who can blame them. It's line up includes a couple favorites such as "Daughter" and "Better Man" which is sure to earn the band a fair amount of revenue.

A medieval collaboration

The University's Opera Company, Concert Chorale and Orchestra work together to create the production of *King Arthur*

By Meg Sommerfield

The campus community can escape into the world of medieval legend when the University's Opera Company, Concert Chorale and Orchestra collaborate to present *King Arthur* this Sunday.

The production doesn't parallel the stereotypical opera. The actors of *King Arthur* wear brightly-colored wigs. The completely non-traditional opera, written by John Dryden ca. 1690 and composed by one of the greatest English composers, Henry Purcell, departs from the original Arthurian legend through political allegories of the late 17th century embedded in the tale. This "semi-opera" was actually written as a masque, a genre which combined opera and spoken drama; such works were preferred to fully sung operas during the Restoration period.

The story is about the coming together of two societies, the Britons and the Saxons. The two groups fight because King Arthur tries to protect his beloved Emmeline from the Saxon King Oswald. Both kings use wizardry to prevail and Emmeline is eventually returned to Arthur. Throughout the opera, there are additional scenes involving shepherds, "half-naked" sirens, and spirits. Cupid is also featured in the production, and is charged with awakening "the Cold Genius" — a character representing a "frozen" society — and teaching him to love.

This is only the second collaboration of the Chorale and the Opera Company; the first one took place about five years ago. The

combination of the different ensembles on the Weis Center stage presents an imposing presence to the audience. The Bucknell Concert Chorale is directed by William A. Payn, professor of music, and includes 60 student members. Payn commented on the chorale's unique role: "It's quite different from their normal preparation because of the movement involved. This gives them a chance to be involved in theater as well as singing." The orchestra, directed by Christopher Para, associate professor of music, performs a colorful and moving rendition of the musical score.

Rowena Cowley, a visiting professor from Australia, is the director of the opera. During the preparation for the production she remarked, "It's important for performers to understand the rehearsal process as a means of making the composer's and dramatist's intentions feel natural on-stage." She also mentioned that Annie Randall, assistant professor of music, helped her with the inception of the idea for this collaboration.

The Bucknell Opera Company consists of nine student members and one professor, Todd Griffith, visiting assistant professor of computer science. The student members include Kate Cressman '99, Christopher Hallierson '01, Marissa Luciani '00, Erik Ralph '00, Krystal Rickard '00, Lindsey Rosenberg '99, Jennifer Schweiger '00, Alexandra Shamas '01 and Jennifer Tilok '00. One of the lead singers, Rickard, also choreographed dance sequences to be interspersed within the action of the opera. The other dancers include Kristie Kuhn '00, Katie Paolisso '99 and Sarah Wagner '01. The assistant director is Amanda Erickson '00.

Said Rickard in reference to the preparation, "At the first rehearsal with the three ensembles and the dancers, it finally felt like everything was really coming together. The whole process is pretty overwhelming."

The performance of *King Arthur* will take place at 7 p.m. this Sunday in the Weis Center for the Performing Arts. Admission is free.

Beetna Kim—The Bucknellian

The Bucknell Symphonic Band performed for the community last Sunday afternoon in the Weis Center. The concert, conducted by Kevin Tutt, included pieces from Gabrieli, Wagner, Tull, Persichetti and Shostakovich.

Time is slipping away for the red wolf

By Kate Nowak

Wolves have endured a long and troubled history in the United States since European settlers came to colonize and share their territory. Complex and controversial, the relationship between wolves and people has suffered since then, as human fear transposed into persecution, and only now has it become one of respect. But is it too late for restitution?

Over the past century, wolves have been completely eliminated in the lower 48 states. Over 80,000 wolves were killed under Congress' extermination program in Montana alone. As late as 1965, bounty programs rewarded individuals for the trapping, hunting, poisoning and killing of wolves. At this same time, habitat loss continued as land was cleared for logging, mining, and road development.

TYPES OF WOLVES

Three types of wolves exist in the United States. The gray wolf, largest of the three, originally ranged throughout the continental United States due to its ability to adapt to extreme temperatures.

A subspecies of the gray, the Mexican gray wolf once roamed central and southeastern Arizona, southern New Mexico, and western Texas. Sightings of the Mexican gray wolves have not been confirmed since the 1970s and in Mexico since the early 1980s.

The third, the red wolf, the smallest wolf in the world, was once a resident of many parts of the southeast, including Florida, extending as far north as Pennsylvania, and as far west as central Texas. By the 1920s, only 100 years after its discovery, the loss of prey and habitat, combined with ruthless persecution from the Federal Predator Control Program, led to the extinction of the red wolf in the state of Florida. By 1980, red wolves were considered extinct in all of the wild.

HUMAN DEVELOPMENT BRINGS ABOUT EXTINCTION

What brought about this extinction was human development, which led to the decrease in habitat, in turn causing scarcity of prey. The loss of prey, including white-tailed deer, raccoons and rabbits forced the wolves to revert to livestock for food. Federal control programs reacted by instituting programs through which 50,000 red wolves were shot, trapped and clubbed to death between 1932 and 1964. Pushed to a small area of Texas and Louisiana, the wolves began to breed with coyotes. By 1967, the red wolf was considered to be an endangered species, and as mentioned above, its official extinction was pronounced in 1980.

Before this declaration, a last-minute rescue operation, conducted by the United States Fish and Wildlife Service, rounded up the remaining red

wolves. Out of about 400 found, only 17 were purebred. These 17 were shipped to the Point Defiant Zoo in Tacoma, WA.

The few animals rescued were successfully bred in captivity and over the years their numbers have increased. Recovery encouraged reintroduction into the natural habitats. Three programs were initiated.

The first occurred in the Alligator River National Wildlife Refuge in northeastern North Carolina. Four pairs were released here in 1987, and the following year, red wolf pups were born in the wild for the first time in nearly a decade.

The second red wolf recovery site was established in 1991 in the Great Smoky Mountains National Park in Tennessee, at which three wolves were released.

The third occurred at Horn Island near Gulfport, MI. These wolves were implanted with radio transmitters and equipped with radio collars in an effort to track them, as well as protect them from those who had opposed the reintroduction.

RECOVERY EFFORTS IN NORTH CAROLINA

Kim Quintal, a graduate student in the North Carolina State College of Forest Resources, together with Jan Laarman, professor of forestry at N.C. State, conducted a survey in April 1995 in order to estimate the ratio of the public support and opposition to the reintroductions of the wolves. Debates were numerous, but out of the 600 residents interviewed, 310 stated their support of the efforts, while only 189 opposed. Of

the 189 in opposition, many stated their belief that the red wolves were dangerous to both humans and livestock.

No evidence exists to prove that red wolves are a threat to life. Cases of red wolves attacking pets or livestock are very rare. On the contrary, the animals generally avoid and fear people, hence remaining distant from their land. Of those surveyed, 56 percent stated just this—no documented cases of red wolves attacking humans existed. Despite this, only 48.5 percent said that they would not be afraid to hike in an area where red wolves were present.

Despite a number of lawsuits, the majority of North Carolina residents supported the recovery efforts. One reason that has heightened awareness is the fact that the red wolf is the only Native American wolf. It actually evolved here in North America, while the gray wolf migrated across the Bering Strait from Asia.

Many other factors contribute to the significance of the restoration, including the evident—wolves are an essential component of the ecosystems that they inhabit. Overpopulations of white-tailed deer have been shown to cause severe ecological damage through overbrowsing. Red wolves aid in the control of deer populations, which have exploded in not only North Carolina but in many other parts of the country.

Red wolves also hunt raccoons, rabbits, opossums and the problem nu-

trials, which are also plentiful in the northeastern areas of the United States. A balanced wilderness is one in which such a fundamental ecological process is maintained.

FAR FROM BEING OUT OF DANGER

But the unfortunate fate of the red wolf continues. A recent *Philadelphia Inquirer* headline (Nov. 15) read, "A wolf project ending in failure." The population reintroduced in the Great Smokies seven years ago has failed to sustain itself.

This fall, wildlife biologists will capture the last four red wolves that still remain in the Great Smoky Mountains National Park, which encompasses the Tennessee-North Carolina border. The capture marks a setback for the government's long-term goal of restoring the wild wolves.

Experts say that it was biology and not politics that killed the undertaking. Lack of prey in the mountainous 500,000-acre park enticed the wolves to search for prey in the 1.5 million acres of national forest adjoining the park itself. But this surrounding land contained too many private farms. Of the 37 released into the wild, six were killed. The remaining either succumbed to disease, parasites and starvation and of the 33 wolf pups born, all but four are either dead or missing and presumed dead.

Chris Lucash, a federal biologist sadly declared, "We're getting almost no survival out of these animals, certainly no survival without an awful lot of intervention on our part." The efforts to restore the shy and solitary red wolf, which is suffering one controversy after another, are doomed, due to habitat.

The captive-bred wolves may have lost too much of their innate fear of humans, and hence, despite tracking efforts of Lucash and his crew who fitted the wolves with the radio collars, prowled into cabins and campsites, as well as private farms. The government paid \$7,900 for 24 cows and other livestock that farmers claimed had been killed by wolves since 1991.

Although the other programs have proven more successful, the red wolf is far from being out of danger. With such minute numbers in the wild, the populations face constant chance of extinction. Additional lands are needed, as well as education of those local to the grounds about the true nature of wolf, its role in the ecosystem and strategies of minimizing conflict with humans. Without public support, the impending future of the red wolf remains uncertain.

Indigenous religions raise their voices of the past and future

By Adam Parris

According to Oren Lyons, as time moves on, most people lack more and more consideration for the way they live their present life, a concept that is intertwined with the ability to look ahead to the future. Indeed, in Lyons' idea of future generations, there is much more than just the future generations of his American Indian nation and family. There are the future generations of every living thing on this earth, and beyond.

"Are you going to aspire to be the richest man in America? Are you going to aspire to be the best man in America? Are you going to aspire to be the best family man in America? Are you going to aspire to be the best woman in America, the best mother, the best grandmother, or clan mother, or friend, or wife or person?" Lyons asked the University in a speech in 1992 at the Weiss Center for Performing Arts.

Amazingly, what Lyons said six years ago is still prevalent at the University, and in the world, today. At the Culminating Conferences of the World Religions and Ecology Series, Lyons addressed some of the same issues and more, remaining dedicated to his people's cause.

"Each day that we do not move directly opposite the directions that we are going now leaves us one day less of option. There is going to come a time when you will have no option, none," Lyons said.

An idea of seven generations has been a part of indigenous traditions, such as Lyons', for many years. It is an idea that has withstood both the six years since Lyons came to the University and the last 400 years since the white man arrived, for a

very specific reason.

"When I became one of the candidates for this faithkeeper, chief, council business and eventually was installed, one of the instructions that was given to me was very direct. They said now when you sit and you counsel the welfare of the people, think not of yourself nor even of your family nor even of your generation, but make your decision on behalf of seven generations coming," said Lyons at the conference.

The consideration that Lyons has for these generations cultivates a vast amount of wisdom. His decisions must stand for his people and for the earth.

"We believe that each individual, being a manifestation of the creation of what the creator planned here must be respected. And in the same light, all of the things that you

see, the trees, the grass, the animals, the mountains and the rivers are also manifestations of the creation and therefore must be honored and respected," Lyons said.

"It's interesting that in the language of the Haudenosaunee, we don't have a word for religion and what we say is the way you live," Lyons said.

This "way" is more than a one-time, or once a week, ritual, which is appropriate for all religions. Lyons and his people believe that religions are more like lifestyles. Lyons wishes to restore focus to lifestyles, and the idea of future generations is crucial to this change.

"Not so much does it matter how much you learn as to what will be the impetus for your life, what will be the drive. Will it be for the personal gain or the personal welfare of yourself? Or will it be for the common people, the common life, and for all things that are here?" Lyons said.

As Lyons speaks of this drive, he is constantly considering the generations which lie ahead, and he is constantly improving his lifestyle, al-

ways representing his people and the world.

"He's a tireless individual. He's driven to do the best and the right thing for his people," said Sid Jamieson, assistant to the athletic director, head lacrosse coach and longtime friend of Lyons.

Lyons' drive does more than represent his people. It is inspired by his notion of future generations and the people and animals which make up his relatives.

"I wear here, as a symbol of who I am, my clan totum which is a wolf. Now that's literally how our family relates to itself. I have native friends all over the continent and even south. Almost in every one of those villages, communities and nations there is a wolf clan. So I have relatives not to say the least my four loved brothers who runs free, yet tribes," Lyons said.

Jamieson said that Lyons is a very talented artist, which could have become his career. Instead, Jamieson said that Lyons could travel all over the globe, in one day, from Stockholm to London to New York to address these issues, and still drive home to Washington, D.C. to see his grandson play lacrosse.

In this sense and in the sense that Lyons extends his idea of family and his idea of future generations to everyone and everything, Lyons stands as an example for all of us. Whether it's at the University or at the Culminating Conferences, Lyons' words transcend issues of immediate time and immediate goals.

"When is it that profit takes over common sense? You must be alert and you must be courageous even though you are afraid, as we all are, to act in the face of fear," Lyons said.

very specific reason.

and what we say is the way you live," Lyons said.

This "way" is more than a one-time, or once a week, ritual, which is appropriate for all religions. Lyons and his people believe that religions are more like lifestyles. Lyons wishes to restore focus to lifestyles, and the idea of future generations is crucial to this change.

"Not so much does it matter how much you learn as to what will be the impetus for your life, what will be the drive. Will it be for the personal gain or the personal welfare of yourself? Or will it be for the common people, the common life, and for all things that are here?" Lyons said.

As Lyons speaks of this drive, he is constantly considering the generations which lie ahead, and he is constantly improving his lifestyle, al-

SCIENCE & TECHNOLOGY

Changing the face of medicine in the UK

By Kate Nowak

Little publicity has been given to a striking, new discovery made in the United Kingdom. *The Guardian*, Britain's second oldest national daily paper, contains one of the only writings about this current revolutionary device. A \$21 billion medical revolution is about to take off and not one science journal or magazine in the United States has taken record of it. Failure to investigate has underestimated its significance, which will likely change the face of medicine for future generations.

Professor Peter Openshaw, who has for years been researching the pathogenesis of respiratory virus infection at London's Imperial College of Medicine, put together a device of barely 200 grams, which, through the process of gas chromatography, performs an analysis of the air exhaled from the lungs of sick patients. The analysis outcome will foretell whether the ailment is of viral or bacterial cause.

Development of this diagnostic breathalyzer is being compared with the invention of the thermometer. Within years, not just every doctor, but every home, could possess one.

A company called BodiTech has been asked to manufacture this hand-held machine, which the scientists foretell will save the world billions of dollars and safeguard the future of antibiotics.

Similar to the police breathalyzer, but higher in sensitivity and detail, the device will detect particular odors from breath samples. Openshaw states that the instrument would allow the physician to determine whether the use of antibiotics would help or not. "It will not only tell the difference between a virus (on which antibiotics have no effect) and bacteria, but it will tell the doctor which type of bacteria is present and which antibiotic will be of most help," he said.

Overprescribing would cease, and patients would be able to recognize their infection. Medical disorders, such as asthma, which affect up to 20 percent of children and around five percent of adults, would be recognized. The infection caused by asthma gives off distinctive vapors that would be detected and measured by the breathalyzer. "The machine would specify whether the inhaled steroid level should be adjusted," Openshaw said.

Openshaw predicts that with time, the machine's capacities could be expanded, and the device could be used to identify illnesses of the liver and kidneys. There is a particular smell associated with liver failure which has even been given a label—foetor hepaticus. A musty smell is embodied by patients with renal failure. In the future, the apparatus could even be used by diabetics with high sugar levels. It would enable them to check their blood sugar amount by blowing three times a day into the box instead of sampling their blood.

The use of odor for diagnostic purposes first sparked Openshaw's interest after his work with a locum medical registrar who was also a French wine connoisseur. "He flipped the lid off the sputum pot, inhaled, and told you which bacteria was involved and which antibiotics should be used."

The concept itself is old, as are most "new age" remedies. During the Middle Ages, odors were often used in diagnosis. But biochemist George Dodds was the first to turn the ancient wisdom into a 20th-century idea. Dodds is a world authority on olfaction science. He is known as "The father of the electronic nose."

In 1970, Dodds published the first explication of a sensor system that could lead to the production and manufacture of an artificial nose. His position today is as a research and development director of Biotech International, the British firm which will hold 51 percent of BodiTech manufacturing to Imperial's 49 percent.

Top scientists in more than seven different fields, from electrical engineering to biochemistry to medicine, have been put to work by Imperial. Their expertise is necessary. Within two years, the first clinical trials of the breathalyzer are expected and the device models themselves should be prepared within five years.

The demand is expected to be high and the market has been calculated to be worth an approximate \$21 billion worldwide, just within medical circles. Managing director of BodiTech, Stephen Collins, anticipates that, although the tools will begin in the hands of doctors, soon enough, everyone will have them. All there is to do now is wait.

MOSOP created a voice for the Ogoni. They demanded that reparations be made for the devastating impacts of oil exploration in the Niger Delta. The group was seen as a threat to the military dictatorship in Nigeria because it provided a model for other ethnic groups.

Likewise, the Shell conglomerate was concerned that international campaigning would harm its reputation. In order to break the spirit of the movement and maintain the status quo, Ken Saro-Wiwa and his eight colleagues were charged with murder and quickly condemned and hung by a military

Speaking of the Big Bang

Bruce Patridge spoke at a physics lecture this past Monday. Dr. Patridge is an astronomer at Haverford College. His lecture was entitled, "Photographing the Big Bang." After the lecture, the Observatory was open for public viewing.

Understanding perspectives on indigenous traditions and ecology

By Adam Parris

Professor of religion and author of *The Shaman*, John Grim believes that the relationship between indigenous traditions and ecology is plagued by some fundamental issues. In many instances, Grim believes our traditional Western approach is very different, and perhaps detrimental, to understanding these people's relationship to the environment. However, a change in our approach of looking at indigenous people is a key to finding a common ground and an intimate relationship with them such as their relationship to their homelands.

"There are conceptual issues. There are political issues. There are questions of religious meaning involved in this discussion of indigenous traditions and the environment," said Grim, at the Environmental College Lecture Hour this past Monday, Nov. 16.

Grim approached these important religious and environmental issues at the lecture hour, but he did so from a different fashion than usual. Grim used a narrative, story-like approach to suggest that these issues have always been problematic because of the conceptual tools we use to understand indigenous people, such as the word "indigenous" itself as well as "culture" and "nature." All of these terms suggest a fixed accessible body of knowledge rather than the reality of communities in process, or life way.

Grim believes that to understand the spiritual issues is to understand a community process. He believes that this process must begin with the understanding of relatedness, or kinship, especially when dealing with the complex spiritual relationship to the environment.

"There are questions with regard to the terms and the ideas and the approaches that we use to talk about this issue indigenous traditions and environmental problems. There is a need for a conceptual awareness in which we acknowledge both critical insight and appreciative insight," Grim said.

Grim believes that the term, indigenous, is both useful and problematic. It masks our ignorance of the diversity of these peoples, who make up the small scale societies of the world, but it can also signal our efforts to understand their needs and aspirations caught as they are in larger nation states.

"The term indigenous has a wide variety of usage to use it to refer to such diverse people as say the Penang people of Borneo and the Crow people in Montana. Obviously, there's a conceptual problem," Grim said.

"But on the other hand, if we try to understand small scale societies that have very unique languages and systems of stories and thought and kinship and relationships to a homeland, if we appreciate what such people have endured, in the face of extreme pressures, I think the word indigenous carries some meaning."

"Our use of the word cultivation now, seems to me, to have more connotation of the results of cultivation. For most indigenous people, culture is not something that you arrive at, it's rather the process of doing it. For indigenous people, culture implies an act of 'together doing.' This 'together doing' is what culture means rather than a result that gets placed in a museum," Grim said.

Grim provided a useful example to understand these concepts. He spoke of a conversation with Peter Brosius, an anthropologist, and Mutang Urud.

Brosius addressed the issue of the word sacred, and he said that the term was very problematic. As Grim said, Brosius criticized some nation states for their exploration of the term "sacred."

Indonesia framed a discussion of Penang land in which the sacredness of Penang land was used to decide all of their homeland," Grim said.

Grim said the problem then became that the use of the word sacred was applied to specific land. The rest of the land was then

John Grim, professor of religion, spoke about the relationship between indigenous religions and ecology.

described as non-sacred and available for exploitation.

Mutang Urud began his discussion very differently. Urud had been exiled from his homeland, in Malaysia, for six years, but asked his audience to join him on an imaginary journey through his homeland. Urud brought his audience through a journey of places in this land that held significance to him during his early life, ending up at a lake where he underwent an initiation ritual as an adolescent. Grim said the importance of this approach was that Urud brought about a feeling of the "sacred," but what made the land sacred for Urud was his kinship relations and the biographical connection that he felt to that land.

Grim used Urud's story to reemphasize conceptual issues, political issues and religious issues.

"There are definitely relationships with local bioregions between these small scale societies. They are very different, but there are these sets of relationships," Grim said.

One conceptual issue is the tendency of Western approaches towards analysis, namely the separation of what we are trying to know, into its constituent parts. Indigenous people also understand analysis, for example when they develop categories to distinguish animals and types of life in the bioregion. Indigenous people prize synthetic knowledge.

"For most indigenous groups, I'd say analysis is not where it's at that the more important act is a synthetic knowledge, or a knowledge of how parts fit in the whole. In order to understand a person, and the act of hunting, or the act of agriculture, it has to be set within the total, the whole, the larger cosmos of meaning often described in the mythic stories of origins," Grim said.

To listen to Grim's presentation, to hear his stories of indigenous people, to feel the process of understanding the lifeway, was what engaged the audience. In much the same way, Western approach cannot continue to analyze for its own purpose. It must analyze the indigenous people, with an understanding and perspective of the valuable way that they deal with these issues, to understand better how its own tradition fits into the whole.

Delta Force: Documenting destruction in Nigeria caused by the Shell Oil Company

By Melissa Pauley

Living in the secure atmosphere of the University community, it is easy to be oblivious to the environmental atrocities and human rights violations that occur throughout the world. Last Tuesday, Nov. 10 the documentary *Delta Force* was shown in the Forum in an attempt to foster awareness of the struggle of the Ogoni people in Nigeria, a small country along the west coast of Africa in the Niger Delta.

The Student Environmental Action Coalition (SEAC) organized this viewing to mark the third anniversary of the execution of Ken Saro-Wiwa and eight of his colleagues in Nigeria. Saro-Wiwa was a Nigerian human rights and environmental activist and writer. The movie *Delta Force* documents the nonviolent struggle Saro-Wiwa led against the exploitation of Ogoni land and people by the Nigerian government and the Shell Oil Corporation. Ken Saro-Wiwa and his colleagues were leaders of the Movement for Survival of the Ogoni People (MOSOP). The MOSOP organization made it clear that Shell was not welcome in Ogoniland.

MOSOP created a voice for the Ogoni. They demanded that reparations be made for the devastating impacts of oil exploration in the Niger Delta. The group was seen as a threat to the military dictatorship in Nigeria because it provided a model for other ethnic groups.

Likewise, the Shell conglomerate was concerned that international campaigning would harm its reputation. In order to break the spirit of the movement and maintain the status quo, Ken Saro-Wiwa and his eight colleagues were charged with murder and quickly condemned and hung by a military

tribunal.

Delta Force called the actions of Shell "an ecological war of 30 years." Since the company began drilling oil in Ogoniland in 1958, the people have had pipes constructed across their farmlands and villages despite frequent blowouts. Oil spills are a constant problem. In a 15-year period, an average of four spills a week occurred.

The Ogoni, a farming and fishing community, also have to live with the flaring of gas. Such pollution is destroying areas needed for land, and in effect completely destroying the Ogoni community. The people also suffer from serious health problems as a result of the pollution.

In many ways, the land of the Ogoni has become a military zone closed to the outside world. The movie shows the organized military attacks waged against Ogoni villages. The military orchestrates disturbances so that it can take order. Innocent people are arrested and subsequently tortured. Such acts are attempts to force the Ogoni to offer no resistance to the actions of Shell.

The regime in Nigeria remains in power through the support of multinational companies like Shell from which military rulers derive most of their wealth. Eighty percent of government revenue comes from oil companies. Shell contributes 50 percent of this revenue, contributing some \$30 billion annually. However, the people still live in extreme poverty. They eked an existence out of land that is being destroyed by oil operations.

The movie poignantly shows the complete disregard for life in Ogoniland. The horrific images of dismembered bodies after a military attack on a village were shown. To clean up oil spills, the oil is often burned. Footage of a barren landscape encrusted

with a layer of burnt crude oil meters thick provides evidence.

This kind of destruction is not secluded to the Ogoni. All across the Niger Delta, ethnic groups are suffering from oppression and environmental degradation by oil companies. Although the United States has condemned the government in Nigeria, we are still one of the biggest consumers of Nigerian oil in the world.

This contradiction can be partially explained by US commitments to international trade agreements. Likewise, Shell and other multinational oil companies lobby hard in Congress against US policy towards Nigeria. Most citizens' lack of knowledge about the source of their oil and gasoline is another problem contributing to the lack of concern for this issue.

However, an international campaign is underway that is demanding that Shell support democracy in Nigeria and "clean up the mess" it has created. College campuses across the United States sponsor activities in remembrance of the death of Ken Saro-Wiwa on Nov. 10 and acknowledge of the Ogoni and other ethnic minorities' struggle for survival.

In addition to sponsoring the showing of *Delta Force*, SEAC held a vigil on Friday afternoon at the Shell station in Selingsgrove. "SEAC was excited to take this issue to the public, and the response we got was overwhelmingly positive. We sent a message to Shell that people want international corporations to be accountable for their actions abroad," Steve Grimes '99 said.

Activists across the world will continue to fight to bring the injustices in places like Nigeria to the forefront of growing concerns for the welfare of the environment and the humans who are a part of it.

Spotlight on Club Sports

Ice hockey remains unbeaten

Bison kill third period penalties to hold on at Dickinson

By Brett Tomlinson

Bucknell hockey continued its winning ways on Saturday with a 4-3 victory at league rival Dickinson. The Bison penalty killing unit helped to smother over 10 minutes of Devils power plays in the final period to preserve the victory.

Defenceman David Streets '01 started off the Bison scoring early in the contest with a quick strike. Later in the first period, Jeff Werring '00 netted the second goal to lift Bucknell to a 2-0 lead.

"We had a good first period and kind of took them for granted," Streets said. "Then they surprised us a little bit."

Dickinson got physical in the second period, but Bucknell responded. After the Devils put their first point on the scoreboard, Brian Huetnik '01 found the back of the net to give Bucknell a 3-1 advantage.

Dickinson fought back again, cutting the margin to 3-2 near the end of the second period. Fatigue on the Bison bench started to figure into the equation as well.

"We had a short bench, especially on defense," Streets said. "We could tell it was

going to be a long period."

Nate Ledyard '02 scored early in the period, but the Devils responded again, closing the gap to 4-3. The responsibility for preserving the lead fell on the shoulders of goalie Tim Sather '02 and the Bucknell defense.

Sather answered the call with a solid period despite less than ideal circumstances. Physical play resulted in one ejection for each team and over 10 minutes of one- and two-man advantages for Dickinson.

Bucknell escaped with a hard-fought win, improving their unbeaten record to 4-0 and 3-0 in Mason-Dixon League Northern Division play. In their surprising start, the Bison have shown solid team chemistry for a team with significant youth. Freshmen and sophomores compose half of the 18-man roster.

"We're playing with a lot of heart, and we play really well together," Streets said.

The Bison travel south this weekend for a two game road trip in Maryland. They face Loyola on Saturday night, followed by a Sunday morning clash with Navy. Bucknell's final game of the first semester is on Saturday, Dec. 5 at George Washington.

This week in football

By Tim Scheu

As far as I am concerned there is only one game this week: Michigan @ Ohio State:

Despite the fact that both teams are flawed this is the marquis matchup of the week. These two teams have a rivalry like no other, and in contrast to that game down south, this has been a game that has always pitted two of America's best teams against each other.

Whether we are talking about the days of Shembeleir and Hayes, or Carr and Cooper, these games have always been incredibly entertaining and filled with emotion. This year is no different. Though Ohio State lost to an upstart Michigan State team, I still firmly believe that the Bucks are among the best in the nation. With a quarterback like Ger-

main, receivers like Miller and Boston, and a running back like Wiley the Bucks can beat you in any way. Their defense is the nation's best. They have an impeccable secondary anchored by All-American Antoine Winfield, and a linebacking core that is unmatched. Michigan is also a very talented club. They are the defending National Champions, and for the most part everyone is back. They have been surging as of late, and have spanked Big Ten rivals Penn State and Wisconsin. I guess it all comes down to the mental game. Michigan has won nine of the last 11, and usually in upset fashion. Ohio State usually has the mindset that if they lose they

Sports

The Best of Both Worlds

Guess what? The NBA is still in a lockout. Patrick Ewing is still criticizing David Stern. David Stern is still yelling about Billy Hunter. Top draft pick Michael Olowonkandi and several other stars are ready to suit up across the Atlantic. Several second-round picks weren't willing to wait, so they've signed on in the CBA.

And Kenny Anderson just wants his money so he doesn't have to start sell his cars.

So let's get away from the chaos, the greed and the utter comedy of the professional (if that's what we should call this bunch of money-hungry, whining owners and players) ranks and take a look at the best basketball around. Let's go back to school.

Duke and Connecticut have proven to be among the most dominant programs in college hoops during the past decade. And with both teams returning most of their lineups from successful 1997-98 campaigns, it was to no one's surprise that these two powerhouses were ranked at the top of everybody's preseason polls.

The Blue Devils are constantly atop the ACC standings while the Huskies have held a tight grip on the Big East. The two are in annual contention for the top seed in the East regional bracket in the NCAA tournament.

Mike Krzyzewski returns to command the Blue Devils while Jim Calhoun leads the Huskies. Both coaches have garnered coach of the year honors in their conferences and are near the top of ballots on the national level each year.

UConn junior Richard "Rip" Hamilton, last year's Big East Player of the Year and second-team All-American, looks to build off a remarkable sophomore campaign where he averaged 21.5 points per game and led the Huskies to the conference championship. Duke boasts sophomore big man Elton Brand, considered by many to be the most outstanding freshman in the land last season. Both players are preseason Player of the Year candidates and will vie for the honor throughout the season.

Each of the two players broke their right foot at one point last year; Brand during the regular season and Hamilton during World Championships team tryouts.

Despite the seemingly endless comparisons, UConn and Duke have as many differences as the NBA owners have with the players. But that's a whole other story.

The Duke Blue Devils boast more McDonald's alums than Jenny Craig. Nine of thirteen Dukies played in the annual high school all-star game while two others graduated last spring. This talent and depth allows Coach K to toy with his lineup and still knock off the Florida States and Virginias of the land. Faithful Duke students camp out for days at a time to get their hands on tickets and will continue bouncing up and down at Cameron Indoor Stadium until the school cancels the program.

The Blue Devils lost floor general Steve Wojciechowski but return plenty of able bodies to pick up the slack. Brand will lead an able front-court that includes fellow junior standout Chris Carrawell, fellow sophomores Shane Battier and Chris Burgess and prep-school phenom Corey Maggette.

Inheriting point duties will be sophomore William Avery, who showed promise while backing up Wojko last season. Senior All-American Trajan Langdon ranks among the nation's best scorers and is a deadly outside threat.

This year, the usual challengers, namely North Carolina, Wake Forest and Georgia Tech fall short of their annual expectations. All three teams lost key players either to injuries or dreams of fame and fortune in the always prosperous NBA. With their unlimited fire power, the Dukies should roll through the uncommonly weak ACC.

Now we travel north to Storrs, Connecticut. The hard-working Huskies return five starters from a squad that won 32 games last season. Ask your local basketball junkie where most of their key players are from, and you might not get an intelligent response. UConn has put together a stellar squad from relative no-names.

Hamilton came out of high school as a mediocre recruit who didn't get much attention from the big schools. El-Amin, regarded as the top prep point guard in his junior year, was ridiculed and dropped in the ranks because scouts thought he was overweight. Junior forward Kevin Freeman emerged from Paterson Catholic (NJ) as a second-rate forward after living in the shadow of Tim Thomas for his entire prep career. Rashamel Jones raised some eyebrows in high school but was criticized for his streakiness. Center Jake Voskuhl entered the Big East as a "project," considered too slow and unathletic to compete with the post players in the conference. Slasher Ricky Moore may be the only truly top recruit the Huskies have signed in the recent years. Touted as one of the top guards in the nation his senior year, Moore has actually taken a back seat to many of these overlooked hoopsters. These unheard of recruits have transformed into one of the most talented teams in the nation.

UConn expects to cruise through the Big East, but they have to watch out for revitalized squads like St. Johns and Syracuse. Their road to the conference championship will be more difficult than Duke's, which could prove to be more valuable in the postseason.

All in all, the road to the Final Four might be more wide open than everyone thinks. Teams like Michigan State, Maryland, Kentucky, Kansas or sleeper Rhode Island can creep up as the tournament nears.

March Madness is going to be crazier than a mental hospital.

Bison football crushed in defeat

By Tim Scheu

Entering last week's game, the Bucknell football team was in an interesting position. They were 5-4 on the season and already out of championship contention, yet they still had a chance to make a major impact on the Patriot League standings. That chance came in the form of a game against Lehigh, the undefeated, nationally-ranked opponent that was steamrolling its way to a league championship. It seemed that the Bison had a shot at revenge, as their '97 season had been spoiled as a result of a similar game.

There was no revenge.

Lehigh was just too strong for Bucknell, as it rolled out to a 28-0 halftime lead and eventually went on to win 49-7. But perhaps the most tell-tale sign of Lehigh's dominance comes in statistical comparison. On offense the Mountain Hawks gained 677 yards to Bucknell's 196. As rushed for 408 yards compared to Bucknell's 109.

"Lehigh was coming into this game with a lot of confidence," said head coach Tom Gadd. "They felt they had something to prove because we had gone out there and beaten them the last two times. When they started to get on a roll we did not respond."

The game opened up on a high note for the Bison. Despite Lehigh getting favorable field position off the kickoff return, the Bison effectively stuffed the Hawk drive. Eric Green '00 and John Papadakis '00 each had sacks and Terrence Joyner '01 caught a Lehigh receiver behind the line of scrimmage for a four yard loss. As a result, Lehigh was forced to punt for the first and only time all game.

Following a stalled Bucknell drive, Lehigh took possession on their own 27-yard line. There the Hawks started an eight play, 73-yard touchdown drive that culminated in their first touchdown. The key play of the drive was on third and four from the Lehigh 49-yard line. The Hawks seemed to have their backs up against the wall, but they responded by gaining 13 yards on a Phil Stambaugh pass for a first down, and went on to score three plays later.

Looking to respond, the Bison received a Hawk punt late in the first quarter. But on the return, Dan Palko '00 was stripped of the ball by

Brett Tomlinson-The Bucknellian

A dejected Jabu Powell '02 displays the heartache felt following Bucknell's loss to Lehigh.

a Lehigh special teamer, losing possession for Bucknell.

Lehigh immediately took advantage as they punched it into the end zone three plays later, making the score 14-0.

The Hawks were not done. After another Bison punt, Lehigh running back Ron Jean dashed 69 yards opening play to extend the lead to 21.

On the ensuing possession, Bucknell seemed to be constructing a scoring drive, but after Don McDowell '99 was stopped on fourth and one on the Lehigh 13-yard line, their chances were dashed.

Lehigh went on to score once more with 1:49

left in the first half and pushed the halftime score to 28-0. The touchdown came on Jean's three yard dive that capped a nine play, 57 yard drive.

The second half was no different. It was marked by an effective Lehigh offensive strategy in conjunction with Bison misplays.

Lehigh scored three more touchdowns in the half and dominated the time of possession, holding the ball for more than 19 minutes. Bucknell, on the other hand, struggled to muster any sort

Bucknell swims way into record book

Alex Johnson '99 and company capture pool record in 200 yard freestyle relay

Beetna Kim-The Bucknellian

Swimming will look to rebound as they host Holy Cross this Saturday.

By Brian Watson

Head coach Jerry Foley's debut in Bucknell's Freas-Rooke Pool turned out to be more than he had expected. Last Saturday, the men's and women's swimming and diving teams hosted Patriot League power Army, the team Foley left

last year to take the reins at Bucknell.

"It was a lot harder than I anticipated," Foley said. "I experienced some emotions that I wasn't expecting. I was very close with many of the swimmers on their team."

Although the Cadets defeated both Bucknell squads, Foley was impressed by their performance. "I

couldn't have been prouder of my team," Foley said. "I was excited for our swimmers. Army was better on paper than us, but we gave them everything we had."

The men's team was downed 166-75 despite several impressive performances. Co-captain Alex "Swonse" Johnson '99 captured first place in the 100-yard freestyle (47.98) and Tyler Wynn '02 took the 200-yard backstroke (1:57.78). Johnson teamed up with Chris Neary '02, Ben Lim '01 and co-captain Doug Hill '00 to win the 200-yard freestyle relay with a Freas-Rooke-record 1:25.70. Johnson's come-from-behind anchor leg (20.99) propelled the Bison to first place and the pool record.

"Swonse seemed like he really wanted to win it for coach," Justin Schwarz '01 said. "We all wanted to go out and prove we could compete with Army."

"The relay win was an exciting way to finish the meet," Foley said.

The women's side swept two events on their way to capturing four first-place finishes. Melanie Kasper '01 took first place in the 200-yard butterfly (2:15.32). Abby Weaver '02 captured the 100-yard

freestyle (54.71) and Debbie Rattot '02 won the 200-yard breaststroke (2:31.51). The 200-yard freestyle relay of Weaver, Ellie Baker '01, Gwen Packard '01 and co-captain Nicole Brandemarti '00 topped Army with a time of 1:41.35.

"There were a lot of close races," Kasper said. "Usually we think that Army is out of our league, but we rose to the occasion."

"This meet gives us good goals for the second semester," Foley said. "We should challenge Army at Patriots. The women definitely have a good shot at taking them and the men will be in their face the whole time."

Although it was the first league loss for both teams, the swimmers are optimistic.

"The score didn't reflect how well we really swam," Jeff Sharpe '01 said. "We all swam well and put up some really good times."

"It's still early in the season, and we should be much better when Patriots come around," Kasper said.

"We're not about wins and losses," Foley said. "We're about getting better, and that's what will happen."

Sports Trivia Quiz

1. Who won the closest Cy Young Award in the history of baseball? And what year?
2. What AL and NL baseball teams respectively have the most MVP recipients?
3. Who was the only head coach to win a championship in AFL and NFL?
4. Who is the only NBA player ever to win repeat championships with two different teams?

1. 1987, Steve Bedrosian by 2 votes over Rick Sutcliffe, 3 votes over Rick Reuschel 2. AL, New York Yankees; NL, Cardinals 3. Weeb Eubank, coach of the NFL Colts (1958) and AFL New York Jets (1969) 4. Recent newlywed Dennis Rodman.

Women's volleyball to compete in NCAA tournament

The Bison volleyball team cruised through the Patriot League Championships on Nov. 14-15, defeating league rival Lehigh on their way to the league crown.

The team captured its first automatic bid to the NCAA Tournament in school history and will face Penn State in State College on Friday.

For expanded coverage on the league tournament and a preview of this weekend's match, see page 11.

Lafayette's potential departure shakes up Patriot League's future

By Brian Watson

Lafayette College recently commissioned its Board of Trustees to launch a comprehensive investigation of their athletic program. The final decision of the Trustees could have a profound effect on the Patriot League as a whole, as Lafayette must consider whether to drop their program to Division III, eliminate certain programs, or attempt to raise additional funds for the athletic department.

Many concerns have been voiced involving the program's overall competitiveness as well as its costs and revenue.

The college is considering numerous options to bolster the standings of its teams in the Patriot League, and the review is expected to continue for several months before a definitive decision is reached. In a press release, Lafayette President Arthur J. Rothkopf stated that "no decisions will be made without a thorough, comprehensive study."

Probably the most compelling issue facing the Board is whether or not to downgrade the entire athletic program from Division I to Division III. Lafayette boasts 17 sports, but only five were able to garner winning records in intercollegiate play during 1997-1998. A drop to Division III may help improve the overall performance of the college's sports teams.

However, the possible demotion places the Patriot League in a precarious situation. The conference, which currently includes Army, Bucknell, Colgate, Holy Cross, Lafayette, Lehigh and Navy, ranks amongst the smallest athletic unions in the country. Many conferences, including the Patriot League, may receive automatic bids to the NCAA tournament for winning a league tournament championship, but if the conference dwindles to six teams, several of these bids will be discontinued. This may cause other schools to exit the league as well. "Both Army and Navy have said they will consider leaving the Patriot League if another school drops out," said Rick Hartzell, director of athletics and recreation at Bucknell.

Another potential downfall resulting in a

drop to Division III will be the end of the Lehigh-Lafayette divisional rivalry. The two schools have competed for decades and their rivalry ranks amongst the strongest in the nation.

The Board of Trustees also must consider eliminating some of its athletic programs. Early in the fall, Lafayette's athletic department contacted Rothkopf about cutting four sports that were on the college's budget. The president refused, and suggested the investigation instead.

The school has considered discontinuing its football program, which suffered its fifth consecutive losing season in 1998. According to Rothkopf, "Football is a big expense for Lafayette College."

One of Lafayette's major difficulties exists in athletic funding. Rothkopf said the trustees plan to take "a hard, realistic look at the capital and operating costs" involved in bringing the Leopards' program to the next level. "We need to see if there are acceptable ways of meeting them, perhaps through fund-raising or the reallocation of existing resources," Rothkopf continued.

If sufficient funding is not found, the alternatives to downgrading seem few and far between.

The Board of Trustees must evaluate the possibility of installing "permissive aid" to its basketball program, as do some of the other Patriot League institutions. Lehigh and Holy Cross plan to initiate these scholarships into their basketball teams next season.

If more capital can be appropriated to the athletic department, Lafayette will be able to attract better student-athletes and bolster its teams' performances. The school recently broke ground on a new \$30 million athletic complex that may appeal to recruits and

Courtesy of Sports Information

Rick Hartzell, director of athletics and recreation

enhance the school's current programs.

While speculation continues over Lafayette's options, the school's recruiting situation faces a crushing blow. Rival Patriot League institutions may be able to attract student-athletes away from Lafayette, ensuring the existence of their program on the Division I level. If the college decides to drop one or more of its programs, it faces losing transfers to better programs, thus depreciating the talent of their own teams.

"Their problem is that they haven't been able to stay competitive with its rival schools," Hartzell said. "I find it hard to believe that they will quit Division I. I hope they can restructure their programs and stay at our level. The Patriot League has really gained some stature over the past few years, and it would be awful if we lost Lafayette."

(For analysis of the University's options concerning Lafayette's possible departure, see page 13).

Tuition rates rise slowly

By Heather Napolitano

In the past three years, the University has experienced a rise in comprehensive fees that has been comparatively lower to those of competitors. Any given change in this growth rate, be it large or small, will bring a set of concerns to the institution.

Comprehensive fees are composed of two factors: tuition, which is its single largest dollar component, and a standard room and board amount that would be charged of an incoming first-year student.

Said Peggy Plympton, vice president for finance and administration, that when the University's financial plan was drawn two to three years ago, "there was a philosophical statement that the cost of a Bucknell education should be kept as low as was possible. So, the institution has made some choices, some very concrete choices, about keeping down the size of the administrative staff, trying to be very cost effective in doing capital projects ... in order to make it possible for the comprehensive fee to grow as little as possible." Upon further consideration she said, "I am not aware that the other institutions that we compare ourselves to have that as an articulated priority the way Bucknell has."

While there are a number of factors that determine the growth rate of these fees, the status of endowment seems to be among the most significant. According to Plympton, the University's endowment is approximately \$330 million in contrast to the \$400 million to \$500 million of the competing institutions.

Although the present figure may be somewhat smaller than the others, it has nearly doubled in the past three years as a

result of the fund-raising campaign and the investment performance. Most of the other schools have not seen such rapid growth and therefore, "they need, relatively speaking, to be getting more of an increase in their student revenue than we do ... that is an example of the things that could make the numbers have the patterns that they have," Plympton said.

The level of comprehensive fees evokes a number of concerns in every college and university.

First, there are several competitive concerns, namely being priced significantly higher than other institutions, and the assumptions made about the quality of education if priced significantly lower than other institutions.

There are national concerns. Plympton said that it is "widely held that, nationally, the overall price of higher education in the United States is very high, and for institutions like us that is an issue. There are a set of concerns about being very responsible and very responsive to the public's concerns about the cost of higher education." There are concerns about balancing competing priorities. The comprehensive fees must be appropriate to accommodate faculty salaries, adding additional faculty, financial aid clauses, renovations and enhancing staffing for public safety.

In the broader spectrum, comprehensive fees constitute one of the four major revenue streams. The remaining three are the interest earnings on endowment, current used gifts and the category simply referred to as "other revenue." This revenue is in high demand by the priorities of the comprehensive fees as well as necessities such as maintenance and electricity.

Noted Plympton, "in the end, there are only so many dollars to be spent."

Charges filed against alleged sculpture vandals

By Chris Ellis

The Department of Public Safety's investigation into the vandalism of the Carol Hepper sculpture located near the Olin Science Building has resulted in criminal charges being filed against two University students.

The East Buffalo Township Police Department has filed four charges each against Michael Knudtsen '00 and Raymond Germin '02. Both students have been charged with two summary counts of disorderly conduct and misdemeanor counts of criminal mischief and institutional vandalism.

The disorderly conduct charges carry a maximum fine of \$300 and a maximum prison term of 90 days, while the two misdemeanor charges carry fines of up to \$5000 and prison terms of up to two years. Research has shown, though, that jail time for cases similar to this one is rarely given.

The external charges were filed be-

Michael Knudtsen '00

Raymond Germin '02

cause of a joint decision by the University and the artist to pursue criminal punishment outside of the University judicial system. External charges are not automatically filed in on-campus cases, but the decision to file charges was made well before the investigation was concluded.

"Prior to learning who the responsible persons were and while the incident was still under investigation, the University decided to pursue criminal charges and turn the incident over to the Police," said Director of Public Safety Vince DeCerio. "This was done because of the serious nature of the act."

The university offered a \$1000 reward for information leading to the conviction of the sculpture vandals, but DeCerio stated that the investigation was not aided in any way by the

reward money. "Through Public Safety's investigation, we gathered information and followed leads and we able to ascertain the individual," said DeCerio.

See SCULPTURE, page 3.

Poor voter turnout for BSG elections

By Tracy Thiffault

Bucknell Student Government's attempt to increase efficiency by implementing complete on-line voting for their elections this semester led to a noticeable decrease in voter turnout. Approximately 20 percent of the study body cast votes through the BSG's newly-updated website.

The complete on-line voting represented a change from the option students had last semester of either voting in the Langone Center or on-line.

"Even though we had everything typical covered advertising-wise, I think people just didn't have the in-your-face way of being reminded when they walked through the LC that day," said Jessica Jackley '00, former BSG president.

The executive officers of BSG decided to put their elections completely on-line for several reasons. On-line voting takes less time and is more tamper proof, according to Jackley. "We really thought that in many ways this would be a better way to go; more efficient, easy, user-friendly and informative."

Ironically, in the past there has been a consistently higher percentage of on-

MANAGING YOUR MONEY:

Relieving the tax time burden of capital gains

By George Jenckes

With the end of the year quickly approaching, it is time for investors to sit down and reevaluate their portfolios, keeping the upcoming tax season in mind. Even with the market's snappy rebound in recent weeks, mainly due to Alan Greenspan's easing of interest rates, the average stock mutual fund is down about 7% for the year. The negative returns from stock funds this year sound bad enough, but it gets even worse. Here comes the kick in the face. You might have to pay taxes on your losses too.

It might come as shock to most investors, but at the end of the year stock funds make their year-end capital gains distributions. Unfortunately, investors have to pay taxes on these payments. The larger the capital gains distribution, the greater the tax burden left on investors, even if their stock fund is at a loss for the year.

Many stock funds will be making sizable capital gains distributions this year because of the market's volatility over the past few months. Mutual-fund managers unloaded large portions of their portfolios because of the uncertainty of the economic crisis abroad. These hefty year-end distributions are coming soon, hitting investors with a troublesome capital-gains tax.

Getting hit with a taxable distribution on a fund that took a loss for the year is pretty insulting, but there are ways to avoid it. To side step paying these capital gains taxes, sell the losing fund before it makes its distribution. It is pretty simple advice. Investors just have to be aware of when their fund is making those distributions. The same advice goes for those investors looking to pick up a stock fund at the end of the year. Avoid making an investment in a fund that has yet to pay out its capital gains distribution for the year. Look for funds that have already paid out their distribution, or are expecting only to pay out a small distribution. By waiting to purchase a mutual fund again until after the new year, you will avoid capital gains distributions all together. However, you might forgo the capital gains you would have gotten if you had invested earlier.

With 1998 coming to a close, you should start sorting through your portfolio and find a stock fund that has lost you a lot of money since you purchased it. Finding a loser and selling it at the end of the year is not a bad idea. It is called tax-loss selling and it will ease your capital gains tax burden significantly. By selling a loser stock or stock fund, you can use these losses to offset the gains you have earned from other investments. You can always repurchase the mutual fund that you sold to book a tax loss, but you will have to wait 30 days after the sale to do so, according to tax laws. Again, if you are going to sell the stock to book a tax loss and pick up another fund, try to avoid buying a fund that has yet to pay out its capital gains distribution.

I do not suggest that you go to sell every losing fund in your portfolio. This would leave you with a large opening in your asset allocation. This is not the way to go. By selling one or two losers at year's end, you will be able to fill some of the tax burden when it comes tax time. Tax-loss selling will relieve you of some of the stress of paying taxes, while losing money at the same time.

A Quaker Voice -

[The expression of joy] almost invariably goes over into gratitude and praise for the Source of Love, the Occasion of Joy, the Author of our Being that includes such possibilities in the midst of the limitation and pain of human life.

The emotional effect may fade. The limitations and pain of human life may go on; but the memory of the occasion and the experience of Love it imparted remain part of the fiber of our being. They add formative touches to our lives and draw us onward to fuller and fuller embodiment of Listening and Love.

A Quaker Query: What is the strongest test of your commitment to the spiritual life that you experience? What has helped you to return to it again and again? What gets in your way?

The Lewisburg Friends (Quaker) Meeting gathers at 11 a.m. on Sundays in the Smith Library, Vaughan Literature Building. We would be pleased to have you with us. For information call Geri Cooke at 523-6628.

Our regional website is "Upper Susquehanna Quakers," at <http://www.epix.net/~wadow>.

ELECTION From page 1.

line voters, according to Jackley. This is another reason for the change to on-line voting.

Accompanying the change was a new website containing special voter guides, designed by Nick Vitalbo, BSG webmaster. "We were eager to see what he would do," Jackley said.

The newly elected BSG officers had mixed feelings of the on-line voting. "I was very disappointed with the voter turnout," said vice-president, administration, Christine Schuman '01, "I think that exposure given to the election in the LC helps encourage voting, and we didn't have that this time around."

"[On-line voting] made it difficult because in order to get voter turnout, we had to advertise in person. The LC method was effective because we could encourage friends to vote," said president Yoshi Maisami '01.

Vice president, operations, Christopher Bouchoux '01 said, "I think online elections were a big success. It is much more convenient for the

students and that hopefully will spur greater turnout."

Jackley said that in the future BSG may allow other ways of voting, in addition to on-line, once again. "Perhaps until there is more assurance that people will go to the page to vote, there should be complimentary voting options." Options such as individual ballots in students' mailboxes were discussed, but BSG decided to see how complete on-line voting would go.

"I think that we should try a combination of the two (LC and Internet) or maybe set up computers in the LC to vote. There should be a way where we can get a larger percentage voting," said George McNamara '00, vice president, finance.

"I would love to hear from the students as to what in the world would get their attention and make them want to vote and care about the candidates," Schuman said.

Brett Tomlinson—The Bucknellian

Public Safety Log

November 20, 1998

INFORMATION/RECOVERED PROPERTY—Public Safety responded to Christy Mathewson Stadium to recover a bicycle found by a University employee.

INFORMATION/INTERNET SCAM—A non-University affiliate reported to Public Safety that she received damaged merchandise ordered on the Internet. The incident was referred to the PA State Police and Lewisburg Police were notified.

INFORMATION/POSSIBLE HARASSMENT—A University student reported to Public Safety that she was followed by an unknown male from the Fieldhouse to Swartz Hall. No one was located in a search of the area. The incident is under investigation.

CRIMINAL TRESPASS/UNDERAGE CONSUMPTION/DISORDERLY CONDUCT/PUBLIC DRUNKENNESS—Public Safety responded to Roberts Hall for the report of an unauthorized individual in a room. The individual resisted Public Safety and Lewisburg Police Department responded to assist the officers. Police and university citations were issued for criminal trespass, underage consumption, disorderly conduct, and public drunkenness.

November 21, 1998

INFORMATION/POSSIBLE MMR DRUG OVERDOSE—Public Safety responded to Sigma Alpha Epsilon Fraternity for the report of a disoriented student. The individual was transported by ambulance to Evangelical Community Hospital Emergency Room for treatment.

INFORMATION—Public Safety responded to S. 7th St. and Moore Ave for the report of a pedestrian vehicle accident. The victim was located and reported that no injuries had occurred.

UNDERAGE DRINKING/FAILURE TO COMPLY—While doing a routine party check at Sigma Alpha Epsilon Fraternity, Public Safety observed two University stu-

dents who admitted to consuming alcohol while under the legal drinking age. One student provided false identification. University citations were issued for underage drinking and failure to comply with University officials.

UNDERAGE DRINKING—While on routine patrol, Public Safety observed an intoxicated University student in front of Lambda Chi Alpha Fraternity. A university citation for underage drinking was issued.

UNDERAGE DRINKING/DISORDERLY CONDUCT/PROPERTY VIOLATION—While on routine patrol, Public Safety observed a University student throw two cans of beer over the bank in front of Phi Kappa Psi Fraternity. Upon questioning, the male was found to be under 21 years of age and had consumed alcohol. University citations for underage drinking, disorderly conduct, and property violation were issued.

TAMPERING WITH FIRE EQUIPMENT—Public Safety responded to Gateway Malesardi for a fire alarm activation caused by a discharged fire extinguisher. The incident is under investigation.

UNIVERSITY PROPERTY DAMAGE—Public Safety responded to the Music and Arts building for the report of a broken window. No suspects or witnesses could be located in a search of the area.

November 23, 1998

DISORDERLY CONDUCT—Public Safety responded to Swartz Hall for the report of a suspicious package containing property missing from the University student's room. While speaking with Public Safety, another University student admitted to having mailed the package. A university citation for disorderly conduct was issued.

November 24, 1998

CRIMINAL MISCHIEF—A University student reported that her vehicle was damaged while the car was parked in the Orchard Lot. The incident is under investigation.

November 27, 1998

INFORMATION—Public Safety responded to the front of the library for the report of suspicious individuals. Seven males were identified and complied with a request to leave the property.

November 28, 1998

INFORMATION/VEHICLE ACCIDENT—While on routine patrol, Public Safety observed a motor vehicle accident at the intersection of S. 7th St. and Moore Ave. Lewisburg Police Department responded to the scene because the operators were not affiliated with University. No injuries were sustained and vehicle damage was minor.

INFORMATION—Public Safety responded to the Weis Center parking lot for the report of unauthorized juveniles who cooperated with the officer's request to leave the property.

November 29, 1998

BURGLARY—Public Safety responded to Gateway Kalman Posner for the report of a computer tower, a keyboard and mouse missing from a University student's room. Lewisburg Police Department responded to the building. Another University student returned to the room and reported that a computer keyboard, mouse, and hard drive as well as a stereo system, compact discs and some computer discs were also missing. The incident is under investigation.

AMBULANCE TRANSPORT—Public Safety responded to the Fieldhouse for the report of a University student with an ankle injury. The individual was transported by ambulance to Evangelical Hospital Emergency Room for treatment and then released.

BURGLARY—Public Safety responded to Gateway Vidinghoff for the report of the theft of a computer and monitor. The student's roommate returned later in the day and also reported that his computer was missing. Lewisburg Police Department notified and responded. The incident is under investigation.

BURGLARY—Public Safety responded to a Smith Hall room for the report of a CPU computer unit. Lewisburg Police Department responded. The incident is under investigation.

Exxon & Mobil Merger

NEW YORK—Fossil-fuel titans Exxon Corp. and Mobil Corp. confirmed their plans to merge Tuesday, creating the world's largest corporate oil producer in Wall Street's biggest deal ever. The merged company will be called Exxon Mobil Corp., retaining both the Exxon and Mobil brands, and will be headquartered in Exxon's home city of Irving, Texas.

The \$80 billion deal is the biggest merger in U.S. history. Previously, that record was held by the \$72.6 billion union of Travelers Group and Citicorp that created Citigroup (CCI).

Audit of IRS reveals problems with security measures

WASHINGTON—A new audit of the Internal Revenue Service's security operation has found potentially costly problems at the agency. IRS used bicycle couriers to transport taxpayers' checks to banks and hired employees with criminal pasts, according to the audit by the congressional General Accounting Office.

Investigators found that unarmed couriers driving civilian cars alone or riding bicycles were used at four IRS service centers to deliver tens of millions of dollars in taxpayer checks. IRS Commissioner Charles Rossotti did not challenge results of the audit, but said the IRS is taking steps to remedy its security weaknesses.

Death row fugitive's grandmother hopes he'll surrender

HUNTSVILLE, Texas—With the manhunt for Texas death row escapee Martin Gurule in its fifth day, the convicted killer's grandmother is urging him to give up peacefully. "I'm hoping for the love of God that he does surrender and does not let it go any further," Amalia Marez, Gurule's maternal grandmother, told the Houston Chronicle in a story published on Tuesday.

Late Thursday night, Gurule escaped from the Ellis Unit of the Texas state prison in Huntsville along with six other inmates. He fled into the foggy night as guards fired at him with rifles from towers 200 feet away.

Father charged with murdering missing six-year-old daughter

CLERMONT, Florida—A father who confessed to killing his 6-year-old daughter after reporting her missing on Thanksgiving Day was to be arraigned Tuesday morning.

Richard Adams, 24, confessed to murdering his daughter, Kayla McKean, in a fit of rage and then burying her in a remote area of central Florida, authorities said.

Capt. Chris Daniels, a spokesman for the Lake County Sheriff's Office, said Mr. Adams is cooperating with investigators, who offered no motive for the killing.

World

Israeli interrogator admits mistreatment of Palestinian suspect

JERUSALEM—An Israeli security interrogator has admitted in court testimony that he pressured a Palestinian suspect by keeping him hooded and tied, forced to stand with arms tightly handcuffed above his head for as long as three hours at a time.

The testimony confirmed what human rights organizations and Palestinian detainees have long contended, that Israeli interrogators were using force to try to extract information from Palestinian suspects. Transcripts of a special Israeli military court hearing held Oct. 20 were made available to the Associated Press on Monday.

TV crew rescued from Arctic island

MOSCOW—A Russian helicopter on Tuesday rescued a three-man television crew that had been stranded on a remote Arctic island by bad weather and was running out of food and other supplies, officials said.

The helicopter evacuated the trio, which included a Russian, a Japanese and an Australian who had been making a documentary on polar bears. The crew was taken to the port of Pevek, said the Ministry of Emergency Situations.

U.N. genocide trial opens for "Serb Adolf"

THE HAGUE, Netherlands—Opening a genocide trial Monday at the Yugoslav war crimes tribunal, a U.N. prosecutor said a Bosnian man who called himself the "Serb Adolf" was guilty of far more than the dozen killings to which he has admitted.

Bosnian Serb Goran Jelisic used the nickname Adolf "with a perverse pride in the genocidal symbolism it represented" and once bragged that "he had to kill 20 or 30 Muslims before his morning coffee," said U.N. prosecutor Terence Bowles.

Jelisic pleaded guilty in October to murdering 12 Muslims and Croats in and around the Serb-run Luka camp set up in Brcko, northern Bosnia, in May 1992.

University remembers World AIDS Day

By Sarah Palmer

Rooke Chapel hosted a "Service of Remembrance and Hope" for World AIDS Day 1998, conceived of by the United Nations and first celebrated in 1988, on Tuesday, Dec. 1. The event endeavors to bring together anyone from the campus or surrounding community who has lost a family member or friend to the AIDS virus or would like to learn more about the virus itself.

The annual commemorative event originated at the University in 1993 with the help of former University chaplain Alison Boden. Ian Oliver, who replaced Boden in 1996, works with Reverend John Dromazog of the Beaver Memorial United Methodist Church in Lewisburg, as well as students and faculty to organize the event.

The affair commenced in Rooke Chapel at 7:30 p.m. where excerpts from the Bible and other writings were presented and discussed. Participants were then offered the opportunity to share their own stories and experiences concerning the HIV virus and AIDS.

Oliver said that the majority of people attending the event are from the Lewisburg community. "There are a surprising number of people with HIV out in the area and all around Lewisburg," he said. "These are some of the people who usually find the service meaningful."

Oliver is pleased that the University can offer an event that offers people a comfortable environment in which they can discuss the virus. "Many people who have been personally affected by AIDS feel like this is the only time of the year they can talk about [the issue]," Oliver said. "It's not necessarily that other people don't want to hear about it, but they [may just not] understand it."

Because of the new protease inhibitors that were introduced a few years ago following an extensive amount of medical research, people living with the virus have been given hope.

"When the epidemic started in the early eighties, if you lived a couple years it was amazing," Oliver said. "Now there are people who are living much longer with HIV."

Oliver referred to Tuesday night's guest speaker, an area resident, who has been living with HIV for twelve years with the new drug therapy.

Although they are accompanied by several harsh side effects, the new protease inhibitor drugs along with newly realized combinations of drugs

lower the virus in the system, permitting many victims to live longer. "The drugs are not a cure and are very costly," Oliver said. "But, people are living."

He said that the cost of medication can easily reach \$10,000 per year, and in many cases, patients are forced to take 15 to 20 different pills each day.

"These drugs are [really only benefiting] Americans because we are the only country that can afford them," Oliver commented.

Although the latest available figures indicate that between 600,000 and 900,000 Americans have been exposed to the HIV virus and that 385,000 have died since the epidemic started, Oliver said, "We have no idea how many are infected with HIV because it takes so long to incubate ... [Someone] could have it for years and not know."

Last year, it was estimated that 5.8 million people worldwide were newly infected with the virus. More than half of these cases occurred in people between the ages of 15 and 24. And infection rates are climbing.

"People aren't worrying about it as much as they did before," Oliver said, "because you don't hear about Americans dying in large numbers." He believes that the new protease inhibitors have given much of the population a false sense of invulnerability.

"The international theme this year is young people and AIDS," Oliver said. "People that are growing up, and think that [the chances of contracting HIV] is less of a threat, and are being less careful."

Right now, Africa is the country where the epidemic is most concentrated. Oliver said that parts of Asia, namely

Thailand, are not very far behind. He believes this is due to ignorance concerning the disease, denial, and inability to afford medication.

In addition, Oliver feels that the AIDS problem is becoming increasingly rural. "It used to be primarily an urban problem," he said. "Now it's much more a rural problem because people in rural areas are afraid to talk about it and get help. Being in a rural area as we are, I think it is going to become more of an issue."

Anyone who is concerned that he or she may be infected with the HIV virus can contact the University Student Health Service for information on confidential testing or the AIDS Resource Alliance of Williamsport at 1-800-773-2437.

The Bucknellian announces new staff for spring semester

By E.J. Crawford

The Spring 1999 Bucknellian staff will experience its greatest turnover in two years, and will feature quite a few new faces, as well as many old faces in new places.

The biggest change comes at the top, as news editor Chris Ellis '00 and managing editor Jared Sillicker '00 will become the new editors-in-chief, replacing Brett Tomlinson '99 and E.J. Crawford '99, after a year at the helm. Tomlinson and Crawford will move into roles as senior editors, and will help in laying out the Science and Technology section.

Alison Dugan '99 will move from News layout to replace Sillicker. Stepping in at News, who also lost abroad-bound Tracy Thiffault '00, will be Sports editor Brian Watson '01 and Arts and Entertainment editor Heather Napolitano '01. Kim Chittim '99 will also move from A&E to News, replacing Dugan as layout editor.

Tim Scheu '01 will stay on at Sports, and will be joined by Pete Van Emburgh '02.

Stepping in for Napolitano and Chittim at A&E will be Courtney Mastain '02 as the assigning editor, and production manager Matt Albert '01 will step in as layout editor.

With Features editors Beth Slaby '00 and Dana Rofey '00 going abroad, Julie Eidem '99 will become the new Features layout editor and Greg Venbrux '01 will step in as the assigning editor.

Kate Nowak '01 will replace Adam Parris '99 as the assigning editor at Science and Technology.

In the only section remaining intact, Beth Martin '99 and Devon Keithley '02 will stay on at Opinions, while Rebecca Rowland '02 will be groomed to replace Martin.

Mark Langer '02 replaces Albert as the new production manager.

In the Business and Advertising departments, Justin White '00 will move up from his assistant position to take over for Nicole Collins '99, while Sarah Gillfillan '99 (national ads), Chuck Ehrenfried '00 and Kate Marston '02 (local ads) will remain in their current positions.

Photography editor Beeta Kim '00 and assistant Paige Cull '99 will remain on in their current positions.

In the darkroom, assistant Jason Aines '00 will take over the role of darkroom manager from Jonah Half '01, who is going abroad.

In other positions, Joe Croncy '00 is returning as the online editor, Debbie Ruggieri '01 stays on as the head copy editor and Jason Krywicki '99 and Jason Siewert '00 return as the systems managers.

James Lee will return for his fourth semester as The Bucknellian advisor.

Low voter turnout voices campus opinion of BSG

Another Bucknell Student Government election has come and gone, and four new qualified candidates are ready to assume their positions as Student representatives.

The trouble is, it seems that hardly anyone has noticed. Sure, Yoshi Maisami, George McNamara, Chris Bouchoux and Christianne Schumann all appear to be qualified candidates ready to serve their responsibilities well. The problem lies not with the newly-elected officers, but the manner in which they were elected.

Turnout for BSG elections hovered near 20 percent of the student body. To be sure, BSG's decision to discontinue voting in the LC mall and concentrate its efforts on online voting surely deprived some voters of a convenient voting reminder, and *The Bucknellian* recommends that BSG reinstitute paper voting next year to help boost voter turnout.

But to blame low voter turnout on the simple lack of paper voting would be to quibble over a relatively minor point. BSG promoted its elections more than adequately, providing ample opportunity for students to be made aware of the elections through the *Bucknellian*, candidate debates in the Bison, campus posters and the like. Online voting, while not as solicitous as LC Mall voting, still seems like a minor inconvenience.

Low voter turnout is only part of the problem. One candidate ran unopposed, and the Vice President of Finance Position, which featured an "election-high" four candidates, was in danger of remaining vacant until BSG President Jessica Jackley and BSG solicited candidates after the formal deadline.

The lack of candidates and low voter turnout means that only students who genuinely care about the workings of student government vote in elections. This participation is admirable by those who are involved, but it is by no means an accurate representation of the student body.

A common misperception of Student Government is that it is a "lip service" organization which answers directly to the University administration and that BSG officers really don't make a difference. Perhaps BSG, which commendably expends considerable effort promoting its elections, should promote its true influence on campus and awareness of student government issues. Perhaps interested students and faculty should be more active in championing causes of Student Government.

The answer to campus indifference to Student Government, while it can be influenced somewhat, cannot be reconciled with a simple change in BSG promotion or voting location. Until BSG officers, interested students, and faculty alike combat the apathy that pervades the University community the question will still be: If an election takes place, and no one is there to witness it, does it really make a difference?

Lincoln Brigade forgotten

TO THE EDITOR:

I write to express concern and surprise over the complete omission of any reference to the various events, including two well-attended public lectures, connected with the Gallery exhibition of Posters from the Spanish Civil War, "Shouts from the Wall." I am not, of course, seeking to dictate what the *Bucknellian* sees fit to print and what it does not. I raise the matter as an interesting comment on Bucknell's sense of priorities. It chooses to make no mention of a group of Americans, the Abraham Lincoln Brigade, who fought in Spain and on their return were first subjected to political surveillance and harassment, and then consigned to oblivion. Others may

Administration's apathy to plagiarism is undermining University's academic ethics

TO THE EDITOR:

As a proud alumnus with two degrees from the University (B.A. '81, M.A. '89) and an adjunct faculty member, I am, like many other faculty members, appalled by the plagiarism rampant among many unethical students here. Furthermore, the administration's apparent indifference to plagiarism has disillusioned me as a teacher, undermining my and other faculty member's grading practices, and also threatens to devalue my Bucknell degrees. Academic dishonesty of any kind not only demeans the value of my degrees, but also devalues the original work of the present generation of hard working students. Those students who have truly devoted great time and effort to receive an education at Bucknell should be outraged not only that outstanding grades are attainable through cheating, but that this practice is abetted by an academically indifferent administration concerned primarily with finances. At the root of the problem is the sad fact that administrators are increasingly guided by questionable business ethics at the cost of the once esteemed higher ethics of academia. Academic standards that were once exalted as the highest ideals of our society, and certainly the campus, have for the most part given way to a monetary pragmatism that addresses issues such as academic dishonesty, not in the light of ethics, but in the interest of fiscal expediency.

Much blame has been levelled at the Internet

and how its easy availability may entice unprincipled students into cheating. This is a cogent complaint but irrelevant to the even more destructive undermining of educational principles due to the lack of commitment of the Bucknell administration to academic dishonesty. The issue of plagiarism has become an annoyance to them, something to be swept under the rug, if possible, rather than an offense deserving of open discussion and strictly enforced penalties. To put it bluntly, the administration fears that if it truly pursues fair and meaningful adjudication of cases of plagiarism and cheating, it may lose the financial support of parents (especially parent-alums) who think they have bought their child an education, even if their child is caught cheating.

Some unethical students have been adept at exploiting the weaknesses of the academic judiciary process at Bucknell. Since the majority of Bucknell students are honest and earnest, they may take no interest at how easy it is to beat the system. However, to be fair to those who harbor no scruples, I feel it behooves me to even the playing field by disclosing the strategy I have seen employed by the students who have been successful in avoiding penalties for cheating and plagiarism. It should be noted first, however, that even if you do plagiarize, chances are good that you will never face a hearing. The vast majority of cheating and plagiarism cases are never reported by faculty to the office of the dean. Many faculty members find the administration's proce-

dures so inadequate that they avoid frustration by not bringing official charges of plagiarism. Others are intimidated by the prospect that they themselves may be made the scapegoat for a student's failure to live up to his or her responsibility. Yet others actually fear that if they were to be vocal of the inadequacies of the system, they might well be putting their jobs at risk. However, if you are nevertheless charged with plagiarism, the following guidelines all but guarantee that you will be found innocent of charges:

- 1) Plead ignorance.
- 2) Cry a lot.
- 3) Blame the professor.
- 4) Involve your parents.
- 5) Have your parents threaten to sue the University.

If your case does get to a hearing before the Board of Review on Academic Responsibility, be sure to bring along a sympathetic faculty member to act as your advocate. Be sure that the professor you choose is arrogant enough to take it upon himself to surmount what little fairness there is in the system exists.

If I can be of further assistance to unscrupulous students—especially to those who balk at claiming ignorance, or crying, or falsely accusing instructors, or enlisting parents or a faculty advocate—don't hesitate to contact me, a concerned Bucknell alumnus.

ROBERT WALZ '81

High school boys show disturbing lack of interest in issues facing women at recent event

TO THE EDITOR:

Last month the Peer Educators of the Women's Resource Center, members of SCAR, the Student Coalition Against Rape, and some staff trained in the Mentors in Violence prevention program gave presentations at Lewisburg High School on the topics of sexual assault and gender violence.

The groups of students, ranging from ninth to twelfth graders, varied in their responses and cooperation. One group would barely participate or even be disruptive while the next would be very responsive. Some were serious while others used humor to get their points across. The group we will always remember will be the last group of ninth grade boys. This group of kids had to the most disrespectful, loud, and trouble-some group that we dealt with. Not only did most of the group refuse to participate, but they would not even let the male college students who were facilitating this session give their presentation. The kids walked into the gym, where we were presenting, yelling and fighting with one another. The gym teacher who was

supposed to introduce us and keep the kids in line, instead was nowhere to be found. After about fifteen minutes of interruptions and stupid, inappropriate questions the facilitators were fed up. We simply got up and walked out. The rest of the day we could not stop thinking about the way those insolent little punks behaved.

What was frustrating was that we could see ourselves at that age. We didn't want a stranger telling us how to think, and we didn't want our friends thinking we were suck-ups. Peer pressure to fit in, to go along with the crowd, to act cool by acting like you don't care, is a very real thing for teens. And for guys, it is very important to "act like a man" and not display any thoughts or sentiments that someone would mistake for "feminine" behavior. For boys that age, they don't want to be seen as a "sissy," "mama's boy," "doodler" or "boy scout."

There also seems to exist a real ambivalence about how adolescent boys should feel towards girls—traditional rules of puberty say that they should be sexually attracted to them, but social traditions tell them to make fun of females, to keep their distance, or to try and demonstrate

male superiority. So how is it that acting like a man and being cool translates into not taking issues of sexual violence seriously? How can one challenge young men to take responsibility for their behavior, to treat girls and women with respect, when at 14 or 15 they think this is all a big joke and want to blow it off?

Not all the kids in that rowdy class were jerks, but it was near impossible for the well-meaning kids to challenge the bad apples. It's not easy to go against the grain and one of the obstacles that seems to get in the way is the lack of role models. How many boys, or even men in college, have seen men stick up for women? How many of us can identify guys who would speak out against sexist behavior? How many of us personally know adult men who proclaim to be feminists and are willing to work with women to address the problems of gender inequality? In providing these educational programs on campus and in the community we are hoping to provide more examples of positive male role models. We want young people to see that you can be a man and still care about women. You can gain self-acceptance and even the respect of your peers for standing up for

what you believe in, for not allowing others to be exploited or mistreated, and for doing what's right... regardless of how others behave.

Some psychologists claim that if you haven't reached a child by the time they are around ten years old, then you never will. Hopefully this isn't completely true. While one particular group of boys discouraged us, overall we think the effect of the presentations was generally positive. While we learned from what didn't go well, we feel that the programs to both boys and girls at the high school were successful. We just tried to initiate some thought in these kids and make them aware of the issues they will face as they mature and leave high school.

We hope that by planting some seeds, and showing how males can interrupt sexism or intervene in some situations, that we might make it a little easier for the good guys to do the right thing.

OPINIONS

Adults baffled at why smokers just won't quit

By Allyson Demerath

In light of The Great American Smokeout, held on November 19th, many smokers were encouraged to put out their cigarettes for the day. This year marked the 22nd Annual Smokeout, which was originally started by Arthur Mulvaney. It has been rumored that more people quit smoking on November 19th than any other day of the year. As if this were not enough of an incentive, the price for a pack of cigarettes recently jumped to over three dollars.

Even though the government continues to persuade people to stop smoking, more members of our generation tend to light up. Between 1992 and 1996, the number of high school students who were smokers increased. In fact, currently about one third of high school students smoke. Even though they took away our favorite average "Joe," we still continue to puff away.

The big question is why? Obviously our government is baffled, and the D.A.R.E. officers, who were supposed to warn us about the affects of tobacco in high school, never knew what was going on in the first place. Perhaps, if they actually took into account what prompts us to smoke, they

would be able to find the root of and solve the problem.

First of all, the more adults tell us not to do something, the more we will want to do it. Many of us watched our parents smoke before they "knew it was bad for them." Consequently, hearing them tell us to quit has little effect. If they did it, why can't we?

Secondly, certain social gatherings make it oh so easy to light up. A pack of Parliaments seems to be almost a necessity at our favorite fraternity party. Between classes, how can we relax on the library benches without our beloved Marlboros?

We are stressed out students. What else can calm us better than those Camel Lights? So, we are surrounded by the constant reminder that many, if not most, of our peers, light up.

Thirdly, we are hooked on nicotine. The simple fact is that smoking is extremely addictive. Many of us who lit up in high school continue to do so in college. The first few innocent cigarettes on the weekend have spiraled into a few every day.

There is no denying how addictive smoking truly is. Even though we may be older and wiser college students, it's extremely difficult to find a good time to put our cancer

sticks out. Let's face it, quitting for a day is simply ridiculous. As soon as we get stressed, anxious, sad, happy, or experience any other extreme emotion, we are bound to light up.

No one can make us quit if we don't want to, and we don't want to. It is pointless for the government to stop cigarette ads; we don't pay attention to them. Great

American Smokeout days go unnoticed in the lives of busy college students, and we are numb to the statistic they have been shouting at us for years.

Do you even remember the statistics that I mentioned at the top of this editorial? I don't know the remedy to make people stop smoking. If I did, maybe I would quit myself.

SURVEY

WHAT WILL YOU REMEMBER MOST ABOUT THIS SEMESTER?

"Since I'm a freshman, I'll probably remember doing a real lot of work."
Michelle Payne '02

"I'll associate this semester with pulling all-nighters—about one a week."
Ed Fochler '00

"I will always remember driving up to the campus and seeing, for the first time, where I'd be spending the next four years of my life."
Chris Gibson '02

"I will always remember the 7th Street rape. It was just such a shocking event that had never happened here before."
Maggie Scott '99

"The thing I will remember most about this semester is all the partying I did on the weekends!"
Brian Causton '01

With all those finals to study for and essays to write, I'll bet you've got a lot of frustration to vent. Write for ops. We want to see more students unleashing their anger in words. The semester may be over, but there's always next year. Call Beth (577-8066) or Rebecca (4811).

Giving tree flakes show generosity among students

By Maren Johnson

The nightly news is filled with it. The daily newspapers flaunt it. Magazines make millions off it. Its bad news, and people eat it up. While it is usually easier to write a column about something that is

most all the flakes were gone. It is satisfying in some strange way, just to see proof that Bucknell students and faculty truly care about helping out those less fortunate. It's fairly obvious, even to a casual observer, that Bucknell's campus and the students themselves are af-

I am proud of us as a community for putting so much effort into such a worthy cause.

Here a Bucknell there has been an outpouring of generosity this Christmas season. What I'm referring to is the 1998 Giving Tree that has been up in the LC for a few weeks now.

We all have passed the Giving Tree at some point in our day. Every once in a while, I took notice of the declining number of flakes on the tree and each time I remembered how the tree had been covered with red and green "flakes" just a week or so before.

Just recently, I noticed that al-

fluent to say the least. Maybe it was this thought that made the quick disappearance of the flakes so refreshing.

To add to this heartwarming show of caring, I noticed a few days later that even more flakes were

put up, and those seem to be disappearing quickly as well. Personally, I am proud of us as a community for putting so much effort into such a worthy cause.

I hope that this generosity continues to play a part at Bucknell even after the Christmas season has passed. My congratulations to all who participated, as well as those who worked so hard to put it together.

LETTERS

An issue of grammar

The word "crew" in English means a group of people that operates a vessel—a boat, a ship, a plane. The word "team" also means a group—one that performs a specific task. Thus the "crew team" says the same thing twice. It is a redundancy; it should be avoided.

Such poor usage in the student newspaper reflects poorly on a university of Bucknell's standing and reputation. Hasn't anyone in the English Department noticed?

Louis Lazar
New York, NY

Editor's Note:

While "crew team" may be a redundancy in English grammar, *The Bucknellian* uses the term "crew team" to avoid confusion. The word "crew" can refer to an entire team or to a singular boat, while "crew team" avoids such ambiguity.

"This semester will always stick out in my mind because of all of them fun times I had with my friends."
Sweety Pandhi '99

"This semester will always remind me of my rushing and pledging experiences."
Allison Staplin '01

"I will remember the fact that this semester was much harder than all of my other semesters ... and I'm a senior!"
Jason Fritz '99

Bucknell Dance Company puts on fall performance

Bottom to Top: Kim Nastasi '00, Leslie Shoemaker '00, and Sarah Wagner '01 perform "Sensitivity" choreographed by Professor Er-Dong Hu in the Fall '98.

By Beth Slaby

The Bucknell Dance Company opens its season Friday and Saturday, Dec. 4 and 5 in Harvey M. Powers Theatre in Cole-

man Hall. This concert will display new faculty, student and commissioned choreography designed to stretch the imagination beyond the boundaries of earth. This performance will be

accented with work that ranges from creative mythologies to extraterrestrial life. This fall's show was directed by Danna Frangione, Er-Dong Hu, and Allyson Green.

Featured in the concert is new commissioned choreography by guest faculty member Allyson Green and is based on South American folk tales highlighted by animal masks and designs of nature. Green received a BFA from Washington University in New York. Based in New York since 1986, she has performed worldwide with numerous famous choreographers. The collaboration of Associate Professor Danna Frangione and lighting designer Heath Hansum offers a theatrical perspective on the University's Focus Semester on Alien Cultures/Outer Space with a work that examines the lighter side of alien culture.

Frangione joined the University in 1987 as the Director of Dance and offers classes in modern and jazz technique, dance composition, dance history, and world dance. Hansum's focus is on lighting design and technical direction. This cultured work is expressed through the eyes of a small child of the 1950s, played by sixth-grade Lewisburg Middle School student Lyn Wheeler.

The University student choreography which range from ballet en pointe to classical swing jazz is framed by the scenography of Assoc-

iate Professor Elaine Williams and guest costume designers Heather Long and Pam Miller. Designers Ashley Elder and Joshua Smith also contributed immensely to the success of this performance.

The concert, funded by the Department of Theatre and Dance, Bucknell Student Government, the Bucknell Focus Semester and the Bucknell Association for the Arts.

Tickets are \$5 for adults and

\$4 for children and senior citizens. For more information on the show, call 524-1235.

Tickets are available at the Langone Center Box Office and at the door of the theatre the night of the production (provided the show is not sold out).

The Department of Theatre and Dance welcome all for a night of entertainment and great enjoyment. The curtain will go up at 8 p.m., so don't be late!

Expanding your horizons: Bucknell in London

By Kristen Jancuk

As the pressure of campus life overwhelms some students, many begin to look for a way to escape from the stress and monotony of life on campus. Though there are many solutions to this common problem, one of the most exciting and rewarding opportunities is studying abroad.

Though the exact agenda changes from year to year, key aspects of the Bucknell in London program remain the same, making the trip more of a tradition than a simple academic endeavor. The main goal is to indulge in British theater, art and architecture to explore England and the rest of Europe. Students studying abroad earn Bucknell credit and the program costs the same as our tuition and dorm fees. In addition, financial aid from Bucknell applies to the program. Students study in London from approximately the first week of September to the middle of December, usually taking four courses. A recess in October gives students the opportunity to personally tour other areas of Europe though the program usually includes some organized trips outside London. In past years, students have traveled overnight to the cities of Bath and York and have taken day trips to Canterbury, Oxford and Cambridge. Many students even had the opportunity to see Stonehenge.

With new faculty directors next semester, (Richard McGinnis from the civil engineering department and Tom Greaves from the anthropology department), the upcoming Bucknell in London 1999 takes a novel approach to the standard study-abroad experience. Beginning in the fall of 1999, a group of 20 students will travel to London to examine British transportation as well as enrich themselves culturally and academically.

Students who have traveled to London before agree that the program is a great source of academic and cultural enrichment. The hands-on experience is invaluable and truly brings the art and history of England to life. Bradley Fixman '99, who traveled to London in the fall of 1997 states, "Experiencing London and trying to survive the obstacles of a foreign environment taught me that I could indeed survive in the real world."

As you consider your options to expand your academic and cultural horizons as well as to experience a change of pace from everyday campus life, consider spending a semester living and studying in London. The experience is one you definitely will not forget.

An Abroad Perspective: The Appalachian Semester Program

By Nora Daniels

I saw an advertisement for the Appalachian Semester Program on a bulletin board in Vaughan Literature when I was a freshman. Then, halfway through the first semester of my sophomore year, I caught the "study-abroad-fever," and knew that I wanted to take a semester to study somewhere other than the University. That's when I saw another advertisement for the Appalachian Semester—and, as they say, the rest was history.

I am now in Barbourville, Kentucky, a small town in the extreme southeastern corner of the state, deep in the Appalachian Mountains. I attend classes Monday and Friday, and have an internship at a local Head Start Center Tuesday, Wednesday, and Thursday of each week.
